The hundreds of millions of uncommitted peoples of South Asia and Africa, plus many in Latin America, have become determined to develop their natural resources and industrialize their economies in an effort to raise their standards of living.

The Russians are encouraging them, and offering help. Perhaps the Russians will not deliver on their promises, but it would be folly for us to risk our own future security in certain of the strategically critical areas of the world on the assumption that the Russians will not deliver.

Unless the United States demonstrates its genuine interest in helping these underdeveloped nations, and is able to devise mechanisms for accomplishing it, probably the governments in most of those areas will ultimately tend to follow the Russian method.

Russia proved during the twenties and thirties that a backward, illiterate, underdeveloped country could successfully force industrialization. Ruthless repression was required, and savings were forced from a people with an already extremely low living standard, but the goal of industrialization was achieved. China is apparently moving along this same path.

Now for the first time in human history it is at least theoretically possible to abolish poverty throughout the globe, and in the space of only a couple of generations.

Whether the people of the United States will come to appreciate quickly enough what is now happening in the underdeveloped areas of the world, or whether we will wait passively until the backward countries begin to accept Moscow's political and economic philosophies as their model, is the overriding political question of the period immediately ahead. Compared with it, most of our other problems shrink into insignificance.

Many Americans have exaggerated ideas of what we are now spending for foreign economic aid. The bulk of our foreign aid is for military purposes. Most of what we are currently paying out under the name of economic aid is going to Formosa, South Korea, South Indochina, and other areas directly affected by military operations, or for the direct or indirect support of military forces. Only a tiny fraction of the funds of the international cooperation administered (formerly called the foreign operations administration; previously to that called point 4 or the ECA or the Marshall plan) are going to the economic development of militarily uncommitted nations, even though these areas may be of great strategic importance.

It is not necessary for us to spend additional billions for foreign economic aid; but a very few hundred additional millions, plus some changes in our methods and psychological approach, might make a decisive difference.

While nothing should deter us from accelerating the development of our military strength and intensifying the scientific research on which our national security may depend, military weapons alone in the period ahead may well prove insufficient to insure the permanent maintenance of our freedom.

Peace in the Middle East

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, January 30, 1956

Mr. MULTER. Mr. Speaker, I desire to direct the attention of our colleagues to the following column written by Yeshayahu Dan in the January 13, 1956, issue of Israel Speaks.

It carefully reports excerpts from the remarks of the Prime Minister and the Foreign Minister, made before the Israeli Knesset—Parliament.

KNESSET BACKS GOVERNMENT ON PEACE

(By Yeshayahu Dan)

"The maintenance of peace is preferable even to victory in war. We know that any war, even one in which we gain the upper hand, involves ruin and destruction for both parties and intensifies hatred between nations. We know that after our victory in one war a second round is possible, and after our victory in a second round, a third round may come, and there is no end to the business."

These sentences, spoken by Prime Minister and Minister of Defense David Ben Gurion at the opening of one of the longest foreign affairs and security debates, held in the Knesset last week, summed up the decisive answer given to the principal opposition demand for partial or full preventive war—in one form or another.

In fact, it decided the major issue by the speakers. Manachem Beigin for Herut and Peretz Bernstein for the General Zionists (Beigin had recently thrown out a suggestion for merger between these two groups) in fact claimed that the issue was not between war and peace to be decided on by the Knesset. According to them, the war unleashed by the Arabs on May 15, 1948 had never come to a stop.

NO BASIC DISAGREEMENT

About the basic facts there was no argument. All speakers stressed the Arab guerrilla warfare being waged against Israel (it claimed no less than 884 Israel casualties in killed and wounded in the last 5 years); dwelt on the Arab boycott and blockade; mentioned the many evasions of the armistice agreements by the Arab countries; described the manifestly warlike intentions of most of the Arab rulers and in particular those of the Egyptian dictator.

The speakers therefore urged the House not to wait until Egypt will have absorbed the vast quantities of new arms supplied to her in order to strike at Israel, but take the initiative into our hands now. They claimed that the validity of their approach had been confirmed by what had happened since the Czech-Egyptian arms deal, for the chances of obtaining the defensive arms desired by Israel had never been great and had recently even decreased.

This approach was also echoed, though not quite fully supported, by youthful Yigal Alon, of Achdut Avoda—a coalition partner—one of Israel's most famed commanders in the War of Liberation. "The problem is not how to prevent a war in the future but how to put an end to the one going on now," was the way he put it.

MAPAM VIEWPOINT

The most forceful answer given during the debate was that of another left-wing speaker, Yaakov Hazan, of Mapam. "You say the (Arab) war against us has already lasted for 7 years," he asserted. "Yet, another

7 years like these and we shall have more than 2 million Jews in this country; hundreds of additional villages will have been established; the Negev will be settled, the Jordan will flow southward, our security will have increased." This admittedly precarious peace had therefore to be saved at all costs and all efforts should be directed toward that goal.

The central points in the debate were made by the two Government speakers, the Prime Minister and the Minister of Foreign Affairs. The major points from these two speeches (together they lasted well over 2 hours) were these:

Ben Gurion:

"There is one certain method which can prevent war in the Middle East * * * the speedy supply of defensive arms to Israel." For "we are faced with a serious explosion, the results and development of which are difficult to foresee either for the Middle East or for the whole world. The responsibility for this explosion will fall not only on the Egyptian military junta, but on all the countries that unceasingly supply offensive arms to Egypt and deny defensive arms to Israel." Yet "war against us is not unavoidable and predestined. * * * All the members of the Cabinet, without exception, are firmly opposed to a war to be initiated by us."

OBLIGATION ON BOTH SIDES

In the face of constant guerrilla warfare against Israel, "the Government showed great forbearance. It is ready now, as in the past, to observe faithfully all provisions of the armistice agreements * * * but this obligation is equally binding on the other side. An agreement which the other side violates will not be binding on us either. If the armistice lines are opened to saboteurs and murderers from the other side of the border, they cannot be closed again for defenders.

"The situation of the State of Israel is unique and I know of no country in the world which, in nominally normal times, is subjected to such constant security dangers as the State of Israel. This uniqueness also makes it difficult for Israel's friends in the world to understand our peculiar situation and the ways of self-defense imposed on us by the attacks of our neighbors. * * * I know that no British or Soviet or American ruler would tolerate planned and continuous murder of his citizens by gangs organized by a neighboring Government for purposes of sabotage, assassination, and frontier violations.

"War is not inevitable, and if we obtain arms—arms of the necessary quality—it is almost certain that our neighbors will not dare to attack us * * * but whether we get the arms or not we have to be prepared at home. We have to establish a regime of mass voluntary effort * * * a minimum of 50 million pounds should be realized for the defense fund * * * shelters have to be built all over the country. * * * We shall have to impose on our young generation an additional year of service over and above their present military service."

SHARETT ADDRESS

The Minister of Foreign Affairs, Moshe Sharett, concentrated on problems of foreign policy. The highlights of his address were these:

"The Government has made a concentrated effort to make public opinion in the world aware and fearful of the danger which threatens the security of Israel. Our cause has aroused a powerful response from friendly public opinion all over the world.

"We regard the Soviet Union as the factor primarily responsible for the crisis which has arisen. We tried to bring home to Mr. Molotov the responsibility which must fall on the Soviet Union. We have heard (from the First Secretary of the Russian Communist Party) a definition of the policy of Israel which has never before been uttered by the official spokesman of a state maintaining normal relations with us." Mr. Khrushchev had claimed that from the first days of Israel's existence it threatened its neighbors. Mr. Sharett quoted statements by Soviet representatives at the United Nations in 1948 when they castigated and criticized the Arab invasion of Israel, in order to refute the Soviet claims.

"We are bound to * * * intensify our opposition to the arming of Arab countries as long as they maintain a state of war with us. * * * We have previously raised our voice against the Baghdad Pact and against the military aid agreement which the United States concluded with Iraq. We must warn today against a continuation of arms shipments to that country and against the attempt to include the Kingdom of Jordan in the Baghdad Pact.

"Israel will conduct her campaign against hostile alliances—by political and not by military means. If a short time ago we acted against Syria, we did it in order to put an end to constant assaults on our security, on the integrity of our territory and on our freedom of action in it, and not for any other purpose.

"MISLEADING FORMULA

"The formula in currency today is one of mutual concessions. We have explained that this formula is liable to mislead, and to lend a semblance of equality where in fact it discriminates. The concession demanded of the Arabs is renunciation of their demands. Of us the concession demanded is renunciation of what we possess.

"The Jewish world should know (in spite of all difficulties and problems) that life in Israel continues normally—that it is possible and indeed a duty to visit Israel precisely at this hour and see her people prepared but calm, confident in their strength and working without cease for its consolidation."

Not less than 10 hours had been allocated to the debate—one of the longest periods in the history of the Israel Parliament. Speaker after speaker who mounted the rostrum gave expression to the gravity of the hour. In the evaluation of the dangers facing Israel and the goal to be striven for—peace—almost complete unity was evident. Where views differed was on methods, but on pure show of hands and hearts the vast majority backed the government in its effort to maintain peace until the last possible moment.

United Nations and Communism

EXTENSION OF REMARKS
OF

HON. USHER L. BURDICK

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 14, 1956

Mr. BURDICK. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include the following speech I made before the Abraham Lincoln National Republican Club at Chicago, Ill., on Saturday, February 11, 1956:

The very origin of the United Nations had a communistic coloring. Russia was very conspicuous in the organization of the pact, and a Russian and Alger Hiss were the main operators arranging the provisions of the Charter. Did Russia at that time have an idea of working for peace within the organization she was foremost in organizing? I think the answer is "No." As Russia is a follower of Karl Marx it might be advisable to examine his manifesto. One of the principles set forth is a directive to Communists "to make any agreement with a capitalistic nation; keep the agreement as long as it benefits you; scrap it when it stands in your way in the complete destruction of capitalism."

The aim and purpose of the Communists was then—when the United Nations was organized—is now, and always will be to destroy capitalism anywhere and everywhere. We knew then, or our leaders ought to have known, that the Russian philosophy was clearly defined.

In order to gain prestige themselves, in order to more easily follow their plan of destruction they talked peace, yet while talking it they were fomenting war. That peace talk finally got stale and the United States could see, if their leaders were not asleep, that while pretending peace they were actually spreading a cold war as fast as possible.

The Charter of the United Nations was approved by the Senate with only two dissenting votes and those were cast by members of the nonpartisan league which in World War I was branded as disloyal. If the vote to approve the charter came up today, Senator after Senator would reverse himself. The peace propaganda spread by the Russians was so strong in the United States at the time of the approval of the charter that Senators as well as educators, ministers, and other intellectuals were taken completely off guard and this dangerous document was ratified.

What is the situation today? Both the United States and Russia sit side by side in the sessions of the United Nations, both pledged to obtain and preserve the peace of the world; both pledged to oppose aggression anywhere and everywhere, yet in our efforts to stop wars, we find our friend in the United Nations, Russia, fomenting and aiding aggression. Count the money and lives we expended in Korea, and you can see the effect of this Russian support to aggression.

The song of peace having faded, the Russians now bring up another slogan, which may fool a lot of people right here in the United States. The slogan now is peaceful coexistence. In both of these propaganda efforts of Russia they have a tremendous advantage over us, because we are asleep—right here from the Nation's Capital, the stream of propaganda is continually going out, while we have no such privilege in Russia. How dumb we have been. We blurted right in and recognized the Russian Government and thereby condoned the brutal destruction of property and lives of the people behind the Iron Curtain.

There isn't an American who would not do his utmost to bring relief to the people behind the Iron Curtain, but that cannot be done. We can't arm them, we can't even feed them. We have attempted to arm distressed nations, but in the end the engines of war have gone into the possession of the Communists. In Vietnam it took the Communists a month to haul home the enormous stocks of munitions which fell into their hands. In China, after the State Department deserted Chiang Kai-shek, the enormous stores in munitions, once intended for Chiang, went into the possession of the Reds of China. I would like to help the Polish people, the Czech people, the people of Latvia, Estonia, Lithuania, Bulgaria, Hungary, China, and all the others, but there is no way of doing it. We could, if we stopped long enough to think, do a lot for these people to preserve in them the spirit of liberty and freedom, and that would be:

First, withdraw recognition of this autocratic and despotic government and let the people in those countries know that we do not condone this ruthless government and do not put our stamp of approval on the summary executions of millions of people who show any disposition to rebel against this regime. But when we sit here like scared children and approve of that kind of

government, the people who are oppressed must lose hope when this great freedom-loving Nation approves the daily torture method meted out to them by their conquerors.

The second thing is get the Russians out of the United Nations or get out ourselves. Every move we have ever made to establish world peace has been vetoed by the Communists, when at the very moment their vetoes were cast, they were talking peace. How long it will take this country through its legal representatives to see the absolute impossibility of accomplishing world peace or any other peace—anywhere, at any time—remains to be seen, but for several years I have seen the impossibility of this and have said so, when only a handful of the Members of Congress agreed with me.

I remember one day at lunch at the Republican table that I presented a resolution to the Members for their signature, opposing the United Nations as then constituted, and two signatures were all I could muster. Now there are 138 Members who are not afraid to oppose it.

The United Nations project No. 1 is to settle matters in the area around Jerusalem, but what do we find? We find there the timberbox that is more than apt to bring about a major conflict. Russia, our buddy for peace, has rushed in and fomented war. There will be war there just as long as both sides are armed, and they are armed by members of the United Nations. This presents a sorry spectacle of two of the great nations, sitting side by side in the councils of the United Nations—one trying to bring about peace and the other trying to foment war. What kind of membership is this that the United Nations seems so proud of?

Turning now to the activities in the United States carried on by this Russian-inspired United Nations, we see a darker picture.

This Nation does not need any lessons in the way of freedom should go and how far it must extend. For example, do we need to have to subscribe to a genocide law? Have we ever been guilty of race murder or destruction? We have always respected minorities; we have always stood squarely for free speech, free religion and a free press. Why does this communistic United Nations have to redefine any of these cardinal principles of the Constitution? Yet that is exactly what this organization is striving for. First, free speech is well defined in the Constitution. Yet this organization insists on redefining our own Constitution. They say every person shall have the right to full free expression of mind, except as limited by law and except when it conflicts with the design of the United Nations to further world peace. Just as soon as we make exceptions, then free speech is no more; the same applies to free religion—the Russians would dearly love to destroy our belief in Jesus Christ and substitute for the Saviour Karl Marx, Lenin or Stalin. Doesn't the first amendment to the Constitution allow us free and unlimited religion? Why do they seek to change it—who seeks to do it? The Communists, because they are infidels, and in the past many religious organizations have let themselves be hoodwinked by this non-Christian band of assassins.

Isn't a free press protected under our Constitution? If it is, and it is, why change it to say that the United Nations shall be the judge of what we may publish?

The worst part of the whole scheme to change our Constitution is the way citizens of this country are dealt with, should they be charged with violating the edicts of this organization. Their revision goes as far as to say that if any citizen makes any statement that hurts the feelings of any group or any member group, he has violated this Charter of the United Nations and can be made to stand trial. But where will he be tried? Will he be tried here in the United States where he made the statement and be protected by our laws and the Constitution? No, he will not. He will be tried wherever the United Nations says he must be tried. He can be hustled out of this country and tried in Russia if he has maligned the Russians. He will not have the protection of the laws or the Constitution of his own country, but will be tried under such rules as the court of the United Nations promulgates. How do you free American citizens like this diabolical program? Yet that is exactly what this Genocide Convention of law will do if approved by the Senate and the President.

There can be no question, whatever, that the avowed purpose of the United Nations is to build a world government and make each nation merely an integral and subordinate part of this government. The United States must, therefore, surrender its sovereignty as an independent and constitutional government in order to partake of the blessings of this communistic-designed world government. Isn't that what the Communists are working for? Can there be any mistake about it? They want world dominion, and if we ever project ourselves into such an organization the job will be done. In this government a world congress will be set up on the basis of population, and it is axiomatic that with Russia, and her allies, the majority of that world congress will be composed of representatives who are opposed to our form of government. This is incontrovertibly true if Red China is ever permitted a membership in the United Nations.

This, therefore, being the purpose of the United Nations, let us see what means its advocates propose to use in order to build this world government. Most of the proponents are educated people—some of them among the most highly educated people in the country. They are fully aware that the vast majority of the people here love their country and would give their lives, as many have in the past, to preserve it. They know that we have great admiration for our great statesmen of the past, as is demonstrated annually by the celebrations of the birthdays of some of our great men like Washington, Jefferson, and Lincoln. They know how the children of the United States revere the builders of this great Nation.

Knowing this, they are smart enough to know that the place to start to undermine this loyalty to our institutions is among the schoolchildren of the United States. The agency of the United Nations which is to be used to eradicate this loyalty and patriotism for our Government is called UNESCO—spelled out it means the United Nations Educational and Scientific and Cultural Organization.

Teachers of UNESCO—at least a lot of them—have been educated at Columbia University to teach our children that loyalty and patriotic feeling for one nation is wrong and will be an impediment to loyalty and devotion to a world government. They propose to the children that they should devote their loyalty not to the United States, but to this super world government. Washington's Birthday is not to be celebrated, but in place of any reference to Washington the time is to be used to advance the cause of a world government. These proponents feel if they can successfully indoctrinate the youth of the land, that the rest of the battle can be won easily.

The unfolding of the purposes and objectives of the United Nations is now so obvious—that the building of a world government is their goal—that the citizens of America ought to see that in the end the sovereignty of the United States and the Constitution of the United States is destroyed.

If world peace is the purpose of the United Nations, why is it that this organization wishes to busy itself with repealing our laws and our Constitution? Why do they single out the United States as the victim of their destruction? The people have made our laws and our Constitution, and nowhere else on the surface of the globe have any people made greater progress under their own laws or Constitution.

The Fujii case in California is directly in point. There an attempt was made to set aside and repeal the laws of the State of California in regard to Japanese aliens owning property. To the astonishment of Americans the lower court did set aside the California statutes, in this regard, under the authority which the court found in the Charter of the United Nations. Fortunately for this country that decision was reversed, but it was not the fault of the United Nations that this decision was not upheld.

A more striking case was the Steel Seizure case before the Supreme Court of the United States. In that case the question before the Court was: Did the President have the constitutional power to seize the steel industry? The case was argued precisely on that ground.

None of the judges could find any provision in the Constitution of the United States for such a seizure. If the steel industry could be seized, all other forms of business could be seized by a President, including the farming and livestock industry. It therefore appeared that the case must be decided in favor of the steel companies. But much was to happen, and what happened was the most far-reaching decision ever handed down by the Court in its history. The Chief Justice in his opinion admitted that there was no provision in the Constitution authorizing this seizure, but listen. He produced the Charter of the United Nations as his authority and decided in favor of the seizure.

Fortunately for the life of this Nation, 5 Judges of the Court upheld the Constitution, 3 put the Charter of the United Nations superior to the Constitution, and 1 Judge took no part.

Suppose, for example, that if the majority of the Court had sustained the views of the Chief Justice, where would our Constitution have been? It would have been a dead instrument, superseded by the Charter of the United Nations. Some people do not believe that God Almighty has anything to do with what happens to this Government, but I do believe it. In all our history there seems to be a power, which we cannot see, that guides the destiny of this great Government. In this case the majority of the Supreme Court rose to the importance of the occasion and sustained the Constitution of the United States. Doesn't this action and the attempt to abrogate the Constitution in the highest court of the land lead the people of this country to take a new look att his insidious attempt to destroy our Government? We never in our history came as close to the destruction of the Constitution as we did in this case.

I do not believe that the people of the United States are ready and willing to abandon a government that guaranties life, liberty, and the pursuit of happiness and the protection of all citizens for a communistic inspired world government.

The fight is still on, and I want to do my humble part to preserve the greatest Government on earth.

Speaking before a club that bears his name, and in a State that gave this Nation and the world Abraham Lincoln, one of the greatest leaders in liberty and freedom in the entire history of the world, I feel we can well pause to hear his words uttered during the throes of a civil war then ranging on this continent:

"It is for us the living, rather, to be dedicated here to the unfinished work which they who fought here have thus far so nobly advanced. It is rather for us here to be dedicated to the great task remaining before us—that from these honored dead we take in-

creased devotion to that cause for which they gave the last full measure of devotion—that we here highly resolve that these dead shall not have died in vain—that this Nation, under God, shall have a new birth of freedom—and that government of the people, by the people, for the people, shall not perish from the earth."

Land Bank and Soil Conservation

EXTENSION OF REMARKS
OF

HON. BEN F. JENSEN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 14, 1956

Mr. JENSEN. Mr. Speaker, on February 7, 1949, I introduced a soil conservation bill, H. R. 2368, and on March 23, 1949, I received unanimous consent to have printed in the CONGRESSIONAL RECORD of that day, a copy of my bill and an analysis explaining quite in full the provisions of the bill.

I have good reason to believe that my bill, H. R. 2368, was the first soil bank—soil conservation bill to be introduced in Congress. But up until a few months ago, no Secretary of Agriculture, nor Congress, nor any farm organization seemed interested in such a bill. However, I am pleased to say that, some of the top officials of the Department of Agriculture now in power have for some time taken a keen interest in the provisions of H. R. 2368.

Mr. Speaker, had H. R. 2368 been made the law of the land soon after I introduced it, I am very certain the farm problem as it now exists would not have developed. I am gratified to see that, the agriculture bill which was recently adopted by the Senate Agriculture Committee corresponds in many of its provisions with the provisions of H. R. 2368, but apparently in greatly expanded form, which I presume is necessary at this late date in order to hasten its effectiveness.

My purpose in having my bill and analysis of it again printed in the RECORD at this time is, in the hope that the reading of same by Members of the Senate and by the Members of Senate and the House conferees, it will be helpful to them in writing a good farm bill which is so desperately needed now. I had, of course, hoped that the House Committee for Agriculture had seen fit during the past 40 days to hold extensive hearings, so I and many, many others could have been heard on this all important legislation, but such was not the case, hence all a House Member can do is to do as I have here done and then vote on the bill as it comes out of conference to the House.

My bill and analysis follows:

H. R. 2368

A bill to provide for establishment of a soil- and water-conservation policy, the coordination of soil- and water-conservation activities of the Department of Agriculture, and for other purposes

Be it enacted, etc., That this act may be cited as the Soil Conservation Act of 1949.

DECLARATION OF POLICY

SEC. 2. (a) That it is hereby recognized that the lack of a sound national soil- and water-conservation policy as a foundation for other agricultural programs; the wastage of soil and moisture resources on farm, grazing, and woodland of the Nation, resulting from soil erosion; failure to maintain and improve soil fertility; improper lay-out for farm- and ranch-irrigation systems and use and management of irrigation water thereon; inadequate farm drainage; improper use of land; and, development of land unsuited for sustained agricultural use, is a menace to the national welfare.

And that it is hereby declared to be the policy of Congress to provide permanently for using the Nation's land in accordance with its capabilities and the treating of it in accordance with its needs; for the control and prevention of soil erosion; for the maintenance and improvement of soil fertility; for the conservation, proper use, and management of agricultural water resources; and for the sound development and use of agricultural land resources and thereby to preserve natural resources, control floods, prevent impairment of reservoirs, and maintain the navigability of rivers and harbors, and protect public health, and public lands, and the Secretary of Agriculture, from now on, shall coordinate all activities of the Department of Agriculture with relation to soil erosion; soil fertility maintenance and improvement; conservation, use, management, and disposal of farm and ranch waters; development and changes in use of agricultural land; and shall recognize as basic the conservation of soil and water resources in the formulation of other agricultural programs, and in order to effectuate this policy is hereby authorized, from time to time—

(1) to conduct surveys, investigations, and research, in cooperation with the State experiment stations, relating to the character of soil erosion, loss of soil fertility and productive capacity, water wastage, land misuse, and the preventive measures needed, to publish the results of any such surveys, investigations, or research, and to disseminate information concerning such methods;

(2) to provide technical assistance to soil-conservation districts and other conservation districts deemed by the Secretary to be qualified in the preparation, carrying out, and maintenance of locally developed and adopted programs for soil and water conservation, preservation and improvement of soil fertility and sound land use on farms, ranches, and other land in such districts; for rehabilitation or construction of needed individual and group farm and ranch drainage and irrigation systems and in conserving, managing, and disposing of irrigation water in such districts; and for necessary guidance of a widespread application program of recurring conservation practices requiring little or no on site (on farm or ranch) technical assistance for those farmers and ranchmen not yet reached in the schedule for assistance in adopting a basic conservation farm or ranch plan or not desiring to participate in the comprehensive program in such districts;

(3) to provide technical guidance, supplementing the efforts of the State extension services, and the local, county, and State committees established pursuant to section 8 (b) of the Soil Conservation and Domestic Allotment Act, as amended, to landowners and operators in those agricultural areas not included in soil conservation or other districts in the widespread application of recurring conservation practices requiring little or no on site technical assistance. In addition, technical assistance may be provided in these areas in the preparation of a limited number of basic conservation plans on farms or ranches for demonstration purposes; and

(4) to complete, as rapidly as possible, a conservation survey of the Nation's farm and ranch lands; to analyze, publish, and distribute the inventory thus secured; to provide copies of land-use capability maps to landowners and operators for their own units of land and to assist them in interpreting and utilizing such maps; to survey and classify by capabilities for agricultural use the lands in existing, proposed, or potential agricultural development projects or the agricultural parts of multiple-purpose projects; to determine the suitability of such lands for sustained agricultural use; and to provide technical and other aids necessary to, or to clear, level, and otherwise develop project, woodland, cut-over, and other lands needed and suitable for agricultural use.

ASSISTANCE

SEC. 3. (a) In furtherance of the policy expressed in section 2 of this act, the Secretary is also authorized to cooperate or enter into agreements with, or to furnish financial or other assistance to, any agency, governmental or otherwise, or any person, subject to such conditions as he may deem appropriate. Such assistance may include, but is not limited to, financial payments, conservation materials, planting stock and seed, use of equipment, or other similar materials and aids: *Provided*, That in furnishing financial or other assistance authorized under this act to any person with respect to land situated within a soil-conservation or other conservation district which meets the standards established by the Secretary of Agriculture, such assistance shall be made available only through, or in cooperation with, such districts.

(b) In determining the nature and extent of the assistance to be furnished, the Secretary of Agriculture shall take into consideration—

(1) the recommendations of the governing bodies of soil-conservation or other conservation districts concerning the need for, and the capabilities of such districts to use effectively, the funds, materials, or equipment;

(2) the urgency and extent of the need for such funds, materials, or equipment to prevent irreparable damage to agricultural land and water resources; and

(3) the availability of technical assistance to assure the most effective use of such funds, materials, or equipment.

PAYMENTS

SEC. 4. (a) Any financial payment authorized to be made to any person under the provisions of this act shall be a class A, B, or C payment and shall be made on such terms and conditions as the Secretary of Agriculture may prescribe except—

(1) class A payments shall be made for conversion of land that has been for the previous two or more years in grain, row, and other soil-depleting crops to non-soil-depleting uses such as meadow, hay, pasture, and woodland, in order to encourage livestock and forest production and prevent permanent loss to the productive capacity of the land. The first payment shall not exceed 50 percent of the cost of converting the land to grass or trees, and payments may be made not more than five times thereafter at a rate of one-fifth of the original cost as determined by the Secretary of Agriculture on a generally fair and reasonable basis for continuing the land in nondepleting use. After June 30, 1952, class A payments may be made only when such conversion of land is initiated and carried out as a part of a complete farm or ranch conservation plan, and if such conversion of land is initiated and carried out on the basis of a cooperative agreement between a soil-conservation or other conservation district and the landowner or operator;

(2) class B payments shall be made for practices and improvements of a permanent or semipermanent nature, such as terrace systems, drainage and irrigation installations, farm ponds, range water-diversion systems, and for other practices and improvements as may be required to prevent permanent loss to the productive capacity of the land. Such a payment shall not exceed 60 percent of the cost of such practice or improvement, as determined by the Secretary of Agriculture on a generally fair and rea-

sonable basis, and shall be made only once. After June 30, 1952, class B payments may be made only when such practice or improvement is carried out as a part of a complete farm or ranch conservation plan, and if such practice or improvement is carried out on the basis of a cooperative agreement between a soil-conservation or other conservation district and the landowner or operator;

(3) class C payments shall be made for recurring practices that will retard depletion of soil fertility, such as liming, fertilizing, grass seeding, crop rotation, cover cropping, mulching, and prevention of stubble burning. Such payments may be made annually and shall not exceed 50 percent of the cost of performing such practice, as determined by the Secretary of Agriculture, on a generally fair and reasonable basis.

(b) Classes A, B, and C payments shall be classified according to such areas and practices as the Secretary of Agriculture may determine and announce for each fiscal year.

(c) Classes A and B payments may be made to a landowner or operator only when the governing body of the conservation district has certified to the Secretary of Agriculture through the local, county, and State committees established pursuant to section 8 (b) of the Soil Conservation and Domestic Allotment Act, as amended, in accordance with certification standards prescribed by the Secretary of Agriculture; that the work has been performed in accordance with the provisions of this section, except that prior to June 30, 1952, classes A and B payments may also be made to a landowner or operator with respect to land not within the boundaries of a soil-conservation or other conservation district under such terms and conditions as the Secretary of Agriculture may prescribe.

(d) Class C payments may be made to a landowner or operator with respect to land within or without the boundaries of a soil-conservation or other conservation district when the local committee, established pursuant to section 8 (b) of the Soil Conservation and Domestic Allotment Act, as amended, has certified, as specified in subsection (c), that the work has been performed in accordance with subsections (a) and (b) of this section.

(e) In making classes A, B, and C payments the Secretary of Agriculture shall, insofar as practicable, utilize as his agents the local, county, and State committees established pursuant to section 8 (b) of the Soil Conservation and Domestic Allotment Act, as amended.

SEC. 5. The members of conservation district governing bodies shall not receive Federal compensation for services rendered or reimbursement for expenses incurred under the terms of this act. This provision regarding Federal compensation and expenses, however, does not preclude their being compensated for their services, travel, and other expenses by the State, county, or district.

SEC. 6. (a) In furtherance of the policy expressed in section 2 of this act, the Secretary of Agriculture is also authorized—

(1) to provide for the employment of, and with State extension services jointly to select, necessary personnel to assist locally with conservation education activities primarily (a) in the areas critically in need of conservation treatment not now in districts and (b) in supplementing the county extension staffs in soil-conservation and other districts in preparing the way for conservation, farm planning, and application action on the land;

(2) to cooperate or enter into agreements with or to furnish financial or other aid to, any agency, governmental or otherwise, or any person subject to such conditions as he may deem necessary, for the purposes of this act; and

(3) to acquire submarginal agricultural lands, or rights or interests therein, by purchase, gift, or otherwise, and to sell federally owned lands suitable for agricultural use to neighboring landowners needing additional acreage to complete a sound farm unit, or in family-sized units to veterans and others desiring to engage in farming or ranching, using procedures consistent with title I of the Bankhead-Jones Farm Tenant Act, approved July 22, 1937, whenever necessary for the purposes of this act.

SEC. 7. The acts authorized in sections 2, 3, and 4 may be performed—

(1) on lands owned or controlled by the United States or any of its agencies, with the cooperation of the agency having jurisdiction thereof; and

(2) on any other lands, upon obtaining proper consent or the necessary rights or interests in such lands.

SEC. 8. As a condition to the extending of any benefits under this act to any lands not owned or controlled by the United States or any of its agencies, the Secretary of Agriculture may, insofar as he may deem necessary for the purposes of this act, require—

(1) agreements or covenants as to the use of such lands; and

(2) contributions in money, services, materials, or otherwise, to any operations conferring such benefits.

SEC. 9. For the purposes of this act, the Secretary of Agriculture may—

(1) secure the cooperation of any governmental agency;

(2) subject to the provisions of the civil-service laws and the Classification Act of 1923, as amended, appoint and fix the compensation of such officers and employees as he may deem necessary; and any persons with technical or practical knowledge may be employed and compensated under this act on a basis to be determined by the Civil Service Commission; and

(3) make expenditures for personal services and rent in the District of Columbia and elsewhere, for the purchase of lawbooks and books of reference, for printing and binding, for the purchase, operation, and maintenance of passenger-carrying vehicles, and perform such acts, and prescribe such regulations, as he may deem proper to carry out the provisions of this act.

SEC. 10. In recognition of (1) the necessity for technical assistance in determining and applying needed conservation practices and measures, and in assuring the effective use of such grants-in-aid as may be necessary to supplement the contributions of landowners and operators in establishing such conservation practices and measures; (2) the impossibility of practically separating the responsibility for the conservation of water or the sound use of land from the responsibility for soil conservation and the prevention of soil erosion; (3) the desirability of having all technical action programs involving conservation, irrigation, drainage, water development, and flood control on farmlands, as well as the development of new agricultural lands, technically directed by one agency; and (4) the desirability of taking advantage of existing relationships and working arrangements already developed with conservation districts organized under the laws of the respective States, the Secretary of Agriculture shall utilize the agency known as the Soil Conservation Service in carrying out the powers conferred on him by sections 2, 3, and 6 of this act and the local, county, and State committees established pursuant to section 8 (b) of the Soil Conservation and Domestic Allotment Act, as amended, in carrying out the powers conferred on him by section 4 of this act, and in order that there may be proper coordination of the activities including grants-in-aid involving soil and water conservation, sound land development and use, drainage, irrigation, and other physical adjustments of farm and ranch lands, the Secretary of Agriculture is authorized and directed to transfer to the Soil Conservation Service such functions, funds, personnel, and property of other agencies in the Department of Agriculture as he may from time to time determine necessary to avoid duplication, achieve economy, and carry out the spirit of this act.

SEC. 11. There are hereby authorized to be appropriated for the purposes of this act such sums as Congress may from time to time determine to be necessary. And the Secretary is directed in presenting his first budget to Congress after the passage of this act to recommend a preliminary conservation timetable, based on currently available information, as a guide to Congress in making appropriations. On completion and analysis of the conservation survey of the Nation's land, the Secretary shall revise and improve the conservation timetable and present it to Congress for use in determining annual appropriate needs.

REMARKS OF HON. BEN F. JENSEN, OF IOWA, WEDNESDAY, MARCH 23, 1949

Mr. Speaker, on February 7, 1949, I introduced in the House of Representatives a soil conservation bill, H. R. 2368.

ANALYSIS OF H. R. 2368

This legislation provides a national land policy, and the legislative framework for the effective administration of a United States Department of Agriculture soil conservation program that will assist our farmers and ranchers to conserve and make proper use of their soil and water resources—and will get the job done in the shortest possible time.

In addition, there are provisions which will help to correct the problem of surplus in certain crops. Land-use-conversion payments will encourage farmers to use some of the land contributing to such surplus for the production of crops for which there is greater demand, such as grass for meat and dairy livestock and timber. When the proper and necessary changes in land use are made I am sure there will be no need for acreage allotments. In bringing about a balance in agriculture production the Government will be better enabled to support farm prices permanently at a full 90 percent of parity.

By using about $100 million annually of the funds now being used for soil conservation payments, for land-use-conversion payments, as provided in my bill, 24 million acres of land could be converted from soil-depleting crops to soil-conserving crops in the next 6 years. This would bring our food, feed, grain, fiber, and meat production into better balance, and greatly assist in flood prevention, and soil, woodland, and water conservation.

Conservation payments and grants-in-aid are provided in such manner that the taxpayer can be assured that the Nation will receive a dollar's worth of benefits in true, effective soil conservation for every dollar spent. Farmers receive more responsibility in administering their own national soil and water-conservation program. No new agencies are established. The Soil Conservation Service, Extension Service, and Production and Marketing Administration are each given more responsibility and without duplication.

If H. R. 2368 becomes the law of the land it will begin to bring "solicide" to an end, the crime too often committed against the priceless topsoil of Mother Earth. It will insure a more stable income for our farmers, which in turn will insure an adequate and stable income for workers, business, and industry. It will be an effective program to help reduce price-depressing surpluses; increase the speed and quality of soil-conservation work in the Nation, while strengthening the farmer-managed institutions engaged in such work; keep more rainfall on the land where it falls, and thus lower flood crests and reduce reservoir sedimentation; give better protection of our rich agricultural uplands and bottom lands, human lives, live-

stock, and buildings; save the taxpayers'—your—money through a more efficient and effective farmer-managed water, woodland, and soil-conservation program; provide the legislative and administrative framework to put our agricultural house in order—for any national or international emergency.

National land policy

A productive and prosperous agriculture is a must for the Nation's prosperity. The wealth of our Nation is wholly dependent upon the productivity of our soil. As the topsoil is destroyed or weakened through erosion or overuse, the productive capacity of that land is lowered. Food costs rise and a lowered standard of living results. This legislation provides that we use our agricultural land within its capability for safe production, and that we treat each acre in accordance with its needs.

National conservation survey

Early completion of a nationwide survey of our farm, ranch, and woodlands to determine the productive capacity and conservation needs of each acre is provided. A land capability map shall then be made available to each landowner, showing how each acre should be used according to its capabilities for safe production.

Conservation timetable

A conservation timetable shall be developed as a guide to the Nation in determining the speed with which our farm, ranch, and woodlands should be treated to prevent further extensive damage.

Sound farm units

H. R. 2368 will assist landowners in acquiring acreage to complete a profitable farm, and thus reduce much land overuse resulting from uneconomic-size units.

Technical assistance

Technical help for effecting proper land use and conservation treatment shall be made available to all farmers. Inside conservation districts, technical help shall include on-site assistance to plan and apply a properly coordinated conservation program. Until a district is organized, such help shall be limited to helping farmers carry out the more simple but effective conservation practices.

Conservation payments

To encourage proper use and conservation of our agricultural resources, land use conversion, soil conserving, and soil building payments and grants-in-aid shall be made available.

Class A: To avoid surpluses resulting from overuse of the land, payments shall be made to assist farmers in converting the use of land that has been for the previous 2 or more years in grain, row, and other soil-depleting crops. This will encourage a balanced production of food, feed, grains, and fiber.

Class B: Payments shall be made to help farmers defray the cost of applying certain permanent or semipermanent soil and water conservation measures. Generally, such payment shall be made only once.

Class C: As an added incentive to encourage farmers to hold their topsoil through proper land use, and other soil and water conservation practices, class C payments may also be made annually for recurring practices that will retard depletion of soil fertility.

Local conservation districts and farmer committees

This legislation recognizes that farmers themselves are best qualified to administer their own national conservation program on a local and community level. Farmer-voted conservation districts organized under the laws of respective States and directed by their respective boards of soil-conservation commissioners and supervisors, and county agricultural conservation association, and State production and marketing administration committees shall be the principal farmer-managed organizations through which the Government shall assist farmers with their soil and water conservation problems.

Agencies to be used

Primarily, three governmental agencies shall carry out the provisions of this act. Each is well schooled in the art of doing its part in soil and water conservation.

Soil conservation service

Because it is impractical to separate the technical, conservation payment, and grants-in-aid assistance in soil conservation, erosion control, drainage, irrigation, water-conservation development, and flood prevention on farm and ranch land, the Soil Conservation Service shall be responsible for all such provisions of this act, except for the specific responsibilities of County Agricultural Conservation Association and State Production Marketing Administration committees.

Extension service

This legislation provides for the needed personnel for county extension staffs for educational work in conservation districts and in areas critically in need of conservation treatment not now in conservation districts.

Production and marketing administration

The County Agricultural Conservation Association and State Production and Marketing Administration committees shall be the agents of the Secretary of Agriculture in making all class A, B, and C conservation payments.

Federal lands

With cooperation of the agency having jurisdiction, all of the conservation survey, timetable, and technical assistance provisions of this act may be made available for the conservation of federally controlled lands.

We must save the soil by which we live. Rich productive soil will insure the survival of America.

Fluoridation of Drinking Water

EXTENSION OF REMARKS

OF

HON. ROY W. WIER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 14, 1956

Mr. WIER. Mr. Speaker, under permission to extend my remarks in the CONGRESSIONAL RECORD, I include a copy of a letter addressed to the Honorable Robert F. Wagner, mayor of the city of New York, N. Y., by George L. Waldbott, M. D., 2930 West Grand Boulevard, Detroit, Mich., commenting on the New York Health Commissioner's report on fluoridation of drinking water.

The letter follows:

DETROIT, MICH., *January 23, 1956.*

The Honorable ROBERT F. WAGNER,
Mayor of the City of New York,
City Hall, New York, N. Y.

DEAR MR. WAGNER: Dr. B. J. Nesin has asked me to comment on Dr. Leona Baumgartner's Report to the Mayor on Fluoridation for New York City.

As a physician I shall limit my remarks to the medical aspect of this project, namely, to the question of its safety.

1. Why does this report fail to answer the points presented by Dr. F. B. Exner (1), Dr. C. G. Dobbs (2), and myself (3) on the inadequacy of the four key studies which purport to prove the safety of fluoridation, namely, the Bartlett-Cameron Study (4), the Paired Mortality Statistics (5), the McClure Studies (6), and the Kingston-Newburgh Study (7)? Why does the health commissioner thus evade the real issue and merely accept and enlarge upon the conclusions of these highly controversial statistics?

2. Why does the report exclusively quote the highly biased public health literature which is favorable to fluoridation, whereas many important publications pertaining to harm from fluorides appear to be deliberately ignored?

3. Why does the author base some of her conclusions on opinions such as those expressed in the two exhibits and on endorsements by medical and lay organizations which have no scientific value?

The following are specific examples in elaboration of the above points:

There are at least twelve well-substantiated reports on fluorine poisoning from drinking water at concentrations from 1 to 12 ppm by competent clinicians in the literature. Such recent studies as those reported by Walters (8), Siddiqui (9), Frada and Mentesana (10) and Rao (11) present exhaustive details on chronic fluorine poisoning from drinking water. Since the daily dose of fluorine intake in food and water is considered safe by the Public Health Service is four glasses per day and many people drink many times that amount, it is inconceivable how such important data could have been omitted from this report.

Well-substantiated data on death from chronic fluorine poisoning in animals and in humans as a result of industrial exposure has shown that this disease is a chronic wasting-away process, cachexia. (The French literature calls this disease fluorose cachectique.) The cause of death, therefore, in cases who die from fluoridated drinking water is extremely difficult to diagnose. Dr. Baumgartner casually dismiss the case of the Texas soldier who died from drinking fluoridated water at near the so-called safe concentration [1] and completely ignores a similar fatal case from Argentina. In the latter, the report was made for the expressed purpose of alerting the Argentine government to this health hazard. Yet, Dr. Baumgartner and her consultants attempt to dismiss these cases as insignificant or as caused by something else.

Instead of quoting the two publications (12, 13) in which I reported my first cases of poisoning from drinking artificially fluoridated water at 1 ppm, Dr. Baumgartner refers to another article of mine not pertaining to the medical aspect of fluoridation and, therefore, not even offered to a medical journal for publication.

In a new article which I am now preparing on the basis of 55 cases, the proof of fluorine poisoning from what is called a safe concentration is thoroughly established by careful evaluation of a clear-cut syndrome not known in any other disease, which is identical with that observed by other authors from poisoning at higher concentrations as well as poisoning in animals. It involves the same organs that are affected in acute fluorine poisoning. This proof does not rest, as she states, on the fact that the individual "has a stomach upset," or that "the condition disappeared when the individual visited a nonfluoridated area."

When Dr. Baumgartner states that "the rules of scientific investigation require that it be established that the condition could have arisen only because of the consumption of fluoridated water and that the relief was obtained by changing the water source alone"; this is precisely one of the methods,

---

[1] Linsman, J. F., and McMurray, C. F.: Fluoride Osteosclerosis from Drinking Water. Radiology 40: 474–84, 1943. (The misprint of 12 ppm was corrected to 1.2 ppm in Radiology 41: 497, 1943.)

among others, which I have employed to prove that this is fluorine poisoning.

Increasing numbers of similar reports are now coming to light. During my visit to the naturally fluoridated town of Lubbock, Tex. (4.4 ppm), October 25, 1955, where I addressed the staff of a hospital, a case of advanced fluorine poisoning was presented by one of the staff physicians. The record and X-rays of an advanced incurable case were shown to me at a second hospital by another physician (names on request) which clearly fitted the description of my own cases.

Two highly significant publications have appeared recently. One deals with further elaboration of the Newburgh data ([2] 59–61) which is based on the premise that the early manifestations of fluorine poisoning are detectable in the urine by examining for albumin, red cells, and casts. That this premise is fallacious is clearly established by the enclosed letter to the editor of the journal where the article was published.

The other publication (14) pertains to the Bartlett-Cameron study in which damage to health was detected in a large percentage of the population (Bartlett with 8 parts per million, Cameron with 0.4 part per million of fluorides naturally). In this new report the claim is made that the 21 individuals who showed bone changes had no other symptoms of poisoning. This highly significant statement is not supported except by fragmentary data on only three cases. Even in these three cases, there is evidence to the contrary. For instance one of them had hearing defects which have recently been reemphasized as characteristic features of chronic fluorine poisoning from drinking fluoridated water by Siddiqui in the British Medical Journal, December 10, 1955. No other data whatsoever is presented on the other 20 cases.

The most striking example of how Dr. Baumgartner has been misled by those whom she consulted for information, is her reference to the "theoretical claims of interference with many enzymes," page 28. All scientists, as well as textbooks on the action of fluorides agree that such interference with enzymes is one of the principal characteristics of fluorine action. Voluminous data on this point is presented by the monumental work by the Danish scientists, Hans Borei (15) and by many other authors, none of whom are quoted in her report.

On the other hand, for substantiation of her own statements, Dr. Baumgartner quotes one author whose writings cannot be considered scientific ([2] 63) and another ([2] 62) who fails to document his views in his article. By thus quoting unsubstantiated data, she makes it appear to the uninformed that the ill effect of fluorides on enzymes is open to question and that those who report it are incompetent.

May I comment on two points outside of the realm of scientific evidence in the report? The letter by Dr. G. J. Cox, in the appendix, regarding the personal experience of his relatives and friends is of no more scientific value than a testimonial for a patent medicine.

The other point is Dr. Baumgartner's claim (p. 29) that citizens have complained of illness from fluorine before fluorine was actually added to the water supply. A similar story is propagated from many cities where fluoridation has been installed. On the other hand, health officials, when asked, nearly always state that there have never been complaints of harm registered with the health department. In view of this apparent contradiction, it would, therefore, be desirable to obtain documentation for this statement.

May I be permitted to make the following suggestions to your committee:

1. The establishment of a neutral committee, composed of competent physicians who have no connection with either the PHS or with institutions dependent on PHS grants to study:

(a) The photostatic copies of the 21 case records of the Bartlett-Cameron Report in order to discover whether other symptoms were present, and if so, how these symptoms and laboratory data correlate with those observed in my cases, the two cases encountered in Lubbock, Tex., and the many others reported on fluorine poisoning in the literature.

(b) The four key articles quoted by Dr. Baumgartner which purport to prove the safety of fluoridation with their critiques submitted by Dr. Exner, Dr. Dobbs, and myself.

Yours sincerely,

GEORGE L. WALDBOTT, M. D.

The Nugget of Fact—Trevor Gardner's Resignation Sounds Warning Soviet Russia Leads in Life-and-Death ICBM Race

EXTENSION OF REMARKS

OF

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 14, 1956

Mr. PRICE. Mr. Speaker, I am personally disappointed to learn that Mr. Trevor Gardner, the able Assistant Secretary of the Air Force for Research and Development, has resigned that important position. I am sure that he did so only after wrestling with his conscience. Mr. Gardner had made a great contribution to the American defense effort. His abilities will be sorely missed at a time when that effort must be intensified. Survival is at stake, and whatever the right or wrong of Mr. Gardner's action in resigning, everyone must admit that Mr. Gardner was fighting for survival of the United States.

As so often happens, Joseph and Stewart Alsop tell the story more clearly and more understandably than any news announcement. The reasons for his resignation are, they say, like the layers of an onion. When you peel down to the heart, you find a nugget of fact. In this case, the nugget of fact is that the Soviet Union is unquestionably ahead of the United States in the life-and-death missile race in the area where it really matters. That area is the intercontinental ballistic missile, the ICBM, to the development of which Mr. Gardner feels that every available man and dollar ought now to be devoted.

Mr. Speaker, with the unanimous consent of my colleagues, I wish to extend my remarks and insert in the CONGRESSIONAL RECORD The Gardner Story, as told in the New York Herald Tribune of February 10. Whether we accept the whole of the story as presented by the Messrs. Alsop or not, we cannot deny that the nugget of fact involves the very survival of the United States.

The article is as follows:

THE GARDNER STORY

The reasons for the resignation of Assistant Secretary of the Air Force Trevor Gardner are like the layers of an onion. The outside layer involves matters of personality and organization, as well as dusty old Pentagon rivalries. But when you peel down to the heart of the onion, you find a nugget of fact which involves the very survival of the United States.

The real turning point in the Gardner story came several months ago, when almost certain knowledge became available to the American Government that the Soviets had produced missiles with ranges up to 1,500 miles. Gardner was himself responsible for the successful American effort to find out where the Soviets really stand in the missile race and this grim knowledge, in turn, led rather directly to his resignation.

Before the Soviet success was known, the American long-range missile program had been very much of a one-man show. When Gardner came on the scene in the spring of 1953, as Air Force research and development chief, the intercontinental missile, or ICBM, program had been a limping, low-priority affair.

It was wholly in the research stage, and Secretary of Defense Charles Wilson, who then tended to regard all research as wasteful nonsense, was getting ready to cut it out entirely. But Gardner, a man of strong views, protested loudly. Wilson at length agreed to submit the whole matter to a high-level committee of scientists, headed by Dr. John Von Neumann. The Von Neumann Committee in turn recommended not only against cancellation of the project, but in favor of giving it the highest priority.

Wilson thereupon put Gardner in charge of the program. In this capacity the strong-willed Gardner made numerous enemies in the Pentagon and the aircraft industry. He also alienated the implacable Lewis Strauss, chairman of the Atomic Energy Commission when he publicly supported Dr. Robert Oppenheimer for his contributions to national security. Gardner's large array of enemies

undoubtedly explains in part the charge of conflict of interest which has been brought against him.

While making his collection of enemies Gardner spurred important breakthroughs in the long-range missile field. Then came the knowledge of the Soviet success in producing the intermediate 1,500-mile missile, known as the IRBM. This grim evidence that the Soviets were far ahead of this country in the missile field simply could not be disregarded.

The Pentagon reaction took two forms. First, a whole cat's cradle of missile committees was formed. There is a top-level coordinating committee headed by Under Secretary of Defense Reuben Robertson, another committee under Secretary of the Air Force Donald Quarles, an Army-Navy coordinating committee, and so on.

Having run his own show, Gardner now had to report to this array of committees, as did others working in the long-range missile field.

The result was the maximum of organizational confusion.

At the same time, Wilson approved a decision to undertake a crash program to produce an IRBM, and thus match the Soviet success.

Because the Army had produced the much-publicized Redstone missile—actually little more than an improved version of the German V-2—the Army was assigned the IRBM project. The Air Force automatically resisted the Army's claim. So did Gardner, but not on the usual strictly bureaucratic grounds.

Gardner argued that the IRBM, while strategically of enormous value to the Soviet Union, would have far less value to the United States. He conceded that it was probably a mistake not to have tried for the intermediate missile in the first place. But now, he argued, the only way to trump the Kremlin's ace was to be first in the field with the true ultimate weapon, the 5,000-mile intercontinental missile A crash program for the IRBM would only cut into the limited technical manpower and resources available for the ICBM, to which every available man and dollar ought now to be devoted.

But Gardner lost this fight, and partly as a result, his recommended budget for long-range missile and other Air Force research and development work was out on the order of $200 million. At the same time, when Wilson at length decided to appoint a czar to make some sense out of the organizational cat's cradle, Gardner was pased over as too controversial

Altogether, the man who almost single-handed saved the American long-range missile program from total extinction may be said to have been poorly rewarded. But such personal considerations aside, it is worth pondering the somber nugget of fact which is found at the heart of the Gardner story—the fact that the Soviet Union is unquestionably ahead of the United States in the life-and-death missile race, in the area where it really matters.

A Christmas Gift From Ike

EXTENSION OF REMARKS

OF

HON. BOB WILSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 14, 1956

Mr. WILSON of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Chicago American of December 21, 1955:

A CHRISTMAS GIFT FROM IKE

One of the nicest things President Eisenhower could have given his fellow Americans for Christmas, in my opinion, came out of his confab on foreign policy.

The President boldly stood up to economy-minded leaders in both parties and demanded more money for United States propaganda abroad. As he put it:

"Nothing is more dangerous to our cause than to expect America's message to be heard if we don't bother to tell it."

That sounds elementary. Every shopkeeper recognizes the maxim when he prints placards. Every big business has been built by advertising. But there still are a surprising number of people who can't get it through their heads.

The President's program is reported to call for a budget of $135 million for the United States Information Agency for the year starting next July 1. That will be $50 million more than the budget for this year.

Will that ever sound good to the Americans on the firing line, charged with the responsibility of getting our story over to foreign people.

This is a subject upon which I can speak with the authority of first-hand acquaintance. I had the job, in one part of the world, for some years. It was enough to make you tear your hair out when you saw the Russians' bigger and better programs while your own budget was being cut.

Here's the way it would go:

Just about Christmas time you'd be asked to survey your field of operations and see what could be cut. That would mean radio, newspaper, magazines, posters, pamphlets, photograph and mat publicity service to the local press, information centers.

You'd look the field over, check the figures on audience response to each medium, see what ought to be added to and what cut back for best results. Then word would come through from the Department of State. The Bureau of the Budget predicted a 25 percent overall cut.

That might mean closing up two of eight information centers, or cutting by one-fourth the amount of photos, mats, and publicity releases which were being printed—virtually in toto—by the countrywide press. You hate to do that. When an editor is willing to throw his columns open to your thinly disguised propaganda, you hate to say "No."

Or it might mean issuing 20 pamphlets this year instead of 25, in editions of 10,000 each instead of 12,000, when free trade unions had already shown themselves willing to mail out all you could furnish.

Or cutting down on the number of posters prepared. Or on the press run of magazines for which you had developed a reading public.

What is this "propaganda"?

Two items which have top priority for the coming period are typical. One is the President's disarmament proposal of "open skies" and an exchange of military blueprints. The other is the atoms-for-peace project.

We say they are typical. That's the kind of thing the United States Information Agency abroad was set up to push. To tell people about, in the hope of countering the constantly reiterated Red talk that we want war.

So a handful of harried "information specialists" abroad, told they'll have to get along on less money, draw up their plans for the coming year. They'll close information center libraries, cut down on the amount of publicity sent out, cut down on pamphlets, on posters, on radio "spots."

What happens? The off-the-street library space on which you held the lease is not vacant 2 days after you move out. The Russians move in.

The space which local editors had been filling with your pictures of the great American auto industry is not left empty. It's filled with pictures of the hydroelectric project at Magnetogorsk or on the Volga.

And so on down the line. The Russians are no dummies. They figure it's cheaper to win a cold war than a hot one.

Now, virtually on Christmas Eve, President Eisenhower has stood up boldly and told the fellows—ex-newspapermen, most of them—in lonely outposts at Reykjavik and Seoul and Bangkok:

"Hold the line, fellows. We at home know what you're doing for us. And we'll see that you get the paper and ink to tell our story to the world."

Why I Am Glad To Be an American

EXTENSION OF REMARKS

OF

HON. OREN HARRIS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 14, 1956

Mr. HARRIS. Mr. Speaker, I am pleased to direct the attention of our colleagues to the following essay written by Miss Julia Ann O'Daniel, of Waldo, Ark. Miss O'Daniel's essay on Why I Am Glad To Be an American was chosen as the best of hundreds entered. She was presented a $1,000 Lion Oil college scholarship, after winning first place in a Lion Oil scholarship fund essay contest. Miss O'Daniel is now a senior in the Waldo, Ark., high school.

Under leave granted to extend my remarks, I include the essay:

WHY I'M GLAD TO BE AN AMERICAN

(By Julia Ann O'Daniel)

Why am I glad? When I see the corn, cattle, and other produce that American farmers proudly exhibit at the county fair; the pride in the eyes of parents at their child's first step; the earnest faces of America's youth as they learn at school; the excitement and loyalty of thousands of football fans as they support their team, win or lose; the ingenuity of all Americans, which has resulted in our having more automobiles, television sets, refrigerators, dishwashers, washing machines, telephones, and spare time than any other nation; the way Americans have used this spare time by organizing the Boy Scouts, the Girl Scouts, the YMCA, the YWCA, the Community Chest, the March of Dimes, and countless other organizations founded to aid humanity; the leadership the United States has assumed in the movement for world peace; the beautiful scenery in every part of this land; the gifts that America has given to the world in every field: science, religion, literature, music, politics; the Americans who have been world leaders in peace and war; the willingness of Americans to go out of their way to help others.

I am glad I'm an American.

When I hear the singing of Swing Low, Sweet Chariot and other stirring American Negro spirituals; the voices of the people at a public gathering as they enthusiastically sing The Star-Spangled Banner; the American symphony orchestra and the New Orleans dixieland band as they give their music to the world; the sound of people's happy voices as they go about their work;

the music made by machines as they turn out products in factories all over the land.

I am glad I'm an American.

When I feel the indefinable spirit which unites all men into one brotherhood; the electric excitement that comes only on election day; the religious zeal of Americans all over the country; the trust and faith Americans have in themselves and others; the moving spirit of a revival meeting; the thought of millions of Americans who are with me at church on Sunday morning.

I am glad I'm an American.

When I think of the thousands of men who shed their blood at Bunker Hill, Gettysburg, the Alamo, and on the battlefields of Europe, the South Pacific, and Korea, that we might be free; the brave pioneers who paved the way for America to reach from sea to sea; the thousands of people whose labor goes into making everything I use.

I am glad I'm an American.

Oil and Wildlife Don't Mix

EXTENSION OF REMARKS

OF

HON. LEE METCALF

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 2, 1956

Mr. METCALF. Mr. Speaker, on December 28, 1955, the New York Times carried the following editorial:

OIL AND WILDLIFE DON'T MIX

The Department of the Interior, which in addition to its other duties is supposed to protect the natural resources of the United States, is in hot water with conservationists once again. Obviously stung by the repeated charge of giveaway, Secretary McKay has in recent months been busily defending his record in this regard and citing an impressive array of statistics to prove his department's interest in conservation.

It will, however, take conservationists a long time to forget the Interior Department's backing of the proposal to erect the giant Echo Park power dam in the middle of Dinosaur National Monument, a proposal now happily defeated. It may take even longer to quiet the fears now arising from the Interior Department's new regulations governing issuance of oil and gas leases in Federal wildlife refuges. The Department and some private experts in the field of conservation take diametrically opposite views as to the meaning of the new rules. But on one point there can be little argument: After a period of 2 years during which no such leases were issued the way is now opened for private exploration and exploitation in the refuges.

One such lease has already been granted on terms that the Wildlife Management Institute of Washington has described as ridiculously low in respect to royalty rates, and on a noncompetitive basis at that. Without going into the merits of this particular lease, it is up to the Department to reconcile the decision to issue new leases with its statement early this month that the regulations are designed to strengthen protection of wildlife refuges for wildlife purposes. The men and machinery involved in exploration for oil and gas normally constitute a disturbing factor in any wild area.

What is particularly puzzling is the Interior Department's decision to open the refuges to such operations, perhaps more widely than in many years, in the absence of any shortage or national-defense consideration. Why should the Federal refuges as a whole be made available to oil and gas companies now? Why should the 2-year-old stop order, commendably issued by Secretary McKay himself, be torn up and the process of invasion of national wildlife refuges be begun with vigor once more?

It is true that the new orders give permanent protection to certain of the refuges; but the bulk of the acreage under Federal control now seems to be laid wide open for extraneous purposes, even though the regulations are rigidly enforced. The Fish and Wildlife Service, which under the new rules is in charge of the leases, will be under constant pressure to open up its refuges, with possibly disastrous results for wildlife conservation and with little if any visible compensating advantage from the standpoint of the national interest.

In the letters to the Times section of the January 29, 1956, issue, Mr. Wesley A. D'Ewart, former Representative from Montana's Second District and now Assistant Secretary of the Interior for Public Land Management, replied as follows:

REGULATING WILDLIFE LAND—BENEFITS TO FEDERAL REFUGES UNDER REVISED ORDERS EXPLAINED

(EDITOR'S NOTE.—The writer of the following letter is Assistant Secretary for Public Land Management in the United States Department of the Interior.)

To the EDITOR OF THE NEW YORK TIMES:

Your editorial of December 28, "Oil and Wildlife Don't Mix," pertained to the Department of Interior's recently revised regulations governing oil and gas leases on the national wildlife refuges. I do not believe the editorial reflects the true meaning of the new regulations promulgated by Secretary of the Interior Douglas McKay.

The new regulations have been widely misinterpreted. The most serious of these misinterpretations have been: that the new regulations permit oil and gas leasing on national wildlife refuges for the first time; that the regulations are without legal authority except in event of a national emergency; that the regulations do not provide adequate safeguards for the wildlife values of the refuges; that the regulations are against the intent of Congress; and that the leases issued under the new regulations do not return to the Federal Government the full amount due in the way of royalties and rental fees.

Allow me to clarify this misunderstanding point by point.

AUTHORITY FOR LEASING

Lands within national wildlife refuges have been subject to oil and gas leasing since the passage of the original Mineral Leasing Act of February 25, 1920. The authority for such leasing was reaffirmed by the act of August 8, 1946, which amended the Mineral Leasing Act of 1920. In 1947 Department of Interior regulations were issued which defined conditions under which the leasing would be permitted. A number of oil and gas leases were issued under the authority of these clearly defined laws and regulations.

However a few months after Douglas McKay became Secretary of the Interior he decided that existing regulations did not provide adequate safeguards for the refuges. On August 31, 1953, he issued a stop order suspending oil and gas leasing on the national wildlife refuges until such time as his Department could formulate new regulations.

During the more than 2 years between August 31, 1953, and December 2, 1955, the old regulations were given a thorough review by the Department of the Interior, specialists from its Fish and Wildlife Service and Bureau of Land Management, its solicitor and the Secretary's advisory committee on conservation.

SUPERVISION OF DRILLING

The new regulations embody the corrective measures that were recommended and agreed upon as a result of this study. Important among changes that plugged loopholes in the old regulations is one which gives the Fish and Wildlife Service and its career technicians absolute authority over where, when, how, and by whom drilling will be permitted on the refuges. Another significant revision makes refuges which provide habitat for rare and endangered species absolutely inviolate for the first time in history.

It is obvious, therefore, that contrary to permitting unprecedented oil and gas leasing on the refuges, the new regulations provide much more stringent limitations than the regulation in existence when this administration took office.

The legal authority for the issuance of oil and gas leases on national wildlife refuges is set forth in detail in the laws. The confusion surrounding this aspect of the new regulations has been generated by those persons who have mistakenly contended that the same laws which apply to prospecting permits for fissionable materials also apply to oil and gas.

As stated above, the purpose of Secretary McKay's 1953 stop order was to arrest a situation that obviously was inimical to the primary purpose of refuges—the protection and propagation of wildlife. The new regulations correct these deficiencies inherent in the old regulation by carefully spelling out the conditions and on what refuges oil and gas leasing is permitted.

INSURING PROTECTION

Though space does not permit me to enumerate all of the many safeguards included in the new regulations, I think it is significant that they have the whole-hearted endorsement of career specialists in the Fish and Wildlife Service and the approval of the Secretary's Advisory Committee on Conservation. Those who are dedicated to the protection of our wildlife feel that the new regulations are the means by which that protection can be insured.

The assertion that oil and gas leasing on the national wildlife refuges is a violation of the intent of Congress is an error in fact. The laws mentioned above, which were enacted by Congress, are irrefutable proof that it has been the sense of Congress that these refuge lands should be subject to multiple use, including oil and gas leasing.

The Department of the Interior is bound by the law. Any argument about the philosophy of permitting oil and gas drilling on the refuges is irrelevant. The Secretary of the Interior has no alternative but to abide by the stipulations of the laws that apply to the functions of Government under his jurisdiction. The most that can be done is to make the regulations implementing these laws as stringent as possible. This has been done by Secretary McKay.

Only those persons who are totally unfamiliar with the law will argue that the Government is not getting its just rental and royalty fees from the leases issued under the revised code. Because these leases were issued on lands defined by the Geological Survey as not being on a known structure of a gas and oil field, they had to be granted on a noncompetitive basis.

The act of August 7, 1947, is explicit on this matter. That act also prescribes the royalty to be charged in noncompetitive leases; to wit, 12½ percent, the amount stipulated in the so-called Frankfort leases. The rental fees of 50 cents per acre are a further provision of the law.

WESLEY A. D'EWART.

Mr. C. R. Gutermuth, vice president of the Wildlife Management Institute, had this to say of Mr. D'Ewart's letter in the

"Letters to the Times" of February 14, 1956:

INVADING WILDLIFE REFUGES—OIL AND GAS LEASING CHARGED WITH CONTRAVENING WILL OF CONGRESS

To the EDITOR OF THE NEW YORK TIMES:

The letter from Assistant Secretary of Interior Wesley A. D'Ewart that appeared in the January 29 issue of the Times stated that your editorial of December 28 "Oil and Wildlife Don't Mix" does not reflect the true meaning of the Interior Department's new oil and gas leasing order, and that "the new regulations have been widely misinterpreted."

It is easy to understand why the millions of sportsmen and conservationists across the country did not realize that the national wildlife refuges have been subject to oil leasing since 1920. They were not aware of the fact because only 25 leases had been issued on 4 refuges during the 33 years from 1920 to 1953.

Whether Interior has a stronger set of regulations now, as compared to the old order, is beside the point. The fact is Secretary McKay has invited oil leasing, and leases are being issued. There are nearly 300 applications on file, and still other leases undoubtedly would have been issued during the past 6 weeks except for the public uproar that was caused by the new order.

RESTRICTIONS ON USE

The Congress, in 1954, in both the Atomic Energy and Mineral Leasing Acts, made it clear that the national parks and monuments and wildlife refuges should not be invaded even for exploration for fissionable materials. Fissionable materials are in short supply. Even so, Congress said that the refuges should not be invaded except for national defense and only by Presidential order. In view of the expressed will of Congress it would seem that there is little excuse for encouraging oil and gas leasing on the meager refuge lands. The Interior Department's own Office of Oil and Gas Production says that the oil industry is not pumping 1½ million barrels a day from producing wells due to economic reasons.

There are less than 10 million acres of Federal refuge lands in the United States—only about one-half of 1 percent of the total land area—and the conservationists contend that there is no justification for any such leasing. Naturally, the service cannot prevent oil and gas operations on refuge lands where former owners retained the mineral rights, but Interior, even with that so-called weaker order, had been able to block practically all leasing. A total of 89 leases have been issued since 1920, 64 of which were granted since December 1952. The earlier ones were issued to protect the Government's interest under the unit plan.

REFUGES RECLASSIFIED

Mr. D'Ewart stated that the Department is bound by law, and that the most that can be done is to make the regulations as stringent as possible. Well, the Secretary, in exercising his discretion, put less than a dozen of the 264 refuges in the no-leasing classification that he established. The remaining refuges are open to invitation in classes B and C.

If he has that authority under the basic law, which has not been changed, then it is self-evident that he could have exercised the same rigid control that was maintained heretofore. The trouble is, the present policy-making officials see no harm in having prospecting and drilling operations on wildlife refuges.

C. R. GUTERMUTH,
Vice President, Wildlife Management Institute.

Mr. Speaker, I feel that a number of other points should be made at this time.

I recall that when the Mineral Leasing and Atomic Energy Acts were being amended in 1954, it was then Congressman D'Ewart who put in the almost identical protective clauses in each.

In the case of the Mineral Leasing Act, the clause reads:

Provided, That notwithstanding any other provisions of law, such leases or permits may be issued for lands administered for national park, monument, and wildlife purposes only when the President, by Executive order, finds and declares that such action is necessary in the interests of national defense.

As the sponsor of that amendment, Mr. D'Ewart knew full well the intent of his colleagues in Congress. Congress said it did not want the Federal refuges exploited.

Now Mr. D'Ewart stated that the new regulations give the United States Fish and Wildlife Service and its career technicians absolute authority over leasing and drilling. I agree that the new order could be regarded as a slightly better set of regulations—if it were not for the fact that all the heads of the Service have been put into schedule C.

The new order does place more responsibility on the Service, but the incumbent political appointees now are subject to all of the pressure, and, of course, must yield to the will of the Secretariat. A telephone call from higher up can force them to issue a lease—the blame would be on the Fish and Wildlife Service, and it would appear that the Secretary had avoided the responsibility which is his under the law.

Mr. D'Ewart says the purpose of the Secretary's 1953 stop order was to arrest a situation that obviously was inimical to the primary purposes of the refuges—the protection and propagation of wildlife. The Secretary's stop order was put into effect on August 31, 1953, but witnesses told the House Merchant Marine and Fisheries Committee last month that more than 50 leases were issued between that date and December 2, 1955, when the new opening order was executed. One cannot help but wonder why the stop order was ignored. The Times editorial was in error on this point.

Mr. D'Ewart wrote that the new regulations had the approval of the Secretary's Advisory Committee on Conservation, but the record shows that in its meeting on January 27 and 28, 1955, and again on December 1 and 2, 1955, the committee recommended against any oil and gas leasing on refuge lands except to prevent loss to the Federal Government by drainage of oil by peripheral wells or in case of national emergency.

Mr. D'Ewart says the new regulations have been widely misinterpreted. Regardless of any misunderstanding that may exist, conservationists are sure of two things:

First, the Secretary's new order takes its authority from the basic law that has not been amended since 1947; and

Second, leases are being invited now on about 250 of the Federal refuges that have not been exploited heretofore.

Mr. D'Ewart is right when he says the basic law has not been changed. The change is in the discretion that is being exercised and in the current thinking in the Department that there is nothing wrong in opening up the wildlife refuges to leasing.

The Committee on Merchant Marine and Fisheries is to resume its hearing February 27 on my refuge-protection bill, H. R. 5306, which follows:

Be it enacted, etc., That, for the purpose of wildlife conservation, it is the policy of the Congress to maintain and preserve the areas of the national wildlife refuges; and the Secretary of the Interior shall not dispose of or relinquish any of the national wildlife refuges, or parts thereof, without the prior approval of the Congress.

Chairman BONNER, of that committee, has offered the following amendment to this bill:

SEC. 2. That section 1 of the act of February 25, 1920 (41 Stat. 437; 30 U. S. C., sec. 181 and following), be amended to read as follows:

"That deposits of coal, phosphate, sodium, potassium, oil, oil shale or gas, and lands containing such deposits owned by the United States, including those in national forests, but excluding lands acquired under the act known as the Appalachian Forest Act, approved March 1, 1911 (36 Stat. 961), those in incorporated cities, towns and villages, in national parks and monuments, those in wildlife refuges operated or under the jurisdiction of the Fish and Wildlife Service of the Department of the Interior, those in national parks and monuments, those acquired under other acts subsequent to February 25, 1920, and lands within the naval petroleum and oil shale reserves except as hereinafter provided shall be subject to disposition in the form and manner provided by this act to citizens of the United States, or to associations of such citizens, or to any corporation organized under the laws of the United States, or of any State or Territory thereof, or in the case of coal, oil, oil shale, or gas, to municipalities. Citizens of another country, the laws, customs, or regulations of which deny similar or like privileges to citizens or corporations of this country, shall not by stock ownership, stock holding, or stock control, own any interest in any lease acquired under the provisions of this act.

"The United States reserves the ownership of and the right to extract helium from all gas produced from lands leased or otherwise granted under the provisions of this act, under such rules and regulations as shall be prescribed by the Secretary of the Interior: *Provided further*, That in the extraction of helium from gas produced from such lands it shall be so extracted as to cause no substantial delay in the delivery of gas produced from the well to the purchaser thereof.

"The Secretary of the Interior is authorized to lease lands under the provisions of this act located in wildlife refuges operated or under the jurisdiction of the Fish and Wildlife Service only when the President by Executive order declares that the requirements of the common defense and security make such action necessary."

The senior Senator from Montana, Senator MURRAY, the junior Senator from Montana, Senator MANSFIELD, and I have offered concurrent resolutions requesting the Secretary of the Interior to refrain from granting further geological and geophysical prospecting permits, and oil and gas leases on refuge lands administered by the Fish and Wildlife Service until the appropriate committees in both bodies have determined whether the issuance of such permits is in the public interest.

We believe that one of the best places to have the Nation's oil reserve is in the national parks, monuments, and wildlife refuges. We may need these resources badly some day—but there is no oil shortage now.

Profits Hide Business Realities

EXTENSION OF REMARKS
OF
HON. PAGE BELCHER
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 14, 1956

Mr. BELCHER. Mr. Speaker, under leave granted, I wish to insert in the RECORD the following article entitled "Profits Hide Business Realities" as it appeared in the Daily Oklahoman, Sunday, January 29, 1956.

PROFITS HIDE BUSINESS REALITIES

(By J. Willis Baker)

Brisk and profitable business conditions such as have been experienced here during the past several years have a seamier side.

A total of 19 business firms suspended operations in Oklahoma City during 1955, the local office of Dun & Bradstreet, national credit reporting firm, disclosed Saturday. That total figures out to a rate of nearly 30 failures per 10,000 concerns as compared with a national rate of 42 in 1954. National figures for 1955 are not yet available.

However, before you start talking about the boom collapsing, consider this estimate of the situation in the words of Dun & Bradstreet: "That failures should have increased across the country in 1954 (from a rate of 33 per 10,000 concerns) is not good news; however, viewed against the background of pre-World War II levels, today's failure situation still stands up as one of the barometers of the current general good health of American business."

What they are saying is this: When business is good, more people move into the commercial world in hopes of getting a share of the profits, and the fact that the failure rate has not increased more than it has indicates a measure of stability on a comparative basis.

Standing out like a beacon light to the person with a few thousand dollars to invest are those profits. And that makes two strikes on him before he comes to bat if the gleam of those profits blinds him to the cold realities of the business world.

First, when times are good the competition for those profits increases. In addition to the many new firms attracted to the light are the expansions of the older firms already in that particular market. So, the less competent of the newer firms and economically inefficient older companies fall by the wayside.

Let's examine some of the major causes of business failures, or maybe suspension of operations might be a better term considering the definition of "failures" used by Dun & Bradstreet: "* * * those businesses that ceased operations following assignment or bankruptcy; ceased with loss to creditors after such actions as execution, foreclosure, or attachment; voluntarily withdrew leaving unpaid obligations; were involved in court actions such as receivership, reorganization, or arrangement; or voluntarily compromised with creditors."

For the most part, business failures are human failures: failures in judgment, personality, decision, ability and know-how. They just don't happen without a pretty good reason.

A survey by Dun & Bradstreet of the 9,162 failures reported in 1950 shows that 96 percent were blamed wholly on the individual. They list these causes: Incompetence, 41 percent; lack of experience in the particular line of business, 16 percent; lack of managerial experience, 15.4 percent; unbalanced experience (not well rounded in sales, finance, purchasing and production), 13.5 percent.

Back of these deficiencies are inadequate sales, heavy operating expenses, accounts and inventory difficulties, excessive fixed assets, poor location and competitive weakness.

Next major grouping of reasons is that of neglect, 5.8 percent, brought about by bad habits, poor health, marital difficulties and others.

Fraud accounted for 3.8 percent of the failures in such matters as misleading names, false financial statements, premeditated overbuying, and irregular disposal of assets.

Disasters such as fire, flood, burglary, employees' fraud and strikes forced 1.5 percent of the 9,162 to the wall, although some of these could have been avoided through proper insurance coverage.

Of the total 2.3 percent were attributed to unknown reasons. The average loss was set at $27,099.

Normally, the most vulnerable business is that of food or grocery stores, followed by eating and drinking places, apparel and accessories, and home furnishings.

One intangible usually overlooked is the fact that the consumer himself is being better educated in supplying his own wants. In the wholesale and manufacturing field this also evidences itself in that buyers know more about qualities and tests because of the greater dependence on research.

Nationwide, Oklahoma merchants and those in other west south central States are exhibiting considerable business acumen, comparatively. Dun's report for the 1940–50 period shows that the rate of failures dropped to 13 from 31 per 10,000 concerns while number of businesses grew 26.2 percent. This compares with the top record rate of 14 failures on an increase of 41.3 percent shown for the east south central States and the poorest record of 50 failures per 10,000 on an increase of only 14.7 percent for the Middle Atlantic States.

One other note. Before you start planning to open your own profitable (?) business, look also at your cash reserves. Dun's report shows that the first 5 years are the hardest: 2 out of every 3 concerns that failed in 1950 had been in business 5 years or less. The first few years test the owner's ability, stamina, and management.

The Late Chauncey W. Reed

SPEECH
OF
HON. JOHN J. ROONEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, February 10, 1956

Mr. ROONEY. Mr. Speaker, it was with great sorrow that I learned of the passing of our respected and distinguished colleague, Hon. CHAUNCEY W. REED, who served here in the House of Representatives for over 21 years.

CHAUNCEY represented the 14th Congressional District of Illinois with great honor and distinction. He was the ranking minority member of the great House Committee on the Judiciary at the time of his death and had served as chairman of this committee during the 83d Congress. He rendered invaluable service as a member and chairman of this important committee and contributed greatly to the improvement of our judicial system, law enforcement, and the development of our laws.

CHAUNCEY's friends on both sides of the aisle held him in high esteem and greatly admired him for his courage, ability, and devotion to his legislative work. I had a very deep respect and affection for him and feel that I have lost a dear friend. I shall miss him very much. Mrs. Reed, his daughter and sons have my deepest sympathy in their bereavement.

Dale Carnegie: Use Him as a Diplomat

EXTENSION OF REMARKS
OF
HON. F. ERTEL CARLYLE
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 14, 1956

Mr. CARLYLE. Mr. Speaker, the Fayetteville Observer, established in 1817 and known as North Carolina's oldest newspaper, can always be depended upon to produce splendid editorials, and for this reason I commend for your reading the fine editorial which follows, taken from the September 20, 1955, issue of the above-mentioned paper.

Even though Mr. Carnegie has passed away since the editorial appeared, its message is just as pertinent now as when it was published. His work, which is praised in the editorial, is being continued by Mrs. Carnegie and long-time associates.

Because of the international interest and timeliness of the editorial, I believe it deserves the attention of a wider audience by appearing in the RECORD:

DALE CARNEGIE: USE HIM AS A DIPLOMAT

One of the greatest problems and menaces facing the world today is the inability of the leaders of different nations to get along with each other.

This inability has been the cause of the plague of wars which have rocked civilization back on its heels for hundreds of years.

One of the remedies can be found in the Dale Carnegie book, "How to Win Friends and Influence People."

If Louis XVI of France had been a reader of Dale Carnegie it is possible that the French Revolution and the subsequent Napoleonic Wars could have been avoided.

If Kaiser Bill had studied a Carnegie course World War I might never have happened.

If old President Hindenburg and his advisers had known more about getting along 25 years ago they might have converted Adolf Hitler into something useful instead of the international mad-dog he became.

The history of Dale Carnegie is the opposite today of the history of the hard-headed diplomats who have butt-headed the world into a sequence of tragic armed conflicts.

While international diplomacy was being developed into the art of getting the best of the other fellow, Carnegie was creating what has come to be a vast industry or educational system in how to get along with the other fellow.

And he has had remarkable success.

His book, "How To Win Friends and Influence People" has sold more copies than any other nonfiction book except the Holy Bible.

His educational courses in this art since 1912 have boasted 450,000 graduates.

Carnegie has concentrated himself on the problem of man's dealings with his neighbors. His work has had a pronounced influence not only on human relations in the United States but on the art of selling.

Today we need more than ever to sell ourselves and our way of life to the people of the world who differ from us. History has taught that principles cannot be forced down other peoples' throats at the point of a cannon or a bombing plane.

It is much more painless to convince them in friendly fashion.

It is a wonder to us why some administration, Republican or Democrat, has not called this proven expert in friendliness into its Cabinet.

Certainly his precepts should be must reading for every diplomat assigned to improve the relationships of the United States with the other countries of the world.

Meantime, Carnegie and his wife Dorothy, are going ahead with their work of promoting friendship and understanding between individual human beings.

One of the subjects of their courses for women is, How To Get Along With Men.

If this course is as successful as other Carnegie enterprises have been we may experience a sharp drop in the divorce rate in the near future.

Jeanerette, La., and the Civic Spirit

EXTENSION OF REMARKS
OF
HON. EDWIN E. WILLIS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 14, 1956

Mr. WILLIS. Mr. Speaker, pride in one's hometown is a very fine thing and I am always pleased when I find someone advertising his or her community at every opportunity. I have had occasion to note a good example of this fact during a visit to Washington by my constituents, Dr. and Mrs. K. P. Brown, of Jeanerette, La. Dr. and Mrs. Brown came to the capital for three main reasons—to attend the annual Mardi Gras ball of the Louisiana State Society, present Louisiana camellias to the Nation's First Lady, and last but certainly not least, to tell everyone about Jeanerette.

With these enthusiastic civic leaders on their trip to Washington were the many lovely Louisiana festival queens who were honored at the Mardi Gras ball, and 24 other Louisiana beauties—choice camellias from 3 of Jeanerette's outstanding floral gardens, including those of Dr. and Mrs. Brown, Mr. and Mrs. Bernard Beaullieu, and Peter Derise—for presentation to Mrs. Eisenhower. But that was not all. There was a large supply of well-prepared and attractively illustrated pamphlets from the chamber of commerce listing the many features offered by Jeanerette and surrounding area, in the heart of the famed Teche country, and which the visitors saw to it were well distributed.

With the fine community spirit demonstrated by Dr. and Mrs. Brown, Jeanerette is certain to continue its forward march as an agricultural, industrial, educational, and religious center, and, as the chamber of commerce pamphlet also stresses, the recreation capital of southwest Louisiana. In short, it points out in many ways how this enterprising cit yoffers every opportunity for a happy, comfortable, and profitable way of life.

How One California Woman Aided Democratic Cause by Selling Subscriptions to Democratic Digest

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 14, 1956

Mr. DOYLE. Mr. Speaker, here is the inspiring story of how one California woman has helped the Democratic cause by selling subscriptions to the Democratic Digest. It is entitled "How To Tone Up Your Circulation" and appears in the March 1956 issue of the Democratic Digest. Under unanimous consent, I include this article in the Appendix of the RECORD:

HOW TO TONE UP YOUR CIRCULATION

Last fall over 1,000 Democrats gathered at two $100-a-plate dinners in San Francisco and Los Angeles so they could cheer Pennsylvania's Gov. George M. Leader and the Democratic Party.

Scattered among the hundreds of dedicated Democrats were 29 guests who came to the dinner, thanks to their own initiative and the Democratic Digest.

There was Alden E. Auller, a steamfitter foreman from El Cajon; Jessie Sletton, a Los Angeles private secretary; Beverly Halcrow, nurse from San Mateo; C. T. Vincent, Whittier attorney, and Faith L. Hawkins, assistant manager of a motel at Bakersfield and a weather columnist.

These 5 persons and 24 other Democrats were present because they each had sold 50 subscriptions to the Democratic Digest, either on their own, or as part of a drive put on by local Democratic organizations or labor unions.

There was one delegate from the Hawthorne Democratic Club, another from the Long Beach Democratic Women's Study Club, another from the 21st Assembly District Democratic League of San Francisco. The Fontana steel local sent a representative; so did the San Francisco Democratic Women's Forum.

Behind this sales campaign and its 1,450 new subscriptions lies the story of how the the Democratic National Committee organized Digest contests for its big fund-raising dinners and how such contests can be turned into a smashing success by the lively cooperation of local Democratic groups.

The California story opened far across the continent in the Democratic Digest office in Washington. The Digest had tied in subscription drives with two earlier dinners. There was the Indianapolis regional dinner in September 1954, which brought in over 1,500 new subscribers to the Digest through the canvassing of 29 contest winners.

Last April when Democrats gathered in Washington to honor Speaker SAM RAYBURN, 16 members of the audience had won their way by each selling 50 subscriptions to the Digest. Mr. RAYBURN and the Digest pulled in admirers from as far away as Oregon, Florida, Michigan, and Texas. Miss Anna Belle Clement, sister of Tennessee's Gov. Frank G. Clement, was among the winners this time.

Both these contests were managed from Washington, but when the Digest decided to tie in a drive with the California dinners last September, local Democrats said they would like to manage the drive. The offer was welcomed in Washington where the staff recognized that they were too far away to give the kind of help which makes a sales campaign successful.

California Democrats talked about the contest at a meeting of the State central committee. One enthusiastic believer in the drive was Mrs. Zella Crown, of El Cajon, chairman of women's activities for California's 30th Congressional District.

National Committeeman Paul Ziffren took it as his cue when he learned that Mrs. Crown had come to the meeting with a proposal of her own for a Digest sales contest with cash prizes.

"Zella," he said, "how would you like to be the Democratic Digest chairman for southern California?"

So Mrs. Crown took on that assignment, and followed it up by agreeing to run the digest contest for the dinner. The national committee promptly expressed her a package of order books, summary sheets, sample magazines, and sales tip sheets. Over 10,000 flyers announcing the contest were printed for the drive.

Even before the literature arrived, Zella began talking about the Digest contest to Democratic meetings in her part of California: to a meeting of the Riverside County Central Committee in Norce, 100 miles away from her El Cajon home; to the Men's Democratic Club of San Diego next door; to a statewide meeting of the Democratic Council of District Directors in Santa Monica, 150 miles away; to a newly organized Women's Democratic Club in San Bernardino County, and to a tea in Beverly Hills, 150 miles away, given by the southern California women's division in honor of the visiting Michigan national committeewoman, Mrs. Margaret Price.

At each gathering, Zella sold 8 or 9 subscriptions, enlisted several members as salesmen in the drive, and arranged for a Digest chairman to be appointed.

This early groundwork produced 6 winners by August 22, more than 3 weeks before the dinner, but the drive moved into high gear with the mailing of the folders that arrived from Washington on August 15.

"Reserve your own place of honor," said the folder. "Take your choice between two major Democratic national committee dinners, one in San Francisco on September 14, and one in Los Angeles on September 15. Sell 50 subscriptions to the Democratic Digest between now and September 10. You keep a $1 commission on a one-year order."

"Commissions help pay your way."

Headquarters for the mailing was the home of Mr. and Mrs. Crown at 580 Millar Avenue in El Cajon, about 25 miles inland from San Diego.

Mr. Crown, an El Cajon building contractor, takes pleasure in the fact that he married a Democrat. Home life on Millar Avenue is flexible enough to encompass assorted precinct workers, files, work shop planning sessions, and campaign mailings.

This time the intermittently quiet routine in the 6-room frame house gave way to 3 typewriters (1 of them borrowed), wooden fruit lugs full of files, cartons of office supplies, and 10 regular volunteers.

Mr. and Mrs. Crown and their teen-age son, Glenn, began eating off trays to make work room on the kitchen and dining room tables. An older boy, Frank, missed out on this year's political activity. (He's in Korea.)

The national committee had advanced $300 to Mrs. Crown to cover the cost of mailing, but by getting the flyers out early enough to send them third-class mail, she cut the cost in half. Her area, of course, was California. Flyers went out from Washington, D. C., to Democratic leaders in six neigh-

boring States and Hawaii, including State Democratic officials, county chairmen, leading Democratic women, officers of the Young Democrats organization and to Democratic Digest sales representatives.

In California, the mailing was far more voluminous. Mrs. Crown wanted to give every active Democrat an opportunity to come to the dinners, so flyers went out to the entire mailing list used by Democratic News, the party's State newspaper. This list included State central committee members and staff: county chairmen and many county committee members; club chairmen, secretaries, and Digest chairmen; council directors, district council presidents and their Digest chairmen, and where possible, to club members themselves. Individual sales representatives were also brought into the drive.

In short, the State was blitzed with announcements of the drive.

On the day that the flyers arrived from Washington, a group of standby volunteers poured into the Crown home, from the El Cajon and Point Loma Democratic Clubs, and from the Richard Thompson County Committee. A few friends who dropped by that day were also enlisted, and within 24 hours the group mailed the first 2,000 letters and flyers. The rest went out later in the week.

The returns started coming back by what seemed like return mail, which can be taken as a sign that the California mailing list is solidly up to date.

The dinner-Digest commiftee knew from experience that scores of eager Democrats would want to earn their way to the dinners where they could rub shoulders and swap anecdotes with famous national Democratic leaders. The prompt returns proved that these people had been reached.

During the next weeks, Zella kept busy with her tallies, with pep talks to groups who called for help, and with letters of congratulation to the winners, telling them where to pick up their dinner tickets. A week before the drive closed, she sent letters of encouragement or made phone calls to all the people who were getting near the finish line.

"You have sold 33 subscriptions already," she wrote one club. "Only 17 more and you can send a representative to the dinner. Good luck to you."

"How are you coming along?" calls were put in to other lively salesmen and saleswomen.

While she was tallying, phoning, and writing letters with her right hand, Mrs. Crown sold another 35 subscriptions with her left, so that she could win a second dinner ticket.

Meanwhile in northern California hopeful Democrats were getting their encouragement from Miss Jane Morrison, Digest chairman for her part of the State. Both women redoubled their efforts as the September 10 deadline drew near.

In her part of the State, Zella Crown took to the road. She drove through 100-degree heat to Fontana, so she could give a last-minute spurt to four groups with prospects of winning tickets. Mrs. Crown and Mrs. Lillian Serra, Digest chairman in her area went out together, sold nine subscriptions and got promises of more. On her way back from Fontana, Mrs. Crown stopped off to sell three $100 tickets to good Democrats in San Bernardino County, and at 8 p. m. while the heat was still high she started toward San Diego.

On several occasions, Mrs. Crown had had heart spells, with shortness of breath, and as she drove through the still heat, she felt another attack coming. So she pulled into a filling station, in Riverside, telephoned Mrs. Serra, and asked her if she would come drive her home. Before Mrs. Serra could get there, Mrs. Crown went to nearby Riverside Hospital for emergency treatment, and was ordered to rest in bed there. That was September 10, 4 days before the dinner, and the closing day of the drive.

Zella is one of those remarkably conscientious people who was determined that no Democrat who had won his dinner ticket would miss out just because the Digest chairman got sick.

With the indulgent permission of her doctor, Zella had her husband bring the last minute mail from El Cajon so she could finish the tallies and notify additional winners by telephone from her hospital bed.

There were 29 victorious contestants throughout the State; new subscriptions totaled over 1,450. After a few days' rest, Mrs. Crown was well enough to go to the Los Angeles dinner, where her work won high public praise from National Chairman Paul M. Butler.

Four days later Mrs. Crown wrote a note to the Democratic Digest general manager, Arthur B. Thatcher, in Washington:

"The doctor says slow down, but how can there be any harm to working with all these wonderful people? I never had so much fun in my life. Bring on the next dinner."

Recognition Overdue

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 14, 1956

Mr. BROOKS of Louisiana. Mr. Speaker, under leave to extend and revise my remarks, I include the well-thought-out editorial entitled "Recognition Overdue," taken from the January issue of the Louisiana Legionnaire, the official publication of the Louisiana American Legion.

This editorial refers to the heroism of four chaplains in the Armed Services during World War II who set a priceless example in giving up their lives as the troopship *Dorchester* went down beneath the waves of the Atlantic Ocean 13 years ago.

I commend this editorial for the reading of all American patriots:

RECOGNITION OVERDUE

Some memories dim with the passage of time; others remain clear and bright regardless of the years. Vets may forget many of the discomforts of basic training. They may not remember the names of girls they danced with at USO. They may even have to think hard to recall the face of a particular drill sergeant. But the friendship of certain buddies, the inspiration of certain events will stay with them forever.

There is not a veteran of World War II, for example, who does not still thrill to the story of the four chaplains who gave up their lives together on the American troopship *Dorchester* 13 years ago this month. Six hundred lives were lost in the icy Atlantic when the German torpedo found its mark that dreadful night, but the calm heroism of four brave men of God turned the defeat into a shining victory.

George Fox, Alexander Goode, Clark Poling, and John P. Washington—2 Protestant ministers, 1 Catholic priest and 1 Jewish rabbi went down with the *Dorchester*—by choice. They could have saved themselves. Eager arms reached from the lifeboats to help them to safety. Instead, they gave their lifebelts—and their precious space aboard the lifeboats—to four young GI's and remained to bring last moments of comfort and ease to the wounded and the dying. In the moments before the final explosion the men rowing away from the burning ship saw the four chaplains standing together on the deck, arms linked, Bibles in hand, waiting serenely for the end.

Different in background; different in creed; their unity of spirit beamed an undying message of brotherhood to all the world. And on far-flung battlefields in Europe, Asia, and Africa, American boys of all faiths, races and religions swelled with pride for these four—and fought all the harder to be worthy of their sacrifice.

It seems almost incredible that the four chaplains, for whom chapels and churches and parks have been dedicated by grateful American civilians, have not yet been honored with the highest military decoration their country has to offer. The Congressional Medal of Honor is long overdue for these heroes whose bravery was so inspiring to soldier and civilian alike during those trying days when victory was far from certain. A bit of prodding from veterans seems very much in order to make sure this recognition is no longer delayed. But medal or not, their act and courage will eternally remain a pride on America's faith, unity and manhood.

Fitting Memorial to the Gateway to the West—Article From St. Louis Globe-Democrat on Jefferson National Expansion Memorial

EXTENSION OF REMARKS
OF
HON. LEONOR K. SULLIVAN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 9, 1956

Mrs. SULLIVAN. Mr. Speaker, the second in a series of excellent articles in the St. Louis Globe-Democrat on the Jefferson National Expansion Memorial is entitled "River Front Memorial Shrines Would Occupy Visitor All Day," and is by Ray Noonan and Ted Schafers, Globe-Democrat staff writers.

In it, the authors have put into vivid focus the glorious and impressive park and memorial planned for the St. Louis waterfront area to commemorate the Louisiana Purchase and the opening of the West. The article tells of the museums and other civic and cultural attractions which would be part of the completed project. And it points out that the main hurdle at the present time to appropriation of the necessary $5 million for the authorized Federal share of the work is the failure of the National Park Service and the President to ask Congress for these funds.

The Members of Congress from the St. Louis area will do their very best, Mr. Speaker, to obtain the necessary funds for the project, as authorized by the law which we passed in 1954. Legal restrictions to appropriation of the funds are now removed. We therefore sincerely hope that the Administration will assist us in our efforts by making a formal request in a supplemental budget recommendation for the $5 million as authorized by law.

Under unanimous consent to insert the Globe-Democrat series of articles in the

Appendix of the RECORD, I submit the second article in the series, as follows:

RIVER FRONT MEMORIAL SHRINES WOULD OCCUPY VISITOR ALL DAY

(By Ray Noonan and Ted Schafers)

(Second of a series)

Most persons here have forgotten how the proposed Jefferson National Expansion Memorial would transform the riverfront into a national shrine, in memory of those pioneers who opened the West.

A whole new generation has grown up since St. Louis voters endorsed the project in 1936 and voted to put up $7,500,000 as their share of the estimated $30 million cost of this national memorial.

Some, for instance, unquestionably think of it as only a park with that big steel arch in the center. The 590-foot stainless steel Saarinen arch symbolizes the gateway to the West theme of the St. Louis site.

Like the Washington Monument and the Eiffel Tower the arch would serve as a giant magnet attracting thousands of visitors from all over the world. But, equally important will be the vast treasure of historical and cultural wealth which will be stored in the museum to attract the tourists and scholars.

Others visualize the present riverfront parking space for 4,000 cars going up in smoke and raise the cry, "Where will we park all those autos?"

The city of St. Louis and the National Park Service have an agreement on this matter. Automobiles could go into a vast underground garage which could be built underneath the memorial area.

The city's plans for developing off-street parking facilities here are being stymied by the Federal Government's failure to act on the memorial, which was approved by Congress in 1934. An appropriation to start construction would help city and State agencies meet the parking situation.

Congress in 1954 authorized $5 million toward construction as soon as the budget was balanced. That condition has been met, and St. Louis representatives now have requested the money. Much depends on the National Park Service to ask for the funds. So far only $150,000 has been sought by this agency, and that is for a fence and landscaping of the Old Courthouse. There has been no indication it will seek the authorized $5 million.

Construction of the memorial would cause a tremendous transformation of the entire downtown area of St. Louis.

To tour the completed memorial as proposed a visitor would have to spend a full afternoon to completely tour the beautiful grounds spread over 82.5 acres of old St. Louis.

There will be museums with priceless painting and sculpture portraying important events and personalities in the westward expansion of the United States.

To spark the imagination and recall the color of pioneer days, frontier scenes will be reproduced. All the glamour of the West, which stirred dad when he was a boy and still keeps him and his sons glued to TV westerns today, would be found on the memorial grounds.

Many a St. Louisan, on his first visit, would be surprised to learn how little he knows of the city's historical role in the opening of the West and Southwest.

Julian C. Spotts, head of the National Park Service headquarters here, said yesterday:

"There are far too few St. Louisans who really know and appreciate the tremendous historical role of their city."

Spotts was sent to St. Louis 20 years ago on what was supposed to be a 3-year tour of duty in establishing the memorial.

Despite all these years of struggle and frustration Spotts is still cheerful: "These things take time. I still feel this fine memorial will someday be completed as designed," he said.

Meanwhile Spotts works with members of the Jefferson National Expansion Memorial Association, a local group, to rebuild the old courthouse. The structure is part of the projects.

During his 20 years Spotts here has picked up a wealth of knowledge about old St. Louis and its historical importance. He shares this information with people who visit the temporary museum established in the courthouse.

In his office in the building is a huge drawing of the proposed stainless steel arch, which would act as a shining beacon to all visitors. But the $5 million item authorized, but not voted by Congress in 1954, specifies none of this money is to be spent for the arch itself.

Like Paris' famous Eiffel Tower, "Saarinen's Arch" has had rough sledding. Backers believe however the arch, once built, will become one of the wonders of America.

Touring the completed memorial will be a rewarding experience.

Visitors will start the tour at a campfire theater where they will learn something about the history of old St. Louis: How Laclede and Chouteau founded the city. How early pioneers brought their covered wagons by steamboat or overland to begin the perilous journey to the West.

Youngsters will be able to walk in the park over the famous trails that had their start on the memorial site. Further on the tour would be the old cathedral, completed in 1834, and the old courthouse where the Dred Scott was argued when the issue of slavery divided the Nation.

Other attractions would include the Architectural Museum, and the Historic Museum. The latter, unlike an ordinary museum would have animated exhibitions, sound film and other modern devices to recreate the life of Jefferson and other historical episodes of history commemorated in the memorial.

There will be cafes on a roof terrace overlooking the river serving lunch and dinner. Finally, the visitor would go to the arch for an elevator trip up its wishbone side. Here the entire panorama of a city will unfold.

This national shrine probably would cause a tremendous "face-lifting" in the area surrounding the downtown riverfront. New offices and apartment buildings would be constructed. It would spur redevelopment of the sections from Third Street to Broadway, long marked for decay.

Through the years there have been many suggestions for other uses of the riverfront. One has been for a large sports stadium. Such a project could still be built either north or south of the memorial.

Those who suggest other uses must remember that title to all this land belongs to the United States Government. It can be used for no other purpose unless Congress revokes all previous actions authorizing the project.

Citizens of many States, regardless of their party affiliations have worked hard for the memorial. World War II and the Korean conflict helped to block development.

The last requirement raised for a balanced Federal budget, has been met.

All that is required now is for the Department of the Interior to give the nod so Congress can act. St. Louis and the Nation will then have what has been long in coming—a fitting memorial to "The Gateway to the West."

Lincoln and the American Worker

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 14, 1956

Mr. MULTER. Mr. Speaker, it was my privilege, over the weekend to attend the Lincoln's Birthday dinner at the Commodore Hotel of the Central Trades and Labor Council of greater New York and vicinity. The principal address was made by its president, Martin T. Lacey.

While too many Lincoln Day orators merely lip that great American's philosophy, it is pleasant to note that some exhort us to live it.

Mr. Lacey's speech follows:

Mr. Mayor, reverend clergy, distinguished guests, fellow trade unionists, ladies and gentlemen, it is a pleasure once again to welcome you to our 32d annual Lincoln's birthday dinner and dance.

It is fitting, too, that the birthday of this great American should be the occasion of this annual celebration. We can have no finer inspiration in all that we set out to do than the model of that statesman who gave true meaning to our American doctrine—that all men are created equal.

He learned the dignity of labor with his own calloused hands. He had to work, and work hard, for everything he gained, but what he gained most of all was a sound sense of values that measured the good and the right, always in terms of the common right, of humanity.

Lincoln, who has been called a character so unique that he stands alone without a model in history or a parallel among men, was a labor man by background and a labor man in his philosophy.

In his address delivered at the Wisconsin State Agricultural Fair of 1859, he expressed his views on labor in these words, which must have sounded quite radical to the listeners of his day: "The world is agreed that labor is the source from which human wants are mainly supplied. There is no dispute upon this point. From this point, however, men immediately diverge—labor is prior to and independent of capital; in fact capital is the fruit of labor and could never have existed if labor had not first existed. Labor can exist without capital, but capital could never have existed without labor; hence labor is the superior, greatly superior of capital."

The dinner in honor of Lincoln's birthday has been a happy tradition of the Central Trades and Labor Council in this town. The party tonight marks the first since the merger of the AFL and CIO. Many of our CIO brothers are now here to celebrate with us. We bid them official and hearty welcome.

There are a few worry warts in the union movement, and some smart alecks out of it, who have been wagging their heads and moaning that the marriage of the CIO to the AFL is a fluke and can't last. They say the AFL groom is too old and too set in his ways. They whisper that the CIO really married the old man for his money.

Since it is no longer polite to flatten these critics out, let me straighten them out. The merger was no shotgun wedding. It was no marriage of convenience. True, the couple were not always passionately in love with each other.

Yet, over the years, there developed between them a feeling of mutual respect and an understanding of the common purpose. It made them realize that the time had come to join hands.

From now on they will be happily wedded for a long, long time to come. Of course, during the difficult and quarrelsome courtship, and before the ceremony took place, there were a few offspring born out of wedlock, but the constitution of the new federation provides machinery to take care of the illegitimates.

Section seven of article eight gives the executive council the power to throw out any Communists, Fascists, and racketeers. The machinery may come in handy.

So, too, is there machinery provided and already in motion, to take care by voluntary agreement of jurisdictional disputes between unions. The new constitution provides that the president and the executive council of this federation shall seek to eliminate such conflicts through the process of voluntary agreement or voluntary merger.

Two very important departments of the new federation have taken positive steps to implement this process. The building trades department and the new industrial union department have agreed to establish a permanent joint committee to regulate matters of jurisdiction that may arise between their affiliated unions.

Just before that, the building trades department had voted to make its own jurisdictional dispute settlement plan calling for impartial arbitration as a terminal step, binding on every union affiliated with the department. The importance of this is obvious. It is not that the jurisdictional machinery is perfect or that conflicts won't arise. They already have, as you know.

Rather it is that the ugly business of hostile unions raiding each other to represent workers already organized will be replaced by orderly procedures where the contest can be settled within the united house of labor.

The merger is thus significant, if only as a declaration, that the civil war in the house of labor is over. Naturally there will have to be a period of reconstruction.

We know too that during this adjustment period we will have to be on guard against carpetbaggers trying to gain or to peddle position and power.

And we can expect that the critics of labor will be waiting eagerly to play up and scarehead every misstep in the new unity.

But, at the least, the merger will mean that the new federation can move ahead to its first and most immediate goal—organizing the unorganized. To be sure, this goal will not be reached just by a declaration.

The boys in the movement will have to get off their well-cushioned rear ends and really do the job of organizing that for too long has been left undone. Yet the importance of this objective canot be overemphasized.

In all the hullabaloo about the merger and the curse of bigness hurled at it, the public tends to lose sight of the fact that organized labor is still in a distinct minority.

Large industries, large areas and the largest majority of the workers of our country are still behind the curtain of employer reaction and resistance.

The Taft-Hartley Act and the new board that administers it has certainly been of no help in stripping down these obstacles to union organization.

The proof is in the fact that since the Taft-Hartley law went on the books the rate of growth of the organized labor movement has been at a virtual standstill. In my judgment, this sorry result under the Taft-Hartley law points up the greatest merit of the Wagner Act.

The worker already in the union movement and getting the benefits of collective bargaining did not need the help of government to protect him in his dealings with his boss. It was his union's job to take care of that.

Rather it was the unorganized worker in anti-union companies and in company towns who needed the help of Government to protect and assure his right to organize.

The Wagner Act really gave this protection. The Taft-Hartley Act, with all its gimmicks and loopholes, only makes believe that it does.

All of which leads me to the second important goal of the merger—effective economic and political action.

There is some talk that we elect a president this year. On the economic front the general approach of the administration now in office has been that what's good for the boss is good for his workers.

This is just another way of describing the trickle-down theory of big business.

It has been the argument of organized labor that the correct approach should be what's good for the workers is good for their bosses.

In other words, it is the increase in mass earnings and improvements in standards of living which make industry prosper and the economy boom. It is the purchasing power of the people which pays the steady dividends and not the giveaways by Government to a few of its favored friends in big business.

We don't make any idle boast as to the political meaning of the merger. The American workers, thank God, has a political mind of his own.

But now that old man AFL and his fresh young CIO mate have joined forces, you can be sure that organized labor will be in a better position to get its political message across to the American worker.

Acting together and working together, we shall tell our fickle political friends that we are not stirred by their trickle-down political anthem.

The merger is a splendid reunion.

Let's now move on to richer rewards for the American worker.

A Time for Reason: No Klan—No Carpetbaggers

EXTENSION OF REMARKS

OF

HON. JOE L. EVINS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 14, 1956

Mr. EVINS. Mr. Speaker, a recent cartoon appearing in the press depicted three large volumes for present-day reading was entitled "Patience, Reason, and Tolerance." It seems to me these volumes need to be read today by all our citizens for today indeed is a time for reason and it is a time when we want or need no clans and no revival of carpetbaggers in the South or any section of our country.

Mr. Speaker, in this connection, under unanimous consent, I ask that there be reproduced in the RECORD two excellent and well-written editorials recently appearing in the press of my State. The editorial entitled "No Klan—No Carpetbaggers," appeared in the Nashville Banner February 10 last, and the editorial entitled "A Time for Reason," appeared in the Nashville Tennessean under date of Sunday, February 12, 1956. I commend the reading of these editorials to my colleagues and others.

The editorials follow:

[From the Nashville Banner of February 10, 1956]

NO KLAN—NO CARPETBAGGERS

If the people of the South were to speak with one voice and in one paragraph the majority sentiment on the biggest question confronting us at this moment, we believe their uncompromising reply would put equal emphasis on two big points:

1. Never again an era of Ku Klux Klan.
2. Never again government by Carpetbag.

Both the law-abiding and the agitators know what we mean.

One is not the answer to the other at this stage of history.

Both were interred by decency and conscience a long time ago. Let's leave them buried, along with the spirit of hate and force and violence which—with the help of some reckless hands—have shown signs of stirring for another fling at dangerous mischief.

The convulsion that rocked the University of Alabama this week was an example of what can happen—not just in that sister State, but a lot of places—by impudent forces moving impetuously in their frenzy to stake out a claim on new-found treasure of social gains whose possession is still a matter of legal controversy.

The voice of reason would admonish them to slow down. Even the Supreme Court which construed the point initially in their favor sought to avoid excitement and turmoil—and specified a reasonable period of adjustment. Such an interval has not elapsed. Mountains do not wear down in a day; wide gulfs are not spanned in so short a time. Even if tomorrow is on the calendar, impatience doesn't hasten it.

We hope that never again will the battle flag of the Confederacy be dragged in the dust as it was at Tuscaloosa—misused as an emblem of mob psychology.

It deserves honor as the symbol of a cause for which brave men laid down their lives so short a time ago. It was desecrated by hands that by inference associated it with malice and cowardice.

It is unfortunate that it had to be the University of Alabama that was such a testing-ground for inflammatory actions. It is a great institution in a great State. It has undergone a trying ordeal not of its own making, but in a sense forced upon it and then magnified by elements ever ready to exploit an area of strife.

It is not surprising that Alabama has manifested a reluctance to yield to coercion in an affair that resembles, however unwittingly, the force tactics of Carpetbagism. The latter still is fresh in the minds of the States whose recent generation suffered it. These are people whose fathers and grandfathers fought and bled and died for a principle in which they believed with all their hearts. They will not willingly submit to anything even remotely suggestive of a replay of Carpetbagger days.

That does not excuse retaliatory violence—acts begetting shame—some of which undoubtedly were committed or incited by outside elements.

It is not, strictly speaking, any of our business what the State of Alabama does in this matter. The institution is a State university, owned there and maintained by Alabama funds. We hold unreservedly to the opinion that a State can best run its own schools, and equally to the conviction that the Constitution itself clearly draws a line between State business and Federal business—and the domain of supervision over which, respectively, each exercises proprietary control.

The Banner has led in the long fight for defense of States rights. We yield to none in the championship of that basic premise.

At the same time, we have said from the outset of the Supreme Court's integration edict, May 17, 1954, that this matter must be calmly handled; that it must be adjucated most carefully in the interest of justice to all concerned. There is nothing more dangerous just now than a wave of recklessness, mob psychology, hysteria, or incitement to passions on either side. This is a Government of law; when it ceases to be that, it will be anarchy. A nation in its right mind will avoid that precipice.

We do not want to stumble over it in a moment of wild excitement. We do not intend to be pushed over it by any pressure group believing it now can take charge as if by coercive privilege.

Calm appraisal and cautious handling of this problem—the course of action recommended by the Banner at the outset—have spared Tennessee such ugly experiences as have marked some other areas. For that Governor Clement is to be commended. As he told a delegation calling on him some 2 weeks ago, Tennessee does not intend to yield to either pressure group, but to abide by the law once the law has been clearly established.

This has not been done to date. But certainly the law against violence is clear enough.

Manifestly it forbids a reign of terror, mob rule, and surrender to hooligans.

The States can solve their own problems, individually, as conditions and considerations of peace and safety require. No blanket ordinance laid down by Washington—for instant and universal application—can do that.

We are not in contempt of court in saying that we do not believe it was ever intended to be handled that way—or that the Constitution so specifies. We believe with the interpositionists, headed by the great commonwealth of Virginia, that if it is to so specify, it must be by an amendment clearly and unmistakably saying that.

We deplore the violence that has occurred. But we hope that both sides have learned from it. We know that in Alabama as in Tennessee the decent, law-abiding, consecrated citizens of both races are righteously concerned about working out together any problem that exists. They are not the ones fomenting strife, erecting challenges, laying down an ultimatum, and invoking the services of self-appointed carpetbaggers.

It would be good for unity and the foundation of law on which America rests if both sides of the extremist elements would quietly retire from the scene and let the program of orderly adjustment proceed—the mob constituents narrowly skirting anarchy at Tuscaloosa, and the NAACP whose questionable zeal so far outruns the dictates of judgment.

There is no room for either among people of good will earnestly seeking the proper solution to this vexatious problem, whose injudicious determination could be calamitous and catastrophic.

[From the Nashville Tennessean of February 12, 1956]

A TIME FOR REASON

It is now almost 10 months since the United States Supreme Court handed down the second of its two historic opinions declaring compulsory segregation in the public schools unconstitutional. With the resulting controversy becoming more heated by the day, the time plainly has come for the South to do some sober thinking about where it is headed.

As recent events in Alabama have demonstarted, the situation has reached an explosive point. The balance between the orderly processes of a lawful society on the one hand and the anarchy of mob rule on the other proves to be delicate indeed and easily tipped.

What happens now will determine whether the dangers of civil chaos will be increased or diminished.

Surely among thoughtful people there can be but one choice—respect for the law. To choose otherwise would be to invite a reign of terror and violence which could do untold damage to the democratic system under which the people of this Nation have been so richly blessed.

It becomes supremely urgent, therefore, that the citizens who understand the alternatives confronting the South today assert themselves lest they be swept up in the consequences of unbridled warfare between extreme elements on both sides.

For if one thing has been made unmistakably clear, it is that the problems of the South are not going to be solved either by mobs like that which defied all recognized authority at the University of Alabama or by NAACP lawyers like the one who made the completely untenable charge that university officials had conspired in the ugly disorder there.

Reason must prevail. And if it is to do so, it is imperative that the Supreme Court decision be reexamined so that neither more nor less than it actually said will be read into it.

In their bitter crossfire, extremists on both sides often create the impression that the Court ordered immediate compulsory integration in all public schools and that the ruling must be resisted or complied with on that basis.

But the Court ordered nothing of the sort. Judge John J. Parker, of the Fourth Circuit Court of Appeals, has helped put the ruling in its proper perspective by stating:

"It is important that we point out exactly what the Supreme Court has decided and what it has not decided. * * * It has not decided that the States must mix persons of different races in the schools. * * * Nothing in the Constitution or in the decision of the Supreme Court takes away from the people freedom to choose the schools they attend. The Constitution, in other words, does not require integration. It does not forbid such segregation as occurs as the result of voluntary action. It merely forbids the use of governmental power to enforce segregation. The 14th amendment is a limitation upon the exercise of power by the State or State agencies, not a limitation upon the freedom of individuals."

Even within this framework, the Court did not order an immediate end to all compulsory segregation everywhere. The Supreme Court does not operate in a vacuum, unmindful of the problems created by its decisions.

In respect to the segregation question, it specifically asked the Southern States to outline their individual problems. And then in its decision it took into account "the complexities arising from the transition to a system of public education freed of racial discrimination."

Requiring only that "a prompt and reasonable start" be made toward compliance with its decision, the Court authorized district Federal courts to consider the "varied local school problems" that must be solved to permit "full implementation" of the ruling.

The test the Court prescribed was one of good faith in complying with constitutional principles which it correctly said could not be abrogated simply because of disagreement with them.

Surely an honest effort to work out solutions within this pattern is not too much to expect of a lawful people.

To defy the Court with violent refusals to accept its decision in good faith is to create a situation from which no one will profit but the enemies of this great democracy.

The inheritance of our democratic Government and the freedoms it provides does not guarantee their preservation. They must be safeguarded by every generation with vigilant respect for the legal traditions and institutions upon which the United States is built.

No greater tragedy could befall the South than to permit obstinate groups with strident voices to trample on these traditions and institutions with ruthless abandon.

Keeping Career Military Personnel in the Services

EXTENSION OF REMARKS

OF

HON. PAUL J. KILDAY

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 14, 1956

Mr. KILDAY. Mr. Speaker, under leave to extend my remarks, I include an editorial from the Army Times of February 11, 1956. This editorial makes clear the fact that the military services have progressively lost the advantage in competing with industry and business for career men. This trend must be reversed if we are to attract and hold competent, skilled, and highly trained personnel. The House has passed the survivors benefits bill, and it is pending action by the other body. My subcommittee has completed action on the dependent medical care bill and has reported it to the Committee on Armed Services. These are two steps in the catching-up process. These must be completed and others must follow.

All Members concerned over our loss of career personnel and repeated extensions of draft laws should give serious consideration to these problems.

The editorial follows:

THE GOOD LIFE (INSIDE AND OUT)

In the years before World War II gave industry that massive shot in the arm, it was generally conceded that such military benefits as pensions and medical care for dependents were generally better and broader than those offered on the outside. This is still more or less true of retirement benefits. But in the past 10 years an expansion of fringe perquisites offered to civilian workers has brought about an almost complete reversal of the picture.

Recent surveys show that money-saving supplements to the worker's pay check have tripled since World War II. They now account for one-fifth of the employer's payroll. Much of the expansion has been in health and insurance. Four times as many workers (in 1954) were covered by a health plan than was the case in 1948. And more than 70 percent of those workers also have coverage for their dependents. Other benefits extend to subsidized meals, discounts on company products, paid sick leave, annual bonuses, etc.

The increasing betterment of the civilian worker's lot is, in effect, a worsening of the military man's since—all else being equal—the latter is interested in getting as much of the world's goods as any of his peers. And, to the extent that his dissatisfaction grows, he presents a problem to our defense leaders who have the job of manning the services and keeping them at strength.

Yet the disparity in benefits has been so feebly publicized that a number of self-interested groups in recent years have been

able to attempt further erosions of the military's rights. In some cases, like the attack on post exchanges, they have succeeded in putting their hands into the soldier's pocket. That has been done by placing surcharges on commissary sales, restricting the types of goods that can be sold in exchanges, and even by putting several commissaries out of business entirely.

Fortunately, the Defense Department seems now to be alert to the dangers posed by such groups as the retailers association and the Hoover Commission. It has prepared a report documenting the increase in fringe benefits for industrial workers and has contrasted it with the leveling-off trend in the military. Armed with this, the Department intends to remind Congress of the situation on every possible occasion.

We hope this is done, for the Defense researchers have come up with some telling figures. For instance:

In 1948 only 3 million workers were covered by some sort of company group insurance. Today, 11.3 million are, and "more and more" firms are providing this insurance free.

In 1954 some 7 million workers were covered by pension plans, under collective-bargaining agreements. This was a 40 percent increase over 1950 and the figure has probably gone up even more since 1954. Eighty-five percent of the workers covered received the benefits without contributing a penny. Disability features have been added to many of the plans.

A survey of 519 companies showed that 240 of them sold company products at discounts ranging up to 80 percent off the retail price. Many served free lunches.

Civilian firms pay workers an "overseas differential" of 21–25 percent above State-side pay. Military officers receive no extra money for foreign service; enlisted people get about 8 percent of their base pay.

Of 500 firms studied, 24 percent paid employees a year-end or Christmas bonus.

Among career measures now awaiting congressional action are the survivor benefits, dependent medicare and housing improvement bills. If passed, these will probably help keep more careermen in service. But if they do not have the requisite effect, then some other means must be found to do so. A general raise in the military's standard of living, along lines suggested by the Defense Department study, may be just the ticket.

If MacArthur Had Had His Way, America Would Have Become Exhausted—Lost in a Chinese Swamp Thousands of Miles From Its Home Base

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 14, 1956

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to call to the attention of my colleagues an editorial from the February 12 issue of the Washington Post, entitled "The Great Debate—Continued."

The editorial follows:

THE GREAT DEBATE—CONTINUED

There seems no end to the argument over the war in Korea and the dismissal of General MacArthur. However, it is an argument so closely tied up with the American destiny that the fresh outbreak between Mr. Truman and General MacArthur is to be welcomed. The unfortunate thing is that for years to come the merits of the controversy will be obscured by prejudice and passion. In the present exchange both parties are guilty of overstatement and misstatement which history in due course will correct.

The point to fasten upon is the rival concepts on the object of the war. President Truman, for the United Nations, fought the war for a limited objective, and this he achieved. He achieved a successful result moreover without damaging our dominion in world strategy. Actually that dominion was improved, and, in the process, Mr. Truman kept the Russian intervention limited with his atomic deterrent. On the other side of the argument, General MacArthur wanted to push on across the Yalu in addition to bombing the bridges and dams (for which in retrospect he had a good case) into the Chinese mainland to what he now declares would have been "sure victory." He dubs anything short of this victorious objective "appeasement."

Here the great issue is drawn, and all the remainder of the MacArthur case—which is becoming more and more studded with innuendoes plainly demagogic in appeal—is subordinate to it. How sure would have been the victory if the MacArthur idea had been carried out? Nobody can be certain about the answer, least of all MacArthur himself, but a mere smattering of knowledge of the past shows that history is not on the side of MacArthur. Japan affords the latest instance of rebuttal. For 7 long years the Japanese were drawn into a fruitless war on the Asiatic mainland within the present generation, and, if any lesson can be learned from it, surely it is that their campaign was a vast mistake. Hitler made the same mistake (forgetful of Napoleon in 1812) against continental Russia.

Classic military doctrine was against Japan and Germany in these enterprises—a doctrine stated by Clausevitz when he said that neither Russia nor China is a country that can be counted according to the rules, that is, by occupying it. It is supreme folly of MacArthur to insist that he could have succeeded where Tojo and Hitler failed. Look, for one thing, at the odds. MacArthur expected to establish himself with only a dozen divisions on the border frontier of nearly 700 miles when his predecessors had at their command 50 times more divisions.

Superior air power would not have made up for the deficiency. Tojo and Hitler had a great preponderance in the air, but this did not suffice to offset the enemy's advantages in space and possession of hordes of manpower. If MacArthur had had his way, America would have become exhausted—lost in a Chinese swamp thousands of miles from its home base. Athens made precisely the same mistake when it issued forth for the conquest of faraway Sicily, and its doom, as Thucydides recounts, was sealed. MacArthur says that if his ideas had been accepted "the threat of global war would have receded, and the world would be a radically different place today." This newspaper begs to differ. It is more likely that Russia would have left China and America to kill themselves off, and, profiting by the American preoccupation would have overrun Europe, where we would have had no allies left.

To be sure, American experience is on the side of MacArthur. Except for the war in 1812, the victory formula he enunciates has prevailed in all the wars that America has undertaken. But this was before America became a world power with responsibilities everywhere. Now this country must not only adjust means to ends; it must limit its engagements with a sense of priorities and a wisdom dictated by the need always to keep its world position intact. Moreover, addiction to the MacArthur formula in the past two world wars has helped bring the world to its present pass. For the other side of the MacArthur coin is unlimited warfare and unconditional surrender. In the Pacific, for instance, it left Japan prostrate, so that all eastern Asia became a vacuum into which the Communist power poured. In today's nuclear terms unlimited warfare would mean unlimited annihilation. Peace, even more than victory, is the ultimate object of war, and the sooner this becomes gospel in America the less chance there will be of the American heritage being frittered away. Even Sherman had to admit that after his experience in the Civil War.

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

DISTRIBUTION OF THE CONGRESSIONAL RECORD

To the Vice President and each Senator 100 copies; to the Secretary and Sergeant at Arms of the Senate, each, 25 copies; to the Secretary, for official use, not to exceed 35 copies; to the Sergeant at Arms, for use on the floor of the Senate, not to exceed 50 copies; to each Representative, Delegate, and Resident Commissioner in Congress, 68 copies; to the Clerk, Sergeant at Arms, and Doorkeeper of the House of Representatives, each, 25 copies; to the Clerk, for official use, not to exceed 50 copies; and to the Doorkeeper, for use on the floor of the House of Representatives, not to exceed 75 copies; to the Vice President and each Senator, Representative, Delegate, and Resident Commissioner in Congress there shall also be furnished (and shall not be transferable), 3 copies of the daily RECORD, of which 1 shall be delivered at his residence, 1 at his office, and 1 at the Capitol.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. The money derived from such sales shall be paid into the Treasury and accounted for in his annual report to Congress, and no sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

OFFICERS OF THE SENATE

Secretary—Felton M. Johnston.
Chief Clerk—Emery L. Frazier.
Sergeant at Arms—Joseph C. Duke.
Secretary for the Majority—Robert G. Baker.
Secretary for the Minority—J. Mark Trice.
Chaplain—Rev. Frederick Brown Harris, D. D.

STANDING COMMITTEES OF THE SENATE

Committee on Agriculture and Forestry

Messrs. Ellender (chairman), Johnston of South Carolina, Holland, Anderson, Eastland, Clements, Humphrey, Scott, Aiken, Young, Thye, Hickenlooper, Mundt, Williams, and Schoeppel.

Committee on Appropriations

Messrs. Hayden (chairman), Russell, Chavez, Ellender, Hill, Kilgore, McClellan, Robertson, Magnuson, Holland, Stennis, Clements, Bridges, Saltonstall, Young, Knowland, Thye, McCarthy, Mundt, Mrs. Smith of Maine, Messrs. Dworshak, Dirksen, and Potter.

Committee on Armed Services

Messrs. Russell (chairman), Byrd, Johnson of Texas, Kefauver, Stennis, Symington, Jackson, Ervin, Saltonstall, Bridges, Flanders, Mrs. Smith of Maine, Messrs. Case of South Dakota, Duff, and Welker.

Committee on Banking and Currency

Messrs. Fulbright (chairman), Robertson, Sparkman, Frear, Douglas, Lehman, Monroney, Morse, Capehart, Bricker, Ives, Bennett, Bush, Beall, and Payne.

Committee on the District of Columbia

Messrs. Neely (chairman), Bible, McNamara, Morse, Frear, Beall, Hruska, Case of New Jersey, and Allott.

Committee on Finance

Messrs. Byrd (chairman), George, Kerr, Frear, Long, Smathers, Johnson of Texas, Barkley, Millikin, Martin of Pennsylvania, Williams, Flanders, Malone, Carlson, and Bennett.

Committee on Foreign Relations

Messrs. George (chairman), Green, Fulbright, Sparkman, Humphrey, Mansfield, Barkley, Morse, Wiley, Smith of New Jersey, Hickenlooper, Langer, Knowland, Aiken, and Capehart.

Committee on Government Operations

Messrs. McClellan (chairman), Jackson, Kennedy, Symington, Ervin, Humphrey, Thurmond, McCarthy, Mundt, Mrs. Smith of Maine, Messrs. Cotton, Bender, and Martin of Iowa.

Committee on Interior and Insular Affairs

Messrs. Murray (chairman), Anderson, Long, Jackson, O'Mahoney, Scott, Bible, Neuberger, Millikin, Malone, Watkins, Dworshak, Kuchel, Barrett, and Goldwater.

Committee on Interstate and Foreign Commerce

Messrs. Magnuson (chairman), Pastore, Monroney, Smathers, Daniel, Ervin, Bible, Thurmond, Bricker, Schoeppel, Butler, Potter, Duff, Purtell, and Payne.

Committee on the Judiciary

Messrs. Kilgore (chairman), Eastland, Kefauver, Johnston of South Carolina, Hennings, McClellan, Daniel, O'Mahoney, Wiley, Langer, Jenner, Watkins, Dirksen, Welker, and Butler.

Committee on Labor and Public Welfare

Messrs. Hill (chairman), Murray, Neely, Douglas, Lehman, Kennedy, McNamara, Smith of New Jersey, Ives, Purtell, Goldwater, Bender, and Allott.

Committee on Post Office and Civil Service

Messrs. Johnston of South Carolina (chairman), Neely, Pastore, Monroney, Hennings, Scott, Neuberger, Carlson, Jenner, Langer, Curtis, Martin of Iowa, and Case of New Jersey.

Committee on Public Works

Messrs. Chavez (chairman), Kerr, Gore, Symington, Thurmond, McNamara, Neuberger, Martin of Pennsylvania, Case of South Dakota, Bush, Kuchel, Cotton, and Hruska.

Committee on Rules and Administration

Messrs. Green (chairman), Hayden, Hennings, Gore, Mansfield, Jenner, Barrett, McCarthy, and Curtis.

UNITED STATES SUPREME COURT

Mr. Chief Justice Warren, of California, Hotel Sheraton-Park, Washington, D. C.
Mr. Justice Black, of Alabama, 619 S. Lee St., Alexandria, Va.
Mr. Justice Reed, of Kentucky, the Mayflower.
Mr. Justice Frankfurter, of Massachusetts, 3018 Dumbarton Ave.
Mr. Justice Douglas, of Washington, 3701 Connecticut Ave.
Mr. Justice Burton, of Ohio, the Dodge.
Mr. Justice Clark, of Texas, 2101 Connecticut Ave.
Mr. Justice Minton, of Indiana, the Methodist Building.
Mr. Justice Harlan, of New York, 1677 31st St.

OFFICERS OF THE SUPREME COURT

Clerk—Harold B. Willey, 3214 N. Wakefield St., Arlington, Va.
Deputy Clerk—Reginald C. Dilli, 1329 Hemlock St.
Deputy Clerk—Hugh W. Barr, 4701 Connecticut Ave.
Marshal—T. Perry Lippitt, 6004 Corbin Road.
Reporter—Walter Wyatt, 1702 Kalmia Rd.
Librarian—Helen Newman, 126 3d St. SE.

Appendix

Address by Senator Wiley Before the Optimist Club, Oshkosh, Wis.

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Thursday, February 16, 1956

Mr. WILEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address which I delivered before the Optimist Club at Oshkosh, Wis., on February 16, 1956.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

SENATOR WILEY PLEDGES CONTINUED BATTLE AGAINST YOUTH DELINQUENCY; SAYS YOUNGSTERS AND ADULTS TRULY INSPIRED BY PRESIDENT EISENHOWER'S LEADERSHIP

I am happy, indeed, to be in Wisconsin again, and to have lunch with you here.

I want to say that, in a world with too many cynics and pessimists, it is a pleasure to be among optimists.

All of us need to be optimistic, in facing the challenges, difficulties, and opportunities of our times.

NUMEROUS ISSUES FACING CONGRESS

Indeed, there are so many challenges facing us that it is almost hard to choose among them and decide which particular one to discuss with you today.

In Washington, for example, the Senate has pending before it right now a new farm bill. This farm bill incorporates a new soil-bank idea to conserve the Nation's soil resource, as well as to reduce the surplus problem. We are certainly going to pass some form of the farm bill, and definitely, some form of the soil-bank idea.

Not long after we finish the farm bill, we are going to take up the social security bill. Beyond question, we are going to extend coverage to upwards of a million more employees and self-employed, including lawyers, accountants, and other professionals. Moreover, we are going to liberalize pensions for widows.

Meanwhile, the House of Representatives is going to put the finishing touches on the Nation's new highway bill. The only big controversy that remains is how to finance the program. Highway taxes are going to have to increase, but it is still uncertain as to how much the average motorist will pay, and how much heavy trucks will have to pay.

Another issue engaging our attention is a study of the work of the oil and gas lobby in connection with the recently passed natural-gas bill.

These, then, are but a few of the topics which we face in Washington, and which you face here in Oshkosh.

OPTIMIST'S CLUB WORK FOR YOUTH

One problem in which Optimist Clubs have rightly been interested is, of course, the problem of juvenile delinquency.

I want, at this time, to highly commend your club for the great and admirable youth work you are performing.

The boys of America, and the country itself, owe Optimist Clubs a great debt of gratitude for your splendid efforts in providing our promising manhood with hobbies and vocational guidance and recreational opportunities and facilities, including such things as sports, woodworking, and swimming.

This is the kind of guidance and leadership we need for the youngsters of America.

DELINQUENCY IN AMERICA

As many of you know, I am a member of the Senate Judiciary Juvenile Delinquency Subcommittee. For the past year, we have had the unpleasant job of investigating delinquency among the youth of our country.

We discovered many sobering and shocking facts. There were:

Over 485,000 youngsters brought before juvenile courts.

Over 200,000 young folks had run away from home.

Over 100,000 youths had been confined in common jails, usually with hardened criminals.

ACTION ON BILL FOR DELINQUENCY PREVENTION

To help prevent delinquency among our young folks, I have sponsored legislation to provide grants-in-aid to States and local communities for delinquency prevention programs.

Other Senators have sponsored companion measures, and it appears certain that some form of this legislation will be enacted before the end of the session.

Meanwhile, the life of the Senate Juvenile Delinquency Subcommittee, itself, should be extended, so that we can complete our study and our legislative recommendations. We have numerous reports soon to be released on motion pictures, education, religion, pornography and related phases.

In any event, we need continued constructive activities by groups such as your own.

YOUTH NEEDS OPPORTUNITY

The difficulty, of course, is not basically with our youth.

I believe, instead, that we as a Nation, are unfortunately not providing them with sufficient challenge and opportunity, with ample outlets for their boundless energy.

As a result, we are wasting a vast reservoir of new thoughts, ideas, talents, and skills. I believe that our youths could learn more of the mechanical skills and of the arts at a much earlier age; could be better prepared, by training, for adulthood; could assume greater responsibilities than they now do.

MOST YOUTHS ARE NOT DELINQUENTS

The statistics on juvenile delinquency throughout the country seem large and startling; yet, these are usualy small in contrast to the successful and wholesome millions of youths who have fine records of home and community activities, who resolve their own problems, who are independent, responible individuals.

These will become the outstanding citizens of tomorrow.

In Milwaukee County, for example, it was discovered that only 2½ percent of the youngsters get into trouble with the law. That is, of course, 2½ percent too much, but at least it indicates that 97½ percent of the youngsters are getting along all right.

IDOLS OF YOUTH: LINCOLN AND WASHINGTON

As you well know, most of our young people have a habit of adopting idols from both the present and the past. These help to mould the character and life of the youngster.

We, ourselves, serve as examples, so we must all constantly strive to live up to the high principles we teach our young folks.

Not only youth, but also nations, have their idols—men and women whom they admire and respect.

We all know that in the month of February, we celebrate the birthdays of two of our greatest forefathers: George Washington, the Father of our County; and Abraham Lincoln, the Great Emancipator, whose birth date was honored on Sunday.

The spirits and beliefs of these two great men still guide our Nation and strengthen the sense of patriotism in the hearts of our countrymen.

Over the years they serve as symbols of genuine leadership and statesmanship.

CRISIS: PAST AND PRESENT

Both Washington and Lincoln faced crisis—different in scope, but similar in gravity—to those we face today.

For example, George Washington fought for freedom and independence of our country. We now are engaged in striving for freedom and survival for the free world.

Abraham Lincoln faced the problem of a divided country. Today, President Eisenhower and our Nation face the problems of a divided world.

In 1861—seemingly a long time ago—Abraham Lincoln emphasized the need to keep abreast of progress. He expressed a great thought that is especially true today. He said:

"The dogmas of the quiet past are inadequate to the stormy present. The occasion is piled high with difficulty, and we must rise with the occasion. As our case is new, so must we think anew, and act anew."

THINKING ANEW AND ACTING ANEW ON SLAVERY

"Thinking anew and acting anew" means, for example, continuing our bold program to keep alive the spirit of freedom behind the Iron Curtain.

As we are all aware, the Soviet Union has recently protested against our relatively new device—the propaganda balloons sent by the Crusade for Freedom behind the Curtain.

As for our governmental activity, and the Red protests against weather balloons drifting over Russia, we are trying to keep these balloons along the routes for which they were basically intended.

But there should be no interference with the right of a private organization, the Crusade for Freedom, sending encouraging messages to the enslaved peoples of Czechoslovakia, Hungary, Poland, East Germany, and Russia itself, urging them to keep the flame of liberty bright in their hearts.

We, who pay homage to the Emancipator, Abe Lincoln, can hardly fail in our responsibility to the enslaved peoples of Eastern Europe or eleswhere.

We must think and act boldly in their behalf and on behalf of peace and freedom throughout the world.

OTHER DYNAMIC RESPONSES TO TODAY'S NEEDS

The occasion is still piled high with difficulty. So, thinking anew and acting anew requires also:

(a) Speeding up America's scientific research, particularly in the field of guided missiles and nuclear weapons, as well as in peaceful application of atomic energy.

(b) Strengthening the Nation's Reserve forces, which are presently, according to all reports, in sadly undermanned strength.

(c) Keeping our domestic economy rolling in high gear with 65 million employed; keeping all segments—industry, labor, agriculture strong and prosperous.

IKE—AN INSPIRATION TO ALL AMERICANS

But before I learn the matter of inspiring examples, I want to point out that we have today another great symbol in the office of the Presidency.

I know that you will believe me that I am sincerely not making a partisan reference when I say this:

History will record Dwight D. Eisenhower in the ranks of our greatest Presidents, as it records the names of Washington, Lincoln and others.

Regardless of how you or I may have voted in November 1952; regardless of how you or I may choose to vote in November 1956, I believe that you may feel as I do, that America can be proud of the man who now occupies the White House.

Public opinion polls have shown that he is still at the peak of his popularity. These polls reflect the fact that the American people clearly recognize the honesty, the selfless dedication, the strength, the judgment which Dwight D. Eisenhower has brought to his office.

My friends who may be Democrats in this audience, or any audience, may and do differ with the President on various issues. Indeed, we Republicans have our intra-party differences, as well. But we Americans do not allow our party affiliations to befog our eyes on true examples and patriotism.

There are few Democrats among us who would, for example, dispute the greatness of Republican Teddy Roosevelt, or few Republicans who would dispute the greatness of Woodrow Wilson.

So, too, with admiration and respect, we will all wait the President's decision as to whether he will or will not run again.

I personally don't know what that decision will be.

I earnestly hope, however, that wholly aside from any partisan consideration he will decide to run again. To do so would, in my judgment, be another great forward step for peace. It would be also a dramatic demonstration of the power of a man's spirit, or of a man's moral strength—the power of a man's soul in action, to reduce the significance of any imperfections in a man's bodily condition.

AN AMAZING CHAPTER IN PRESIDENTIAL PRESS RELATIONS

Meanwhile, however, the President's utter frankness about his health, his willingness to talk about this delicate matter completely, openly, frankly, is another magnificent demonstration of the straight-shooting character of this man in the White House.

The man from Abilene has not tried to withold a single fact. His tireless Press Secretary, James Hagerty, has helped him write one of the most amazing chapters in presidential relations with the American press in our entire history. Day after day, night after night, side by side with his Chief, Jim Hagerty has literally exhausted himself, to comply with the press' every wish, to know the up-to-the minute facts about Ike's condition.

By contrast, in the world of dictatorship, there would never be the slightest inkling of the true physical conditions of the head of state.

Even in the free world, great leaders have suffered disabilities which have often been withheld from public knowledge.

But we have been witnessing today one of the most remarkable demonstrations in our history, of the strength of our own free Nation. The people have been entitled to the facts. The people have received the facts—straight, impartially, accurately, promptly.

We may all be proud that this Republic is so strong, that there has never been fear in anyone's heart concerning our people's getting the facts on this matter.

"Ye shall know the truth, and the truth shall set you free"—free of fear, free of doubt, free of misunderstanding.

Whatever Ike's decision, he will have earned his lasting place among the most honored of American Chief Executives.

Whatever the decision of the American electorate next November, we will not soon forget this great term of office of a great man.

THE WORLD OF TOMORROW

Now and in time to come, we must and will remain strong.

Meanwhile, to those of us who are optimists and I assure you I am a member of your club; in spirit, if not in fact—we must look forward confidently to the future, to the great things of tomorrow.

The world of tomorrow will be a fascinating place in which to live. There will be stirring advances in all the things we are enjoying today.

There will be more jet propulsion, atomic power, and electronic devices.

There will be new food for higher nutritional levels and better standards of living.

There will be new forms of pleasure and entertainment, such as "regular" color TV.

We will have better disease control and longer life expectancy.

Our culture will be further enriched with the best thoughts, arts, and ideas of all cultures.

LIFE IN THE NEW WORLD

To live in this great, new, challenging world, we must adapt ourselves to its needs and its fast moving pace. The spirit of youth must never die within us.

We must never cease to be imaginative, to "dream dreams and see visions," and to be attuned to the progress of our times.

CONCLUSION

If we dedicate ourselves to progress, to high ideals, to improvements of our way of life, we can—to quote Lincoln—be assured that, under God,

"This Government, of the people, by the people and for the people shall not perish from the earth."

Democratic Responsibility

EXTENSION OF REMARKS

OF

HON. ROBERT L. F. SIKES

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 14, 1956

Mr. SIKES. Mr. Speaker, under permission to extend my own remarks and to include extraneous material, I submit herewith for publication in the CONGRESSIONAL RECORD an editorial appearing in the February 1, 1956, issue of the St. Petersburg Times, St. Petersburg, Fla., entitled "Democratic Responsibility":

DEMOCRATIC RESPONSIBILITY

Two actions last week are clues to the quickening tides moving within Florida's Democratic Party.

The party's State executive committee censured Richard D. Barker, national committeeman, who in 1952 repudiated his party's presidential ticket.

And, furnishing the second clue, the party's governing body rejected the idea of trying to send an unpledged slate of delegates to the national convention.

Both actions suggest the party, long a mere traditional and rather disorganized group of people who call themselves Democrats, is beginning to awaken to a sense of its responsibility.

There is no reason to suggest that the Barker resolution and the rejection of the unpledged delegation will amount to more than ripples in 1956's stormy politics.

But those ripples may be taken as surface manifestations of important undercurrents which have been reshaping both the form and direction of the State Democratic Party since 1952 and especially in the last year.

Jacksonville's rebellious Richard Barker is not the important element in the resolution of denunciation.

The personal feelings of anger and resentment toward him will, like all of the sort, dissolve in the wash of time.

Of top importance is the principle implicitly expressed in the action. It was a simple principle.

In a State the good citizen submits to the rule of law whether it is enacted by a majority he opposed or supported.

Similarly in a political party the member who accepts the benefits and offices of the party should submit to the decisions of its majority.

In 1952 the national party had enunciated certain principles (its platform) and named certain men (its candidates) to lead a fight to write those principles into Government. For publicly repudiating both, Barker, an officer of the party, was censured.

In shouting approval of the censure resolution the State committee was saying: We no longer wish our party represented by men who reject it without leaving it, who use their badge of party office to advance their personal political whims rather than the objectives of the party.

It was no demand for blind loyalty. In government we Americans boast we have rule by law, not by men. In party affairs it is sound to seek rule by principle, not by men.

Let those of all minds impress the party with their views. But when the party majority has accepted a view, approved a principle, its program and its purpose breaks down if the minority will not at the least silently submit to that larger will.

The demand is not for subservience. It is for a belief and sympathy in the party's desire to carry into governmental action the principles endorsed by most of its members.

There we are speaking of an ideal. A look at the Democratic Party in Florida will return us to more difficult realities.

Despite recent signs that political ferment is nudging the State party toward that more meaningful form for which the Times has long fought, the party is just beginning to move.

By no means has it arrived, as is shown plainly by the fact there are no answers to such questions as:

What are the principles of the Florida Democratic Party? What governmental programs does it support? What, in short, are the planks of its platform?

There is no platform. The same State committee last weekend decided to wait until after the national convention to formulate a platform. At that time, of course, it will be much too late to pledge State candidates for Democratic nominations to a party platform.

But the State committee, when its members gathered here, did lay down a broad principle which will be the best foundation on which eventually a full program can be built.

In first endorsing the new presidential preference primary and, second, voting against the idea of an unpledged slate running in that primary, the committee was saying: "Let's leave the affairs of party as directly as possible in the hands of the voters."

Any candidate for President can be placed on the primary ballot. Among those named the voter can pick the one he likes best,

and his vote will be reflected in the makeup of the delegation, which will be bound at the convention to carry out the will of the voters.

Advocates of an unpledged slate are merely demanding that the voters be asked to send to the convention a bunch of politicians who will be free to trade and bargain with their votes for reasons of personal power and without referring at all to the will of the people.

In rejecting that plan the State committee made a start toward bringing the party to its true purpose, to serve as an agency for translating the desires of the people into political action.

It was not a bad start.

Third Party for Ike?

EXTENSION OF REMARKS
OF
HON. GEORGE P. MILLER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 7, 1956

Mr. MILLER of California. Mr. Speaker, the straightforward editor of the Morning News, of San Leandro, Calif., spoke out on February 9, in answer to a front-page editorial that appeared in the New York Herald Tribune January 30, calling upon the President to seek reelection.

The Morning News editor makes no claim that the Tribune is not within its rights in urging the President to run. However, he draws some conclusions that are worthy of serious consideration.

The two-party system is the foundation of our American form of government. We should do nothing which would contribute to its breakdown.

I believe this editorial deserves the attention of a wider audience, and I commend it to the Speaker and my colleagues:

THIRD PARTY FOR IKE?

The New York Herald Tribune on January 30 published a front-page editorial calling on President Eisenhower to seek reelection if his health will possibly permit.

That action of the Herald Tribune was treated as top news in the press, on radio, and on TV.

The full text of the Herald Tribune front-page editorial has been mailed to every daily newspaper. We had expected it to be equal to the Herald Tribune's high reputation.

But to us it is a disappointment. Not because it says that a majority of the people are giving him a decisive vote of confidence in his handling of public affairs. It is a disappointment because the Herald Tribune bases its call upon sloppy thinking which does a discredit both to a great newspaper and to the President himself.

Presumably it may not be reprinted in full, because it is copyrighted. But it can be quoted in part for review and criticism.

The Herald Tribune says, "It is one of the best of our traditions that the two parties want their elected President to give the Nation the continuity of 8 consecutive years of service if he can possible do so. To give the American people the opportunity to have a two-term Chief Executive is normal and desirable and constitutional."

This is nothing more than guff.

If the 2 parties wanted an 8-year Presidency, they would lengthen the term. They do not want 8 years, nor do they want 2 consecutive terms. They agree that every administration should be put to a periodic test of an election, to make sure that it represents the will of the people.

Until the time of Franklin Roosevelt, the George Washington tradition was strong enough to prevent any President from seeking more than two terms. There was never a tradition that he must have a second term. Only 1 President in 3 served as much as 8 consecutive years.

Death or defeat is the tradition—reelection is unusual.

After Roosevelt's death, both parties joined in amending the Constitution. They did not extend the term to 8 years. Instead, they wrote into the Constitution limitations to 8 years or less.

Herald Tribune is false to history.

To be accurate, both parties recognize that any President has enough political power to dictate his own renomination, and that this power repeatedly used might work to the detriment of the people.

Therefore, Republicans and Democrats alike joined in putting the country's welfare above party succession. It was Harry S. Truman, Democrat, who urged adoption of the amendment while he was in office. He deliberately cut himself off from any possibility of serving 8 consecutive years.

The Herald Tribune is much more candid when it quotes with approval the statement by Vice President NIXON: "The Republican Party is not strong enough to elect a President. We have to have a presidential candidate strong enough to get the Republican Party elected." It goes on to say for itself: "The blunt and objective truth is that the Republican Party faces the very real danger of defeat this fall unless President Eisenhower remains as its head, its prestige-laden leader, its two-term presidential nominee."

The Herald Tribune says it does not ask Mr. Eisenhower to run primarily to save the Republican Party. Instead, it asserts one of the compelling reasons why he should accept renomination is to secure the two-party system—by making sure that the Nation has a party which is liberal and effective because it is freed from the extremes of either the right or the left.

In plain language, it asks Mr. Eisenhower to save the Republican name, though not the party. It asks him to use his incumbency to capture that party name. It asks him to create a third party, to contest Democrats on one side and the Knowland-McCarthy wing on the other.

All this is legitimate. It may attract voters. But it parades under false colors. This is not the two-party system. This is a call for a third party, under false colors with false history.

Timely Warning on Safety

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 26, 1956

Mr. BROOKS of Louisiana. Mr. Speaker, under leave to extend and revise my remarks, I present herewith a very timely editorial taken from the New Orleans Item of February 13, 1956, entitled "Better Roads Aren't Sure Cure":

BETTER ROADS AREN'T SURE CURE

In Congress, there has never been any real question about a highway program except how to finance it.

Nearly all Congressmen favor modernized highways, and now that President Eisenhower has given up his bond idea and come round to the Democrats' way of thinking, there may be speedy action.

The higher gasoline tax may run into some objections. But on the whole, good highways are a popular cause in this car-happy land. As highway congestion increases, so do demands for better roads.

There is, in fact, a tendency to consider wide, well-engineered highways the answer to all traffic problems, and to look to them as guaranties against accidents.

So general is the idea that new highways are the shortcut to safety that the Association of Casualty and Surety Companies while backing the highway improvement program—thinks this word of warning is timely:

"In the last analysis, the accident reduction impact of better roads will be determined less by how well they are engineered than by how adequately they are controlled and how lawfully and intelligently they are used."

This association, made up of representatives of 133 casualty insurance companies, recommends that the new highway program should require each participating State to establish safe speed limits and enforce them through adequate police supervision and strict law enforcement by both the police and the courts.

It's a sensible suggestion.

I certainly commend the New Orleans Item for writing such a timely and needed editorial.

Can H-Tests Be Stopped?

EXTENSION OF REMARKS
OF
HON. EDITH GREEN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 16, 1956

Mrs. GREEN of Oregon. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial which appeared in the Oregonian, Portland, Oreg., on January 13, 1956, entitled "Can H–Tests Be Stopped?" I should also like to include a resolution adopted by the Oregon Council of Churches at its annual convocation held recently in Portland. This resolution likewise relates to test explosions of nuclear weapons.

The editorial and resolution follows:

[From the Oregonian, Portland, Oreg., of January 13, 1956]

CAN H-TESTS BE STOPPED?

The unanswered question, at least from the presumed final authority, the Atomic Energy Commission, is this: Are additional hydrogen bomb tests essential to continued development of nuclear weapons.

Members of Congress have been informed that an H-bomb or bombs dwarfing those previously exploded by the United States and the U. S. S. R. will be tested in the Pacific this year. Secretary of State Dulles stated Wednesday the United States will continue to make such tests until the Soviet Union accepts an iron-clad system of controls and inspection of nuclear weapons.

But the whole world—not only the Communist nations—is crying out against the nuclear explosions. People we know are dismayed by the prospect of bigger and bigger hydrogen bomb blasts in the Pacific and Siberia. Nations allied to the United States and neutral nations are apprehensive and resentful.

Has the attempt sincerely been made to get the Russians to agree to stop the bomb tests, as a step toward agreement on in-

spection and arms reduction and control? We have not been so informed. Each side in the cold war would be handicapped equally were the tests to be stopped. A violation by either side would be detected instantly by instruments now in use.

We do not believe that the explosion of a superduper H-bomb by the United States will make it easier to obtain Russian agreement to arms control. It may make this more difficult. The Russians will feel that they, too, must trigger a deadlier blast to save face. And the two world forces are moving rapidly into the same kind of competition with intercontinental missiles.

We should like to see the United States propose, right now, a cessation of all tests of superbombs. The Soviet peace and prosperity salesmen would find it difficult, if not impossible, to say "No."

RESOLUTION OF OREGON COUNCIL OF CHURCHES

Resolution No. 1 (test explosions of nuclear weapons).

Whereas we view with alarm the competition among nations for superiority in the development of mass-destruction weapons; and

Whereas nuclear weapons of astronomical strength are being stockpiled and occasionally exploded for test purposes by the leading powers of the world; and

Whereas we have learned something of the deadly effects of radioactive fallout and have been warned by scientists of the potential danger of radioactive contamination of the earth's atmosphere; and

Whereas the great powers agreed at the summit conference in Geneva that no nation can achieve its purposes by engaging in nuclear warfare; and

Whereas the peace of the world rests precariously on a "balance of mutual terror" (Winston Churchill) with nations possessing the destructive power to annihilate much of our civilization: Be it therefore

Resolved, That this convocation assembled appeal to the governments of all nations through the United Nations to refrain from any further test explosions of nuclear weapons whether within or without their territorial boundaries;

That we appeal to our own Government to intensify efforts to reach agreement on international control of the manufacture and use of nuclear weapons; and

That we pledge to the President of the United States of America, his staff, Members of Congress, and the United Nations our united support of all honest and sincere efforts to achieve universal disarmament under international control.

Adlai Stevenson

EXTENSION OF REMARKS

OF

HON. ROBERT L. F. SIKES

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 14, 1956

Mr. SIKES. Mr. Speaker, under permission to extend my own remarks and to include extraneous material, I submit herewith for publication in the CONGRESSIONAL RECORD an editorial from the Anniston Star entitled "If Stevenson Had Been President," appearing in the January 29, 1956, issue; an article by Raymond Moley appearing in the February 12, 1956, issue of the Florida Times-Union entitled "Stevenson Looks Good by Comparison"; an editorial from the Evening Star, Washington, D. C., entitled "Man of Courage," appearing in the February 13, 1956, issue, and an article by Joseph C. Harsch, special correspondent of the Christian Science Monitor, appearing in the February 10, 1956, issue of the Christian Science Monitor entitled "State of the Nations; Social-Political Notes.:

[From the Anniston (Ala.) Star of January 29, 1956]

IF STEVENSON HAD BEEN PRESIDENT

Shortly before he left for Rio de Janeiro last week to be present at the inauguration of the new Brazilian President, our young Vice President and Eisenhower's heir apparent, indulged himself in a precampaign address, in which he said he had just been thinking what would have happened if Mr. Stevenson had been President for the last 3 years.

We, of course, cannot advance any irrefutable assertion as to just what Mr. Stevenson would have done; but there are a few things, we know, he would not have done. In the first place, he would not have consulted Dunn & Bradstreet or the membership roster of the Union League Clubs to select 10 of the richest Republicans in the United States to occupy most of the places in his official Cabinet.

He would not have kept on the payroll that battery of advertising agents, ghostwriters, television experts, etc., who were in the employment of the Eisenhower campaign in 1952, and who are now trying to build up a mass psychology that will force Ike to seek reelection at the risk of his life, merely in order that those who have been plundering the public domain might continue their depredations.

He would not have kept in office a Secretary of State and a Secretary of Defense who have kept us on the brink of war or in a state of equivocal peace for 3 long years. He would not have negotiated a phony peace that has turned North Korea into a Communist arsenal and directly contributed to the loss of Indochina and practically all of southeast Asia to the Communist forces, not to mention our losses in the Middle East.

He would not have had a Secretary of Agriculture and a Secretary of Commerce who would have caused our farmers to forfeit most of the gains they achieved under Democratic administrations, and who have so unbalanced our economy that the rich have gotten richer while the poor have suffered neglect. Otherwise, great States, like Michigan, Pennsylvania, and Massachusetts would not be burdened with unemployment.

He would not have sold down the river our vast offshore oil deposits, which the Supreme Court repeatedly had declared to belong to all the people. He would not have turned over our public parks for private exploitation. He would not have concentrated most defense contracts in the hands of General Motors alone, nor would he have appointed a Chief Justice of the Supreme Court to upset the South's way of life.

He would not have had a "hound's tooth" Secretary of the Air Force like Talbott, a double-dealing Buildings Commissioner like Stroebel, nor a Budget Director, a Security and Exchange Commissioner, plus an atomic energy chief who would have stood for an Adolphe Wenzell's chicanery in the dire effort to put over the Dixon-Yates deal as a preliminary to the destruction of TVA, which has been worth so much to the South and the Nation in time of war and of peace.

We say these things advisedly. For we know what Adlai did do when he succeeded one of the most corrupt administrations in the history of his home State—that of Gov. Dwight H. Green, a Republican. Stevenson then set about cleaning the Augean stables of their filth. He stopped crookedness in State purchasing, took the State police out of politics, appointed an honest man as mine inspector, so as to stop a rash of fatal accidents, and so forth.

The first thing Stevenson did when he took office was to appoint able and honest men to all public offices, sometimes disregarding any party affiliation. He revolutionized the public-school system, took road building out of politics, and completely overhauled the States system of highways; he improved the care of patients in public hospitals, gave more aid to the cities and stopped the yearly increase in taxes.

In other words, Stevenson kept his campaign promises. And if anyone wants to know more about what he would have done had he been President the last 3 years, we refer him to the book of Adlai's 1952 campaign speeches, which became a best seller for nearly a year; his college and university lectures, his contributions to Fortune, the Atlantic, Look, Harper's, and other standard publications.

In fine, Stevenson is not only a successful lawyer, a trained executive in political life; a defeated candidate who has raised millions by way of paying his party's debts—he is highly literate, widely read and traveled and, indeed, qualified as few American Presidents have been for the high office of Chief Executive.

And when he speaks, you may know that the words he utters are his words and not those of some ghost writer or advertising agent.

Even now Mr. Stevenson enjoys the confidence of the chancelleries of the world, and we believe he would be able to keep the peace without a MCCARTHY at home, a Cohen and Schine abroad and a saber-rattling Secretary of State who has caused us national humiliation by his constant threats of massive retaliation, which have brought us to a state of "agonizing reappraisal" almost every month of the last 3 years.

[From the Florida Times-Union, Jacksonville, Fla., of February 12, 1956]

STEVENSON LOOKS GOOD BY COMPARISON

(By Raymond Moley)

Adlai Stevenson may not get the nomination. I am inclined to believe that in one of more of the many primary contests Senator KEFAUVER may deal him a mortal blow without, however, bringing the nomination to himself. But as excesses of Author Truman and Aspirant KEFAUVER grow greater, the moderation of Stevenson becomes more and more soothing to the ear. If anything can bring the man from Illinois to the brink of statesmanship, it is the dismal prospect offered by the tactics of Truman-KEFAUVER.

"A man's moderation," said Irving Babbitt in his almost forgotten book, Democracy and Leadership, "is measured by his success in mediating between some sound general principle and the infinitely various and shifting circumstances of actual life." Of course, as Babbitt added, the man of moderation "must dispose of the question of truth or error before he can properly begin to moderate at all. Otherwise he will run the risk of resembling the English statesman of whom it was said that he never deviated from the straight and narrow path between right and wrong."

It is not clear what the philosophical home base is from which Stevenson judges the immediate problems that confront the Nation. Perhaps he would if put to it decide that his ideology differs very little from that of Eisenhower. Perhaps his home philosophical stance is identical with that of KEFAUVER, except that Stevenson is more honest in his criticisms of the opposition. In any event, he is a man of sensitivity and truthfulness who is unwilling to prostitute his position by making promises that no rational person could expect to fulfill.

Nothing of the sort can be said of the Truman-Kefauver line. The Tennessee Senator had the gall to stand before an informed audience in California and bring up the Trinity River project as an instance by which to condemn Secretary McKay as a faithless custodian of the Nation's resources. Eastern readers may be induced to subscribe to that conclusion only because they do not realize that the Trinity River project was passed by the last Congress and that the Democratic Congressman who was its immediate sponsor has no reproaches for the administration in the circumstances surrounding its passage.

More serious than this attack by innuendo was KEFAUVER's bald statement that the Eisenhower administration "has not made a single start on a water resource project since it came into power." The fact is that the Eisenhower administration has, in some cases I believe unwisely, presented to Congress a number of projects for authorization which the Truman administration had consistently sidetracked. If they failed, it was because of the opposition of Members of Congress, mostly of KEFAUVER's own party.

Meanwhile, in the East Mr. Truman indulged himself in an orgy of billingsgate. One charge, for which he was unable to produce a single scrap of evidence, was that somewhere, sometime Vice President NIXON had called him a traitor. When in Boston the former President was pressed for exact specifications he said merely that NIXON had said it "all over the West." When he returned to New York, he said in reply to the same question that "All I did was read the papers." Later, some unnamed spokesman for the unreliable man from Independence, apparently trying to perform a rescue operation, said that NIXON had said "traitor" in private conference, not in speeches, and that unnamed prominent people had reported it to Mr. Truman.

At any rate, Author Truman made plenty of headlines which should sell plenty of books when his opus is placed on the market next month. Perhaps it was the enterprising author, rather than the statesman talking.

[From the Washington (D. C.) Evening Star of February 13, 1956]

MAN OF COURAGE

Adlai Stevenson has taken a stand on the school-segregation issue which is as courageous as it is correct.

In brief, he has served clear notice that he is not going to play politics with the race question for the sake of votes. And he has appealed to all candidates to do likewise, pointing out that there could be no greater disservice to the country than to exploit for political ends the tensions that have followed in the wake of the Supreme Court (school) decision.

Unfortunately, there is abundant evidence that some other candidates are not going to follow the Stevenson example. They will bid for Negro votes even though, in doing so, they may impair national unity and actualy set back the legitimate aspirations of the Negroes for full equality. As the campaign moves along, this is going to subject Mr. Stevenson to the heaviest sort of pressure. We hope that he will be able to hold the high ground that he has occupied, and that at least some of the other political hopefuls will lend a helping hand by refusing themselves to play the dangerous game of racial exploitation.

[From the Christian Science Monitor of February 10, 1956]

STATE OF THE NATIONS

(By Joseph C. Harsch)

SOCIAL-POLITICAL NOTES

WASHINGTON.—On the morning of Thursday, February 2, in New York City, the following succession of "social" events occurred:

Harry S. Truman, former President of the United States, shared breakfast with Averell Harriman, Governor of New York, at the Governor's New York City townhouse.

After breakfast Mr. Truman returned to his hotel, where he spent a half hour with Senator ESTES KEFAUVER, of Tennessee.

Senator KEFAUVER took a taxi from the Truman hotel to Governor Harriman's house. He returned to his own hotel from this meeting in Governor Harriman's limousine.

Judge Samuel I. Rosenman, former friend and speech writer for Presidents Roosevelt and Truman, happened to be present at all three meetings.

The three principals at these meetings described them as "social," although they also said that political issues but no personalities were discussed.

Judge Rosenman stayed for lunch with Governor Harriman, and the two were joined by George Backer, a patronage adviser to Governor Harriman, and by Leslie Biffle, former secretary of the Senate, political adviser to Mr. Truman, Governor Harriman, and to many another Democrat, but particularly to Democrats of the Truman persuasion.

As any lawyer knows, an event which follows another does not necessarily happen because of the other (post hoc is not ergo propter hoc). It may well be that there was no cause-and-effect relationship between these events in New York City on February 2 and another sequence of events soon thereafter in California.

It is only an isolated fact, which may or may not be related to the level of gasoline consumption by some Democrats in New York on the first date with which we are concerned here that—

1. On Sunday, February 5, the Reverend L. Sylvester Odom, pastor of an Oakland, Calif., Negro church and president of the local chapter of the National Association for the Advancement of Colored People, entered a private conference with Senator KEFAUVER wearing a Stevenson button, and emerged wearing a Kefauver button, and

2. On February 7 Mr. Stevenson addressed a Negro audience in Los Angeles with markedly unsuccessful results. He said firmly in answer to questions that if he were President of the United States he would not cut off Federal funds from segregated schools nor use Federal troops to enforce integration.

There is no public record that Senator KEFAUVER had said during his California sojourn that he would do such things, but it seemed plain to reporters that Mr. Stevenson's Negro audience of February 7 thought that Senator KEFAUVER would be willing to do things which Mr. Stevenson avowedly, and, I think, most properly, is not.

Did the New York meetings result in putting Mr. Stevenson on the spot on what we, in an election year, euphemistically call the civil rights issue?

Perhaps only a cynical reporter is capable of such suspicions.

However, Mr. Stevenson was on the spot, and he must have gulped hard and at least twice before he crossed his Rubicon and said flatly that he would not, if President, use Federal troops to enforce integration.

A Stevenson worker earlier in this campaign remarked wryly that there are many pitfalls ahead of Mr. Stevenson. This, it seems to me, was more than a pitfall. It came fairly close to being a Scylla and Charybdis situation, or at least a Rubicon.

It is one which will plague Mr. Stevenson again before the campaign is over, and the whole Democratic Party as well, for if the New York "social" events of February 2 did not intentionally arrange the Los Angeles ordeal for Mr. Stevenson, the Republicans of Washington will certainly arrange others like it.

The Powell amendment to the school-construction bill (providing for denial of Federal funds to nonintegrated schools) will obtain many Republican votes and very probably will be passed in the House, if not in the Senate, and may well wreck the school-construction bill in process. Republicans have little to lose and perhaps much to gain by putting the Democratic Party on the spot on this matter.

The puzzle is over what the Truman-Harriman-Kefauver coalition (if it exists) stands to gain by arranging pitfalls for Mr. Stevenson (if it did). One theory is that these three are only trying to nudge him gently leftward for the sake of the party's position in the big northern cities. The other is that they are using KEFAUVER to stop Stevenson in order to clear the way for Harriman. But Governor Harriman would not necessarily be the beneficiary of a Stevenson crash landing.

It is a known political fact that in Mr. Truman's opinion the Democratic Party can win elections only by being aggressive and by being boldly solicitous of the interests of groups of voters.

The Farmers' Own Farm Program—Part I

EXTENSION OF REMARKS

OF

HON. RICHARD BOLLING

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 16, 1956

Mr. BOLLING. Mr. Speaker, the following excellent address by Mr. Howard A. Cowden, president and general manager of Consumers Cooperative Association, the headquarters of which is located in my district in Kansas City, was delivered before the 14th annual meeting of the National Rural Electric Cooperative Association, St. Louis, Mo., January 24, 1956:

THE FARMERS' OWN FARM PROGRAM

(Address by Howard A. Cowden, president and general manager, Consumers Cooperative Association, the National Rural Electric Cooperative Association, St. Louis, Mo., January 24, 1956)

Mr. Chairman, distinguished guests, ladies and gentlemen of the National Rural Electric Cooperative Association, it is a high honor, I assure you, to have a place on your program. I have watched your organization from the very beginning and I salute it today as one of the great forces on the side of what is good and right in our great country.

Though I have not been active in rural electric work, I hope you consider that I am one of you. There is a strong bond of kinship between your organization and the farm supply cooperatives with which I am associated. Our goal is a higher living standard for the men and women who toil in the fields and feed lots of rural America. Our faith is in the ability of farm folk generally to attain for themselves, through cooperatives, many things that otherwise might be denied them.

Yes, we have common aims and basic principles. And because these aims and principles sometimes run contrary to certain powerful forces in our national economy, we have some enemies in common, too. We are both confronted by a dogged group that dislikes our mode of operation to the point they would destroy us if they could. And they never stop trying. That, I would emphasize, is more than a passing comment. Before I finish I hope to impress upon you the importance of unity among the various groups and organizations that speak and work for farmers. If we cannot attain a greater degree of unity than we have had in

the past, we stand to lose ground in the years immediately ahead. May I speak therefore as one who knows many of your problems and headaches as well as one who shares all your hopes and aspirations?

While I come from the opposite side of the State, I want to join with the others who have welcomed you to St. Louis and Missouri. Ours is known as a border State, whose people were sharply divided a hundred years ago over the question of slavery. Out of those bitter experiences came many traditions and attitudes that survive to this day.

Some of the laudable traits and characteristics of Missourians, I think, will be found in the men of this State who have led the rural electrification movement down through the years. Like their grandfathers before them, who had to choose between the northern or southern armies that swept back and forth across the State, Missouri farmers have had little chance to be neutral in the conflict between the REA co-ops and the forces that would like to throttle them. Most Missouri farmers, I am proud to say, took their stand with the co-ops, but the battles they have had to fight have been bitter nevertheless. They have been pressed from the east by the powerful private utility centered here in St. Louis, from the west by another powerful company in Kansas City, and from the south by these and other companies that have teamed up to keep the co-ops from getting full benefit of Federal power projects. I think you know what I am talking about when I tell you that Missouri has had to have some real fighters among its leaders to accomplish what it has in rural electrification.

I am proud to know some of these fighting leaders of the rural electrification movement in Missouri.

I am proud, too, to have had a long acquaintance with Clyde Ellis, whose brilliance and courage are an asset that I hope your national organization fully appreciates. You are fortunate indeed to have him as your representative in Washington. He has already earned his place in rural electrification's hall of fame.

No listing of individuals associated with the development of rural electrification down through the years would be complete without mention of the late George Norris. He represented the neighboring State of Nebraska in the United States Senate, but on great issues he spoke for all mankind, as he most surely did in his campaign to bring electric light and power to the Nation's farms. I consider it one of the great experiences of my life to have known George Norris, and I trust that the memory of him and what he stood for helps light the way for all of you who are today's leaders in rural electrification.

I have been asked to direct my remarks to the management of cooperatives. I approach the subject with full awareness that some of the management problems in your organization are strictly technical and clearly beyond the scope of my experience and understanding. I shall confine my remarks therefore to those aspects of management we have in common.

In a cooperative the lines of management extend to two major groups—the employees and the members. The extreme importance of those lines that reach out to the members is one of the great distinctions between cooperative management and private-business management. I shall devote most of my discussion today to management's relations with the membership. I emphasize in passing, however, that employee relations are important, as they are in any business. Don't neglect them and don't hesitate to apply progressive policies in employee relations.

There is an old story about a factory foreman who had been a sergeant in the Marine Corps. His supervisor called him in one day and pleaded with him to lead his people rather than drive them. The foreman listened attentively. At the end of the 30-minute lecture he jumped to his feet and shouted, "If you want me to lead them, boss, that's what I'll do—and I'll lick the first one that doesn't follow me."

Well, we do not want to adopt the sergeant's tactics, but we must learn to lead. We must learn to inspire men to do a full day's work. And I happen to believe that a manager who really knows and believes in cooperatives can get more out of his employees than a manager who is indifferent toward the things cooperatives stand for.

Your electric cooperatives, like the farm-supply cooperatives that I represent, have a common heritage. Both are the outgrowth of long-felt needs. But the present memberships of both, I know too well, are inclined to forget the reasons for their existence. It is important in cooperatives, therefore, that we constantly remind the membership of the conditions that brought our co-ops into being. We must be constantly mindful of our past.

Now don't misunderstand me. I'm not one of those who longs for the good old days. In most respects the old days were not good days at all, when we get down to realistic comparisons.

Let me tell you about an experience of some years ago. I made a trip down into the Missouri Ozarks to spend a night with my brother, who still lives on the farm where eight of us boys were born and reared. That old farm brings a rush of fond memories every time I visit it.

On the night I have in mind I went with my brother to the barn. It was the same kind of barn I knew as a boy, but how different it was at evening choretime in the middle of winter. In my days there, we did the chores by the light of a coal-oil lantern. The barn is electrically lighted now, and all my brother had to do was turn a switch and the whole place was flooded with light.

We used to milk cows by hand, but my brother milked them that night with an electric machine. And as the milker lines throbbed away, we sat and visited.

Naturally, I commented on the convenience of electricity—for this was my first visit since the place had been connected to the cooperative powerlines. The change was amazing.

But the change in the barn was even less amazing than the change that had been made in the house. The old wood cookstove my mother used was replaced by a shiny electric range. A big refrigerator filled one corner of the kitchen—and I couldn't help thinking of the thousands of times my mother had carried food to and from the old cellar that was the only spot on the premises where we could begin to keep the butter from melting on a hot day.

At one end of the old hall there was a bathroom—and I thought of the times we went to the creek or the horsetank for a Saturday night bath. And in all the rooms, from which my mother's best oil lamps could never quite drive the evening shadows, there were electric lights that brought the brightness of day.

I have thought many times about that visit to the old home. I have marveled at the transformation that electricity has brought to our American farms. And I have swelled with pride over the fact that farmers themselves—through their cooperatives—made the great transformation possible. Farmers did it when nobody else would assume responsibility for building powerlines into rural America. Farmers did it in the face of direct opposition from the private power companies and gloomy warnings that they couldn't possibly pay off the loans made possible by a friendly Federal Government.

Your electric cooperatives have a success story that is almost without parallel in the annals of American agriculture. Your organizations are the outgrowth of what is probably the greatest attack ever undertaken against a nationwide social problem. You changed the whole way of life on millions of farms and did it in a matter of a few years.

But in the very ease with which you have come through this first phase of your history are the seeds from which monstrous troubles could easily sprout in the next few years.

As I go about the country I detect among some of my farmer friends some disturbing conditions:

First, there is a tendency to take their electric co-ops for granted—an attitude of outright smugness in some cases.

Second, there is an amazing degree of complete unfamiliarity with what constitutes a cooperative organization and a lack of interest on the part of farmers in what goes on within the cooperatives.

Third, there is alarming evidence that some farmers would give up their cooperatives in favor of service from privtae companies and think little about it.

These conditions are the direct concern of management. They exist in many cases, I am certain, because of management's shortcomings.

I have heard some discouraging reports—or at least they are discouraging to me—about the actual conduct of some managers and directors of electric co-ops.

I am told that there are managers who try to operate independently of their boards and that there are boards that sit through lengthy discussions of policy without ever calling in their managers.

In one instance I was told of a cooperative that hadn't had a true annual meeting for several years—that its directors had managed to avoid a meeting of the membership and had in that way perpetuated themselves in office.

Wherever boards or managers conduct themselves in such manner there is bound to be indifference on the part of the membership, and I repeat what I have said over and over down through the years: Where the membership is indifferent, the co-op is in danger.

Wherever managers and boards fail to keep in close communication with their members, they bring about a gradual weakening of the foundations of their organizations. It is not enough for the farmer-patron of your co-op to have a dependable supply of power. It is not enough that he gets good routine service. If he is to be a good member and contribute his share to the good health of your organization, he must know what's going on inside the organization. He must know what makes it tick. He must be reminded regularly of his relationship as an owner as well as a patron. He must have a sense of participation in management. He cannot have that sense unless he is properly and fully informed about your operations your problems and your plans.

I cannot overemphasize when I discuss management of an electric co-op that I am not thinking solely of the general manager. The managerial responsibilities in any cooperative extend in part to the board of directors. And they extend beyond the boards to those segments of the membership that take active part in the formulation of general policy.

There is a tendency in your co-ops, as in some other kinds of co-ops, for the management to forget—or try to ignore—the distinct differences between a business that is cooperatively owned and one that is privately owned. Whenever the management of any cooperative takes the attitude that there are no distinctions between it and another business engaged in the same lines of production or service, it is planting dynamite in the foundation of its organization.

A cooperative must have a good balance sheet. It must be competitive as to price and service. It must have good employee rela-

tions and all the other things the management experts advise. But if it has all these and does not have good member relations, it is on precarious footings. And in the case of your rural electric co-ops, I fear the weaknesses show up sooner than in other farmer cooperatives.

The vigor of a cooperative must not be measured solely in dollars and cents or even in the size and splendor of physical assets. It can be measured accurately only in terms of the temper and activity of its members. Balance sheets and operating statements reflect bone and sinew, but they do not always reflect the strength of the heartbeat and the fervor of the soul. Because cooperatives are people working together in a common purpose, moods of the membership are all important. And good co-op management, I submit, must direct a lot of attention to developing the proper attitudes on the part of the members.

The Farmers Own Farm Program—Part II

EXTENSION OF REMARKS
OF
HON. RICHARD BOLLING
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 16, 1956

Mr. BOLLING. Mr. Speaker, there follows part II of an address by Mr. Howard A. Cowden, president and general manager, Consumers Cooperative Association, delivered before the 14th annual meeting of the National Rural Electric Cooperative Association, St. Louis, Mo., January 24, 1956:

What is the proper attitude on the part of members, and how can management bring it about?

In my opening remarks I referred to the common aims of all farmer cooperatives, which are to improve the living standards of farm people—to enable farmers to have some things they would not otherwise have.

There was a period following World War II when those aims seemed to lose significance. Farmers—along with the rest of our economy—were doing pretty well, and reference to anything like a "farm problem" seemed quite out of date.

Then came the 1950's and some gradual changes that farmers themselves were slow to recognize. Up until the middle of 1955, in fact, there was very little public recognition of what some of us were warning against as early as 1952—the cost-price squeeze on agriculture.

As recently as last September I encountered seemingly well informed people who refused to believe that farmers had fallen behind the rest of the economy. Let me tell you one particularly interesting observation.

Returning from Europe, where we attended some international cooperative meetings, Mrs. Cowden and I got acquainted with a family whose company on shipboard we enjoyed very much. The head of the family was an executive in a large oil company. He conversed brilliantly on many subjects, but one day he undertook to discuss the so-called farm problem. He couldn't understand why anyone should be concerned about farmers. And he tried to clinch his point with the remark that "most farmers even have running water and bath rooms." And he went on to complain that he thought he was helping pay for all this rural luxury with his high income taxes.

That story seems quite appropriate today. For one thing, I feel that I am in the presence of people who have had a large part in giving farmers something better than a washtub for their Saturday night baths. But more important on this occasion is the illustration of how easy it is for the nonfarming majority of this country to misunderstand the aims and needs of the people who produce our food and fiber.

Most of you, I am sure, have heard about the New York Times reporter who wrote that most Iowa farmers had a minimum of two new cars and that they were usually brand-new Buicks, Oldsmobiles, or Cadillacs—and how one of the farm papers checked up and found that the average Iowa farm car was 5 years old and that 3 out of every 4 were Fords, Chevrolets or Plymouths. (The Cadillacs turned out to be just four-tenths of 1 percent of all the cars found on all Iowa farms.)

I relate these incidents because I think one of the important responsibilities of cooperative management is to make sure that it is tuned to the realities, the interests, the needs and the peculiar problems of farmers.

In our farm supply cooperatives some of us handle more petroleum products than anything else. We operate refineries, oil leases and pipelines. But we must guard against the assumption that our primary interest is in the oil business.

We are in the oil business all right but we are in it as the representatives the hired hands if you please—of farmers. In like manner we are in the fertilizer business or the feed business—but our primary interest is on the farm and in the feed-lots of our farmer-members.

You managers here today are in the electric power business. But you are in that business not just to see how efficient an operation you can develop. You are in that business not to see how much money you can save or how big a load you can handle—you are in it to serve farmers. Your cooperatives are a means to an end. When you lose sight of that fact—or when your boards of directors lose sight of it, you lose that higher concept of management that is essential to long-run success in a cooperative operation.

For many weeks now we have heard and read a lot about the farm programs offered by one group or another as remedies for the aforementioned ills of agriculture. There is a wide range of opinion, and great disagreement, as to what should be done. I am not here to discuss any of these programs in detail. I am not here to pick flaws in any of the proposals that are likely to be written into new farm legislation in this year of great anxiety in Washington about the farm vote.

I do think, though, that we need a change of emphasis and, to a certain extent, a new approach to the farm problem.

If one analyzes all the proposals that are being publicized these days, one will find that they can be divided under two main approaches:

First, is what I call the political approach. It stems from the notion that all we have to do is set up the right kind of price supports, acreage regulations and the like—by Federal law—and farmers will be back on easy street.

I am not against the idea of Federal farm programs. The complexity of our modern society makes it necessary that the Government exercise certain controls in almost all areas of production. And agriculture is important enough to our national welfare that the Government certainly must be prepared to offer relief in times of crisis. Yet I hope we can follow a course that does not put agriculture completely at the mercy of politics.

Congress can change every 2 years. If we become completely reliant on Government programs, we run the risk of getting a new one every other year. And farmers can't stand to be buffeted about like that.

There is a second approach to the farm problem which in final analysis can be called the do-nothing approach. Its proponents would ignore completely the current distress of farmers. They say in effect that if a farmer isn't making a living, he should quit and move to town. They believe in survival of the fittest to the extent that they would sacrifice the family-type farm to a system of centrally managed corporate farms. This idea seems to appeal to many big-business leaders, especially those who boast of their "rugged individualism."

But it is a cold and heartless approach. It ignores the family farm as a social institution and a source of character and vitality in our people. It dismisses the fact that there are millions of men and women who have chosen farming as an occupation because they prefer to live in the country rather than the city.

Many people have left our farms already. More will be leaving in the next few years. Our agriculture has attained an efficiency that enables fewer persons to do the work. Much of this efficiency is a direct result of rural electrification, and I am thankful for it. Yet I believe we should seek by every possible means to keep as many as possible of our families on the soil and directly involved in the business of agricultural production.

And that brings me to a third approach to the current farm problem that is a vital concern of all who are engaged in the management of rural electric cooperatives and other farmer-owned businesses.

In our cooperatives we have a time-tested farm program, a program that has meant dollars and cents, service and convenience and a vast measure of independence to farmers. This program was started many years ago by farmers themselves with organization of our first cooperatives. It got a big boost in 1922 with the passage of the Capper-Volstead Act, which clearly defined the legal status of farmers' cooperatives and encouraged farmers to organize them. It was enlarged and broadened by subsequent legislation, including establishment of the Farm Credit Administration. Then in 1935 came the Rural Electrification Act and the subsequent mushrooming of your cooperatives which have, in the words of your general manager, "changed the face of rural America."

The contribution of cooperatives to the welfare of the Nation's farmers is one of the most underrated stories of our time. In fact, one gets the impression sometimes that there is a nationwide campaign of silence to keep the people from knowing what cooperatives have done and can do.

In the region where Consumers Cooperative Association operates we have made some studies of cooperatives on a county-by-county basis. We found several counties last year where the savings of the cooperatives amounted to 5 and 6 percent of the gross income of all the farmers in those counties. Savings of that kind mean much in this period of the cost-price squeeze.

In one county in Iowa last year the total savings of all the co-ops—including the electric co-op—was calculated at well over a million dollars. Those savings, in my opinion, took a lot of the cost-price squeeze off the farmers of that county.

If co-ops can make an annual saving of a million dollars in one county, can we not assume the possibility of developing our co-ops to the point they could account for a saving of one thousand times that—or a billion dollars? Just let someone in Washington mention any program that involves a billion-dollar estimate, and we see big headlines. But when we talk about cooperatives—which certainly have a billion-dollar potential in savings for farmers—we get very little recognition. There are too many people who don't want the word about co-ops

and what they do to become public knowledge.

The savings, or patronage refunds, paid by co-ops, are not the only measure of a co-op's influence. There is an unseen saving—we call it a community dividend—that comes to every farmer in a co-op neighborhood. This may be from the co-op's influence in holding down the prices of gasoline, or fertilizer—or electric power—or it may be from the influence on the prices farmers get for grain, butterfat and other products. In any event, co-ops have demonstrated that they help cut farm costs and help increase farm prices. (And, of course, they also bring comfort and convenience, when it is the electric co-ops we have in mind.)

When co-ops are doing all this, why don't we hear more about them? Why aren't they headlined along with soil banks, domestic parity, price supports and all the other devices that are put forth as remedies for the current farm situation?

I have a double answer to those questions:

In the first place, our cooperatives—all kinds of cooperatives—have been subjected to vicious propaganda campaigns, supported by the contributions of business interests that don't like cooperative competition.

In the second place, we who manage and direct cooperatives have been less than diligent in our efforts to sell cooperatives to our members and the general public. The effects of our enemies' propaganda have reached into the management of some co-ops, I am convinced, to the extent that managers and boards are lukewarm in their support of the basic principles of their business.

Somewhere, somehow, there have crept into the cooperative movement influences that tend to dull the desire of our leadership to grow and expand. Maybe the anti-co-op propagandists are responsible. In any event, I am distressed to hear of co-op boards and managers who refuse to join in fights to protect their sources of electric power.

We learned long ago in CCA that it pays to carry our operations all the way back to raw materials. We do it in petroleum, through the ownership of oil wells and refineries. We do it in fertilizer through the ownership of our own nitrogen plant at Lawrence, Kans. It is not just a coincidence, I assure you, that the price of nitrogen to farmers has gone down as much as $10 and $20 a ton since that plant went into operation.

It is good management to defend your cooperatives as cooperatives. It is good management to protect their independence by protecting the publicly owned generating plants that have served cooperatives so well. It is good management to work with other cooperatives through State and national organization for the good of all cooperatives—and all farmers.

A few weeks ago I read the Secretary of Agriculture's latest list of suggestions for helping farmers and observed that there was no mention of cooperatives so I wrote the Secretary a letter. Let me quote one paragraph from that letter.

"Cooperatives are the farmers' own farm program. We ask you to give the full blessing of your office to cooperatives as the most effective weapon available for coping with the cost-price squeeze. Speak boldly on the subject. Too many men in high position have been inclined to speak timidly in the past, fearing they might offend the business interests that look upon farmers' cooperatives as deadly competitors. Speak boldly and thus give courage to millions of farmers, some of whom have been half-hearted in their support of cooperatives."

I quote from that letter because I believe that it sums up one of the great needs of our organizations. We need to speak boldly in support of what we have done and what we can do. We must encourage our members and our friends to speak up for what we are doing.

Recently I sat in a meeting of representatives of just about every kind of cooperative we have here in the midwest. The discussion centered on the need for an intensive campaign to show the public what cooperatives have done for farmers and what they can do to ease the cost-price squeeze. Every person in that meeting spoke of the need for more cooperation among cooperatives, more pooling of our resources to bring about a better understanding of what co-ops mean to American agriculture. I hope the spirit of that meeting can spread from coast to coast.

We are in this fight together, as farmers and spokesmen for farmers, as cooperative managers and spokesmen for cooperatives. The most important management problem you have today is the problem of holding your members firm in the conviction that rural electric cooperatives are right and good. It is your first line of defense against the kind of campaigns that recently killed off one of your cooperatives in the State of Washington.

I invite you—I urge you in fact—to recognize your common cause with all farmer cooperatives. Together we have a farm program that has proved itself and one that will win greater public acceptance in direct proportion to our ability to explain it.

We must talk not just in terms of our own particular cooperatives, but in terms of all cooperatives, their savings and their services. We must do this if we want the general public to understand our organizations.

As the Nation's population shifts more and more to the cities we farmers are losing some of our numerical strength. We must offset this with a greater unity. "Divide and Conquer" is the watchword of those who would destroy every farmer cooperative if they could.

Let me close, therefore, with a verse from Kipling:

"Now this is the law of the jungle
As old and as true as the sky,
And the wolf that shall keep it may prosper,
But the wolf that shall break it must die.

"As the creeper that girdles the tree trunk,
So the law runneth forward and back—
For the strength of the pack is the wolf
And the strength of the wolf is the pack."

The Fabulous Case of United States Against Hughes

EXTENSION OF REMARKS
OF
HON. JOSEPH R. McCARTHY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Thursday, February 16, 1956

Mr. McCARTHY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement prepared by me on the subject of the fabulous case of United States against Hughes.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR McCARTHY

The fabulous case of *United States* v. *Hughes*, concluded last week in New York, indicates the unconscionable lengths to which powerful liberals in this country have gone, and will still go, in order to discredit and defame those who are attempting to expose the Communist conspiracy.

The United States prosecuting attorney, in his opening statement at the Hughes trial, described the case as "one of the most fantastic schemes * * * in all the annals of political intrigue." This was, if anything, an understatement.

Paul Hughes came to my office late in 1953 seeking a job. I never saw the man; but members of my staff interviewed him and turned down his application. He then went to a number of prominent liberals, posing as a McCarthy investigator. The liberals paid him handsomely for a mountain of scandalous and defamatory information about me and the committee—information that is now admitted to be completely false. (An example of the sort of information Hughes peddled: The McCarthy committee maintained an arsenal of submachine guns and lugers in a secret cache in the Senate Office Building.) All in all, the anti-anti-Communists paid their secret spy $10,800 for such information in an effort that they now admit was designed to eliminate McCarthy.

The names of the men who were involved in this attempt to defame a committee of the United States Senate and its chairman read like a Who's Who of my leading political opponents over the past 6 years: Joseph L. Rauh, chairman of the ADA; Clayton Fritchey, deputy chairman of the Democrat National Committee and editor of the Democratic Digest; Telford Taylor, chairman of the National Committee for an Effective Congress (which masterminded the censure movement); James Wechsler, editor of the New York Post; Philip Graham, James Wiggins, Alfred Friendly, publisher, editor, and managing editor, respectively, of the Washington Post; and Paul Porter, partner of the law firm of Arnold, Fortas & Porter, attorneys for Owen Lattimore.

The main issue in the Hughes' trial was whether Rauh and his cohorts knew that the information they paid for was false—or whether, through their unreasoning hatred of McCARTHY and congressional investigating committees, they had been duped into believing that Hughes' manifestly ridiculous reports were authentic. The verdict, which resulted in the freeing of Hughes, indicates that an impartial jury believed the liberals were in the plot as deeply as Hughes. Hughes was indicted for perjury on six counts. Four of them charged that he had lied when he told a grand jury that several of these liberals were involved in an attempt to get Harvey Matusow to repudiate his testimony against Communists. The other two counts charged that Hughes lied when he testified that Rauh knew that fictitious documents furnished by Hughes were indeed fictitious, and that Rauh knew that the name "Bill Decker," which was affixed to the documents as an attesting witness, was a fictitious name, and was in reality an alias for Paul Hughes.

On 2 of the 4 counts involving Matusow, the jury voted unanimously to acquit Hughes; on the other two it split. On the remaining two counts, involving Rauh, chairman of the ADA, the jury voted 11–1 that Hughes had not lied when he said Rauh was aware that the documents were fraudulent.

Even if the liberals are to be believed when they claim they were innocent dupes (which the jury verdict makes difficult), they stand convicted of hypocrisy and duplicity of the worst sort. For years they have attempted to frighten the American people with concocted stories about paid secret informers; then, on their own showing, they turn around and hire one of their own. For years they have railed against smearing people on the basis of unsubstantiated evidence; yet on their own showing, Rauh and Fritchey paid $10,800 for smear material to an imposter whose credentials they never bothered to verify. For years they have piously pleaded for fair play in politics; yet

on their own showing they paid thousands of dollars for such items of advice from Hughes as that "McCarthy will not be defeated by extensive use of fair play (or) squeamishness," and that a Senate committee and its chairman can be discredited only "by relaxing somewhat on ethics."

I am convinced that the full truth behind this ugly attempt to discredit a Senate committee has not yet been revealed—that probably many prominent people are involved beyond those already named. I believe, therefore, that a congressional committee ought to be instructed to investigate the entire matter. I wonder if you agree with me. Since I want you to have all the facts, I regret that space does not permit more than a brief explanation of the case in this letter. A detailed and revealing account of the case can be found in the February 8 and February 15 issues of National Review magazine, 211 East 37th Street, New York City.

A Bill To Restrict and Limit the Use of Government-Held Real Estate

EXTENSION OF REMARKS
OF
HON. A. L. MILLER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 16, 1956

Mr. MILLER of Nebraska. Mr. Speaker, on February 7, 1956, I introduced H. R. 9131 which would restrict and limit the use of Government-held real estate.

This bill is simply a matter of good housekeeping. It was introduced for the purpose of preventing the Government from using its land in any way that would contribute further to the huge supplies of agricultural commodities that are creating distress in our farm markets. Passage of this bill would demonstrate the good faith of the Congress is recommending the soil-bank program. By retiring its own land, the Government would be taking the lead.

American farmers have been asked by this administration, and by the Agricultural Committee of the United States Senate, to stop producing a large number of their cash crops on nearly 40 million acres of land, under the premise that an oversupply of livestock and a mountainous surplus of certain supported commodities have caused the prevalent agricultural distress. The Government can make a substantial contribution toward the success of the soil-bank program and toward relieving the congestion in the farm market place by passing H. R. 9131.

The Federal Government is the Nation's largest landholder and landlord. It owns more than 456 million of the Nation's 1.9 billion acre total. In other words, the Federal Government owns or controls approximately 25 percent of the total land area in the continental United States, and nearly 50 percent of the total farm land area in this country.

A substantial portion of this Government-held land is not being used for governmental purposes. Instead, much of it is now outleased for the production of crops—principally wheat and corn, which make up a large part of the $8 billion worth of surplus agricultural commodities.

The Defense Department is one of the chief offenders. Beginning on January 4, 1956, and continuing for several days thereafter, the House Interior and Insular Affairs Committee held hearings into the land-use policies of the military departments. The testimony and records submitted reveal many interesting things, but it was especially impressive to me that the Defense Department, as only one agency of the Government, holds more than 24 million acres of land in the United States, as well as an additional several million acres in Hawaii and Alaska and the Trust Territories. By way of comparison, these holdings in the United States exceed in area the States of Massachusetts, Maryland, New Hampshire, Delaware and Connecticut. Or, put another way, these land holdings are the equivalent of a strip of land 11 miles wide from New York to San Francisco.

This empire has been created ostensibly for natural security reasons, but it is astonishing that more than 10 percent of the military land is being used in competition with private farm operators. The following table shows the extent to which military land is being out-leased for agriculture and grazing. It also shows the annual income to the Federal Government from those sources:

Outleasing of Defense Department landholdings in United States, June 30, 1954

Branch	Acres held	Agriculture acres	Grazing acres	Total acres	Consideration
Army	8,253,298	366,299	538,816	905,116	$1,156,384.72
Navy	3,778,417	70,135	111,282	181,418	655,146.06
Air Force	12,141,024	15,923	495,847	511,770	169,622.30
Army civil works		742,390	188,173	930,563	1,311,287.94
Total		1,194,747	1,334,116	2,528,867	3,292,441.02

The Department of Defense holds land in each of the 48 States and the District of Columbia, from a mere 1,335 acres in Vermont to a tremendous 3,886,067 acres in Nevada. Its land-use policies are felt in every State, and it would be safe to assume that crops are being produced in great quantities on military land in nearly every State.

In my own State of Nebraska, the Defense Department owns or controls 107,168 acres of land for defense purposes. Only 20 acres were acquired through withdrawal from the public domain. The balance has been acquired by condemnation, purchase, grant, lease, or other means from choice privately owned farmlands in the heart of an outstanding agricultural region. Military installations now occupy some of the finest farm ground in the State of Nebraska, near Wahoo, Hastings, Grand Island, and Sidney, although military use extends to only a small portion of the areas. As a matter of fact, approximately 77,500 acres of this total are being used to produce crops, and more than 6,000 acres are being used to graze livestock. In other words, 72 percent of the military land in Nebraska is being farmed, and 6 percent is being grazed.

The investment of the United States Government in this land and the fixtures located thereon is appraised by the Department of Defense at $207,700,000. This, Mr. Speaker, equals 8 percent of the 1950 appraised valuation of all farmlands and buildings in my State.

The principal crops that are grown on this military empire are wheat and corn, and they are the 2 commodities that make up a great part of the Government's $8,666,309,000 investment in farm products. One leaseholder, with more than 3,000 acres of military land under his control, last year received a price support loan of $96,521 on 42,671 bushels of wheat. Other military leaseholders approached these figures, and I am sure that the records for other States will show that this situation is not extraordinary.

These lands are also being used to produce crops such as alfalfa, grasses, legumes, and nitrogenous plants that are not in critical oversupply, and I have no objection to a continuation of these practices. I do feel, however, that if the soil-bank program is adopted by the Congress and becomes a part of the law of the land, these practices should be made to conform to the prescribed soil-bank regulations.

The Federal Government cannot continue to talk out of both sides of its mouth. It cannot continue a "do as I say, not as I do" attitude. If it advocates a program that requires a more limited production of supported commodities, it should be the first to show the way.

I hope, Mr. Speaker, that H. R. 9131 will receive the careful consideration and strong support of every Member of Congress who is willing to help relieve distress in the vital farm sections of our economy.

Federal Aid to Distressed Economic Areas

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 16, 1956

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement of Thomas Kennedy, vice president, United Mine Workers of America, before the Subcommittee of the Committee on Labor and Public Welfare of the United

States Senate at Wilkes-Barre, Pa., February 10, 1956, in re Senate bill 2663, a bill to establish a Federal program of assistance in the areas of excessive unemployment:

I have very carefully read Senate bill 2663, introduced by Senator DOUGLAS and others, and also its companion bill, H. R. 7857, introduced in the House by Congressman FLOOD. Speaking of the Senate bill, it is my judgment that it has a great deal of merit but, in light of the situation existing in the anthracite coal fields, I doubt that it can reach far enough to alleviate conditions in that region. I am herewith listing some of the facts with relation to the unemployment situation in the anthracite and will follow with some suggestions with respect to remedies that might be applied to correct and stabilize the economic situation in these anthracite counties.

According to our records the number of idle members of our organization in the 3 anthracite districts is substantially as follows:

In district No. 1, Lackawanna County has 4,723 unemployed members and in the Wyoming Valley section of Luzerne County there are 9,479 unemployed members. Idle members under major coal companies in these sections are as follows: Glen Alden Coal Co., 3,174; Hudson Coal Co., 2,663; Lehigh Valley Coal Co., 1,483; Moffat Coal Co., 1,456; Pennsylvania Coal Co., 1,062; Pagnotti Coal Co., 849; Susquehanna Collieries, 687.

District No. 7, which is the Lehigh region, with members in lower Luzerne County, Carbon County, and part of Schuylkill County, has an idle membership of approximately 6,000 men. In district No. 9 comprising Schuylkill and Northumberland Counties with some members in Columbia and Dauphin Counties, we have an idle membership of approximately 7,000. In many of these sections unemployment-compensation payments have been exhausted and in many other sections payments of unemployment compensation will be soon terminated. For instance, in Schuylkill County there is a total unemployment of 13,450, of which 11,700 are males and 1,750 females. Of this number 3,654 individuals are receiving unemployment compensation, while 1,328 receive partial unemployment compensation. These figures would fairly represent the number receiving unemployment compensation in the other districts, or relatively about one-third of the total unemployed are receiving unemployment compensation. While it is true that some of the slack of unemployment has been taken up in the anthracite region through the acquisition of new industries, the fact still remains that anthracite coal is the basic industry and it will require a great deal of planning in the application of remedies before the economic situation can be stabilized in the anthracite counties.

While we are in favor of the provisions of Senate bill 2663 for the establishment of new industries and other public-work enterprises, we also believe that some attention should be paid to the situation as affecting the basic anthracite coal industry itself. This leads into the avenue of the possible creation of a national fuel policy. Likewise, the attention of the Government should be called to the possibilities of exporting coal to Europe and Asia, as well as to some of the unfair competitive factors involved in the dumping of residual oil on the eastern seaboard, principally from Venezuela; and the promiscuous use of gas as boiler fuel, which is also dumped at frequent times, regardless of price, in some sections of the consuming territory, principally to public utilities. I believe that this committee should and no doubt will give some consideration to these factors.

Representatives of the United Mine Workers of America, who probably have been more affected by the reckless importation of foreign fuels to this country than any other group of citizens, have appeared before countless congressional committees over the years in opposition to such ruthless tactics. However, up until now special interest groups have been catered to on a selfish basis rather than having a policy adopted whereby the country in general would be the beneficiary. As a further insight of this statement, I might refer to a letter released under date of January 18, 1956, by Mr. Arthur Flemming, Director of the Office of Defense Mobilization when he sounded a note of warning that the unusually cold weather of this winter has increased the demand for fuel oils. In his announcement, Mr. Flemming emphasized he was acting on the recommendation of the President's Advisory Committee on Energy Supplies and Resources Policy by requesting oil-importing companies to indicate any additional imports of residual fuel oil beyond what was already specifically programed which they might deem necessary to meet current and prospective consumer demand from now until April 30. This alarmist attitude, in my estimation, is utterly ridiculous and probably the most one-sided statement ever issued from any Government office. The viewpoint is without foundation because the facts of the situation indicate that the available supply of coal in this country is of such sufficiency to meet the fuel requirements of the Nation that there need be no worry about the importation of residual oil at all. Emphatically speaking, it looks to me as though this statement was a sounding board for the oil companies which control tremendous wealth and power in the Nation. In a nutshell, the Flemming statement was little concerned about the coal industry or its problems.

When the reciprocal trade bill was up in the last session of Congress, the figures on residual oil showed that it displaced roughly 30 million tons of coal, most of which was bituminous. The figures for 1955 will show the displacement of about 36 million tons of coal; so, the dumping of residual oil has increased, rather than decreased.

All of these problems are looked upon with little interest at the moment by the administrators of the Federal Government, who seem to be more concerned about oil and gas than they are about coal; and yet, if we were to get into any national difficulties resulting in a program of national defense or war effort, the whole burden of heat and fuel for power would be thrown back upon the coal industry. This happened in World War II and the coal industry met the challenge by increased productivity to the extent that we were able to not only take care of our own needs, but to export approximately 50 million tons per year to our allies. Under present conditions I doubt that this performance could be repeated because of the shutting down of mines and the unemployment that results; and it would take months to rehabilitate shut-down mines. So I submit that the problem should not only be approached on the basis of alleviating conditions of excessive unemployment, but that the question of national defense with an adequate supply of coal in any emergency is likewise important.

The situation in the anthracite region with respect to unemployment has been worsened by the damage done by the recent Hurricane Diane. Several coal companies in the anthracite have suffered heavy damage as a result of the rainfall of 11½ inches within a short period of time. To illustrate one particular happening, the Hazleton Shaft Colliery of the Lehigh Valley Coal Co. employed approximately 800 men with approximately 1,000 affected in the overall picture. This mine was drowned out, the pumps were lost and the mine is now idle and has been since last September. This was the basic industry in the city of Hazelton with a payroll of over $3 million per year. The coal company claims it does not have the money to dewater this mine and have operations resumed. The work incident to resumption not only involves pumping out the water, but the rehabilitation of underground machinery amounting to close to $1 million.

We shopped around in Washington, without results, following the hurricane to find out if any branch of the Federal Government could do anything to put this mine back in operation. We also approached the State administration in Harrisburg, and the matter is still under consideration, but with the present tax budget problem of the State very little can be done until the legislature fixes the tax program and other fiscal matters.

Senate bill 2663 provides for loans for the acquisition of new industries; yet here we have an industry located in the anthracite region employing approximately 1,000 people and no means can be found to rehabilitate this industry and put these 1,000 men back to work. It seems to me that somewhere along the line there should be some agency of the Government to provide for the rehabilitation of this mine and others like it involving any other companies in the anthracite region that were similarly affected.

Unemployment compensation as affecting the Hazleton shaft employees will run out shortly; after that what is to be done with respect to taking care of all these people? Surely, it is a problem which demands the consideration not only of the Federal Government, but of the State government as well.

Senate bill 2663 provides for the payment of supplemental unemployment compensation for 13 weeks for unemployed persons who are taking vocational training under the bill. Here we have a situation in the anthracite where in the mining industry there are approximately 25,000 unemployed persons with ages ranging from 18 years up to 65 and sometimes more. Many of these unemployed persons would be unable to take up vocational training and only the younger persons, in my judgment, would be covered by this section of Senate bill 2663. Why should not the same principle be applied to all unemployed persons and arrangements made by the Federal Government and the State to pay supplemental unemployment compensation to all such persons during the total period of their unemployment or until they can qualify for Federal old-age security?

I recommend this thought for the consideration of the committee with the hope that in the final determination of the bill favorable consideration could be given to this suggestion. My further recommendation would be for an intensive research study for greater uses for anthracite, especially in the metallurgical field, and some consideration should be given to increasing our export trade in anthracite. I also recommend that the Government should give some consideration to this stricken industry in bringing about the resumption of operations at idle mines, and that a national fuel policy should be studied and agreed upon which would establish and set a fair competitive situation among the various fuels—liquid, gas, and solid.

The situation is serious enough to challenge the Government to evolve remedies that will bring about stability and relative comparable prosperity in the anthracite coalfields. We are lending hundreds of millions of dollars to European coal districts to rehabilitate their mines and even to provide housing in countries affected by the Schuman plan. Why not do a little of that at home where it is badly needed?

During the past few days in Washington, Réné Mayer, of France, President of the

High Authority of the European Community for Coal and Steel (the Schuman plan), has had many meetings with high United States Government officials. Secretary of State John Foster Dulles is quoted in the press as favoring the Coal and Steel Authority and takes credit in substance for the loan of $100 million that was made by the Export-Import Bank to the Coal and Steel Authority which, of course, was underwritten by our own Government. This aid has been given to the countries under the Schuman plan to strengthen their economy and to sidetrack the inroads of communism. The fact remains, however, that communistic influence in the trade unions of France is as great today, if not greater than ever before. In fact, the French Government recognizes the leader of the miners Communist union in that country and selects him as their delegate to International Labor Organization meetings which I have personally attended.

In other words, people leaning to the Communist theories of dictatorship receive better treatment at our hands than real honest-to-God Americans, who believe in our form of government and the American way of life. People in countries affiliated with the Coal and Steel Authority can get a loan of $100 million for these two industries, while we here at home cannot get enough money to even begin to rehabilitate some of our own mines and relieve unemployment.

We are not in opposition to the retention of aid to these countries, but we still believe that our own needs and requirements ought to also be taken into consideration and be provided for, because this Nation must remain strong in order to protect the weaker countries in Europe and Asia.

Speaking for the anthracite mineworkers and their families, I express my thanks and theirs to the committee, whose chairman is Senator PAUL H. DOUGLAS, and to this subcommittee, presided over by Senator MATTHEW M. NEELY, for coming into the region to get first-hand information, which shows their sincere interest in trying to do something for this fine cross-section of people making up our anthracite communities.

True Significance of the Paul H. Hughes Trial

EXTENSION OF REMARKS

OF

HON. JOSEPH R. McCARTHY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Thursday, February 16, 1956

Mr. McCARTHY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "The Hughes' Trial," published in the Tablet, of Brooklyn, N. Y., on February 11, 1956.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE HUGHES' TRIAL

The true significance of the Paul H. Hughes trial is that it has exposed with startling clarity the personal and intellectual dishonesty of those who have been in the forefront of the anti-anti-Communist drive. The men who have led the fight to impugn the Government's security system, to eliminate the use of former Communists as Government witnesses, to discredit the Department of Justice and the Federal Bureau of Investigation and to destroy Senator McCARTHY have been revealed in an unenviable light.

Mr. Hughes, posing as an investigator for Senator McCARTHY, was paid almost $11,000 by the Senator enemies for secret "information" on the Senator. The "information" supplied by Hughes was a fantastic mixture of foul lies and vicious distortions, but the more incredible his tale, the more eagerly did Senator McCARTHY's foes snap at the bait. Mr. Hughes even convinced them that the Senator maintained an arsenal in the basement of the Senate Office Building.

Thereafter Mr. Hughes testified before a grand jury that he had overheard conversations indicating that these enemies of the Senator had known that Harvey Matusow, a former Government witness in Communist trials, was in the process of recanting his testimony and had been supplying financial assistance to him. These accusations resulted in his indictment for perjury.

Arrayed against Mr. Hughes at his trial were the following Government witnesses: Joseph L. Rauh, Jr., cofounder of the Americans for Democratic Action and its present chairman; Alfred Friendly, managing editor of the Washington Post and an ADA member; James A. Wechsler, editor of the New York Post, cofounder of the ADA and member of its national advisory committee, and Telford Taylor, member of the advisory committee of both the ADA and National Committee for an Effective Congress.

In summing up his defense, Mr. Hughes' attorney admitted that his client was a forger, unethical and "a louse" who was "engaged in filthy practices" for personal gain, but stated that the evidence adduced from the major Government witnesses "was deliberately false and an insult to your intelligence." "It is your duty," he asserted, "to repeat by your verdict your refusal to convict on perjured evidence gotten from men in high positions."

The jury chose not to accept the words of the above-named prominent self-styled defenders of civil liberties over the word of a "louse" and acquitted Mr. Hughes of two of the major charges against him.

It is no wonder the jury reached the conclusion it did, for the performance of these individuals on the witness stand was utterly disgraceful.

For example, Mr. Rauh swore that he had given but two hints to his good friend, Mr. Wechsler, that he was working with a man who was acting as an informant on Senator McCARTHY. Mr. Wechsler then corroborated Mr. Rauh's testimony, but when confronted by the assistant United States attorney, Thomas A. Bolan, with statements made by him earlier he admitted that Mr. Rauh had given him many details concerning the Hughes project.

Mr. Rauh reasoned on the stand that it was all right for him to have a spy on Senator McCARTHY but improper for the Senator to have a spy on the New York Post (as Hughes had falsely stated to Rauh to be the case).

On three occasions Alfred Friendly swore before the grand jury that he had destroyed all his memoranda relating to his meetings with Mr. Hughes. However, some 6 months later, and after the indictment against Mr. Hughes had been filed, he stated that he had not in fact destroyed the memoranda.

Mr. Friendly swore before the grand jury that he did not know whether a pending recantation of Matusow had been discussed during his meetings with Mr. Hughes, but during the trial (some 9 months later) he denied emphatically that this subject had ever been mentioned.

Mr. Friendly stated he was "embarrassed" when Mr. Hughes would bring in typewritten memos relating to legitimate activities of Senator McCARTHY, as he was not interested in such reports. However, on one occasion Mr. Hughes came in with an oral report, and Mr. Friendly manifested his "embarrassment" and "disinterest" by writing out in longhand 14 pages of notes recording Mr. Hughes' information.

Mr. Rauh testified that Mr. Friendly informed him that $1,000 was loaned to Mr. Hughes in his, Mr. Rauh's name, in order to repay Mr. Hughes for a loan he had made to a McCarthy investigator. Mr. Friendly, on the other hand, testified that the $1,000 was paid to Mr. Hughes to help him move his family out of town.

Mr. Rauh and Mr. Friendly swore that their only interest in dealing with Mr. Hughes was to obtain evidence of illegal activities on the part of Senator McCARTHY and that no political considerations were involved. Such contentions were manifestly absurd and must have appeared so to the jury, as the overwhelming bulk of the material furnished by Mr. Hughes in no way pertained to illegal conduct.

By having a paid spy on the Senator McCARTHY committee, Mr. Rauh and Mr. Friendly were doing exactly the sort of thing they have publicly accused Senator McCARTHY of doing and their obstinate refusal to admit this obviously had considerable effect on the jury.

Apart from the issues involving Matusow, Mr. Hughes also asserted that Mr. Rauh had instructed him to fabricate certain statements derogatory to Senator McCARTHY and members of the staff. Mr. Rauh denied that he knew the statements to be false. However, 11 of the 12 jurors disbelieved him and voted to acquit Mr. Hughes on this particular issue. Thus, after hearing all of the evidence, all but 1 juror could not conclude that Senator McCARTHY's arch-enemy, Mr. Rauh, did not knowingly pay for fictitious documents condemning him—a fine commentary on the caliber of men who have sought to silence Senator McCARTHY and, indeed, a finer commentary on the methods used by them in that endeavor.

"No one can guess where this process of informing will end," wrote Mr. Rauh in a 1950 article attacking the use of informants by the Government. The humorous irony of this statement is apparent. One can be sure that Mr. Rauh never dreamed that the "process of informing" would lead to the exposure of him and his friends as deceitful. Hypocrisy suffered a defeat.

If Senator McCARTHY had testified during the Army-McCarthy hearings or during his censure hearing as falsely and evasively as did the proponents of "liberalism" at the Hughes' trial, he would have been buried in an avalanche of scorn. If it were discovered that Senator McCARTHY had a paid spy in the employ of the ADA or on the Washington Post, the roar from an outraged "liberal" press would have been deafening. However, so far we have heard not even a peep from "liberal" sources in criticism of Messrs. Rauh, Friendly, et al. But, of course, that is not surprising, for the "liberal" press has always been ruthlessly one-sided in matters McCARTHY.

It is a great pity that all issues involving Senator McCARTHY and his enemies cannot be resolved as was the Highes' case, with all parties involved under oath and with a jury of 12 impartial Americans to determine who is telling the truth. Instead, the pious mutterings of leftwingers of the like of Mr. Rauh will continue to be treated as gospel in the "responsible" press and anything done by Senator McCARTHY to expose the Communist conspiracy will be regarded as the machinations of an evil man. However, the Hughes' case, with its amazing revelations, should cause all thinking Americans to pause and reflect. Messrs. Rauh, Friendly, and Wechsler have been responsible for a gret deal of anti-anti-Communist and anti-McCarthy propaganda. In the light of their exhibition at the Hughes' trial, one may well wonder what value to put on any of their previous utterances.

Lincoln Day Address by Governor Smylie, of Idaho

EXTENSION OF REMARKS
OF
HON. HENRY C. DWORSHAK
OF IDAHO
IN THE SENATE OF THE UNITED STATES
Thursday, February 16, 1956

Mr. DWORSHAK. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by Gov. Robert E. Smylie, of Idaho, at the annual Lincoln Day dinner of the San Francisco County Republican Central Committee at San Francisco on February 9, 1956.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS OF GOV. ROBERT E. SMYLIE, OF IDAHO, AT THE ANNUAL LINCOLN DAY DINNER OF THE SAN FRANCISCO COUNTY REPUBLICAN CENTRAL COMMITTEE, SAN FRANCISCO, CALIF., FEBRUARY 9, 1956

Words will not tell you how thrilled Mrs. Smylie and I are that you invited us to dine with you tonight. Like millions of other Americans, this lovely city by the bay holds a special place in our lives. It was here that we tarried a while in 1945 before I flew from Oakland to Tacloban in Leyte Gulf. True, the days of that visit were few; but the mind invests them now with a splendor born of the always fleeting sweetness of those troubled war-torn years.

And so we come happily back to San Francisco. The bustle of your commercial life intrigues us. Your devotion to the arts, to entertainment and good living, coupled with happy memories of a decade ago, make your city a capital of our hearts. And with tonight we can write another chapter in our lives entitled "San Francisco."

Speaking personally, I must tell you that I am flattered and honored to be asked to speak in San Francisco and in California. The strength and muscle of California's republicanism is a national legend. That time after time you win elections against great odds is a testimonial to the brilliance and depth of your leadership. It is important to California, to the West, and to the Nation that your record of achievement continues. It is only a question of time now until California is our greatest State. Then the balance of national power will swing westward even more rapidly. Then, as now, California will have many leaders to give to the Nation.

In Idaho, our admiration for your great leaders is total. We know them all. We admire their courage, their skill, and their devotion to the cause of liberty and individual human dignity.

California's brilliant 31st Governor, Goodwin Knight, is adding a splendid chapter to the history of California's service to the Nation.

Your two Senators, WILLIAM KNOWLAND and THOMAS KUCHEL, are towers of strength for the Republican Party.

Our great Vice President, RICHARD NIXON, has brought talent and distinction to his office that it has lacked for many years.

Congressmen like BILL MAILLIARD, who represents you, and LEROY JOHNSON, in whose district I visit tomorrow, have helped make the story of California republicanism an envied legend in the land.

And California gave America a man to whose name no words that I can utter would add luster—our great Chief Justice, Earl Warren.

A decade ago we lived in Washington, D. C., on the far side of the continent. In those war years, you'll remember, travel was anything but easy. We tried to fly. We did for a part of the way. But I had to leave Lucille in Denver to try and get here by train, while I flew on ahead. For me that first trip all the way was a sort of review of all the history and geography I ever knew.

You move swiftly away from the seaboard as you head west by air. Below you are all the hallowed shrines of the first years of our nationhood. Now they are scattered among great cities and the industrial plants of the East. You pass the Blue Ridge and move westward over the steel furnaces of Ohio and Pennsylvania. After a bit the land levels out, rumples up around the rivers, and the vast and fertile Corn Belt is below you. Then the ground really gets flat and the Great Plains mount toward the front range of the Rockies and in some places still you can see the ruts of the wagons that carried America west. Now the high upland plains are below you as you wing westward, rimmed by mountains majestic in the sun. Then quickly you drop over the Sierra and your great city by the bay glows like a chain of pearls along the neck of all the golden valleys of northern California.

You land, and in one short span of hours you have traveled the whole stage of our history as a nation, you have seen the productivity and mighty capacity of the fairest and strongest land the world has ever known.

This is our America—productive, strong, and free.

This is our America—great enough and big enough and courageous to rise to the challenge of stirring times.

This is our America; custodian of a world leadership that we did not seek but which came to us out of the superb heroism of our people and from their devotion to duty both public and private.

This is our America; where the dynamic ferment of a people's greatness has been their acceptance as a basic item of faith of the proposition that man's genius for betterment cannot grow and flow and produce except in the free, clear air of political and economic freedom.

It will be good for our Republican Party—and good for America—to have our convention meet this year in your great city. This convention will be the 26th. One hundred years will have passed since the first convention nominated General Fremont as our candidate against Buchanan.

And this journey of our party is symbolic. Fremont, who helped your great Stockton win the Bear Flag War, was nominated in Philadelphia, a continent away from San Francisco.

That Republicans gather a century later in the great State that Fremont helped make a part of the United States is symbolic of our devotion to liberty and individual human dignity that have made America great.

It will help us all remember our great beginnings. It will keep us true to our first principles.

We gather here this evening with no one's permission. That is our American freedom of peaceful assembly.

No one has even vaguely suggested what I should say here, and this is our American freedom to speak and think as we will.

And certainly long years ago, or so it seems to me that it was long ago, no one told a schoolmaster's son in Iowa that he might or might not aspire to high places in this free land of ours. And yet in a few short years I can come before you as the Governor of one of our great States.

And this, of course, is proof positive that the incentive system is still a ferment in our America and illustrates more clearly than any shining word could do that most precious of American freedoms—the right to aspire to be something more than you are.

Of course there is a reason for all this. The philosophy of freedom that has welded us together as partisans of dynamic middle-ground conservatism is easy to trace. It found its first place on the world stage in the mind and heart of our party's first President. There is an obscure quotation from Mr. Lincoln's papers that seems to be to be most appropriate to this time and place.

In 1864, just as they departed to join the Army of Northern Virginia then commencing its campaign through The Wilderness, Lincoln said to the 184th Ohio Infantry on the lawn of the President's house in Washington:

"I happen temporarily to occupy this big White House. I am a living witness that any one of your children may look to come here, as my father's child has. It is in order that each one of you may have, through this free Government which we have enjoyed, an open field and a fair chance * * * that the struggle upon which we are engaged should be maintained."

Drawn from the deep springs of Lincoln's humility and his communion with the spirit of our Nation's greatness, that statement is a beacon that any one of us can follow. It speaks the ancient command that we must so honor our freedom that no act of ours shall ever leave that heritage less secure than it was when we received it from our fathers. And that spirit guides us now.

In the hustle of day-to-day life we sometimes miss those kernels of thought and expression that history will later mark with greatness. Let me take the liberty of inviting your attention to a modern statement of American sentiment that I think history may rank alongside the magic words of the great Lincoln.

This was the President of the United States to the 84th Congress. This was his message on the state of the Nation:

"The obligations upon us are clear:

"To labor earnestly, patiently, prayerfully for peace, freedom, for justice, throughout the world.

"To keep our economy vigorous and free, that our people may lead fuller, happier lives.

"To advance, not merely by our words but by our acts, the determination of our Government that every citizen shall have opportunity to develop to his fullest capacity."

In what more sparkling dress, in what more faithful words could the hopes and aspirations and the dreams of the people of this Free Republic be expressed? The yearning for domestic tranquility, for the freedom to aspire, for a just and lasting peace—all of them are there in that simple paragraph.

Perhaps unknowingly—but I think otherwise—the great human heart and mind of the President identified him with the dynamic ferment, the driving principle of this Nation's greatness. For his paragraph speaks our acceptance as a Nation of the credo that man's genius and strength will not produce except in the clear, free, tranquil air of freedom.

This world in the mid-twentieth century is not just as you and I would like it. That is well—if all were right there would be an end to aspiration. I am glad that I was born in this age and that as Governor of my great State, I am permitted to join my efforts with those of our great President to continue the peaceful prosperity we now enjoy. I will not attempt to turn the clock back because the good of yesterday will not always fit the problems of today. I will put forth the best efforts of my life to assist anyone who desires to go forward toward continuing peace and contentment for free people everywhere.

We Republicans know that government is a human problem and we will do all we can to promote the happiness and contentment of our people. We realize that in order for man to be happy he must have something

to believe in, someone to love, and something to possess.

And we know that there is stretch and muscle left in this dynamic America. We are not in a boom period. The current upsurge in our economy is backed by the strength of necessity. The personal income and purchasing power of our people is well ahead of any period in our history. More people are at work and more goods are being produced than ever before in the history of the world.

As this new era of peaceful prosperity continues, the fear of socialistic schemes and of resurgent communism itself will grow ever more remote.

This might be a good time for you and I, as partisans of President Eisenhower's program of dynamic conservatism to really take stock—to use the phrase of that happy warrior in the brown derby, who might well be one of us now if he were still among us, "Let's take a look at the record."

Do you remember that wicked and divisive phrase that the Democrat high command tried to make into campaign slogan. They spent millions to say, "Don't let them take it away."

Take what away? —Look at America in 1956. Measure the might of our production. Use the yardstick on our prosperity and then turn the slogan around. We Republicans know how to keep America free and prosperous and peaceful too. And the people like it—they'll remember how it was—and they won't let anybody take this away.

Do you remember that in 1952 the guns were blazing in Korea as you voted? Those guns are silent now.

Do you remember that in 1952 the dollar that filled the workingman's envelope was getting slimmer with each paycheck? For 3 years now the purchasing power of that dollar has remained nearly constant, and the wage increases have been wage increases—not just figures on a check that bought less and less—for more and more.

Do you remember that in 1952 Government spending hit an all-time high, and tax relief seemed all but impossible? Now that budget is in balance and the largest single tax reduction in the history of America has helped every individual in the land enjoy more of the fruits of this more productive America.

Do you remember that in 1952 we were all apprehensive that our greatest concern might well be to defend America from traitors already within the door? Now the people's confidence in their Government is restored and the worry about Communist infiltration in high places is ended.

And remembering all of that—do you suppose that any slogan will confuse the people? I think not.

The American people know which kind of government makes America best for Americans and they'll vote for it again.

And no amount of whistlestop bombast will confuse them. Neither will clever quips amuse them. In these last 3 years Americans have witnessed the benefits of constructive, conservative government. They have found it good—and good for them.

As good Republicans, remember that these 3 years were Republican years, and let that be an answer to the prophets of gloom and doom who would have you believe that we must turn the clock back to all the tired old panaceas and that there is no future for our American incentive system.

These have been a brilliant 3 years, studded with the accomplishments of a free people, born to persevere and prosper. They have been the accomplishments of men and women true to the heritage of liberty and enterprise bequeathed to us by the great Lincoln. And the future that lies ahead will be just as bright, and brighter. We face great challenges, but the history of this country is the story of difficulties met and mastered. We have the vision, the courage, the ideals and the spirit with which to face these bright tomorrows and to make them our years of historic growth and development.

But let the President himself sum up this record. Hear now his summation of these last 3 Republican years in his address to the Nation last January 20 as we saluted the 3d anniversary of his inauguration:

"At home we enjoy prosperity; not the false prosperity of a dizzy inflation or of economic activity based mainly on arms spending; not the tragic prosperity of a few who can squander and of millions who must pinch; rather the genuine and widely shared prosperity of an immense productivity for peacetime satisfaction of human needs.

"This record is the product of an industrious citizenry, supported in the Federal Government by a program designed for progress and dedicated to integrity, to concern for every individual, to faith in America and its principles."

The people approve that record. I hope he will let us celebrate his inauguration five more times.

But I trespass overlong in a discussion of those thinsg that lie closest to my heart these days—the tremendous contribution that President Eisenhower's concept of dynamic conservatism has made to a free, vigorous and productive America.

We are met tonight to honor the memory of the first President which our Republican Party installed in the White House. It is true that Abraham Lincoln belongs to the ages—to the history of a free world whose brilliant concept of liberty is encrusted with Lincolnesque devotion to the Christian dignity of the individual human being. But history will understand in this hour of commemoration in the anniversary year of our party's first national convention, if we remember with glad hearts that peculiarly and historically, the great Lincoln belongs to us—to the Republican Party. He spoke our first principles and he first set our party's feet firmly on the path that led to service to our Nation. And in this hour of dedication and commemoration, it is fitting that we look to the greatness of his spirit for guidance and for inspiration.

In the Book of Ecclesiastes there is a somber passage about the "time of little hope," which is described as the day when the clouds return after the rain. In some ways it fits this time of stress all too well. The immediate, deadly danger from the storm is over. Yet the clouds return and instead of the sunshine of enduring peace we live under the gray overcast of stern, implacable tension.

It was in just such a period that Abraham Lincoln came to the White House almost 100 years ago. The storm had not burst, but the clouds hung low and were growing thicker and blacker. The hearts of brave men failed when they tried to look into the future; and cowards were already whimpering and whining on street corners, in partisan rostrums and in the editorial columns.

Yet had the Nation but known it, on March 4, 1861, the Nation was already saved, for the man had arrived. It took a long time for people to realize it, long years of blood and fire and anguish; and longer years for the dust of battle and the clouds of passion to drift away. But when we could see clearly again, the truth was plain—from the moment that Lincoln took the oath of office as President, the Union was saved.

I draw the parallel no further. I dare not. Men of Lincoln's stature are God's gifts to a nation, bestowed when and as His wisdom, not our wishes, may determine. He may not grant us another or, perchance, He may have already sent us one whom we have not yet recognized.

But this we do know—in times when the road ahead is shouded in mist, it is the spirit of Lincoln that this Nation needs above all else, and it is the gift of that spirit for which it should pray.

Carl Sandburg has published as a book the preface that he wrote for his great life of Lincoln but later for some reason discarded. In it he has a description of Lincoln that may strike you at first as merely curious, but which, when you study it, will find to be great. Sandburg said, "He was not only a genius in the science of neighborly human relationships and an artist in the personal handling of life from day to day, but a strange friend and a friendly stranger to all he met."

Translate that into national terms and see what a lordly thing you get. Imagine, not a man, but a nation infused with the spirit of that man—a genius in the science of neighborly human relationships. How soon the worst of its problems dissolve and vanish. Imagine the Government of the United States as an artist in the personal handling of life from day to day—how magically our public life would be transformed, how quickly the screaming and vituperation would die away, how rapidly we would suppress the merchants of hate, how we would scorn the sowers of suspicion and prejudice. Imagine us as strange friends and friendly strangers—the Samaritan among the nations, never identified with any, never inseparably bound to any, always a stranger but always a friend.

Somewhere in that picture I believe you will find every good thing that the United States has done in this blasted and twisted century—the bloodiest in human annals; in which good deeds, God help us, are few and far between. A great deal more is in the picture—it includes every good deed we might have done, but didn't. Take such splendid moments as we have had, such fragments of nobility as we have managed to achieve and fit them together, discarding the weaknesses and villainies, and you have a portrayal of the grandeur of Lincoln's spirit.

Then add the lost opportunities—the times when we didn't quite understand, or didn't quite dare, or weren't quite generous enough to do the great thing we really wished to do—and you will have the sorrow that brooded over his spirit.

In 1861 it was Lincoln's wish to purchase the slaves and set them free at the expense of the whole country, not at the expense of the Southern States alone. But he was not permitted to do it. Passions ran too high. Misunderstanding was too thick on both sides for calm reason to obtain a hearing. So, while the evil was eventually eliminated, it was at the cost of fearful agony and loss.

In 1956 we are facing the same old evil. It has a new name, but that doesn't matter. They call it communism now, but it is slavery. It must be and it will be eliminated; but I believe, as Lincoln believed, that there are better ways of eliminating it than by fire and sword. The best and wisest among us know that there are better ways than by hammering out a solution on the terrible anvils of atomic war.

So while I dare not claim that there is a Lincoln among us, I have faith to believe that some men among our leaders are imbued with the spirit of Lincoln to the extent that they will not accept war as the solution of our problem until the last honorable alternative has been exhausted.

You will find such men in both parties, but conspicuous among them is the President of the United States. Under intense provocation at home and abroad, he has yet to utter one inflammatory speech or commit one rash or blundering act. With firmness in the right as God gives him to see the right, he is yet convinced that hatred and suspicion, to say nothing of the wild passions of war, are poor instrumentalities to advance the fight. He knows that there is a better way and, like Lincoln, he seeks desperately to find it, and then persuade his countrymen to follow it.

It is no partisan appeal to call upon all men of all parties to sustain him in this endeavor. Disagree with him on everything else, if you please, but follow him in his effort to make reason the rule and charity toward all, the spirit of our foreign relations; for this is the spirit in which Lincoln acted, and, so acting, rose above all parties, all sections, all economic interests. In that spirit there is neither Democrat nor Republican, no North, no South, no East, no West, only Americanism.

It was in so acting that Lincoln acquired the piercing vision before which the mists of passion, the dust and smoke of battle that blinded other men, became the thinnest of transparent veils through which he could see that Nation that was to be—indivisible, under God, with liberty and justice for all.

In the century since the Lord took Lincoln from among us we have learned to know that his real genius was his onenees with his people. Sprung from the most humble among us, born to suffering and privation, touched with an inspiration that had its source in divinity and took its strength from our whole concept of individual freedom and dignity, Lincoln lives in history as the really great example of the brilliance of the American way. He had the enduring patience to live with a problem until it could, and would be solved; and he knew that no issue, no question, would long be mistakenly decided if it were submitted to the patient wisdom and the ultimate justice of the people themselves.

It is fitting then that we should come here to do honor to this greatest of all great Americans and that the brooding and somber spirit of the Emancipator can look down upon us to see if we remember his sacrifice and if the love of liberty and human freedom still burns in our hearts.

Look down, Lincoln, look down upon us. This is more than an anniversary—it is a rendezvous with your spirit—an occasion for reporting that for another year we have kept the faith.

May God preserve the memory of this great and gallant American.

May God preserve the land and the principles for which he lived and died.

May God bless our Nation, and give to each of us the strength to answer whenever duty calls, and to say by deeds, as well as words, "Lincoln, we are here, and we remember."

Address by Archbishop O'Boyle Before the American Committee on Italian Migration

---

EXTENSION OF REMARKS

OF

HON. HERBERT H. LEHMAN

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Thursday, February 16, 1956

Mr. LEHMAN. Mr. President, on December 5 of last year His Eminence, Archbishop O'Boyle, of Washington, delivered an address before the American Committee on Italian Migration. It was a spiritual address, dealing with the subject of immigration, among other things. In the course of the speech, Archbishop O'Boyle took occasion to criticise the national origins quota system. I ask unanimous consent that his fine address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY ARCHBISHOP O'BOYLE BEFORE THE AMERICAN COMMITTEE ON ITALIAN MIGRATION, DECEMBER 5, 1955

It is rather fitting that a priest like myself, the son of Irish immigrants, should have the honor of addressing the sons and daughters of other immigrants, and particularly those of Italian extraction, since the experience of the Irish and the Italian immigrant in this great land of ours has been so similar. If we were given to boasting, we might say, though our trials and tribulations have been many, we both have done our share to make America great. For many other reasons, I naturally feel very much at home here.

In the first place, as you all know, I have the honor to be the spiritual son of the esteemed and distinguished Archbishop of New York, His Eminence, Cardinal Spellman, who year after year has shown his interest in your aspirations and objectives by presiding over your dinners. His presence here is another manifestation of his deep and abiding desire to help in the easing of all world tensions, a desire attested to by his many self-sacrificing journeys to all quarters of the globe and by the assistance he readily lends to any program that will relieve the suffering people of the world.

It is only a few short years since I was associated with the leader of this movement, the indefatigable Judge Marchisio, in another venture—that of American relief for Italy. Many of you here this evening joined with us in those efforts, and now you find yourselves united in a new attack on one of Italy's most basic problems—the emigration of its surplus millions. This sunny land, whose shores look out on the blue Mediterranean and the sparkling Adriatic, has always had to depend upon emigration so that all her people might find the sufficiency of life which is their God-given right.

From the dawn of the industrial revolution in the mid-19th century, when the first big waves of emigration began until this very moment, sailing ships and modern ocean liners, all have been carrying the children of Italy not only to the countries that make up the Americas, but to far away New Zealand and Australia. To every land and clime, they have brought the richness of their culture and tradition.

Like a mother, whose love knows no sacrifice too great, she has had to stand beside ship after ship in Genoa, Naples, Reggio, and Palermo and bid goodbye to hundreds of thousands of her children who were forced to look, many for the last time, on the Italy that gave them birth, and then turn their eyes courageously toward some new land in which they might obtain, at least, a measure of adequate livelihood and an opportunity to rear and educate their children at a standard that is every true parent's dream.

Here in our own beloved United States, some of her sons were already distinguishing themselves in the days of the American Revolution, a fact that is not surprising when we consider that it was an Italian, Christopher Columbus, who first claimed this land of ours for another foreign sovereign, and it was still another Italian sailor, Americo Vespucci, who gave this country his name.

All through the early days of the new Republic's beginnings and right down to the Civil War, we find the names of distinguished Italians adding to the glory of our history. However, it was only in the 1870's that we began to experience the first great influx of Italian migration. From then on down through the first decade of the 20th century, adverse economic, social and political conditions in Italy brought hundreds of thousands to our shores. And to the everlasting credit of America, it did its share in helping to ease the burden of one of that country's greatest problems.

The Italians were not alone in their coming for all of Europe was encouraging its children to seek freedom, hope and security in the new Nation that was pioneering its destiny to the Mississippi and beyond to the Pacific. The greater part of 40 million immigrants that have been our rich heritage came to America in the last 3 decades of the 19th century and the first of the 20th before, as one author puts it, "the lamp that lights the Statute of Liberty was virtually extinguished by the anti-immigration laws" that were passed in the 2 decades that followed.

The period between the two World Wars saw all immigration from Italy practically cut off so it is little wonder that we find the American Committee on Italian Migration coming into existence at a time when the emigration of her citizens has again become one of Italy's greatest problems.

Synonymous with immigration is the great name of Scalabrini.

It is proper and right that here this evening, through the Very Reverend Father Francesco Prevedello, Superior General of the Pious Society of the Missionaries of St. Charles, you should honor the Servant of God Bishop John Baptist Scalabrini, its founder. In every country to which his spiritual sons have gone they have been celebrating this year the 50th anniversary of his passing, and more and more people have come to know the life and labors of this saintly man, truly and justly called "Father to the immigrants." While multiplying the prayers for his accession to the honor of the Altar, these celebrations also have helped to focus the eyes and minds of many on the problem of emigration.

John Baptist Scalabrini was born in Fino Mornasco, a little village near Gomo, in the Lombardy region of Italy, in the year 1839. Early in his childhood, he showed signs of an uncommonly brilliant mind and a keen sense of right and wrong. It was no surprise to anyone when at 18 he entered the seminary to study for the priesthood to which he was ordained in 1863, at the age of 24. Even as a student, he gave his time to the teaching of catechism which was no more popular then than the vocation he had chosen for himself since anti-clericalism was abroad in the land. He grew up in an age that took courage, determination, and vision for the enemies of the church were many.

All through his life—as a parish priest, rector of the seminary and as bishop—he built upon the foundation he had laid so well, and pressed the study of the catechism for he knew that education alone without sanctity could not produce the strong faith and the integrity in men's hearts that his age required. But it is for his work among the emigrants that we hail him this evening. Here particularly were his courage and vision most noticeable. He saw the hundreds of thousands that of necessity were leaving the mother country, and he realized probably better than anyone else the spiritual as well as the social and economic problems that would be facing them in the new world.

It was for this reason that he organized missionaries to work among the Italians who were finding new homes and planting new roots, not only in other countries of western Europe, but in North and South America and Australia. He knew that priests would have to accompany them on the ships and remain with them in their new homes if they were not to be lost to the faith. Today his spiritual sons in these lands are legion, and their seminaries have another thousand students preparing to replenish and strengthen their ranks.

It was this saintly bishop who first suggested to St. Frances Cabrini that she lay aside her dream of a missionary post in China to follow the Italian emigrant to the West, and who finally persuaded Pope Leo XIII to order her to go west. Little did she dream that soon she would be taking her little community to the harbor of exiles and immigrants, the great port of New York,

where one day she herself would be hailed as the "Mother of the immigrants".

Unwilling to send others where he himself would not go, Bishop Scalabrini came to America in 1901 where he visited all of the establishments that had been set up by his followers and where he talked with everyone who would listen, even the President of the United States, about the problem of the immigrants. In 1904, he followed his missionary sons to South America where he visited their houses in Brazil and the Argentine. The strain of that trip was to shorten his life for he barely returned to Italy in time to complete the report on his journey when this faithful and loyal servant of God was called to his reward on Ascension Day, June 1, 1905.

By example as well as word, he had personally fulfilled the mandate he had given to his spiritual sons and daughters—"Wherever there be an Italian immigrant, take to him the comfort of his faith and the smile of his native land." Bishop Scalabrini's works were prodigious and many. It was not without reason that he was called the Apostle of the Catechism, and his voice was heard, not only in inspiring talks and sermons, but also in numerous pastoral letters rich in doctrine and in practical teaching.

He promoted social and economic action, a good Catholic press, and introduced Catholic action in every parish at a time when it was practically unknown in the form which is so familiar in our day. But it was in the problem of emigration that Bishop Scalabrini was a true pioneer in Italy. He awakened the authorities and the entire nation to the needs of the emigrant. These needs became the subject of lively and effective discussion in the public press, in the Parliament, and in every city. What an example and inspiration he provides for our day when our own thinking and feeling in regard to immigrants and immigration right here in the United States could stand more serious introspection.

The pages of our immigration history do not always make the most pleasant reading. They are sometimes filled with accounts of prejudice and discrimination, mistreatment and exploitation, restriction and isolation, of racism and nativism. Fear and distrust of the stranger has not been the least of our sins. The American of today, no less than the descendant of the early colonist, seldom takes an idealistic view of immigration. Over the past 175 years, all of us have been too prone to forget that the only native American was the American Indian. Although our land was peopled by the oppressed, we need to be urged that it is a duty and a privilege to offer a home to others who are oppressed.

Even during those days when immigration was at its height here in the United States, the Italian, the Pole, the German, the Irishman and other nationalities who came to this country in such great numbers received at best a grudging welcome. And all during those years there were forces at work that would destroy entirely, if they could, the "melting pot" that in God's providence had been forged on these shores. It did not matter that the immigrant came with his tradition, his culture—his faith—all of which he desired not to be melted away, but to be woven into a mosaic, rich and colorful, of Old World custom adapted to the New World.

It did not matter that the immigrant came with his thrift, his industry, and his sense of destiny. There were those who saw in him only an instrument of cheap labor and of exploitation.

It did not matter that the immigrant came prepared to make every sacrifice that the lot of his children might be better than his own. There were those who would relegate him to the slums and the ghettos, then rave and rant because the products of these same slums frequently found their way into the children's courts and, now and then, into lives of crime and violence.

It did not matter that the immigrant came with a deep and abiding zeal for the religion into which he had been born. There were those who claimed that this religious fervor would be used to stir the immigrant's imagination to a point where he would help to overthrow this country's established norms and institutions.

The general terms of the great immigration restriction laws of the early 1920's stare up at us from the pages of every textbook in American history. A student of the subject knows that the groundwork for these restrictions was laid as early as 1880, and that they were only the culmination of false fears, prejudices, and hatreds. More than a quarter of a century has passed since these laws were first enacted, and the saddest aspect of all is the fact that it took the McCarran-Walter Act, which was designed to be nothing more than a recodification of these laws, to awaken us to the thought that there is something contrary to the ideas of our Founding Fathers—something very un-American and un-Christian about our immigration policy.

It is true that in the year following the war America has provided a home and a sanctuary for thousands of people who were displaced by the war, but our legislators made it clearly understood that their entry would be charged against the quotas set up in our sacrosanct national origins quota system. The Refugee Relief Act of 1953 places no such mortgage on the quotas, but it places so many other restrictions and prohibitions on a person's entry that the act is almost inoperable. It will be nothing short of marvelous if every one of the 209,000 for whom it provides finds his way into this country.

Nevertheless, there is always a silver lining in every cloud, and we are told that at least the 60,000 Italians for whom this latest law provides, since many of them will be coming to relatives, will all be admitted before the act expires at the end of next year. In a sense then, the secondary aim of the American Committee on Italian Migration has been achieved.

Your committee's primary objective of helping to bring about a change in our basic immigration law is going to take a great deal more doing. Under Judge Marchisio's leadership, you have set a great task for yourselves. Your very presence at this dinner is an encouraging indication of your determination to accomplish that task.

Following the example of John Baptist Scalabrini, you will have to interest the leaders in your communities throughout the United States in this problem, for, after all, it is an educational job. But let us be clear in what we are seeking. No one would be so foolhardy as to ask for unlimited, unscreened, uncontrolled immigration.

An American immigration policy that would permit the entry of, say, 250,000 people a year, would be reasonable. The admission of the immigrants could be based upon our needs, their need for asylum, their relationship to others already in the country, and finally their economic needs. It seems that such a system of selection could be established that would be a realistic substitute for the National Origins Quota System, which is so heavily weighted in favor of those who have no need or desire to come to the United States.

We are all aware that our beloved America, with its expanding industry, its farm problem where so many young people are deserting the farm for the cities, still can use and is in need of additional manpower. We know that countries like Italy have more people than their economies possibly can maintain. Some countries have the products of their factories, their mines, and their farms to export, the better to maintain their own people. Italy is relatively poor in natural resources, but she is prepared to give up the most precious of her possessions—her cherished sons and daughters.

May America, the bulwark of freedom, the guardian of liberty, be once again the hope of those who only ask that they, too, may contribute to her goodness and her greatness under God, our Father, to whom belongs all the nations of the world.

Return of Rear Admiral Byrd From the Antarctic

EXTENSION OF REMARKS

OF

HON. JOHN STENNIS

OF MISSISSIPPI

IN THE SENATE OF THE UNITED STATES

Thursday, February 16, 1956

Mr. STENNIS. Mr. President, many thousands of us throughout the Nation have noted with interest and satisfaction the safe return of Rear Adm. Richard E. Byrd from the Antarctic to New Zealand, and the news of his early return to the United States.

As a member of the Armed Services Committee, I had some advance information about this expedition, in preparation for International Geophysical Year. The selection of Admiral Byrd to head this mission to the Antarctic was very gratifying because this is a field where his attainments have been so great and so broad and of such lasting value to the United States and the rest of the free world.

All of us have watched with interest and good wishes the progress of this mission, and we await with equal interest the admiral's report. The findings and results of this expedition, Admiral Byrd's fifth to the Antarctic, will be one more major contribution in a long and faithful career of patriotic service above and beyond the call of duty.

I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the New York Times of November 21, 1955, and reprinted in the Memphis Commercial Appeal on November 28, 1955, in tribute to a great American. The editorial will be of interest to all the Nation.

Mr. President, the official mission to which Admiral Byrd was designated and which he has been carrying out, is reflected in a letter from the Deputy Secretary of Defense. I ask unanimous consent to have the letter printed in the Appendix of the RECORD, in connection with my remarks.

There being no objection, the editorial and letter were ordered to be printed in the RECORD, as follows:

BYRD TURNS SOUTH AGAIN

Richard Evelyn Byrd is carried on the Navy's rolls as retired. This seems reasonable enough. At 67, which is this admiral's present age, few officers feel the urge to command a fleet in action. But Admiral Byrd's notion of retirement has expressed itself in accepting the overall responsibility for a new expedition to the Antarctic.

This will be his fifth visit to the southern reaches of the earth. It is nearly 30 years since he flew over the North Pole, more than 26 since he and his companions circled the South Pole. The aim of exploration has

changed. Man can now go anywhere he wants to, and even Antarctica, as the admiral suspects, won't be such a lonely place.

But innumerable questions remain to be answered. The present expedition is part of a 40-nation preparation for the International Geophysical Year. As the admiral says, "The biggest thing we're after is just plain scientific data."

Some politics is mixed in, too. The southern continent has strategic values, in which not only the United States and its friends but Russia and her friends are interested. Admiral Byrd, who might have stayed in Washington making up grocery lists and studying charts, leaves next Friday by air for New Zealand, whence he will go by sea to the neighborhood of Little America. It is a big neighborhood—1 million square miles explored by Byrd out of Antarctica's 6 million. The United States hasn't claimed this territory yet. Perhaps it soon will.

Good wishes will follow the admiral and his crew across thousands of stormy miles—good wishes, and a specially warm admiration for this modern Ulysses, who would not rust unburnished. Over the Antarctic camp where explorer Robert Falcon Scott and his men died after their own tragic journey to the pole is a memorial carrying Tennyson's lines: "To strive, to seek, to find, and not to yield." Let us hope that these same words may hereafter be remembered of an expedition with a happier ending: Byrd and his men have earned them, too.

THE SECRETARY OF DEFENSE,
Washington, October 21, 1955.

Rear Adm. RICHARD E. BYRD,
Washington, D. C.

MY DEAR ADMIRAL BYRD: By direction of the President of the United States, and upon the recommendations of the Chairman, Joint Chiefs of Staff, the Secretary of the Navy, and the Chief of Naval Operations, you are designated officer in charge, United States Antarctic programs. In this capacity you will consider yourself the senior United States representative charged with maintaining effective monitorship over those political, scientific, legislative, and operational activities which comprise the total United States Antarctic program. You will report to the Secretary of Defense and through him to the Operations Coordinating Board on matters pertaining to the United States Antarctic program.

You will advise the Operations Coordinating Board in the preparation of its overall plans for the implementation of United States Antarctic policy. You will assist the Secretary of Defense and his assistants and the Secretaries of appropriate military departments in the development of necessary legislative programs, including the establishment in concert with other departments of the Government of a permanent unit for Antarctic activity, and you will also provide technical and scientific advice on Antarctic matters to the operating agencies conducting United States Antarctic activities.

In addition, in respect to specific operations and expeditions in the United States Antarctic programs, you will advise the military commanders thereof in the preparation of plans and as to the technical suitability of their plans and projected operations. You will insure that such operations and expeditions, the public information programs relating thereto, and the scientific endeavor involved, shall be correlated. You will advise the appropriate military commanders and, as appropriate, the Secretary of Defense and other elements of the Department of Defense if, in your judgment, the technical aspects of such plans and operations require modifications or adjustment. You are authorized to request and have access to and to examine any or all documents, staff studies, plans, or public releases which may be relevant to your mission.

You will make recommendations to the Secretary of Defense concerning such additional or supplementary action with respect not only to the expeditionary activities but to all related matters concerning the Antarctic when, in your judgment, such recommendations will, if adopted, further the United States Antarctic programs.

You are authorized such personal staff as may be approved by the Chief of Naval Operations and are further authorized to undertake such travel, including participation in the Antarctic expeditionary activities of the United States Government, as you may deem necessary to accomplish this mission.

Sincerely yours,

REUBEN B. ROBERTSON, Jr.,
Deputy.

Unjust Exclusion Under the McCarran-Walter Act

EXTENSION OF REMARKS
OF
HON. HERBERT H. LEHMAN
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Thursday, February 16, 1956

Mr. LEHMAN. Mr. President, in the February 11 issue of the weekly publication, the Saturday Review, there is a very fine editorial, written by Mr. Norman Cousins, dealing with the exclusion of a Soviet violinist, Mr. David Oistrakh, under the terms of the McCarran-Walter Act. This is but the latest instance of a long and shameful series of such incidents. I ask unanimous consent that Mr. Cousins' thoughtful editorial on this subject be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE POVERTY OF IMITATION

Mr. Erich Leinsdorf, the distinguished conductor, recently invited David Oistrakh, a master of the violin and a citizen of the Soviet Union, to appear as guest soloist with the Rochester Philharmonic Orchestra. Mr. Oistrakh was willing but the United States State Department vetoed the concert. It ruled that Rochester was out of bounds for the Russian violinist.

Rochester is neither a center for the production of fissionable materials nor a launching site for intercontinental guided missiles. The city specializes in photographic equipment, good music, and excellent education. David Oistrakh commands only the science of the violin. Yet the State Department banned his appearance. When it was argued that Rochester had cultural rather than military significance, the State Department replied that it was "retaliating" because some of the Russian cities have been declared out of bounds to American tourists.

Whom are we retaliating against? Whom are we hurting in this childish game of last tag? By depriving the people of Rochester of the privilege of hearing 1 of the 3 or 4 greatest living violinists, do we thereby teach the Russians a painful lesson and win a point in the cold war? Is this our idea of an intelligent and imaginative approach to the competition with the Soviet Union for world leadership? If the Communist rulers make a prodigious mistake, can we think of nothing more exalted for our own role than the imitation of error?

Congressional committees have been concerned with un-American behavior. Here is a large, clear, and fully visible specimen that we commend for investigation. It has nothing to do with secret meetings or spying or plots to destroy the Government. Yet what is involved can be just as serious. We refer to an un-American smallness—an un-American shortage of the kind of moral imagination that went into the making of America and that will somehow have to be rediscovered if America and its values are to survive, no matter how many atomic warheads we fashion.

It is un-American to act like frightened pygmies. Can anyone imagine Abraham Lincoln suggesting we should cope with the stupidity and narrowness of our foes by measured imitation? Does anyone suppose that Thomas Jefferson, if faced with a similar situation, would have advocated acceptance of the twisted standards of a totalitarian state operating out of fear and collapse of a compassionate intelligence? One can hardly imagine that Dwight D. Eisenhower could have had anything to do with such puny ideas; and we can only suppose that because of illness this matter did not come to his attention.

Here was the ideal stage for dramatizing to the entire world the largeness of spirit that must flow out of the history and vital purpose of a free people. Much has been said in Governemnt and the press about the need to point up the moral factor in the Democratic equation. Why could we not have used this as the occasion for opening our doors in a way that would have been in obvious contrast to the conditional parting of the Iron Curtain?

In this respect, the smallness is not the exclusive copyright of either political party. Ever since the end of the war, we have hurt ourselves by an unthinking, negative approach to the challenge of communism. Some of the leading sponsors of such a powerful idea as point 4, for example, deprived the plan of much of its moral power when they sought funds from Congress by claiming that this was a cheap way of combating communism and helping ourselves, instead of standing bold and firm on the proposition that this was something we should do because it was the right thing to do.

Our leaders may hold the American people too cheaply. It is not necessary to disguise good purposes and objectives in the slick clothing of national self-interest in order to win support. The overwhelming majority of the American people are not crass or cynical; they have a historical sensitivity to human needs and will respond when those needs are honestly and frankly described and tied to a plan for effective and competent action. Yet it is supposed to be smart, realistic politics to affect tough self-seeking arguments in order to achieve broad human goals. It so happens, however, that the people whom we want to help are listening too.

In place after place in Southeast Asia where we spent point 4 money, I would meet people who would ask in effect: "This is wonderful assistance you are providing; but is it true that we do not really figure in this aid as human beings, and that you are really trying to help yourselves in your contest with the Soviet?"

I met the question as best I could, but more than once I was tempted to say that actually we were all playing a game. The men who conceived of the idea of foreign aid did so out of decent impulses but found it hard to believe that enough men in Congress could be similarly motivated. Meanwhile, the men in Congress who were decently impelled would echo the tough arguments because they didn't feel they could appeal to the decent instincts of the people at home. And in the public debates, many of the citizens supporting foreign aid seemed content to cut themselves down to the size of their opponents by arguing out the issue on the grounds of self-interest. Then, having won, they somehow expected that the recipients abroad would know it

was only a game and that the real intent was noble. But it didn't quite work out that way. The others played it straight.

National policy by imitation and the negative approach to worthwhile goals are exercises in national shrinkage—shrinkage in strength, shrinkage in values, shrinkage in prospects. The times cry for growth.

Agricultural Conditions

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Thursday, February 16, 1956

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter I have received from Henry Benge, of Flaxton, N. Dak.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

FLAXTON, N. DAK., *December 23, 1955.*
Hon. WILLIAM LANGER,
Washington, D. C.

DEAR OLD FRIEND BILL: Of course you know Bill, the farmers are jealous of each other and some of your neighbors or my neighbors don't think as I do. Some are not interested only in themselves and some of us will help and furnish money and men to fight our battles in Washington. And 3 out of 4 of our neighbors will set back and do nothing, all they want is the price our men in the farmers union are doing in Washington for them as well as us. Such fellows as Glenn Talbolt and Jim Patton are fighting tooth and toenail for all the farmers. But 3 out of 4 just set back and make fun of them and laugh at the rest of us for fighting their battle as well as our own. But how can we do it any other way. You can use this letter you returned me or the one I wrote to you I presume you meant or any other letter I write to you in any manner you wish or any other letter I may write you if you can read them. I am in my 75th year and failing in my writing and spelling. And I only went in school to the 6th grade to a teacher that received $28 a month for teaching and walk a mile or 2 to school to a cold schoolhouse in Iowa with no roads to walk on, build her own fire in an old coal stove, sweep her own floor for $28 per month. Now they tell us all the time on the radio our teachers are poorly paid, getting from $300 to $600 a month, living right by the school with janitor clean-swept floors, always warm and good electric lights at hand at all times. And they tell us our teachers are underpaid if we would pay more taxes and pay our teachers higher wages we would get better teachers. Who is going to pay them? Our Government is putting $36.5 billions into war materials each year. Robbing us of the youth of our Nation to fight foreign wars and telling us dumb farmers we are not going to have any war. But we must be ready with our loved ones to give their lives and money to foreign countries, we must build them up—countries such as Russia—bring them over here, show them how to farm, how to build tractors and raise wheat to kill our foreign trade. I say live without Russia, leave them alone, we have lived without them before and can do it again. Well Bill, we have had some very cold snowy weather for about 2 months now, has been down to 34° below zero, and the 13th and 14th of December we had the worst blizzard I have seen in North Dakota in 52 years, winds from 50 to 70 miles an hour. And snow just like flour, could not see 10 feet. I have one son. Bill as you know he was married June 6, 1954, got a boy 9 months old December 29, weighs 21 pounds, lots of dark hair, about 12 teeth, laughs out loud and is about the cutest little guy you ever saw. Don is in class 1A in his service rating, they have not called him yet. But he is such a home-loving boy and thinks so much of his family, I think he would almost lose his mind if they tear him away from his 19-year-old wife and baby. Why do they talk peace all the time and prepare for war all the time. We don't want war. We don't want our boys to murder people they never saw and if they leave them alone never would see. My son don't want to murder anyone. He just wants a home and peaceful life. Well, Bill, if there are any questions you want answered and I can answer them, just write me and I will be pleased to try. Excuse this awful writing and spelling. I have 12 pens and I cannot find 1 to write with. Any office you run for I will vote for you. I voted for Ike before in 1952, but never again, when he put such fellows as Benson and lied to us about parity prices.

Sincerely,

HENRY BENGE.

Interprofessional Cooperation for the Improvement of Our Health and Welfare—Part I

EXTENSION OF REMARKS
OF
HON. CLEMENT J. ZABLOCKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 16, 1956

Mr. ZABLOCKI. Mr. Speaker, in conjunction with its 75th anniversary, the Marquette University has recently sponsored a 4-day conference on the subject of Interprofessional Cooperation for the Improvement of Our Health and Welfare, thereby rendering a magnificent contribution to our Nation's various programs in this vital field.

I am pleased and honored to have this opportunity of calling this significant event to the attention of the membership of this House, and I wish to commend the conclusions reached during the conference to my colleagues' careful study.

For some time, it has been apparent that there exists a serious need for the development of a spirit of cooperation in the health and welfare fields. This need was created by the continuing trend toward a high degree of specialization within the medical and paramedical professions, and the increase in the number of nonmedical specialists. The situation has been further complicated by the rapid growth of the many special disease interest groups.

Cognizant of the existence of these problems, and desirous of disclosing their full complexity in order to aid in their solution, Marquette University recently invited many of our Nation's recognized leaders in the medical, dental, hospital, and rehabilitation fields for a 4-day conference.

A panel of six speakers, and a group of discussion leaders and participants, were entrusted with the task of seeking the answers to such important questions as: How should the boundaries between specialists be established? Who should be responsible for hospital operation, medical education, and the dispensing of drugs? Is the importance of some diseases being overemphasized? Who should raise and control funds for medical research? and the like.

Out of this important conference, there came suggestions of a program for establishing cooperation among the many specialists and agencies in this general area. The result should be improved patient care and health service.

I wish that it were feasible to place in the CONGRESSIONAL RECORD the complete record of the conference on interprofessional cooperation for the improvement of our health and welfare. I am certain that Members of Congress, and many persons throughout the country who read the CONGRESSIONAL RECORD, would like to review that very interesting and informative document.

Because of space limitations and other factors, I shall limit the extension of my remarks on the subject of the conference to the inclusion of 6 brief releases, containing the highlights of the 6 major presentations made at Marquette University. The first two releases follow in this extension of remarks. The next 2 will appear in part II of my remarks on the subject of the conference, while the last 2 will be included in part III.

Mr. Speaker, under leave to extend and revise my remarks in the RECORD, I wish to commend to the attention of my colleagues the first two releases on Marquette University's conference on interprofessional cooperation for the improvement of our health and welfare, entitled "Dr. Robert Moore Speaks" and "Dr. Robin C. Buerki Speaks":

DR. ROBERT MOORE SPEAKS

MILWAUKEE, January 23.—"What the United States needs today is not a legislated program of health care but a program led by the health professions which will bring about a decrease in costs," a University of Pittsburgh medical authority declared tonight in the opening address at a Marquette University conference on health and welfare.

"The American people demand and deserve the best of health, and if we, the members of the health professions do not provide it at a reasonable cost, they will turn to the Goverment," Dr. Robert Moore, vice chancellor of the University of Pittsburgh Schools of the Health Professions, stated.

Dr. Moore was the first of six leading medical educators and administrators scheduled to deliver public addresses during Marquette's 4-day conference on "Interprofessional Cooperation for the Improvement of Our Health and Welfare." A panel of 30 selected members of the medical and para-medical professions will probe further into the problems behind such cooperation in closed discussions.

"The health professions have increasingly accepted the objective to minister to the physical ills of man but this curative medicine represents only a small part of our responsibility to society," Dr. Moore said. Other major responsibilities, he said, are preventive and comprehensive medicine, teamwork, and utilization of health care.

"We are just making a beginning in the prevention or early detection of disease in individuals," he said. "A part of this lack of progress is lack of application, a part is our present inability to apply known facts on a large scale and a part is the lack of

knowledge concerning the causes of a given disease or means to control it."

Dr. Moore said great strides have been made in the last few decades in preventing infectious diseases in childhood and in tuberculosis. "I have no doubt," he added, "that the coming years will see techniques for the early detection or prevention of great killing and crippling diseases such as arteriosclerosis, hypertension, rheumatoid arthritis, to name a few."

He defined comprehensive medicine as a return to the position and attitude of the general practitioner of the last century without loss of the gains of this century. He declared members of the health professions must consider the whole human being and the interrelation of mind and body rather than merely the disease afflicting the person.

Dr. Moore declared the need for teamwork in the health professions is obvious when you consider how the health professions have drifted apart into specialty and subspecialty groups and even into sub-subspecialty groups.

As for the responsibility to utilize health care, Dr. Moore said "We must in the future give equal attention to the administration and utilization of health care as we have in the past to the science of health care."

"Already," he said "we know more than we can use. We can use more than we have the manpower and resources to use. We have more resources than the people can afford."

DR. ROBIN C. BUERKI SPEAKS

MILWAUKEE, January 24.—Dr. Robin C. Buerki, executive director of the Henry Ford Hospital of Detroit, said this afternoon that without medical teamwork in the modern hospital "we will find ourselves in real trouble shortly."

Speaking at Marquette University's health and welfare conference, Dr. Buerki told representatives of the health professions that "the problem is growing and we are not doing much about it."

The goal of the medical teamwork must be improved patient care and reduced costs, he declared. This teamwork does exist in hospitals but there is not enough of it, he added. Doctors, hospital administrators and trustees, nurses and allied technicians must plan now how to secure better care at less cost, the Detroit administrator said. "The future of medicine and the health of the public is at stake."

Dr. Buerki said as far as doctors are concerned the lack of teamwork in hospitals could be traced to the fact that doctors are not trained to work with others. They have little appreciation of the problems of hospitals, he said.

Another factor in the problem, he said, is the dollar sign. "There's fear by the doctor that the hospital dollar will not be divided in his best interest; by the hospital administrator that he won't get as large a cut as he should have; by the hospital trustees that the hospital won't operate in the black; by everyone on the hospital payroll, who realizes that he or she could be getting more money outside."

Hospital administrators are too frequently suspicious and afraid to act and often they are elected not to enforce the rules laid down by the medical board but to wink at the rules so the doctors can practice as they see fit, Dr. Buerki went on.

"And we are totally neglecting the education of qualified hospital trustees," he said. Dr. Buerki called the trustees "the greatest hope doctors and hospitals have if we are to accomplish greater things in the future."

Marquette's 4-day conference on interprofessional cooperation for the improvement of our health and welfare opened Monday. Six leading medical educators and administrators are exploring the problem from various aspects in public addresses with selected national and local leaders from the health professions discussing their views in subsequent closed seminar.

Interprofessional Cooperation for the Improvement of Our Health and Welfare—Part II

EXTENSION OF REMARKS

OF

HON. CLEMENT J. ZABLOCKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 16, 1956

Mr. ZABLOCKI. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I want to commend to the attention of my distinguished colleagues the following two releases, dealing with the presentations of Dean Stanley E. Dorst, of the University of Cincinnati College of Medicine, and of Dr. Howard A. Rusk, chairman of the department of physical medicine and rehabilitation of the New York University Bellevue Medical Center, at the conference sponsored by Marquette University on the subject of Interprofessional Cooperation for the Improvement of Our Health and Welfare:

DEAN STANLEY E. DORST SPEAKS

MILWAUKEE, January 24.—Dean Stanley E. Dorst, of the University of Cincinnati College of Medicine, tonight urged reorganization of the Nation's medical specialty boards to provide an integrated, intelligent authority.

"The magnificent achievements of medicine in the past 40 years would never have been possible without specialization both in the clinic and in the laboratories," Dr. Dorst declared in an address at Marquette University's conference on interprofessional cooperation for the improvement of our health and welfare. But excessive specialization will explode the profession into chaotic fragments, he warned.

"I have no fault to find with special training in restricted fields leading to superior technical competence," he told representatives of the health professions attending the conference. "My objection relates to the machinery which has built itself around the methods of specialization, and the subsequent consolidation of those specially trained into organized groups who seek, first, rigidly to control the training of specialists and later to control the hospitals in which the practice of medicine is carried on.

"This is all done in the name of better medical practice and is justified only so long as it is compatible with fair treatment of the physicians who must use the hospitals for the proper care of their patients and who are qualified to treat them."

Dr. Dorst pointed out that 26 autonomous boards and sub-boards exist to govern various medical specialists in this country. "The Advisory Council for the Specialty Boards has not the power or the authority to achieve the necessary integration of these boards," he said. "I am not so naive as to suggest the abolition of specialty boards, but I plead for a reorganization which will provide an integrated, intelligent authority, an authority whose basic concept of its function will be the wise and thoughtful moderation of the last phase of professional medical education, not an agency making rules to produce skilled technicians and craftsmen."

The danger is that in operating more and more exclusively through technical means, specialism with its ever-narrowing vision and increasing organization will no longer occupy a subordinate position, Dr. Dorst declared. "To see that this does not happen becomes the heavy responsibility of medical education," he said.

The physician's primary concern must be for human welfare, said Dr. Dorst, treating Joseph Smith, who is ill with a myocardial infarction and not treating only a myocardial infarction. Treating the "case" instead of the human being is "part of the price we paid for the very great advances which laboratory science brought to medicine," he said.

"Except for the problem of undue specialization, medical education may be said to be meeting its challenges quite adequately," Dr. Dorst stated. "If we can bring this one phase of medical education under control, we need not have much fear concerning interprofessional relationships, for I am confident they will fall into place once medicine's house is in order."

Marquette's 4-day health and welfare conference, wich opened Monday, is part of the university's 75th anniversary observance. The need and means of securing cooperation between the health professions is being analyzed by 6 leading authorities in public addresses and by 30 representatives of the health professions in closed seminars.

DR. HOWARD A. RUSK SPEAKS

MILWAUKEE, January 25.—Despite tremendous advances in rehabilitation medicine in the past 15 years, too many patients, particularly older persons, have been allowed to become unnecessarily dependent, an authority in the field told Marquette University's health and welfare conference tonight.

"These patients are absorbing the services of a vast corps of health personnel who could be freed for other essential services if some new approaches were made to patient care," said Dr. Howard A. Rusk, chairman of the department of physical medicine and rehabilitation of the New York University Bellevue Medical Center, New York City.

"If we are to make any broad-scale attack on the problems of physical disability, we must broaden both our understanding of rehabilitation and its application in both hospital and adult institutions, so that the costly economic, psychic, and social costs of chronic disease may be prevented," he said.

Addressing selected representatives of the health professions on the semifinal day of Marquette's 4-day 75th anniversary conference on interprofessional cooperation for the improvement of our health and welfare, Dr. Rusk declared:

"As yet too few hospitals and adult homes provide dynamic, integrated services which will permit such patients to lead independent lives of dignity outside of the hospital. Until we find the solution to degenerative disease, the only answer is a dynamic approach to the problems of the chronically ill and the severely disabled.

"Rehabilitation medicine is concerned with the reintegration of the chronically ill and disabled into active living. The degree of such activity is limited only by the capacity of the patient. Such reintegration concerns the development and use of the maximum potential remaining in that patient. The physical, vocational, and psychological areas must all be utilized in the total approach."

Dr. Rusk said a large percent of all rehabilitative procedures could and should be handled by the physician responsible for the primary patient care as an integrated part of total medicine. For the severely handicapped, he said, there is a need for a special rehabilitation program and service.

This need cannot be met without a concentrated long-term program and special

techniques which must include full utilization of all auxiliary disciplines, he added.

"Rehabilitation not only requires interprofessional and patient cooperation but the utilization of all the tools in the community—voluntary agencies, labor and industry, government, family services—if the total needs of the severely disabled are to be met."

Interprofessional Cooperation for the Improvement of our Health and Welfare—Part III

EXTENSION OF REMARKS
OF
HON. CLEMENT J. ZABLOCKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 16, 1956

Mr. ZABLOCKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the final two releases describing the major presentations made during the Marquette University's recent conference on interprofessional cooperation for the improvement of our health and welfare.

These last two releases summarize the highlights of the addresses delivered by Dr. Maynard K. Hine, dean of the School of Dentistry of Indiana University, and by Dr. Herman G. Weiskotten, dean emeritus of the University of Syracuse Medical School.

I commend them earnestly to the attention and study of my colleagues:

DR. MAYNARD K. HINE SPEAKS

MILWAUKEE, January 25.—"Deliberate efforts to draw the professions of medicine and dentistry closer together" were recommended at Marquette University's health and welfare conference this afternoon by Dr. Maynard K. Hine, dean of the School of Dentistry of Indiana University.

"Because of a lack of information, the physician many times has no confidence in or understanding of the contributions a dentist can make in the treatment of oral disease, so proceeds with a treatment plan without consulting the dentist," Dr. Hine said.

"Even more often the dentist fails to consider the patient as a whole and does not ask for consultation from the physician. The result is often inadequate care of the patient, since for proper care of a patient close cooperation is often required between a physician and a dentist.

"All modern dental curricula include courses on medical science, but few medical schools include even a series of lectures on dental science. Joint meetings of both professions should be encouraged and interchange of ideas and techniques encouraged. Close cooperation between both professions must be based upon understanding and respect.

"Another reason for close cooperation between all of the sciences is the need for more knowledge about oral physiology and oral pathology, to make possible even better methods of preventing oral disease."

Dr. Hine outlined dentistry's role and responsibilities in the health sciences as 1 of the 6 major speakers in Marquette's 4-day conference on the theme of Interprofessional Cooperation for the Improvement of Our Health and Welfare. The various aspects of the problem considered by the respective speakers are being further analyzed by a panel of 30 selected representatives of the health professions in closed seminars. Marquette, which called the conference as part of its 75th anniversary program, intends to publish the conclusions and recommendations of the panel. The conference ends tomorrow.

Dr. Hine urged dentists to place greater emphasis on prevention of oral disease. "Little progress has been made in the field of preventive dentistry, although one of the most promising developments in the past two decades has been the success encountered in the search for procedures to prevent dental caries," he said.

"Fluoridation of communal water supplies deserves special mention since it is perhaps the most effective and most needed dental public-health preventive measure. * * * It is established beyond doubt that fluoridation will consistently reduce the prevalence of tooth decay often as much as 65 percent so is an effective and safe preventive and control method."

Dr. Hine said it is the responsibility of the dental profession to furnish the community with information regarding the value of fluoridation so its residents can decide intelligently whether to utilize this method of reducing dental caries.

DR. HERMAN G. WEISKOTTEN SPEAKS

MILWAUKEE, January 26.—The medical profession is vitally interested in contributions from ancillary fields but the doctor must remain responsible for treatment and prevention of disease.

This was the statement of Dr. Herman G. Weiskotten of Skaneateles, N. Y., dean emeritus of the University of Syracuse (N. Y.) Medical School, in the final address tonight at Marquette University's 4-day conference on interprofessional cooperation for the improvement of our health and welfare.

"In rendering a high standard of medical care, the profession has required the services of a considerable group of nonmedical persons especially trained in fields ancillary to medicine," Dr. Weiskotten said.

"Upon request, the American Medical Association's Council on Medical Education and Hospitals has cooperated with the national organizations concerned with the training of such personnel, including medical technologists, physical therapists, occupational therapists, medical record librarians and X-ray technicians. * * * The council has cooperated in formulating standards of training and in accrediting institutions offering training in these fields.

"The national groups involved believe that the cooperation of the council has been an important factor in placing training in these fields on a sounder basis and has made more effective the contributions that these services are making to the overall health program. At the same time the medical profession had received a clearer understanding of the nature and standards of service these various groups are prepared to render.

"There have been many conferences and much discussion in regard to the most mutually satisfactory and effective relationships which could be established between these groups and the organized medical profession.

"Neither the American Medical Association nor its Council on Medical Education and Hospitals are in themselves qualified or have any desire to set educational or training standards in these specialized fields. These standards should be established by those entirely familiar with the particular fields involved and with the objectives of their educational and training programs.

"However, the medical profession is vitally interested in the contributions which individuals from these fields can make in assisting it in meeting its responsibilities to the public. * * * It continually looks forward to expanding its relationships with all other groups which have as their objective the improvement of the health and medical care of the American people."

But, said Dr. Weiskotten, "all groups involved must realize that pooled abilities cannot be a substitute for the physician's capacity and responsibility in the prevention, diagnosis, and treatment of disease."

Marquette University, observing its 75th anniversary, invited six leading medical and dental educators and administrators to the campus to outline the vital need for interprofessional cooperation. Thirty prominent national and local representatives of the health professions considered means of attaining that goal in closer seminers. The university will publish their conclusions.

Integration in Politics

EXTENSION OF REMARKS
OF
HON. A. WILLIS ROBERTSON
OF VIRGINIA
IN THE SENATE OF THE UNITED STATES
Thursday, February 16, 1956

Mr. ROBERTSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Integration in Politics," written by Walter Lippmann, and published in a recent issue of the Washington Post and Times Herald.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

INTEGRATION IN POLITICS

(By Walter Lippmann)

There is mounting evidence of grave trouble ahead over integration in the public schools of the Southern States. For in recent weeks we have come nearer to the question which can divide the country dangerously. Is the decision of the Supreme Court to be put into effect gradually and with the eventual consent of the leaders of southern opinion or is the Federal Government to be called upon to enforce integration against the resistance of the South?

This question poses as fateful a dilemma as any internal American question that has arisen for several generations. It arouses great human passions which cannot be reconciled, which can only be assuaged and accommodated in this generation. They are passions which boil up quickly into violence, and they can be kept within bounds only when and only while there is great wisdom and resolution in the leaders of the country.

The temptation to play politics with these passions is almost overpowering. And it is the approach of the national election, the struggle between the two parties and also the struggle within the parties, particularly within the Democratic Party, which have brought the dilemma to the surface.

It is significant that the closer a public man is to the Presidency, the more will he shrink from the idea of Federal enforcement, as distinguished from persuasion and accommodation. Governor Stevenson has been notably firm and decisive and the President, though his words were a bit cloudy, is certainly not considering intervention by the Federal executive power. It is the politicians, the men who have little or no prospect of themselves being in the White House and bearing the President's responsibility, who are heating up the issue.

There is no likelihood that the Republicans in Congress will agree to take the issue out of politics. For it is a most damaging issue to raise among the Democrats. Nor is there much likelihood that Governor Stevenson's rivals for the nomination will forbear to raise it. It is such an easy way to make things difficult for him.

The issue will have to be debated in the open. The fundamental question to be debated is whether integration is to be promoted by persuasion or by Federal enforcement. These are two different roads, and no one should think he can go down both of them at once.

Consider, for example, the Powell amendment which would withhold Federal aid from States or school districts that do not integrate their schools. Let no one suppose that the Southern States will give in and accept integrated schools because some Federal money is withheld from them. To suppose that they will give in is to mistake the temper of the South, particularly the temper of the Deep South.

What, then, are Representative JOSEPH L. MARTIN and Governor Harriman going to propose next, once they find that withholding money does not induce the Southern States to yield? If they start on the path of coercion, the authority of the executive power will be engaged and new measures of coercion will be demanded to uphold that authority. For unless the Federal Government is going to confess that it is beaten, it must—taking the path of Federal enforcement—become more and more coercive.

No one should doubt that the attempt at Federal enforcement will intensify and harden the resistance of the South. Those who are disposed to try to work out integration gradually will resent the Federal Government's efforts to coerce them. The problem of integration will become progressively more insoluble in the South, the racial passions will become increasingly sharp, the sectional feeling increasingly disruptive.

Let us stop and think before we let irresponsible politicians push us into the whirlpool.

The way things are developing is a reason for asking ourselves whether the decision of the Supreme Court does not need to be supplemented. As it stands now, the question of what constitutes a "prompt and reasonable start towards full compliance" is left to the judgment of the Federal courts. Now what would be a prompt and reasonable start, say, in the District of Columbia, might well be impossibly hasty in Mississippi. Success in putting into effect the principle of the decision requires a program which must vary with local conditions. It is, for example, an enormous step forward when universities in the South admit Negro students. And it would be the part of wisdom in a State like Alabama to regard admission to the university as being for present purposes "a prompt and reasonable start."

The question is whether through some sort of council of eminent citizens guiding principles might be agreed upon which would give to American opinion a standard around which it could rally.

Farmers and the Social Security Program

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Thursday, February 16, 1956

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter I have received from Mr. and Mrs. Carl Gust, of Durbin, N. Dak. Their letter deals with the problems faced by older farmers, particularly with regard to the social-security program.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

DURBIN, N. DAK., *October 17, 1955.*

Senator WILLIAM LANGER.

DEAR FRIEND: Sorry that we did not get to see you while in North Dakota but know you are a busy man.

Just where do we oldsters fit in the social-security program?

If our farm program does not allow us to put in more than 60 acres of wheat, and 2 families must live on the income from a half section, how long will our savings last, if we are compelled to draw on that year after year?

Sure we've paid taxes for old-age pensions but we never want to go under that program, for that is not even an existence.

Keep up your good work and we do hope you'll run again.

Respectfully,

Mr and Mrs. CARL GUST.

The Doctrine of Interposition

EXTENSION OF REMARKS
OF
HON. HERBERT H. LEHMAN
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Thursday, February 16, 1956

Mr. LEHMAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD two editorials from the Norfolk Journal and Guide, a weekly newspaper which has a wide reading audience throughout the South. I wish to place these in the RECORD for the benefit of my own constituents and others who are interested in the discussion which is now going on in this country relative to the so-called doctrine of interposition.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Norfolk (Va.) Journal and Guide of January 21, 1956]

INTERPOSITION DOCTRINE

Since Virginia suddenly sidetracked consideration of the Gray plan constitutional convention—at least temporarily—to ponder the notion of having the General Assembly pass a resolution of interposition by which backers of the idea think that the State could avoid compliance with Supreme Court decisions on school desegregation, it is in order to clarify what the doctrine of intersition, revived from pre-Civil War days, is all about.

At least four States, Virginia, Mississippi, Louisiana, and South Carolina, are considering resolutions of interposition by their legislatures. Delegate Boatwright offered a bill on interposition on the opening day of the current session of the Virginia legislature. It was promptly declared to be a "fantastic" project by the principal antiorganization Democrat in the House of Delegates, Robert Whitehead.

"Interposition is popularly equated with the doctrine of nullification," says the January issue of Southern School News, established to give nonpartisan reports on the school segregation issue.

The first proponent of the idea in this State was the Richmond News Leader, and it commented that "this plan contemplates an assertion of fundamental principles, coupled with an appeal to our sister States to decide, by ratifying or rejecting a proposed constitutional amendment, whether the power to operate racially separate public school facilities should be prohibited to the States."

In Mississippi, however, the plan is opposed by the incoming governor, James P. Coleman, although its chief advocates in that State are two members of its congressional delegation, a judge, and a former governor.

The Cyclopedia of American Government offers the following definition of interposition:

"The Virginia Resolution of 1798 declared that the powers of the Federal Government result from the compact to which the States are parties, and 'that, in case of a deliberate, palpable and dangerous exercise of other powers not granted by the social compact, the States, which are parties thereto, have the right and are in duty bound to interpose for arresting the progress of the evil' for maintaining their rights.

"What was meant by interposition? It has sometimes been asserted that it meant nothing more nor less than nullification by a single State. Madison declared, in later years, that such was not the meaning. It is not unlikely that nothing more was intended than to secure, by cooperation among the States, a general expression of opinion.

"But it is possible that the framers had in mind a convention of the States to pass upon the Constitution or that they planned authoritative interpretation by amendment."

And the New Dictionary of American Politics gives this definition of nullification, which interposition effectively is:

"An alleged right of a State in the American Union, acting in a sovereign capacity through a convention of its people, to declare an act of Congress 'null, void, and no law, not binding upon the State, its officers or citizens.' "

[From the Norfolk (Va.) Journal and Guide of January 28, 1956]

INTERPOSITION IS NULLIFICATION

Those who are advocating interposition (nullification of the Supreme Court decision of May 17, 1954), are ignoring the 14th amendment entirely. True, some of them express the opinion that the 14th amendment has been incorrectly construed by the present Supreme Court. They place their own private opinions above the considered decisions of the unanimous Court.

The interpositionists are bent upon invoking theories about the rights of States which were debatable issues long before the Civil War occurred, resulting in the 13th, 14th, and 15th amendments to the Constitution.

The Civil War and the incorporation into the Constitution of these amendments cut the ground from under the doubtful validity of a State's right to interpose itself between the Government of the United States and the people of a single State or a group of States, in the matter of individual rights conferred by the United States Constitution.

It is clear that the issue which prompts the present interposition movement is one of race. The theory or contention of those who wish to interpose or to nullify is the right of States to deny certain minorities within their borders due process of law, or equal protection of the law.

Without citing them (they are there in the records for all to examine) enough decisions were made during 25 years of Chief Justice John Marshall's tenure to firmly establish the right of the Federal Supreme Court to review the laws of the 48 States composing the Union, and to pass upon their constitutionality.

The claim that the decision of the Supreme Court on the school segregation matter was made on a basis of sociological theses written by "foreigners" is the height of absurdity. The decision was made on the content of the 14th amendment. The States attorney generals, especially Virginia's, used many sociological arguments in presenting their case to the Supreme Court in behalf of racial discrimination.

It is just as logical to say that the Supreme Court "legislated" in 1896 when it established the doctrine of "separate but

equal" is to say that the Supreme Court "legislated" or amended the Constitution in 1954.

The Constitution was originally drafted when slavery was an established legal institution in the United States. It is unreasonable to suppose that the framers of the Constitution did not intend that it would apply to all free Americans if and when slavery was abolished; and many of the framers had disturbed consciences on the slavery question when they drafted the Constitution.

There was nothing inherent in slavery which placed upon the Government of the United States the responsibility to keep an American minority from enjoying equal protection of the laws as free men.

There are no good reasons to suppose that the framers of the Constitution intended that the separate States should keep a minority in civil slavery after chattel slavery was abolished.

Questions now bothering Virginians are:

1. If interposition (nullification) is a part of the Gray commission's plan, why was an extra session of the general assembly called for the purpose of authorizing a referendum on repealing a section of the State constitution?

2. If the State intends to nulify the Supreme Court's decision, by interposition why adopt the Gray proposals?

What the general assembly is doubtless giving serious thought to is the obvious fact that interposition now would be just as much of a step toward secession as it was in 1832, the last time it was tried.

There is litte sentiment in the South, other than among a few extreme racists of the Griffin-Eastland type, who would want to put themselves in the position of appearing to favor a step in that direction.

The Hells Canyon Dam Issue

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES
Thursday, February 16, 1956

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very excellent editorial on the Hells Canyon Dam issue, published in the February 3, 1956, issue of the Boise Journal. The editorial was written by the editor of the Boise Journal, Mr. Ed Emerine.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

COMMENTS BY THE EDITOR
(By Ed Emerine)

PLENTY OF WATER, BUT WHERE IS INDUSTRY?

In a recent column in the Idaho Daily Statesman, John Corlett stated: "In the arid and semiarid West, the inhabitants don't realize that water often is the key to industrial development; that industries often locate in certain areas only because of abundant water supplies."

The comment could have been carried further, of course, for abundant water alone does not attract industry. But the full development and use of streams do induce industries of all kinds. We have seen how the great dams and powerplants on the Columbia River attracted industries to Washington and Oregon, giving them new population and wealth. Likewise we have seen that partial and incomplete development and use of Snake River waters have held Idaho back.

We have consistently opposed small dams on big dam sites. Likewise we have fought for multiple-purpose dams and full development of our streams and natural resources. We see no way for such development except through the people's own Federal Government. Dams that control floods, that develop hydroelectric power, and irrigate the deserts, also provide low-cost power and abundant water to attract industry.

We confidently believe that one large Hells Canyon Dam would attract more industry and do the entire area more good than a dozen little Idaho Power Co. dams. Call us a dirty name if you will, but you must admit that Idaho, with water running out of its ears, has no industry. There must be a reason.

A PHILOSOPHY THAT LONG AGO LOST ITS PUBLIC APPEAL

Our peripatetic young Governor, Robert E. Smylie, in his most recent series of nationwide speeches, has declared that the building of large dams by the Federal Government is a "philosophy that long ago lost its public appeal." Those who advocate a dam like Hells Canyon "are living in the past," according to Mr. Smylie.

At the very moment our Governor was uttering his immortal words, great floods were tearing out the fields and forests in California, inundating cities, taking lives and doing millions of dollars in property damage. In the great State of California, the philosophy of our Governor has prevailed. Large federally constructed dams, for multiple purposes, have been frowned upon, and the bright, new "investor-owned" little dams idea has prevailed. But even before the crest of these floods had passed, that State had held its hand out to the Federal Government and said "gimme, gimme, please; we need help."

Back in 1943, before Anderson Ranch and Lucky Peak dams were built, Boise Valley lost heavily in a flood from the Boise River. And just a few weeks ago the Payette River went on a rampage and destroyed thousands upon thousands of dollars' worth of property. But when we point these facts out, the Governor mumbles about "the events of a decade and a half occurred without their notice."

So, those of us who "harp back about things that are past," as the Governor says, must point out the facts. In our opinion, there is still great need for multiple-purpose, federally planned and built dams that will control floods, generate hydroelectric power, and irrigate the lands.

The "Get McKay" Movement

EXTENSION OF REMARKS
OF
HON. ROMAN L. HRUSKA
OF NEBRASKA
IN THE SENATE OF THE UNITED STATES
Thursday, February 16, 1956

Mr. HRUSKA. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "The 'Get McKay' Movement," published in the Lincoln (Nebr.) Journal of February 8, 1956. It contains some very appropriate comments upon the splendid record being made by Secretary of the Interior McKay, and also contains reference to some very fine and pertinent source material which will be enlightening to those who consider his record.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE "GET-MCKAY" MOVEMENT
(By Raymond Moley)

Attacks upon Secretary of the Interior McKay are proceeding from several quarters, but the general pattern is to portray him as a faithless custodian of the precious natural resources entrusted to his Department. There is the constant effort to win votes in the West by saying that this administration has initiated no new water resource projects, when in fact it has recommended several which Congress has failed to act upon. There is the Al Sarena case, about which a joint subcommittee has been conducting an investigation, with Senator KERR SCOTT in the chair and the loquacious NEUBERGER acting as prosecutor. There is also an effort, zealously promoted by NEUBERGER and aided by MORSE, to prove that adequate care has not been observed in protecting the fish and wildlife reserves from improper exploitations by oil and gas leases.

The fact is that oil and gas leasing of public lands in fish and wildlife reserves has been the policy of the Federal Government for many years. By law, since the passage of the original Mineral Leasing Act of 1920, these lands are "subject to disposition * * * to citizens of the United States, or to any association of such persons, or to any corporation organized under the laws of the United States, or of any State or Territory thereof." An act of 1946 which amended the Mineral Leasing Act of 1920 reaffirmed the authority for such leasing, and in 1947 Department of Interior regulations were issued which defined conditions under which the leasing would be permitted.

STUDY BY EXPERTS

More than 2 years ago, because Secretary McKay felt that the regulations of the Truman administration did not provide the refuges with adequate protection, he issued a stop order which halted all leasing until a thorough study by experts could be given the matter and a set of strengthened regulations worked out. Participants included department officers, specialists from its Fish and Wildlife Service and Bureau of Land Management, its solicitor, and the Secretary's Advisory Committee on Conservation.

Finally, regulations with stringent provisions to assure maximum protection of refuges were ready. In December the Secretary's Advisory Committee unanimously approved them. Dr. Ira N. Gabrielson, of the Wildlife Management Institute, was present at this meeting, but raised no protests. A few days later, however, Gabrielson and the Institute made a bitter attack on the regulations and charged among other things that oil operators can now get an immediate lease with no prior submittal of any operating plan. As Secretary McKay countered, "No prospecting or drilling operations may be conducted on lands administered for wildlife conservation without the consent and approval of the Fish and Wildlife Service as to the time, place, and nature of such operations."

BOUND BY LAW

During the past week Senators NEUBERGER and MORSE indulged in a display of malicious banter on the floor of the Senate. NEUBERGER accused the administration of pursuing policies designed to destroy our natural resources: "The accelerated onslaught against our resources which we have witnessed in the past 3 years give rise to genuine concern over the national welfare of the future."

Besides these attacks, there has been some irrelevant discussion about the "philosophy" of putting oil wells on any of our refuges. By law, over the years Congress has expressed its will that leases be granted. And the Secretary of the Interior is bound by the law. It is to Secretary McKay's credit that he has seen to it that the regulations implementing the law are both wise and exacting.

Let's Expose the Communist Capitalists

EXTENSION OF REMARKS
OF
HON. FRANK CARLSON
OF KANSAS
IN THE SENATE OF THE UNITED STATES
Thursday, February 16, 1956

Mr. CARLSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Let's Expose the Communist Capitalists," which appeared in the February issue of the Veterans of Foreign Wars magazine.

This dynamic, thought-provoking article was written by Kenneth L. Myers, an attorney of Wichita, Kans. The article represents the fruits of study, observation, and investigation which Mr. Myers has carried on for more than 25 years. This work by him started during his years at Harvard University in the early thirties, and was brought into sharper focus by personal experiences with Communist workers in over 4 years of civil affairs and military government work in Europe, during and following World War II.

It is a thought-provoking article, and I commend it to the Members of the Senate.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LET'S EXPOSE THE COMMUNIST CAPITALISTS—RUSSIA'S SYSTEM OF "COMMUNIST MONOPOLY CAPITALISM" THRIVES ON THE MANY EVILS THE REDS PRETEND TO BE FIGHTING AGAINST

(By Kenneth L. Myers, Post 112, Wichita, Kans.)

It was springtime in 1944. I was temporarily stationed on the lovely southeast coast of England. One day, as I watched a particular V–1 approach, an anti-aircraft battery opened up on it. A partial hit caused the V–1 to make a complete U-turn and fly back toward France, still carrying its cargo of destruction.

In idea warfare, the supreme art is to make use of the enemy's own major weapon so that it injures the enemy himself.

Hitler employed the concept of the "Herrenvolk" (master race) to rekindle the spirit of German conquest. However, the application of this concept to conquered peoples brought on a reaction of hatred and opposition which contributed greatly to the downfall of the Nazi state.

In their great enveloping drive in the Pacific, the Japanese announced the policy of "Asia for the Asiatics." But when it became obvious that what the Japanese really intended was "Asia for the Japanese"—many Asiatics, who had supported the Japanese, turned to disillusionment and thence to active opposition.

Just how can we execute a play which will successfully exploit the very propaganda strength of the enemy? Theodore S. Repplier, with his concept of our "people's capitalism," as presented in the December issue of the VFW magazine, proposes a strategy which can gain us invaluable yardage. In addition, we require an accurate definition of the Communist system that we can use in the present war of ideas.

Communist propaganda experts know that their battle is facilitated when, in describing their own system, they employ terms which, by historical usage and custom, have already been accepted with favor by most people everywhere.

The other angle of this technique is to label all non-Communist systems with terms which, by historical usage and custom, provoke disfavor and repugnance by most people everywhere.

This, plus the deliberate intent to confuse, is the real psychology behind Communist appropriation of terms like: "People's Democratic Republic," and "People's Court" in referring to their own system; and the incessant libeling of non-Communist systems with such words as "monopoly capitalists, capitalist exploiters, capitalist colonialism, capitalist decadence, and capitalist landlords."

The damage occasioned by this technique has been compounded by many of our own newswriters and radio people through their use in articles, news reports, and newscasts of the labels which the Commies deliberately planted to assist their subversion program.

During the Korean war I heard many American news broadcasts which contained this phrase: "The People's Democratic Republic of North Korea announced via radio that . . ." I have before me a news article clipped from the paper of an American church which opens with:

"LONDON.—Jan Izydorczyk, Polish Ambassador to the East German People's Republic."

In the battle for men's minds, the major Communist target has been what they call, "monopoly capitalism." They have caused millions of people throughout the world to hate and fear all that which is labeled "monopoly capitalism." And exactly herein lies the great vulnerability—the soft spot of the whole Communist campaign. Our great and pressing job is to make certain that men everywhere understand exactly that which is monopoly capitalism and that which is not monopoly capitalism.

Our first task is to determine the meaning of the words: "monopoly capitalism." In Russia or the United States, "capital" consists of the tools and facilities which are utilized in the productive and distributive systems—plus the produced end items which people use for their health, welfare, recreation, and protection.

Thus, "capital" includes groceries on the shelf of a store as well as plants, machinery, land, mines, and communication facilities. To "monopolize" capital is to take its control and management out of the hands of the many and centralize it in the hands of a few. The fewer the hands which control, the greater is the monopoly.

This matter of the degree of monopoly control is not limited merely to economic operations; it can likewise be applied to the cultural, educational, religious, military, and political systems of every nation. The tests of the relative degree of monopoly are: what proportion of the citizenry individually owns, manages, and controls our economic enterprises; what proportion is freely associated with organized and competing political parties; what proportion may freely choose their own occupation, place of dwelling and bargain freely for wages and working conditions?

Now the Communists allege that under their system capital belongs to the state, as the representative of the people in common. But the state never did anything; it is a fiction, an abstraction. The crux of the whole matter of monopoly is that all decisions affecting the life and welfare of the people of any nation are made by persons—not states. Some person or group of persons is responsible for every decision made.

Who makes the decisions in the Soviet Union? All impartial authorities agree that, after the great purge killings in the thirties, every important decision affecting the welfare and economy for the peoples in Russia was subject to the approval of one man. This man personally held the power of life or death, prominence or oblivion over every man, woman, and child in the Soviet Union, including the members of the Communist Party. His name was Joseph Djugashvili (alias Stalin). And because of the great technological advances in communications—his vast network of police agencies gave him the kind of absoluteness of control which the czars never enjoyed.

Currently, the monopoly powers which Stalin wielded are exercised by a group of 5 or 6 monopoly capitalists. No important action can be taken in any field of Russian activity which lacks their approval. These few rulers direct, control, and manage production, wages, prices, capital expenditure, employment, taxes, the spending of the profits earned by economic enterprises—plus the cultural, political, religious, educational, and military life of the Soviet Union. These men dominate the Communist Party, which in turn has a monopoly over all organized political activity.

Who is permitted to make decisions which affect economic life in our "people's capitalism"? Who is permitted to own, control, and manage "capital"? Who is permitted to give employment to others? The answer, of course, is every adult citizen—and this is precisely why we are a "people's capitalism." We permit those individuals whose savings, and whose management, have produced profits to retain a portion of those profits for further use and investment. Communist enterprises often produce profits, too—but these profits are spent by Khruschchev et al.

And what about the Communist slogans of "land reform" and "colonialism"? Can the propaganda value of these appeals be reversed to our own advantage? Lenin used the slogan of "land for the peasants" in his revolutionary seizure of power. After Communist control was sufficiently entrenched, the farmers were robbed of their land and personal ownership of land was made a crime. Nonetheless, the Communist monopoly capitalists are still using the old Lenin technique of "land reform" with great international success. Actually—"land reform"—meaning to take the ownership and control of the land away from the exploiting monopoly Communist landlords, and returning it to the individual farm families who occupy and till it, should be another of our great mass motivating weapons.

A costly error has been made in permitting the Communists virtually to monopolize the evil aspects of the word "colonialism." Russia itself has practiced the cruelest extremes of colonialism against her captive slave satellites. We and our allies should be hammering day and night against the unspeakable exploitation of "Communist colonialism."

How were Lenin and his successors able to accomplish their system of Communist monopoly capitalism? They acted on two basic facts: (1) men have a natural will to live—self-preservation; and (2) if you monopolize the control of the economic system in your own hands—the citizenry will do your will in all matters in preference to dying for want of food, clothing, shelter, and medical attention. Control the bread and you can control everything else. Lenin actually starved hundreds of thousands of Russians to death by the simple trick of seizing control of food supplies, and then by denying ration cards to those whom he wanted dead.

The terrible fraud of the technique of nationalization, which is also demanded by fuzzy-minded collectivists and self-styled liberals as a means of eliminating the evils of monopoly, is that it worsens monopoly by increasing the centralizing of control. Thus, the State economic planning commission, with perhaps 10 members, supplants the economic judgment of the millions.

Communist capitalism is the system of the supermonopoly of economic and political power which Karl Marx foresaw would inevitably result in the unparalleled exploitation of the masses. This monopoly capitalism did not, as Marx predicted, emerge as a result of gradual economic processes oper-

ating in a highly industrialized state. It resulted from the sudden legislative process of decreeing laws which transferred the ownership of property from the many little capitalists to a handful of Communist monopolists.

The great and incessant Communist effort to eliminate God is intimately related to the survival of Communist monopoly capitalism. As long as there are men and women who look to a source of guidance and inspiration, which is beyond the immediate regulation and control of the Communist leaders, their monopoly is incomplete. And to the degree that it is incomplete, it is endangered. Thus the dynamic of Communist control must ever be toward a more and more absolute monopoly. This dynamic explains the high death rate among the supercapitalists of the Communist system. It is necessary to kill one Communist monopoly capitalist before another can be squeezed in. And what is the contrasting dynamic of our people's capitalism? You can observe it at every corner of America. Our dynamic is: every citizen a bigger and better capitalist.

The law of peace is reverence of the rights and dignity of all other individuals. People's capitalism is in harmony with this law. The law of war is the will to force others to submit to unwanted controls. Communist monopoly capitalism is both a creation, and a proponent, of this law.

For us the concepts of people's capitalism and Communist monopoly capitalism constitute a double-barreled weapon for the war of ideas with Russia. One barrel reveals the fraud of the Communist system. The other reveals the moral superiority of our system.

Now that we have the tools—how and where can they be used with maximum effect? A great educational crusade on a global front is required. Even here in our people's capitalism much work is needed. Thirty-eight years of Communist propaganda and subversive have created a confusion and misunderstanding which must be overcome. Required are the inspired efforts of a host of educators, ministers, news writers, radio commentators and directors of film and television presentations.

Are we, perhaps, overestimating the importance of the ideas which motivate peoples? In the summer of 1945, another American and I were conferring in Cologne with the now German Chancellor, Dr. Konrad Adenauer. Dr. Adenauer rose from his desk, walked slowly to a partially repaired window, and contemplated for a moment the terrible wreckage of his home city. Then he turned toward us and said:

"Ruins, terrible ruins. But I am not the most deeply concerned about them, for the city can and will be rebuilt. The problem with which I am the most deeply concerned is: What great ideas and concepts will motivate the German people, and, indeed, the peoples of other nations, in the years which lie ahead? This, gentlemen, is the only really important problem."

Great ideas do not grow and spread by themselves; they are propagated through the works of dedicated people. But for His disciples, the great teachings of Jesus would have perished. Without a masterful educational effort the dignity, worth, and self-expression of the individual, which people's capitalism both recognizes and promotes, will be lost in a godless world state of Communist monopoly capitalism, wherein the individual is but a source of physical energy to be allocated, conditioned and exploited in the service of a handful of monopoly capitalists.

The program of enlightening the people as to the facts of people's capitalism versus Communist monopoly capitalism must be carried abroad by our public and private information services.

In addition we require an adequate program of training leaders in: (1) The strategy and technique of Communist subversion; (2) the countermeasures required to cope with such subversion; and (3), as conditions permit, the building of people's capitalism.

We must have this program because on virtually every front of this war the anti-Communist native leadership has proven incapable of coping with the tactics employed by the foreign Communist graduates of Moscow subversion institutes. After having trained cadres of foreign natives, and their return to their homelands, we must be prepared to support their anti-Communist leadership to whatever degree is required to make it effective. In this we shall be doing no more than meeting the challenge of the effective support which Moscow gives to its foreign agents. There will, however, be this fundamental difference. The objective of Moscow support is always to create permanent, slave satellites. The objective of our support is to preserve, strengthen, and create free and independent people's capitalisms.

United States gifts of cash, and technical assistance, are not enough. The UNRRA millions poured into Poland, Czechoslovakia, and Hungary did not save these nations from Communist subversion. World events strongly argue that aid programs alone may be only fattening the geese for the Communist monopoly butchers. The crucial factor is not so much dollars, or even hydrogen bombs, as it is effective anti-Communist leadership. Secretary of State Dulles recognized this truth when he said: "The Communists, too, can be infiltrated."

The program outlined above is more than an immediate necessity. It is a matter of life or death, freedom or slavery to millions of God's people. It merits the very best organizational and educational effort which those who love freedom have to give.

A national educational "Institute for People's Capitalism" could mobilize an unmatched faculty from amongst the scores of persons who have been personal witnesses to Communist deceit, cruelty, and subterfuge in every part of the globe. Foreign students, brought here on scholarships, can experience with their own senses the fruits of people's capitalism. With a proper example in this country, the lovers of freedom in many other countries would move to establish similar institutes in their own Communist-threatened homelands.

What agency could possibly undertake the domestic educational aspects of the program? Would this task be in keeping with both the purposes of the Ford Foundation, and with those highest traditions of a people's capitalism through which the Foundation became a reality? Do we not already possess overseas diplomatic, intelligence, and military agencies which are in position to support trained anti-Communist leadership?

Could not the proper implementation of this program hasten the collapse of monopoly Communist capitalism and usher in a new dynamic of individual freedom, responsibility, and creativity which is inherent to people's capitalism, and which would make this world a better abode for all men?

Inaccurate and Unfair News Coverage

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Thursday, February 16, 1956

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Inaccurate and Unfair Coverage," which appeared in a recent issue of the bulletin of the American Society of Newspaper Editors. The article was written by one of our Nation's most distinguished editors, Mr. Samuel L. Latimer, Jr., of the State, Columbia, S. C.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

INACCURATE AND UNFAIR COVERAGE

(By S. L. Latimer, Jr.)

I agree with Mr. Archer that "newspapers ought to decentralize their sources of (national) political information."

I think the newspapers themselves are greatly to be blamed. We all too often give importance, beyond its due, to the opinions of political figures or to a certain dateline, and the wire services are too prone to attach more significance to a story that breaks in a big center, such as Washington and New York, than to a story of equal value originating elsewhere.

Mr. Archer says there must be in every State or at least in every region some newspaperman who knows what the people are thinking and whose skills and presentations are fully equal to those who write in Washington. I should hope so. But if these correspondents had the same difficulty getting their stories printed as now is the case with favorable news about the South their time would be wasted.

I cite the South since it at present is a political football and because if there ever was an area that has failed to get accurate and fair coverage it is this section of the country. Let something take place that throws a good light on the South and see what happens to the story. But let something happen that reflects upon the South and immediately the story gets big, and often distorted, treatment.

I wish our paper could afford to have a bureau in every section of the country to tell us what the people are really thinking, not what the politicians and the progagandists want to ram down the peoples' throat. But if we had such a service we would feel obligated to print the reports, whether we agreed with them or not, so that our readers could be informed.

Unless the newspapers change their attitude toward grassroots information, the situation of which Mr. Archer complains will continue to exist.

Proposed Commission on National Housing Policy

EXTENSION OF REMARKS
OF
HON. STEWART L. UDALL
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 16, 1956

Mr. UDALL. Mr. Speaker, I have today introduced a bill to create a Commission on National Housing Policy.

This bill is identical with S. 3186 introduced Tuesday by the junior Senator from Alabama, Mr. SPARKMAN, and cosponsored by seven other Senators. It is designed to provide information as to why there are threatened cutbacks in the vital housing industry and to provide logical moves to correct any shortcomings.

Part of the trouble, I believe, can be traced readily to uncertainty about the status of Government-supported mortgages in the money markets under the

Veterans' Administration and Federal Housing Administration programs.

More will be found in the capital-short areas of the Nation—for the most part those sections showing fastest growth—where the Federal National Mortgage Association has not been functioning as intended.

This bill is broader in scope than H. R. 9053, which I introduced on February 2. The purpose of H. R. 9053 was limited to amending the FNMA Charter Act to make that agency function as the Congress intended, to stimulate home construction capital-short areas instead of depressing it by policies which aggravate the shortage of mortgage funds.

I have in mind particularly the FNMA policy of requiring that common stock in FNMA be purchased by the local primary mortgage buyer before the agency will—in its secondary market function—buy the mortgage.

In addition to this, there is the widespread practice of discounting Government-supported mortgage loans in the money market.

Elimination of this practice was one of the major aims cited by Senate sponsors of S. 3186. Because the supply of money is short in many areas, discounting on VA and FHA insured loans is prevalent, reaching as high as 12 percent in some parts of the country.

I was pleased to note the concern with this situation evinced by Senators sponsoring S. 3186, as well as their interest in expanding the function of FNMA in stabilizing the mortgage market.

Mr. Speaker, I hope there will be early and sympathetic consideration of both of these measures by appropriate committees of the House. The housing industry's health has an important effect on the Nation's economy.

Industrial Mental Health

EXTENSION OF REMARKS

OF

HON. FRANK CARLSON

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Thursday, February 16, 1956

Mr. CARLSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article which appeared in the November 5 issue of Business Week, regarding a study of industrial mental health which is being conducted by the Menninger Foundation and Clinic, in Topeka, Kans.

The Menninger Foundation and Clinic, in Topeka, under the able direction of Drs. Will and Karl Menninger, is rendering outstanding service in the mental health field, nationally and internationally. We in the State of Kansas are indebted to them for guidance and direction in programs which have materially benefited the mentally ill people of our State, in assisting us to establish at our State institutions programs which have resulted in our State's moving from among the lowest in mental health care to one of the top States of the Nation.

It is of great personal satisfaction to me that this program was initiated in 1946–50, during my administration as Governor of the State of Kansas. We had splendid cooperation from the legislature, the Kansas Medical Society, the Menninger Foundation, and our people generally.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NEW STUDY MAY GIVE ANSWERS

Enlistment of psychiatry in the fight against the manifold industrial problems listed above has become a fact—and a fact that seems bound to grow in importance.

The Rockefeller Brothers Foundation took a major step to make it grow when it granted $105,000 for the establishment of a division of industrial mental health at the Menninger Foundation and Clinic, of Topeka. The sum is not a large one, but the grant gives a hefty shove just the same, for it means that the famous doctor team of the Menningers—Karl A. and William C.—will be able to expand their specialized training of industrial psychiatric personnel.

The grant, made 4 weeks ago, was followed by some icing for the Menningers' cake. Last week the American Public Health Association conferred an Albert Laskar award on the Menninger Foundation.

PUBLIC RECOGNITION

The significance of the Rockefeller grant and the award lies in the public recognition it will bring preventive psychiatry. The Menningers are the leading exponents of the idea that psychiatry should come out of the hospital and contribute whatever it can to the well-being of mankind.

Actually, it's going to take a lot more than $105,000 to do very much about industrial mental health. This sum is little more than a drop in the bucket when you consider that maladjusted workers annually cost industry at least $3 billion through job changes, absenteeism, alcoholism, goldbricking, sabotage, vandalism, interpersonal frictions, executive breakdowns, and other manifestations of emotional difficulties. But, at least, it's a sign of a growing realization that something should be done about attacking these problems.

I. THE PROBLEMS

In the last 15 years or so, the language of pschiatry has become almost commonplace in America. The facility with which the average high school student tosses around the once taboo subjects and words often comes as a shock to the older generation. But the language is used not only at home or cocktail parties. It's all around us.

Those partially overhead conversations in streetcars, elevators, rest rooms, frequently consist of an amateur analysis of the speaker's associates in terms of complexes, drives, and sex life. And the fearless hero and pure heroine have almost disappeared from fiction, to be replaced in novels, TV, and the movies by characters torn by all manner of psychoses.

Extent of maladjustment

Still, most people retain a sneaking suspicion that mental health or maladjustment is something involving only crazy people and perhaps the slums, something far removed from their daily lives. Statistics provided by, say, the National Mental Health Committee ring no bell for them, although the chances are about 1 in 4 that they are one of the statistics. While maladjustment may not be the only cause, it is certainly a major factor in all of these situations:

For every 4 marriages a year, there is 1 divorce.

About 50,000 Americans are addicted to narcotics.

About 1,750,000 serious crimes are committed every year.

About 265,000 children between the ages of 7 and 17 are brought into juvenile courts each year.

About 12 percent of the 15 million men examined for induction into the Armed Forces during World War II were rejected for neuropsychotic disorders.

One out of every eighten persons now alive will spend some part of his life in a mental hospital.

Worker dissatisfaction

In industry, more than in any other area of American life, we are constantly being reminded of the dissatisfactions, strife, and violence that occur between groups of our citizens.

In the words of Dr. Will Menninger: "Many jobs don't offer a very adequate outlet for some of the instinctive energy that is in all of us.

"True, there are some compensations. Sometimes we feel that our work is sufficiently worthwhile to make up for the fact that we don't have the outlet we need. Often we gain satisfaction from the very happy personal relationships we have on the job. One of the most advantageous aspects of any kind of job is the feeling that we 'belong.' Monetary gain, too, is often a source of satisfaction.

"In the opposite direction, we see, across the country, very many evidences of dissatisfaction with work. In management-labor difficulties, labor often appears to be fighting for material returns when it is actually striving for job satisfaction. The restrictive nature of work as we enforce it upon ourselves—the regimentation, the routine, and often the lack of opportunity for creativeness—adds, I think, to job dissatisfaction."

Cost to industry

What does Dr. Will's theorizing mean in dollars and cents to industry? It shows up in the surveys that have been conducted with increasing frequency by industrial researchers in the last few years:

In a study of 127 plants, a group of industrial psychologists found that the workers were galled by rules that assigned them to dining rooms and toilets inferior to those of their bosses and that left them to scramble for parking space in lots where stalls were reserved for executives. The worker, the research team said, was frustrated, made to feel like an inferior creature, a number in a department. As a result, there was greater pressure through the union for more money to make up for an emotionally dissatisfying work atmosphere, and meantime the workers continued to exhibit all the hostility, sloppy production, inefficiency, and lack of motivation that resentment can produce.

Statistics on accidents indicate that some 30 percent of the workers become involved in 85 percent of the accidents, as a result of emotional troubles. Additional research has shown that the seriously troubled employee had 3 times as many safety violations, shop rule violations, and disciplinary contacts; 2½ times as many grievances and medical dispensary visits, and 1½ times as many minor surgical requirements, sick days, and absences for personal reasons as other employees.

In a study at a major oil company, character traits were said to represent 90 percent of the causes for discharge and 76 percent of the reasons for which promotion was not granted. Another study of 4,000 cases of discharge in 76 companies indicated that 85 percent were fired primarily because of character traits.

II. THE MENNINGERS

The Menninger Foundation and Clinic in Topeka has been described as America's psychiatric, and psychoanalytic, powerhouse. And the phrase is apt.

The foundation, a nonprofit professional organization dedicated to the conquest of mental illness and improvement of health, was established in 1941. But its history

starts in 1908 when Dr. Charles Frederick Menninger visited the Mayo Clinic and dreamed that his young sons, Karl and Will, should be doctors and that together they would establish the Menninger Clinic.

The dream came true in 1919 when the clinic was founded, but it adopted psychiatry as its specialty. At the time, psychiatrists going into practice in the big cities were having a difficult time making a living. Few professionals expected a clinic to endure long in the land of tall corn and sunflowers.

Psychiatrist's mecca

The flow of patients, however, soon contradicted the experts. The Menningers were forced out of their downtown office into a remodeled farmhouse on the edge of town. Additions have been added steadily. In 1941, the Menninger Foundation was incorporated as a nonprofit institution and absorbed the properties of the clinic. Today, the foundation with a dozen buildings occupies 40 acres and the Child Psychiatry Department has three buildings in a separate location.

Other hospitals have been built in the area as Topeka became a mecca for psychiatrists. Psychiatry is now the city's second largest industry, involving as patients, doctors, technicians, and maintenance personnel close to 10,000 people.

The foundation today is a training and research center as well as a hospital and clinic. The training program began in 1946 and since that time has graduated about 500 students. Industrial preventive psychiatry bolstered by the recent Rockefeller grant, is primarily a research activity.

Application to industry

The industrial program had its roots in Dr. Will's military service during World War II (brigadier general). As director of the neuropsychiatry division in the Surgeon General's office, he was in charge of the mental health of some 10-million GIs. After the war, he helped set up Winter General Hospital in Topeka, which was taken over by the Veterans Administration.

"The Army functioned as a huge industry does," Dr. Will said recently. "In it, psychiatry played a relatively prominent role. Why could it not contribute to civilian industry and business?

Gaining perspective

To obtain information for establishment of the new division, Dr. Harry Levinson, a foundation graduate and a clinical psychologist particularly interested in the problems of industry, was added to the staff. In the last year, Dr. Will and Dr. Levinson have traveled about 20,000 miles observing, asking questions, looking for leads, trying to obtain a perspective on industrial mental health. Together they visted almost all the psychiatrists working full time in industry, many industrial health departments. They talked with professors teaching labor relations, industrial psychology, industrial medicine, human relations. They sat in on union meetings and counseling programs. They talked to personnel directors and business executives. They've scoured the literature.

The advice they got from persons concerned with emotional problems in industry boiled down to this: "The only way to study and attack such problems from your point of view is to begin some small service to industry. Once within the plant, your own experience will make certain problems immediately apparent to you that are not apparent to those without psychiatric understanding."

III. THE NEXT 3 YEARS

How do the Menningers propose to get the newly established unit moving on industrial mental health?

Dr. Will sees first the recruitment of a staff of trained personnel to assist Dr. Levinson. He believes in the team approach and wants the staff to include a psychiatrist, a sociologist, and a management specialist. This team would choose an industry and study it for 2 or 3 years. Several industries already have volunteered to be used as guinea pigs.

Fact gathering

In addition to the firsthand accumulation of facts and experience, the data of published research and contemporary thinking will have to be studied and integrated to make the survey complete. This means building up a library of books and journals devoted to industrial problems.

After 3 years of study and research, Dr. Will believes that the team will be able to launch a program that will have far-reaching effects on many of the problems of industry. For this later program he hopes to get support from industry not only in the form of money for research and training, but also for putting psychiatric consultants on the company payrolls and establishing emotional-aid stations in the plants.

Character analyses

While a scientific program is 3 years away, the prolific writing of the Menninger brothers provide some interesting analyses of character traits and what they now consider important characteristics of good mental health.

"The kind of leader that I would wish in many, many high places," Dr. Will wrote last year, "is the man who has some understanding of personalities, their structure and function, how they work, and who knows of the unreasonableness in all of us and the hostilities we all have."

Of motivation in industry, he said: "Unless we help a man understand what his job is and give him a total picture what his part on the team is, he can never really be a member of the team. * * * While there may be effective communication from above down, there are rarely any communications from below up."

A Reply by General MacArthur

EXTENSION OF REMARKS
OF
HON. JOSEPH R. McCARTHY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Thursday, February 16, 1956

Mr. McCARTHY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "General MacArthur Makes His Reply," written by Douglas MacArthur, and published in the February 13, 1956, issue of Life magazine.

I have been informed by the Public Printer that the article will make 3 pages of the CONGRESSIONAL RECORD, at a cost of $240.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

GENERAL MACARTHUR MAKES HIS REPLY—HE ACCUSES TRUMAN OF FALLIBLE MEMORY AND OF DODGING COURT OF INQUIRY BY WAITING UNTIL NOW TO BRING UP THIS BELATED CLAIM OF INSUBORDINATION

(By Douglas MacArthur)

I had sincerely hoped that in his memoir narration of the Korean war and the facts and circumstances surrounding my relief from command in the Far East, Mr. Truman would be animated by a high sense of dedication to the historical record and proceed with restrained concern for truth and accuracy. Possibly I should have been forewarned that such was not to be when distinguished Americans and the Ambassador of a neighboring state, among them former Secretary of State and Supreme Court Justice James F. Byrnes, former Vice President Henry A. Wallace, former Attorney General Francis Biddle, former Foreign Aid Administrator Leo T. Crowley, President Truman's own Chief of Staff, Fleet Admiral William D. Leahy, Mr. Bernard Baruch, Gen. Albert C. Wedemeyer, and former Secretary of War and Ambassador to China Maj. Gen. Patrick J. Hurley found it necessary, generally with incontrovertible supporting documentation, publicly to challenge the integrity of his work. Even so, I would not join in such an arraignment were it not that Mr. Truman's narration does such violence to the truth that to remain silent would be a disservice to the Nation.

I will not be so brash as to attempt to diagnose the animating impulses which have led him into such a labyrinth of fancy and fiction, distortion and misrepresentation. Suffice it to suggest that a well-known quotation may provide a clue to the answer: "Everything looks yellow to a jaundiced eye." For such does seem peculiarly applicable to Mr. Truman's memoirs in the writing of which he has been unable to rise above those petty instincts based upon spite and vindictiveness which have so frequently led him into violent and vulgar public controversy. The more the pity, for in a discussion of these events of recent history the record is replete with original documentation which Mr. Truman has largely ignored in favor of his own fallible memory and gift for twisting the facts to serve his own ends. If left unchallenged, he would indeed establish a mastery of fiction over fact, thus altering and slanting the record in his endeavor to explain the aftermath of tragic reality which has followed.

Were I to attempt to correct Mr. Truman's many inaccuracies and distortions concerning the Korean war and my relief from the Far Eastern scene, I might as well attempt a rewrite of that part of his memoirs. I therefore confine myself to certain basic facts which, because of their warped treatment, need to be restated and reelucidated.

To begin with, Mr. Truman seeks to involve me in the responsibility for South Korea's inability to meet the North Korean assault in late June 1950 by slyly referring to my approval of the withdrawal of our XXIV Corps from Korea in 1949.

He attempts in this way to divert attention from the fact that the project was initiated in Washington and that my approval was based upon the assumption that there would be created in its place 10 full divisions of trained South Korean troops equipped with all modern weapons of war. This was not done. With the withdrawal of the XXIV Corps over-all responsibility for South Korea was transferred to the State Department. In Washington the fatal decision was then made that the South Korean troops should not be supplied with such weapons as tanks, long-range artillery, adequate heavy trucks, large-scale engineering and signal equipment, aircraft and general supply and maintenance resources. This amazing policy was based apparently on the fear that otherwise these troops might be used to march north in an attempt to unify the country by force of arms.

Under such drastic limitation of armament, South Korean units were little more than a constabulary force and were unable, in spite of their bravery and excellent training, to cope with the North Korean army with its full complement of heavy armament, including hundreds of tanks and long-range artillery pieces with supporting aircraft in overwhelming force. In addition, these South Korean divisions were not brought to full strength. At their peak they never numbered more than 65,000 men—about half the numerical strength of the North Koreans.

Had the South Koreans been organized up to 10 fully equipped divisions, which would have brought them up to the enemy's strength, in all probability the North Koreans would not have dared to attack. But even had they done so, it is my firm belief that the South Koreans would have repulsed them.

Mr. Truman's relief of me on April 11, 1951 was important not because of the personalities involved but as a symbol of a basic change in his attitude toward Asia since entering upon the Korean war and the calamitous events which resulted therefrom. It set off a chain of reaction which has prejudiced to its very foundation the struggle between the free and the Red world. Mr. Truman's decision to meet Communist aggression in its military effort to seize Korea would have been a noble one indeed had it been implemented with unswerving courage and determination. But he proved unequal to the task. After Red China entered the conflict, he yielded to counsels of fear and abandoned pledged commitments to restore to the people of Korea a nation which was unified and free.

A CATASTROPHIC BLOW TO THE FREE WORLD

Such abandonment of principles by a President in whom the peoples of Asia had placed such trust and faith was a catastrophic blow to the hopes of the free world. Its disastrous consequences were reflected throughout Asia. Red China promptly was accepted as the military colossus of the East. Korea was left ravished and divided. Indochina was partitioned by the sword. Tibet was taken almost on demand. Other Asian nations began to tremble toward neutralism.

Mr. Truman's action wasted the opportunity to retrieve our basic mistake of the 1946 Marshall mission in offering appeasement to the Red Chinese at the expense of Nationalist China beguiled by the naive concept that the Reds were only agrarian reformers. It confirmed Red control of continental China and fostered the growth of a powerful ally of Soviet Russia which well might tip the balance of military power in the struggle for the world. It signaled the artificial restraint of our forces in Korea which could have attained victory without recourse to other than conventional warfare and with much less loss than actually occurred under protracted negotiations. Aproximately three-fifths of our casualties were suffered during the indecisive aftermath following my relief. Mr. Truman's policy reversed United States military doctrine of a century and a half from reliance on attack to defense, although the history of warfare shows the latter never attained more than an indecisive stalemate. It accepted at tragic cost the thesis of indecision that in war there can be a substitute for victory; that enemy leaders who violate the conventional laws of warfare by savage brutalities need not be held to ultimate responsibility; that the rights of honorable prisoners of war are no longer a sacred trust.

All of this destroyed Oriental faith in our fortitude, in our determination and in our belief that the Far East was comparable in importance to Europe. It confirmed their fear of allied concentration on the Atlantic Ocean area and a much lower priority for the Pacific Ocean area. This largely lost us the psychological results of our World War II victory in the Far East.

Mr. Truman failed abysmally to comprehend the Soviet strategy in the latter's continuing and relentless effort to control the world, although that strategy is clearly expressed and delineated in the public writings of the Soviet leadership. He failed to understand that the global panorama has long encompassed three great areas of potential struggle: in the center, Europe; on the flanks, Asia to the north and Africa to the south. Mr. Truman apparently thought of the center as the area of supreme interest and potential struggle, believing that if it could be held safely all else would fall into place. This concept was fostered and encouraged by the constant propaganda pressures of the Soviet designed to convey the clear impression of aggression there and thus concealing his real objectives on the flanks.

What the Soviets sought were the economic frontiers of the world—Asia to the north, Africa to the south—frontiers which possessed such a mighty reservoir of the world's potential wealth in raw resources. The center represented little in economic advance, the flanks everything. The Soviet strategy was merely to defend in Europe, but to advance by way of the flanks; to cause the free world to concentrate its resources at the center to the neglect of the vital ends. It has worked even beyond his wildest expectations. Our main priority, even with war raging on the north flank in the Far East, has been the center, Europe, although practically free from battle combat. And now, with the north flank turned in Asia, the Soviet has started to envelop the southern flank in the Middle East.

All this and more has followed from Mr. Truman's fatal decision not to see it through in Korea. It plunged us from an invincible position of moral strength into the confusion of uncertain bewilderment, the practice of doubtful expediency and the eventual misery of timid appeasement. Seldom in history has national prestige dropped so precipitously from the top toward the bottom.

Mr. Truman is angry with me for regarding the Korean conflict as a war and not, as he termed it, a "police action." He imposed drastic restrictoins on the use of our air and naval power, established sanctuary zones protecting the enemy's supply depots and lines of communication, and, by prohibiting the employment of Chinese Nationalist troops, neutralized the half million soldiers of Chiang Kai-shek. My many protests that such decisions would cost us the lives of thousands of our soldiers and deprive us of our victory were disregarded. In his memoirs, Mr. Truman defends his decisions by stating that otherwise we would have caused war with Red China. How could Red China have been more at war against us? Every ounce of her military and economic force was thrown into the Korean struggle. Lacking naval and air power, she was incapable of anything more. She was already strained to the breaking point in a 100-percent war effort against us.

How can one reasonably say it is not war when 134,000 Americans and many times that of our allied South Koreans were killed, maimed, or captured? The preponderance of these casualties were inflicted by Red Chinese and were largely due to Mr. Truman's unprecedented restrictions. Can such arbitrary decisions with such fatal results be regarded as right, or logical, or even rational? I am sure no man who fought in Korea will ever think so.

Mr. Truman further attempts to justify his extraordinary military policy, which literally placed our arms in a straitjacket, by arguing the possibility that if we had followed our tradition and fought to win it might have precipitated Soviet Russia's entry into the war. But the entry of Soviet Russia, or Red China, was a risk inherent in his original decision to intervene in Korea. Then is when he should have weighed the possible consequences and taken his decision with full acceptance of all the circumstances involved.

Mr. Dulles, our present Secretary of State then on a special mission to Korea, understood the risk of possible Soviet involvement and so informed the President by cable from Japan prior to the decision to intervene. But Mr. Dulles stated that he believed the risk of global war would be less if we intervened than if we abstained, and he advised the President that we should go in.

For myself, I have never felt, because of the realities involved, that there was serious danger of active Soviet intervention. In Korea the Soviet would have been at his weakest. The long and tenuous supply lines and other difficulties inherent in fighting a Far Eastern war were coupled with Moscow's psychological tendency to back down before a determined show of force. Moreover, Russia's policy is not to sacrifice its own troops but to use those of its friends. The enormous expansion of Soviet influence since the end of World War II has been brought about without the Russian soldier firing a shot.

Over the years many conflicting reasons have been given by Mr. Truman, or his supporters, for my abrupt relief when victory was in our grasp. Now, for the first time, he bases his action upon what he terms insubordination, one of the most serious of all military offenses and one which throughout our military annals has never been made without the officer concerned being given a hearing and the opportunity to defend himself. Indeed, the code which the Congress enacted to establish the laws governing the Military Establishment specifically makes such a hearing mandatory. Had Mr. Truman made such a charge against me at the time of my relief, or even later during his tenure of office, I would have had the right and privilege to ask that a court of inquiry sit in judicial judgment upon his allegations. But he made no such charge, confining himself instead to administrative reasons for my replacement by an officer of his selection—a decision which violated no military code or constitutional prescription and left me with no remedy, either in law or tradition.

This belated claim of insubordination is made by him not as a public official but as a private citizen. In making it he conveniently ignores the fact that the members of the Joint Chiefs of Staff, my military superiors in the conduct of the Korean war, specifically, categorically and unanimously denied under oath before the joint senatorial committee investigating the reasons for my relief that I had ever been guilty of insubordination, and that the joint committee members themselves in the report made at the conclusion of the hearings were in complete agreement upon this point. Nevertheless, Mr. Truman categorically states that General Bradley charged me with insubordination. This is in direct contradiction to General Bradley's sworn testimony in the Senate hearings. In answer to direct questions by Senators GEORGE, BYRD, and MORSE he three times denied there had been any insubordination.

Mr. Truman bases his charge upon the writing of three documents, viz: my message to the Veterans of Foreign Wars of August 1950, my call on the enemy commander to capitulate on March 24, 1951, and my reply to an inquiry from then Minority Leader Congressman JOE MARTIN, of March 20, 1951.

The message of the Veterans of Foreign Wars was a strategic study of the island of Formosa as a link in our defensive chain in the western Pacific which both explained and supported our Government's enunciated policy concerning that island. It was a rountine message which normally would have attracted little attention other than from those who might have secretly harbored the ultimate intent to surrender Formosa to Red Chinese control. These latter would naturally react against such a strategic study for it emphasized the policy that Formosa must not be yielded to Soviet influence.

The charge that I was insubordinate because I called upon the enemy commander to surrender and stop further bloodshed is even more grotesque. Twice before had I done so: after the Inchon victory and after our capture of Pyongyang, the enemy's capi-

tal city in North Korea. In neither instance had there been the slightest whisper of remonstrance from any source; indeed, quite the contrary. And actually how could it have been otherwise? From the beginning of warfare it has not only been a right but a duty for a field commander to take any steps within his power to minimize the bloodshed by the soldiers committed to his command. Mr. Truman has complained of my emphasizing the enemy's weakness; but my statement was not only factual but intended to present to the enemy the basic reasons why he should agree to stop the war. Mr. Truman further complains that my proposal interfered with one he himself contemplated making for an armistice. Such a complaint is unexplainable. How could any proffer of peace by me possibly interfere with a similar purpose or move on his part—unless, of course, he were secretly entertaining the idea of appeasing the Reds by an agreement short of the declared objectives of the United Nations in the unification of Korea? Less than 4 months later the Soviets' initiation of a conference was avidly accepted by him.

The third document which Mr. Truman calls insubordination was my letter in reply to that of Congressman MARTIN asking my views on the employment of Chinese Nationalist troops which had been offered for the Korean front. It has always been the practice and became the law that military officials, when called upon by Members of Congress for information, shall give it without reservation, but here again Formosa loomed up as the focal point to Mr. Truman. For in that letter I agreed with Congressman MARTIN's logic that the loyal Chinese troops on Formosa should be utilized to support our own forces in the battle for Korea. Indeed, I believe the decision not to do so at that critical time was one of the most ill-conceived and illogical ever made by a President of the United States. In ultimate effect, we were protecting the Red Chinese against troops allied with us in the same common cause.

Mr. Truman takes particular exception to my statement in the letter to Congressman MARTIN that "in war there is no substitute for victory." The absurdity of such a complaint is apparent. As events since my relief have so clearly demonstrated, the only substitute for victory lies in appeasement. A great nation which enters upon war and does not win always suffers the ultimate consequences of defeat. Stalemate may end the casualties on the battlefield but marks the military collapse of the purpose which induced entry into combat. Mr. Truman had by this time apparently reached a point in his career as President where the slightest divergence in view by any subordinate was regarded as a personal affront to him. The disease of power was coursing through his veins. To apply such a dogma to political appointees of temporary length of service was one thing, but to require complete conformity from those permanent members of the government whose services lie in the field of a profession is to introduce the very essence of absolute government. The oath they take is not to an individual but to support the Constitution and the laws of the land. They are the servants of the people and ultimately responsible to their Congress, however much they may be subject to the lawful orders of their superiors. That is what differentiates a democracy from a tyranny.

Quite apart from what Mr. Truman has to say in his memoirs, I have searched in vain for some loigical explanation for my abrupt relief from command in the Far East. I am sure that it was influenced by my firm convictions against appeasement of any sort and by my objective of victory. I am sure that my view that Formosa should be held as an integral part of our defensive chain in the western Pacific and that once Red China initiated hostilities against us we should regard it as an act of war aroused many influential persons in Washingon and other capitals, and probably the President himself, against me. That I did not—and could not—alter my professional military convictions to conform to the political expediences of others was to them unpardonable. But what may well have triggered my removal was my recommendation, made in January shortly before my relief, that a treason trial be initiated to break up a spy ring responsible for the purloining of my top secret reports to Washington. My campaign plans, including those of the Eighth Army, were transmitted daily to Washington. General Walker complained constantly to me that the enemy was receiving prior information of his movements. We could find no leaks in Korea or Japan. Then suddenly one of my dispatches concerning the order of battle was published in a Washington paper within a few hours of its receipt. I insisted that those responsible be prosecuted in order that such subversive activity be stopped but the case was never processed and I was shortly relieved of my command.

LINKS TO THE ENEMY

It was not until the recent exposure of the British spies, Burgess and Maclean, that the true facts began to unfold. These men with access to secret files were undoubtedly links in the chain to our enemy in Korea through Peiping by way of Moscow. I believe my demand that this situation be exposed, coming after the Alger Hiss and Harry Dexter White scandals, caused the deepest resentment and that it probably was branded a political move to embarrass the administration.

I myself have long been convinced that Red China's decision to commit its forces to the Korean peninsula was predicated upon assurance previously given through Moscow that such intervention would not precipitate retaliation against its attack bases. I do not intend to impugn in any way the loyalty or patriotism of President Truman and his high associates, and above all not to reflect upon the integrity and unquestioned greatness of the Democratic party which was then in power. But the obstinacy which dictated the failure of President Truman to recognize the damage that could be done by Red infiltrators and his "red herring" characterization of all efforts to unmask them are among the astounding features of an astounding epoch.

President Truman's legal authority to relieve a field commander, irrespective of the wisdom or stupidity of his action, has never been questioned by anyone. The supremacy of the civil over the military is fundamental to the American system of government and is wholeheartedly accepted by every officer and soldier in the military establishment. It is not an issue in this case. But in exercising his constitutional power to relieve me Mr. Truman did so in a way which amounted to drastic summary punishment without hearing or trial.

This was no mere change of command. It was a vengeful reprisal. Since the beginning of time commanders have been changed, some through whim, some through cause, but never in history was there such a savage and brutal method employed. It followed the practice of our Soviet adversaries: no hearing, no opportunity for defense, no consideration of the past. It was accomplished without the slightest hint to me that my service had become unsatisfactory. Indeed, had I had the least inkling of dissatisfaction, I would have instantly applied to be relieved. Up to the moment of my relief I had been receiving laudatory commendations from the President, publicly and through his liaison officer at my headquarters. No slightest opportunity was given me to explain my position, to answer allegations or objections, to present my future concepts and plans.

CALLOUS DISREGARD FOR ORDINARY DECENCIES

I was first apprised of the President's action through a press dispatch over the public radio. Mr. Truman claims that he tried to inform me through the Secretary of the Army, Mr. Pace, then on a visit to Japan and Korea, but could not reach him. This is incredible. Secretary Pace had been with me in my office just before and had reflected a most complimentary attitude in Washington. In Korea, where he was at the moment the news came, he was in direct contact with my headquarters, which had similar contact with Washington.

The actual order I received from the President was so drastic as to prevent the usual amenities incident to a transfer of command and practically placed me under duress. No office boy, no charwoman, no servant of any sort would have been dismissed with such callous disregard for the ordinary decencies.

President Truman attempts to spread the responsibility for his action to his immediate subordinates by revealing what purports to be the details of a conference called by him on April 6, 1951, to consider the question of my relief. He refused to reveal such details when called upon to do so by the Joint Senatorial Committees inquiring into the causes of my relief, throwing up the shield of constitutional privilege arising from the duly ordained separation of powers between the executive and legislative branches of Government. Now, after having denied such information to the Congress, he has blandly released it to a publisher for a price. At the same time he explains his refusal to give the information to the Congress by saying "advisers, to be of value, must feel that what they say or write will be held in confidence." He thus betrays the very principle upon which he denied the information to Congress; he betrays the very conferees he says it was his duty to protect; and he betrays the Congress by selling at a price information it had sought to obtain in the public interest.

Mr. Truman claims that the conferees, all of whom were his appointees and beholden to him for past favors and dependent on future support—General Marshall, then Secretary of Defense; General Bradley, then Chairman of the Joint Chiefs of Staff; and Averell Harriman, an exeutive assistant; and Secretary of State Dean Acheson—all acquiesced in my relief from command. I suspect that all knew, despite his disclaimers, the decision the President had already reached.

The two military men, Generals Marshall and Bradley, officers of high distinction and notable service, were both personally hostile to me. General Marshall's enmity was an old one, but General Bradley's was more recent. It undoubtedly had its origin in my refusal to accept him as my senior ground commander for the invasion of Japan when he was recommended by General Marshall. I frankly preferred my own commanders, Kruger and Eichelberger. I was doubtful of General Bradley because of his decisions and actions connected with the Battle of the Bulge, where he was the ground commander, and which resulted in approximately as many American casualties as were sustained in the entire southwest Pacific area campaigns from Australia to Tokyo. General Bradley was a candidate for promotion to the rank of General of the Army and Mr. Truman now discloses in his memoirs that as far back as my message to the Veterans of Foreign Wars he had contemplated appointing him to replace me. Moreover, the victory at Inchon had exploded General Bradley's previously stated view, entirely contrary to my own at the time, that amphibious warfare was a thing of the past never again to be resorted to on a major scale.

A PAROXYSM OF ANGER

Averell Harriman, a distinguished diplomat, had called on me in Tokyo shortly after my visit to Formosa and just before Inchon. He pointedly cautioned me of the extreme dislike with which President Truman regarded Chiang Kai-shek. He said that the mere mention of the Generalissimo's name aroused in the President a paroxysm of anger.

To illustrate his point Harriman told me that the then Secretary of Defense, Louis Johnson, despite his long and proven devotion to President Truman, was on his way out because the President suspected him of being on too friendly terms with the Generalissimo. Within a month his prediction was fulfilled. I felt that I was being pressured because of my openly expressed admiration and personal regard for the Generalissimo. In effect, it was a warning to be a conformist or risk following Louis Johnson. The interview was distasteful to me and Harriman probably recognized my distrust. His prejudice could have resulted.

Secretary Acheson had frequently exhibited petulance and impatience with those phases of the occupation of Japan which did not follow certain socialistic concepts which the State Department was endeavoring to force upon the Japanese people. Like Mr. Truman, during his long tenure of public office he had never visited Asia and therefore had no personal knowledge of its peoples or its special problems and was a complete stranger to Oriental psychology.

These are the four men with whom the President conferred, although he himself states with cynical inconsistency that he had already definitely decided to relieve me.

PERVERSION OF MY COMMENTS

Mr. Truman asserts that at the Wake Island conference I misled him by assuring him that Red China would not enter the Korean war. This is a peculiar perversion of my comments. The President asked what were the chances for Chinese or Soviet intervention. I replied that my answer could only be speculative, but that my guess would be very little.

I then explained that I could not only speak from a military standpoint with its manifest limitations and the question was one which involved a fundamental political decision; that I had had no intimation from either the Defense Department, the State Department, or the Central Intelligence Agency, my sole sources of political information, that such a move was in contemplation; that large concentrations of Red Chinese troops were on the Manchurian side of the Yalu but that with our complete command of the air, if they crossed the Yalu in force, we could isolate and completely jeopardize their safety by destroying the bridges and Manchurian supply bases; that such a move would be an act of war by Red China and that our power of retaliation would be overwhelming. I assumed under such circumstances that all prohibitive restrictions would be removed. This view was not questioned by anyone at the conference and was later supported by the Central Intelligence Agency's report of November 24 that "there is no evidence that the Chinese Communists plan major offensive operations in Korea." Had anyone intimated to me that our country might suffer the Chinese Reds to strike us in full war force and retaliate only by trying to ward off the blow as it fell without striking back on our own, I would not have believed so preposterous a suggestion. I knew that any military commander could not but regard as sheerest folly a peninsular campaign which so extended and exposed his bases and supply lines to destructive retaliation.

What then was the unparalleled circumstance—and the only circumstance possible—which induced the Chinese to enter the Korean war? They must have been told by someone and they must have known what I did not know, that even if their armies swept across the Yalu by the hundreds of thousands, even if they struck without warning as at Pearl Harbor, we would ensure their forces sanctuary in Manchuria. Only if he were certain that we would continue to protect his bases and supply lines would a commander have dared to throw the full weight of the Chinese Army into Korea. Indeed, the Chinese commander in chief of the forces which entered North Korea is reported to have publicly stated he had definite advance information that my hands would be tied by this sanctuary doctrine. Otherwise, he is reported to have said, "I would not have dared risgk almost certain destruction by crossing the Yalu in force. No competent commander would have been such a fool." The Maclean-Burgess defection has shown how he could have known.

THE FATAL MOMENT

This was the moment—the fatal moment—when the tide throughout the world began to turn against us. Had we gone on to what was sure victory, the entire picture would have been changed. The threat of global war would have receded. The world would be a radically different place today.

One of our distinguished authors, Louis Bromfield, a most substantial Democrat, sums up President Truman's memoirs far more concisely than can any words of mine. Writing in the Philadelphia Evening Bulletin he says: "Its principal value will be, not to throw any illumination upon the events of the times but simply an exposition of what Harry Truman really is, how he thinks, how he is able to twist the record of events to his own ends. In this he was far from a novice—even while he was President. * * * As to those aspects of the book that deal with facts and the reality of events, it is curious that Mr. Truman's accounts of what really happened differ so widely from the accounts of a number of honest and honorable citizens who have served their country well. Not everybody can be out of step but Harry. * * * Contradictions are not vague ones nor even statements which might be misinterpreted: They are flat-out head-on collisions of fact. Truth may be interpreted or shaded according to feeling or wishful thinking, but fact is fact * * * a matter of date, of spoken or written words. It is not easily shaded or misinterpreted as time is likely to show in the Truman record."

Just a Simple Remedy

EXTENSION OF REMARKS

OF

HON. WAYNE N. ASPINALL

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 16, 1956

Mr. ASPINALL. Mr. Speaker, we are now giving some consideration to a means by which the postal deficit can be reduced. It is most vital that this be done, because the precariously balanced budget which the administration was finally able to send up, is predicated on the elimination of such deficit.

If it is possible to solve some grave problem by a simple program and without burden to our people, it should be followed. I noticed just such a simple program recently in an editorial of the Daily Sentinel of Grand Junction, Colo. I pass it along here so that it can be seen before we rush into a solution which will increase the burden of our people.

JUST A SIMPLE REMEDY

Once again the talk of raising postal rates comes along, and the suggestion is being made—again—that first-class letter postage go from 3 to 4 cents, and that newspaper and magazine rates be sharply raised.

None of us can complain too bitterly against the idea that the post office ought to be more nearly self-supporting, although delivering the mail is certainly a service which we have come to accept as a function of the Government—for which we pay in part through taxes.

However, none of us ever takes from the mail box an armload of "junk" mail, solicitations for this, that or something else, mailed out by the hundreds and traveling the mail routes for practically nothing, but that we wonder whether a ruling which would make all such mail have to go first class—at first-class rates—would not immediately solve the problem of the deficit.

These flyers are mailed out by the millions. The man on one mailing list gets onto scores of others. He may get as many as 4 or 5 solicitations from 1 house—and within a few days. No attempt to check the lists is ever made. In fact such solicitations often contain a little slip saying that it is too expensive to check the list. It's cheaper to send out 5 or 10 of the folders and let Uncle Sam pay the cost.

A rise in postal rates for such mail would (1) cut them to an absolute minimum and thereby save postal work and costs, and (2) bring in more income. We don't expect that anything so simple will be adopted, but it would be more sensible than adding that extra burden to John Q. Public's cost of living. And it would save a lot of paper too.

Address of O. R. Strackbein, Chairman, the Nationwide Committee of Industry, Agriculture, and Labor on Import-Export Policy, at the Annual Meeting of the National Western Mining Conference, Denver, Colo., February 4, 1956

EXTENSION OF REMARKS

OF

HON. BYRON G. ROGERS

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 16, 1956

Mr. ROGERS of Colorado. Mr. Speaker, I ask unanimous consent to have inserted in the Appendix of the RECORD an address by Mr. O. R. Strackbein at the National Western Mining Conference at Denver, Colo., February 4, 1956:

A year ago I had the pleasure of speaking in Salt Lake City to another group, the National Wool Growers' Association. At that time, as I recall, the title of my address was "Look Out for the GATT; It's Loaded."

My reference was to the General Agreement on Tariffs and Trade, known as GATT. It was and still is loaded. Later I spoke before another group in Fort Worth under the title "Unloading the GATT."

Several additional pages of tariff history have been written since that time, and I shall try to bring you up to date.

One of the developments since then is the new agreement to set up the OTC, or Organization for Trade Cooperation, which would be a specialized agency of the United Nations dedicated to the administration of the general agreement, or GATT. This is the new international trade organization that Congress is now being asked to approve. The bill is H. R. 5550 and is now before the Ways and Means Committee of the House. The new OTC represents a resurrection of the ITO, or International Trade Organization, that died before Congress in 1950. It represents the effort to unload the GATT on the United States in a form that will make it permanent.

But let us go back a bit in order to gain perspective.

The so-called reciprocal-trade agreement, of which all this is a part, is now 21 years old. That represents a considerable span of years and has given us enough time to test the program and particularly its administration.

There can today no longer be any doubt about the meaning of this trade program so far as Congress is concerned. What the final objctive is, no longer lies hidden—it no longer can be hidden. It is open to view for anyone to see. I refer to the administration of the Trade Agreements Act and the separation of Congress from its constitutional authority over the regulation of our foreign commerce under the administration of the trade program as it has been carried out.

Nor can there any longer be any doubt about the meaning of the trade program and the character of its administration to American industry, to American agriculture, to mining, fishing and grazing operations—to those who work at these pursuits—millions of men and women whose incomes and livelihood depend upon employment in domestic plants, mills, and mines and on the land and sea in other gainful occupations. Import competition is not a matter of indifference to them. The trade agreements program and how it is handled is of the greatest importance and concern to them.

The unfolding of this program, the trade agreements program, especially after abandonment of the bilateral agreements and the substitution of the General Agreement on Tariffs and Trade for them when the Geneva agreement went into effect 8 years ago, left many of us with the gravest misgivings, wondering how far it would go.

Now there is no longer any mystery about it. With the resurrection of the badly defeatd ITO proposal, now again rearing its head, as already pointed out, in the recently negotiated OTC, there no longer remains a shred of doubt what the plan is.

To refresh your memory to a little history, let me repeat that the letters ITO were the initials of the International Trade Organization, the charter for which was signed in Habana, Cuba, in 1948. This ITO charter, which called for a world trade organization under the United Nations designed to lead us to free trade and global economic planning, was brought to Congress for approval. However, it never got beyond the House Committee on Foreign Affairs where it was pigeonholed after full hearings in 1950.

That was the end of the ITO. It died because no other leading country was interested in it without United States membership.

Now six years later the OTC is brought before us, dressed in innocent garb and trotted out as a harmless lamb.

The fact is that the proposed OTC or Organization for Trade Cooperation, is in point of fact the abandoned ITO all over again in essence and potential, but has the deceptive advantage of being more attractively packaged.

OTC has been advertised as calling for no supranational power; yet that is exactly what it would have in practice and in fact: and that is also exactly what the State Department wants it to have. Otherwise the Department would not be interested in it. Since the OTC would have an assembly, which means a law or rulemaking body, it could turn itself into the ITO at any time it saw fit to do so and make no mistake about it, that is the intent. We would have 1 vote out of an initial total of 35.

Unquestionably this resurrected International Trade Organization would make a meek beginning, as a fledgling of the United Nations. Once more the Members of Congress would lose sight of the body sitting in Geneva. Before many years, however—in fact, quite soon—we would find that the coils of the python had been silently but thoroughly thrown around us.

The authority that we find, when we read our own Constitution, conferred upon Congress in unmistakable black and white, to regulate foreign commerce and to lay and collect duties on imports, would then become little more than so many words.

That is the prospect that faces Congress during this session. The OTC bill, to repeat, is H. R. 5550.

But there is more.

Congress has legislated repeatedly since 1951, when the escape-clause amendment to the Trade Agreements Extension Act of that year was adopted. Congress has made its will known repeatedly in legislation, in many amendments to that escape clause, to make sure that all American producers faced with hurtful import competition have a reasonable remedy.

Just as surely this legislation has been batted down at the other end of Pennsylvania Avenue. The prime mover has been the State Department—a Department that seems to find it hard to believe that American producers are entitled to the most elementary considerations of fair treatment.

It is my opinion that Congress has exercised great patience and restraint under the circumstances—in fact entirely too much patience. The power and responsibility of Congress in the field of trade has already been taken over so far by the State Department that what it has left is a mere shadow. Even this will disappear into the twilight if OTC is approved and then into the night, to be lost for good, beyond recovery. I say to you that this is indeed the year of decision in this most important struggle.

Because of the repeated, conscious, and stubborn blocking of the will of Congress in this field of its undoubted authority, by the executive, it has become obvious that the escape clause has little value in the area of its intended application. It has been overridden, ridden down, and mauled, much to its indignity and dishonor. Its treatment represents a clear case of executive nullification of a law of Congress.

How does this reflect upon the integrity and standing of the Congress? The escape clause, in its present form, is the product of Congress. It was adopted by a heavy majority of both Houses, and was amended from time to time to make clear the intent of Congress. You would not believe this from the treatment it has received. The State Department has shown it neither honor nor respect. Quite the contrary.

The fact is and, as I have said, it can no longer be hidden: the State Department has not only undertaken the regulation of our foreign commerce, but has been most diligent and tireless in throwing a high fence of international moral obligations around Congress against the day when Congress awakened to its loss of power. This usurpation of power by the State Department accounts for the attempted resurrection of the ITO in the form of the OTC. Congressional approval of the OTC would confirm the State Department's role as the maker of our tariff and trade policies.

Now let us see where we are today as a result of the executive practices and maneuvers that have just been described.

Our experience with import competition during the past few years has shown that import quotas would in a considerable number of cases offer a better way of regulating the flow of imports than does the tariff, hacked, slashed, and bound as it has been in the past 21 years.

Therefore, efforts have been made to place import quotas on different products by direct legislation. This has been piecemeal legislation and Congress did not accept it.

Now, however, a general import quota bill has been proposed and it was introduced as H. R. 7925 by Representative HENDERSON LANHAM, of Georgia. The same bill has been sponsored by a number of his colleagues of both political parties.

What do we find?

This will come as a shock to all who have not made a specialty of tariff and trade legislation and who have been absorbed in other activities.

The Congress cannot legislate quotas or provide the mechanism for their imposition by an administrative agency without violating the letter and spirit of the General Agreement on Tariffs and Trade. This is the agreement, previously mentioned, which was entered into by the State Department in 1947 and which became effective January 1, 1948, known as GATT.

By just what pattern of reasoning the State Department could arrive at the notion, that they could properly bind Congress against any particular type of legislation on quotas, or anything else, has not yet been explained—neither who originated the idea, who propagated it or who executed it. But it has been given effect in the tainted majesty and unabashed illegitimacy of the general agreement which has never come near Congress for approval, not even in the OTC proposal.

I commend to you the general import quota bill as a method of dealing with import competition in a reasonable and liberal fashion in those instances where the tariff for one reason or another is relatively useless. It will meet many of the problems of import competition that cannot be solved under the restrictions that have been fashioned for us by the State Department.

True, the Department of State is opposed to such quotas and has promised GATT that the United States will eliminate the few that we have. This promise emphasizes again how far the State Department usurpation has gone. According to that Department the people of this country have no longer anything to say about the matter. In other words, "The American people be damned. We in the State Department know what is best for you."

As well close the doors of Congress and forget our election of representatives every 2 years.

Unless I am much mistaken you will not accept this philosophy. You, as the people the State Department wants to forget, will not care to be so handily overlooked. You have something at stake that is not easily forgotten, namely, your livelihood.

Therefore we should not feel too badly that the State Department does not like the general import quota bill. Some of us might even regard that Department's dislike of quotas as a recommendation.

It is the simple purpose of the bill to make it possible for domestic producers to live with import competition by setting aside a reasonable share of the market that may be supplied by imports.

The bill would therefore measure the importance of imports by the share of domestic consumption supplied by them, i. e., 5 percent, 10 percent, 25 percent or the like. Next, the bill calls for measuring the trend of imports in terms of their share of the market. Have imports been gaining on domestic

producers and taking more and more of the market from them? If so, to what extent? If they were taking 10 percent of the market, are they now taking 15 percent or 20 percent or more?

The bill would throw a ceiling over imports and prevent their taking over progressively more and more of the market. On the other hand, it would not take away what they had already gained. Only if imports had gained rapidly on domestic producers or had taken away more than 20 percent of the market would there be any cutback. From that level on the bill gets tighter, as it should, if the interests of our domestic producers are to mean anything.

However, to avoid freezing imports at a particular level, the bill provides for flexibility of three kinds: (1) Short-term flexibility to meet surplus or shortage conditions; (2) long-term flexibility to adjust to technological trends, consumer preferences, etc.; and (3) to meet the requirements of national defense.

One of the chief sources of injury from imports comes from the wide gap between foreign wages and those paid in this country. The bill recognizes this fact and provides for a bonus to be given in the form of higher quotas to any country that raises its wage levels sufficiently to narrow the gap appreciably. The different levels are spelled out in the bill.

If the American market is as important to other countries as they say, the incentive contained in the bill should help to bring up wages in other countries and to narrow the wage gap.

Other features of the import quota bill are that an agency of Congress, rather than the State Department or the White House, would establish the quotas, guided by the specifications in the bill. That would be the Tariff Commission. The tariff itself would, however, not be touched by the bill.

Thus Congress would recapture its constitutional authority and responsibility and once more you and others like you, the producers of this country, would regain your lost voices in the determination and direction of trade policies that are of the greatest importance to you.

Lincoln's Birthday and Brotherhood Week

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 16, 1956

Mr. ROOSEVELT. Mr. Speaker, on Monday, February 13, 1956, the Textile Workers Union of America, in conjunction with their education program, conducted for the benefit of their rank and file members of local unions, a ceremony during which a wreath was placed at the Lincoln Memorial in Washington, D. C. Because of the close proximity of Lincoln's birthday and the specially designated week known as Brotherhood Week, I prepared the following brief remarks for delivery on that occasion:

Brotherhood Week comes as a timely and forceful reminder that we, in America, must take a spiritual inventory and rid ourselves of any prejudice that we might be inclined to harbor against any religion, race, or group.

Never in the history of the Nation has the need been greater for a unified people joined together in the bonds of common understanding. Prejudice is a hateful business at any time. It is even more hateful these days, when people of all faiths—Protestant, Catholic, and Jew—are considered dangerous by those biased persons who believe that man was made for the state and not the state for man.

The occasion for a needed spiritual inventory is Brotherhood Week. This special week, designated as February 19–26, is an annual observance sponsored by the National Conference of Christians and Jews, which is now celebrating its 28th anniversary.

Every race, every creed has contributed its heroes to the advancement of mankind. Courage and integrity are the monopoly of no group. Why should we be prone to condemn races or creeds for minor prejudices, when there is greater opportunity in honoring them for their achievements? Why not seek the good and ignore the evil? We are together in this journey toward a better civilization for all mankind. Should we not strive to make it as pleasant a journey as possible?

In paying tribute to Brotherhood Week, we are in keeping with the traditions which have been handed down to us by the architects of our freedom. The spirit of brotherhood is not new. It is best exemplified for us in the Declaration of Independence and in the Constitution.

Brotherhood Week emphasizes one of the great principles of the American way of life. We believe in the principle that the dignity and worth of the individual is important. We believe that he is endowed by our Creator with certain rights and our Constitution guarantees those rights to him.

There is more to brotherhood than a willingness to "tolerate" people whose skin color happens to differ from one's own or who choose to pray to God in a different way. True brotherhood is understanding.

All that is best in America stands with increasing strength in firm opposition to forces of retrogression and despair. The dignity of man requires firm adherance to the principles and practices of civil and political liberties—freedom from bigotry. Those who belong in the free world understand this.

One of the best preparatory steps for enduring peace is to exemplify the spirit of good will and brotherhood in our daily lives. With that spirit we should be nothing but optimstic about the future. Understanding between peoples is indicative of progress.

It is my hope that all Americans will join in wholehearted support of Brotherhood Week, so that we may become fully aware of the need for the preservation of that spirit of fellowship and understanding so essential to our well-being as a Nation and as a community of the world.

Address by Hon. James A. Farley, Chairman of the Board, the Coca-Cola Export Corp.

EXTENSION OF REMARKS
OF
HON. JAMES J. DELANEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 2, 1956

Mr. DELANEY. Mr. Speaker, Under leave to extend my remarks, I include the following address delivered by the Honorable James A. Farley before the Washington Chapter of the American Marketing Association last October:

First let me congratulate the Washington Chapter of the American Marketing Association for its enterprise in focusing public attention on this very important phase of Government's contribution to business by holding this fine awards meeting. I want to pay my respects and good wishes particularly to the two men who are cowinners of the association's top award—Mr. Henry Wulff, of the Department of Commerce, and Mr. D. M. Shuffett, of the Department of Agriculture, for their outstanding contributions to business and industry.

And special acknowledgement is due also to the heads of these departments—who are represented tonight by Mr. Carl Oechsle, Acting Secretary of Commerce and Mr. O. V. Wells, Administrator, Agricultural Marketing Service of the Department of Agriculture. It is testimony to each of your abilities to bring inspirational leadership, to organize special talents, to produce the knowledge needed so vitally in today's changing world.

I understand that one of the factors your awards committee feels important in evaluating Government marketing contributions is the degree of cooperation with industry and others who have a direct interest in the marketing problem under study. This, I think, is excellent. Professional marketing people like yourselves in Government can provide technical know-how and academic background while industry can provide a marketing laboratory with real marketing problems and the facilities for their solution, which cannot be obtained in any other way. The combination certainly permits the most effective and valuable marketing research.

In tonight's recognitions I see a particular significance. In my mind, I see a word that goes to the very core of what this gathering is all about. The word is "teamwork"—enthusisatic cooperation between Government and business to produce valuable information which can be translated into consumer benefits.

The miracle of American know-how and enterprise has been told many times over, but I wonder if the story of painstaking research and fact finding that is behind this wondrous acumen has been given the credit it deserves.

Without the good work of Government departments and agencies which provide a steady flow of statistical information, would it have been possible for industry to reach its present heights?

I can tell you from experience in my own company that Government information stands side by side in importance with research and statistics developed within our organization. Together they place at the hands of the Coca-Cola management and divisional heads a fund of knowledge that has enabled us to create markets and increase sales throughout the world.

There is always great concern about increased corporate taxes, the number of restrictive measures placed on business by Government and the instances where Government actually competes with private enterprise. But no one can say that the service agencies of this Nation have not contributed gloriously to business and industry and brought aid and comfort to risk capital.

We can applaud as well as deplore Government actions and services. Tonight's gathering is an example of our appreciation of those in Federal departments whose efforts provide fuel rather than obstacle to the free functioning of world trade.

I feel especially honored to be invited to address this illustrious gathering and welcome the opportunity to be with men and women to whom this Nation owes so much—experts whose specializations contribute heavily to the dynamics which have made this country the greatest on earth.

Your skills have helped produce and speed the greatest flow of products and services in

the history of mankind. Because of specialists such as you, the United States stands today at the helm of civilization. Your thirst for knowledge, your creative skills, your understanding of the psychology of selling have stimulated world markets, built faraway outposts of American progress.

Think back on the fashioning of the first crude wheel. Envision the earliest cart. Conjure up memory of early century sailing vessels. Then go forward to the transportation wonders of today. Marvel at the promise peaceful atomic application holds for tomorrow. And you have the measure of human advancement.

Contemplate the wonders of huge cargo planes, high-powered trucks, modern railroads, gigantic freighters, and you have only a limited canvas of the workings of God and the embodiment of His power in the knowledge of man.

We are today on the threshold of boundless accomplishment. If mankind could banish the selfish obstacles it has itself imposed, if self-seeking voices were silenced, if political and military curtains were lifted, if peaceful measures and scientific knowledge were given full sway, there could be no limit to achievement.

You, my friends, are important architects of this kind of better world—where dictatorship would give way to the dictates of brotherhood and recognition of human dignity.

Perhaps such divinity is too much to hope for. And, if human frailty and lust for power can never permit it, then praise the Almighty your kind of talents are at hand to fuel the forces that have made this Nation invincible.

New manufacturing skills, modern merchandising and distribution, productive media are enabling us to deliver more products to every corner of the earth. Accelerating this widespread trade is greater earning power among more people. As universal demand increases, so does the challenge to experts like yourselves. Your resourcefulness in applying the science of marketing can give this increasing prosperity 7-league boots.

Today, a powerful new medium is adding millions of new sales of every possible variety. I speak of television. Radio's $64 question has given way to TV's $64,000 question. Fifteen-minute broadcasting segments have been enlarged to hour-and-a-half spectaculars in color.

Television reproduces images that move and breathe. With nearly 36 million American families owning television sets today, with foreign nations increasing their output, it can be appreciated how much the demand for products of all kinds will spread and how the problems of production and distribution will rise in direct ratio.

And as we head into the future, the challenge to those engaged in marketing and allied effort will increase. Perhaps only 5 years from now, maybe sooner, the world may be spending billions of dollars on products that today have only the merest foothold in world markets.

Development of new forms of distribution; new techniques of warehousing, stocking, and display; new advertising and sales approaches; new delivery methods—a whole new marketing outlook may be required.

In the past, the Coca-Cola Co. has never been complacent with progress or smug in appraisal of its competition. Certainly, its talents and facilities will be applied even more ambitiously in an ever-changing future.

Because of today's competitive pressures—even with something so simple as a soft drink—we are pursuing every approach to sales here and abroad.

In a recent talk before the Georgia State Chamber of Commerce, H. B. Nicholson, board chairman of the Coca-Cola Co., made some very significant statements about future prospects for our business, and in effect, they reflect a confidence expressed by many organizations whose products are deep-rooted in American life.

Mr Nicholson said, "We look forward to the time when 50 million drinks a day," the present rate of coke consumption, "will seem like a drop in the bucket. It was only 9 million a day in the depression years when we were told that, as a business, we had leveled off.

"Like any business, we resented such predictions. Especially since the product we sell answers such a basic human requirement as the need for refreshment. Like most selling organizations, we have looked for greater growth in more distribution and better merchandising.

"This Georgia-born product has spanned this continent from one end to the other. It has crossed the oceans and conquered the barriers of foreign languages and customs to bring the pleasant pause that refreshes to some 89 different countries and geographical regions."

Continuous study of marketing conditions and testing new methods is as much a characteristic of the Coca-Cola Co. as hard work and manufacture of a prime and wholesome product.

Year after year, since the very beginning of business, searches have been made to find even better ways to make it convenient for people to enjoy Coca-Cola.

I am sure you've all seen the everimproving self-service coin coolers in stores, business establishments, and on roadsides across America. We have gone on to such innovations as coke in new-size bottles, larger fountain glasses, new take-home cartons, plastic and metal picnic coolers, and, recently, another stimulating merchandising development—premix, a method of distribution which enables the bottler to handle almost any selling situation imaginable. Coca-Cola sirup and carbonated water are premixed at the bottling plant, delivered to the outlet in sealed tanks and dispensed at just the right temperature in a paper cup.

As a business, Coca-Cola is fortunate to be based on so common a denominator. Everybody gets thirsty. Every throat has a palate. Every palate can judge the pleasure of good flavor. Everybody has a dime or a nickel. And so everybody is a customer of Coca-Cola.

The universal appeal of good taste to a thirsty palate—plus almost 70 years of foresighted marketing effort—is back of the story of how Coca-Cola is deployed across the vast expanse that is America; over the seas to foreign lands on every continent.

Retailers of Coca-Cola are in every State of the Union. Over 140,000 soda fountains dispense it. Over 1,500,000 retail outlets sell it.

Few products have had such dynamic effect on the whole economy of a nation, nor greater recognition as a joy in the daily habits of people. Perhaps a short anecdote will convey the impress Coca-Cola has made.

When Life magazine sent a reporter to Emporia, Kans., to interview William Allen White on the occasion of his 70th birthday, the famed editor of the Gazette proposed that his photograph be taken beside the Coca-Cola dispenser at the local soda fountain.

"It was a picture of my own choosing," he explained. "Coca-Cola is such a sublimated essence of all that America stands for, a decent thing honestly made, universally distributed, conscientiously improved through the years, that I thought it would be fitting and typical to have the word in the picture that portrayed the average American town—too big for a hamlet, too small for a city, the breeding ground of the middle class."

Nowadays Mr. White could enjoy "the pause that refreshes" from the rim of the Arctic to the Cape of Good Hope. It is an accepted custom, popular in North and South America, Europe, Africa, Asia and the far islands of the Pacific.

The Coca-Cola Co. and its subsidiaries have the distinction of dealing in more countries at one time and on a larger scale than any other single trade-marked product in world history. Yet everywhere you find Coke, you find it is a local enterprise. With very few exceptions, the bottling plants are locally owned and locally operated—and then there is local management.

The whole business structure is often compared to a pyramid, because the Coca-Cola Co. and its suppliers take a small share from the top, the bottlers and their suppliers take a larger middle share, and the dealers responsible for retailing our product take the largest share at the broad base of the business. Undoubtedly, this working democracy, this business commonwealth wherever Coca-Cola goes on sale, has contributed immeasurably to the acceptance of our product everywhere.

Economists struggle with the shifting boundaries of "class markets" and "mass markets," but for Coke there has always been just one market—people everywhere. For years, we have pointed out the fact in our ads: "Whoever you are, whatever you do, wherever you may be, when you think of refreshment, think of Coca-Cola—for Coca-Cola is everywhere."

We have reiterated that theme in magazines, newspapers, highway signs, and point-of-purchase lithography, radio, and more recently television. As the means of communication for reaching more and more people have developed, we have made the appropriations necessary for telling more and more people about our product.

People like Coke. And we like getting it to them—within arms reach, and wherever people are. My responsibilities, in the main, are concentrated in the wherever phase—the export end.

As somewhat of a globetrotter in this function, I have been placed in proximity to all manner of people. And in these countries of varying degrees of civilization and culture, I have come face to face with the great glory of this Nation's ingenuity and its far-reaching contribution to global progress.

I believe one of the things that has given me the most gratification about my own product and what American enterprise can do has been in the provincial towns of the Philippines.

Here one gets on a plane in the modern, up-to-date city of Manila and rides 400 or 50 miles to Cebu or Bacolod, or any 1 of 5 or 6 other provincial towns of some 200,000 Filipinos.

Way back in these islands, the provincial cities consist mostly of nipa huts which are homes on stilts, constructed of bamboo and grass. Living space in each hut is at a premium. The natives are shabbily dressed. The children mostly wear no clothes at all. The settlements usually have streets of mud and one-story shacks.

But you turn a corner in all this poverty and suddenly you catch sight of a beautiful Coca-Cola bottling plant. These plants to me are amazing. Well built and freshly painted in sparkling white, they are equipped with the latest and most modern bottle fillers, bottle cleaners and water treating equipment and all the things that go to make up a modern Coca-Cola manufacturing plant.

At every plant there is a doctor's office with a doctor and a nurse to meet any emergency.

Shower baths in our plants are mandatory for the employees. In the beginning it was hard to get workers because showers were required. But today, the natives come and inquire at this plant for work, giving as a reason the fact that they can take a shower.

Certainly these plants have raised the standard of living in each of these islands where they are located.

Here, I wish to ask you please forgive the frequent reference to the trademark I represent. I do this because, naturally, it is what I know most about. I am sure many other products have a similar influence on similar communities, but I do not know as much about them as I do my own product.

Getting back to my travels—in India, to the average mind, there are three major products which represent America—more than all the political talk of Nehru or Bulganin or even our own Mr. Dulles. To them America is represented primarily by American automobiles—Buick, Ford, Chrysler, and General Motors, by American oil companies—predominantly, I think, Caltex, and by Coca-Cola, which is on sale in some 10,000 or more outlets in Bombay, Delhi, and Calcutta.

About the time that the Mau Mau trouble was beginning in Kenya, but while it was still comparatively safe to travel, I was in that part of the world. One of the boys I was traveling with took a trip from Nairobi, 100 miles inland, to the treetop hut over the famous waterhole where nightly hundreds of wild animals come for water. This hut is well known because, the night that her father died, Queen Elizabeth and the Duke of Edinburgh were in that hut and it took many hours to locate them.

To reach the treetop hut from Nairobi my companion traveled over a corduroy dirt road in a Coca-Cola panel truck for some 80 miles without seeing any kind of real civilization. There were no towns and no civilized settlements other than some native huts scattered along the road. Suddenly he came upon a small trading post that looked like a second-rate general merchandise store at some crossroads in deep Alabama.

He was amazed to find there, some 80 miles from anywhere a Coca-Cola cooler; and, as he stopped for a refreshing pause, he casually looked around the shelves of the trading post. He was particularly impressed by the sight of four American products on sale—the Coke he held in his hand, a large box of Gillette razor blades, a dozen cans of Heinz' soup and, to his utter amazement, four boxes of Toni.

How heartening it is for a world traveler to see the widespread distribution of American products. It may be an International Harvester combine at work in the wheatfields of Argentina. It may be a GMC truck along the dikes of Holland. Or perhaps it is a Singer sewing machine, humming busily away in a little Italian tailor shop.

Maybe it's a pack of Luckies, jealously hoarded by a Nile boatman at Cairo, or a Hershey bar held in the tight fist of a hungry little child in West Germany. In Brisbane, in Calcutta, in Rio, Rome, or Paris, American products are making friends for America.

It is a well-known fact that people understand things much better than they understand ideas. When we speak to a man in another country about democracy, he may or may not understand us. But when you give him a ride in your Buick, Ford, or Chrysler, or offer him a Chesterfield, Lucky Strike, Camel, or Old Gold or a Coke, he can easily judge for himself.

This is democracy at work. This is America with its hard fist in the eye of greedy ideology. This is the Lord, the image of man, spreading subsistence, comfort, and joy.

To you men and women whose know-how is responsible for such good works there can be no question that we must remain the greatest producing nation in the world. We must march down all avenues of freedom, bringing the good things of the earth, embracing all peoples, insuring free flow of ideas and trade, enhancing our prestige as a champion of peace and humanity.

In such determination, in such enlightened action, lies the hope of the world.

Tariffs and Trade Policy

EXTENSION OF REMARKS
OF
HON. HARRISON A. WILLIAMS, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 16, 1956

Mr. WILLIAMS of New Jersey. Mr. Speaker, I would like to call the attention of the Congress to a statement by the Committee on Foreign Trade Education on tariffs and trade policy which has been submitted to appropriate committees of the Congress. The Committee on Foreign Trade Education is a volunteer, nonprofit organization, in existence since late 1953, which has contributed much in thoughtful analysis of our vital trade policy.

COMMITTEE ON FOREIGN
TRADE EDUCATION, INC.,
New York, N. Y., February 8, 1956.

Hon. HARRY F. BYRD,
Chairman, Senate Finance Committee, Senate Office Building, Washington, D. C.

Hon. JERE COOPER,
Chairman, Committee on Ways and Means, House Office Building, Washington, D. C.

GENTLEMEN: "The present period in history may one day be recognized as a major turning point in the struggle between communism and freedom. * * * The Soviet Union * * * (is) using economic and social collaboration as a means for jumping military as well as political barriers. * * * We are in (an economic) contest * * * which is bitterly competitive. Defeat in this contest could be as disastrous as defeat in an armaments race."

This statement of the United States delegation to the United Nations General Assembly, we feel, perfectly hits the nail on the head. They add: "We could lose this economic contest unless the country as a whole wakes up to all its implications."

Aiding in the wakening process is just what this organization was set up to do. In late 1953 a small group of men and women, primarily drawn from both the Young Republican and Young Democratic Clubs of New York, formed the committee as a volunteer, nonprofit association to stir public interest in United States tariff-trade policy (a key to our foreign economic program) and to mobilize wide support for a liberalization of that policy.

The committee, filling an apparent vacuum, has been extremely successful. It now represents a membership, still completely volunteer, that has spread through 31 States, and, besides the national headquarters in New York City, has branches in Washington, D. C., New Orleans, La., and suburban Chicago.

The reason for our existence is expressed in our prospectus for 1956:

"Impressed by the appalling fact (disclosed by the Gallup poll) that 48 percent of the public know nothing of the national battle on tariffs, the committee has given its entire program a 'grassroots' orientation—the campaign is taken right to the general public. The appeal is to the man in the street from fellow citizens whose only interest is civic. The average family is shown its stake in expanding United States trade—and that if it is to be effective in bringing about trade policy reform it must become articulate. The three main premises of the committee's argument are—the grave and urgent necessity of cementing the free world coalition by trade; the importance of trade to an expanding national economy; and consumer interest."

Conscious of our responsibility to our membership and in order to satisfy the very wide audience that has come to look to us for information on the tariff-trade question, our program for 1956 has these four main goals:

1. To stir public opinion to demand that political candidates make their position known on the tariff-trade question.

2. To intensify the committee's public education program with the aim of promoting general knowledge of and concern with United States tariff-trade policy.

3. To support customs simplification (H. R. 6040); United States adherence to the Organization for Trade Cooperation (H. R. 5550); and similar legislation that may be presented in the current congressional session.

4. To expand the committee's national chain of community chapters.

Point 1 means this: While maintaining a scrupulously nonpartisan position, we will aim to induce political candidates to air their views on trade, and, by that, stimulate public consideration of the economic contest to which the President attributes so much importance. As a part of this, we will, therefore, provide platforms from which presidential aspirants can state their position; survey all congressional candidates and release the results thereof to both the national and local media; and stage other provocative and informative rallies, including the committee's 1955–56 presentation of its annual Cordell Hull award for leadership in building United States foreign economic policy.

Trade and tariffs, we acknowledge and fully appreciate, are not in this century a popular issue. We believe, however, that the subject is preeminently important because of its implications on our international political program (in fact our very survival) and our continued economic expansion and health. It is our responsibility, therefore, in terms of foreign-trade education, to make tariffs and trade an issue that all political aspirants will take to the people. Allowing tariffs and trade to remain as something too tough or abstruse for a politician to take his stand on has caused the vacuum of public opinion in which the powerful, well-financed, high-tariff lobbies and special-interest groups have so successfully operated. We hope that your colleagues and, also, their potential opponents will cooperate with us and with the Nation in bringing the facts on the tariff-trade controversy out in the clear.

The reasons we urge prompt and favorable congressional action on H. R. 5550, H. R. 6040, and H. R. 229 are these:

H. R. 5550: The Congress should, before the end of the current session, authorize United States adherence to the Organization for Trade Cooperation. OTC will give added strength to the General Agreement on Tariffs and Trade (GATT) and increase the value of the agreement beyond the very considerable benefits already derived.

Mr. John S. Coleman's splendid statement, The Choice Before Us, correctly describes just one of the benefits GATT has already provided. GATT, Mr. Coleman says, is "the most effective machinery for dealing with * * * remaining trade barriers, especially those directed toward American products. In early 1953 only three European countries permitted purchase of significant quantities of American goods without license. Now there are 14."

Beyond the outstanding positive advantages of OTC, we recall President Eisenhower's warning that "failure to assume membership in OTC would be interpreted throughout the Free World as a lack of genuine interest on the part of this country in the efforts to expand trade. * * * It

would strike a severe blow to the development of cooperative arrangements in the defense of the Free World."

OTC, and the Congress' prompt passage of it, will be, in the President's mind, a major addition, "in the struggle against Communist domination, to greater security and greater prosperity of all."

H. R. 6040: To the objective observer the situation in regard to Customs Simplification is ludicrous. The House has four times passed a Customs Simplification Bill which would have dealt meaningfully with that wondrously potent begetter of red tape, the difference between foreign value and export value. The Senate Finance Committee has, unfortunately, three times allowed this legislation to die.

As they now stand, customs procedures are not only a significant detriment to the profitable flow of trade but an insult to the intelligence. Indeed, as we explained in one of our first publications, Advance America, Advance Trade, by the pace of customs court adjudications in 1953, at least, a businessman getting on the end of the line could wait 28 years before a duty on his specific import was finally determined.

H. R. 229: The committee has constantly endorsed and again this year hopes for favorable action on the Trade Adjustment Act proposed by the Honorable HARRISON A. WILLIAMS, JR., of New Jersey, an honorary member of the committee. It is our position that if the economic contest is of major importance to the progress and security of the United States, then those few who might face some dislocation brought on by a national desire to lessen the contradictions between our foreign economic policy and our foreign political policy should receive some compensation for their sacrifice in the national interest.[1] There was ample precedent for this sort of adjustment during World War II and the Korean war when both employees and employers were given considerable aid in facing disclocations precipitated by military requirements. And, indeed, the President's economic report for 1956 urges a somewhat analogous sort of aid for depressed areas, the area aid program (or so-called domestic point 4).

We also hope that either the administration or the Congress will take some step to reduce the impossibly high tariffs on laboratory and scientific training equipment. This has a bearing, of course, on what Admiral Strauss and other observers have depicted as our growing failure in the competition with Soviet Russia in training engineers and scientists. The fact is that schools and colleges, at the very least, should be exempted from tariffs on this laboratory and experimental equipment. If the self-seeking lobbies representing domestic optical and laboratory manufacturers will not relent and give the entire public a chance, schools, at least, should not be denied the full meaning of their very limited moneys. This whole question, as pointed out by the American Association of Physics Teachers, has real meaning and a very immediate financial relevance to the dismal and embarrassing fact that approximately 50 percent of United States high schools are unable to provide their students with physics and chemistry courses.

We, also, strongly urge that you reject in any shape or form the bill submitted by Mr. LANHAM, of Georgia, which proposes import quotas. This bill, in the minds of our national membership, is a presposterous throwback to the economic nationalism which has destroyed so many nations in the past.

This is, we admit, an imposing program for a group of several thousand men and women, who have, in terms of self-interest, no concern with foreign trade.

We are asked what motivates us, what stirs our workers (all volunteers) who have put so much time into building public interest in United States tariff-trade policy and in mobilizing support for its liberalization.

One thing that keeps us going and constantly growing are the outrageous fantasies that the high-tariff bloc so assiduously spins.

Here are just a few examples:

Fantasy: The National Association of Blouse Manufacturers, perhaps, is even beginning to believe their plaint that Japanese import competition is ruining the industry.

Fact: Despite a significant increase in Japanese imports, the domestic production of blouses was up from 12½ million of dozens in 1954 to approximately 15 million of dozens in 1955.

Fantasy: Oversea competition (principally from Britain) has almost driven the domestic bicycle industry into extinction.

Fact: Official figures make it explicit that European bikes did not reduce the domestic market for the producers, but, rather, served to stimulate and build a far larger market than had previously existed.

Fantasy: This Nation's multi-billion-dollar electrical machinery industry is menaced by oversea imports.

Fact: In 1954 (the last year for which complete figures are available) United States exports of electrical machinery totaled approximately $723 million, while the domestic producers only had to buck $46 million of imports.

Nor can we find any excuse, even on the basis of a perverse sense of humor, when the so-called Nationwide Committee of Industry, Agriculture, and Labor on Import-Export Policy describes their dangerous and destructive import quota bill as one designed to "provide an instrument for a liberal import policy."

And, as we have been at pains to point out before, the United States jeweled watch industry must have known that they were off beat when they attempted to buttress their "defense essentiality" claims by stating that "only 4,000 precision watchmakers are left in America." The United States Tariff Commission says, instead, that our domestic timing industry in 1954 employed 21,519 precision workers and that the jeweled watch companies, themselves, employed 9,754.

And, of course, the rallying cry of "defense essentiality" is now being so used, with a sublime faith in Barnum's famous maxim, that the lace industry, the wool glovemakers, the cutlery industry, the tunafish producers and even the lead-pencil manufacturers solemnly witness their indispensability for national defense.

But we are not in this, however, to titilate our sense of righteous indignation or to take your valuable time with mere expressions of civic outrage.

We know that Communist Russia, by its very ideology, believes that international, capitalist trade provides a basic "contradiction" by which the free nations will ultimately fall on one another. Rather than waiting for the "inevitable sweep of history," the Communists are trying to precipitate the "capitalist crisis" and have launched an economic war against the West whereby they hope to engulf the "neutrals" and separate us from our allies.

We cannot survive by ignoring the challenge.

If our nationally accepted foreign policy is correct, if this Nation must bastion its strength by a system of alliances with the free nations, then the retention of even the vestiges of a petty, out-of-date "protectionist" United States foreign economic policy can only be described as the sabotage of that foreign policy.

This Nation, which we are informed has so often during the last few years been close to war, simply cannot afford the luxury of any longer appeasing the interests that so indifferently call for continued high tariffs. We must mobilize every possible facet of national policy in the effort to win over communism.

The committee will continue to work toward the goal to which the United States delegation, the President and Secretary Dulles have pointed: of waking the country as a whole to the United States-Soviet economic contest and all its implications.

We are completely convinced that the Honorable J. K. Javits, attorney general of New York State, said what is right, when he last week courageously told a meeting of executives of the chemical industry: "The day of protectionism should be as dead as the day of isolationism and for exactly the same reason—because it is inimical to the national security of the United States." We fully endorse Mr. Javits' statement: "Today the question is one of defeating communism. In this fight we have sacrificed, and must continue to be prepared to sacrifice, far, far more than is involved in the protectionist views of some segments of United States business."

We hope this statement will be worthwhile to you and your colleagues as an advisory on the sentiments of the membership of the Committee on Foreign Trade Education, Inc. We thank you very much for the consideration you have given our opinions.

I am,

B. A. RITTERSPORN, JR.,
Executive Director
(For the Committee.)

[1] But we appreciate that those who could suffer dislocation are an exceedingly small group. We know, for instance, that the number of workers employed in tariff-dependent industries totals about 100,000. This figure, which equals the Nation's average monthly job-turnover, must, for real perspective, be measured against the more than 4 million American families whose incomes are directly dependent on export sales. But, no matter how small the group, we feel that the spirit of American fair play should be extended to them and, by the means of technical aid, retraining, community development, etc., they be given an opportunity to undertake an economically valid role which is consonant with the national interest.

Capital Punishment

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 16, 1956

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following excellent article on capital punishment, written by Evelle J. Younger, judge of the municipal court of Los Angeles, which appeared in the American Bar Association of February 1956.

This article is most timely in view of the many bills that have been filed in the legislatures of various States on the subject of the abolition of capital punishment.

The article follows:

CAPITAL PUNISHMENT: A SHARP MEDICINE RECONSIDERED

(By Evelle J. Younger, judge of the municipal court of Los Angeles)

(Capital punishment is older than recorded history, and it was apparently accepted without question for many centuries as a perfectly natural form of punishment. In modern times, however, both the wisdom

and the humanity of such drastic retribution have been challenged. Judge Younger has written this article reexamining the whole question of capital punishment, its historical background and the arguments pro and con.)

"It is sharp medicine," said Sir Walter Raleigh, as he tested the keen edge of the axe while awaiting execution. Since 1618 we have changed the medicine, utilizing allegedly more humane methods, and have greatly limited the occasions which call for such drastic treatment; but executions are still carried out by the state in the name of justice and argument concerning the death penalty continues. Bills outlawing or further limiting capital punishment were introduced again this year in the California State Legislature.[1] Also, the unfortunate circumstances surrounding the execution of Barbara Graham and the details concerning the frequent stays of execution granted in the Chessman case have become matter of common knowledge. Consequently, and fortunately, our citizens—both lawers and laymen—have shown increased interest in this problem of capital punishment during these past few months. I say "fortunately" because public interest encourages official attention. The more we study this problem, the more we learn; the more we learn, the closer we come to answering the $64 question.

CAPITAL PUNISHMENT: THE HISTORICAL ASPECT

Before considering that question, some attention must be devoted to the historical aspect of capital punishment. We should realize that our reaction to the executions carried out by our predecessors may be prophetic of the reaction that our successors will have to our present-day system. Bloody Queen Mary, who caused thousands of executions, undoubtedly was activated by the noblest motives. The lawyers and judges who participated in the Salem witchcraft trials would strenuously resent any suggestion that we are more honorable or conscientious than they. If we can't claim more noble motives, we can at least hope that our judgment as reflected in our system of punishment better stands the test of time.

Originally the death penalty rested primarily upon man's effort to placate the gods, lest their beneficent solicitude for the group be diverted as a result of apparent group indifference to the violation of the social codes supposedly revealed by the gods. The complete blotting out of the culprit was a practical demonstration of group disapproval. Later the individual came to be looked upon as a scoundrel, capable of free choice in every aspect of his conduct, who had wilfully chosen to do wrong. The theory of capital punishment which evolved in this period was based on man's natural desire to return blow for blow, injury for injury. In order that desire for revenge would not develop to the point where every killing resulted in family feuds and wars of varying sizes, restrictive laws were introduced,. Gradually, it was realized that crime was more than a personal affair between guilty party and victim, and the state took over the responsibility for punishment. Action was still purely retaliatory. Later, however, the concept developed that in punishing, the state provided protection against potential injury. A penal system evolved, featuring three clearly defined aims: (1) prevention, (2) punishment and (3) indemnification. It was contended that only the death penalty achieved these objectives. As deterrence ranked higher and higher, more and more crimes became capital crimes. Torture before, and degradation after, were added to the punishment of death.

According to the Bible, the punishment of death was inflicted for a large number of offenses against the laws of Moses. Among these offenses we find, on the one hand, so serious a crime as murder, and, on the other, so petty an offense as gathering sticks on the Sabbath day. Later, when the population was sparse and men were needed for armies, executions were rare. William the Conqueror, for example, used the death penalty only to punish conspiracy against his rule. His successors, however, reintroduced it for other crimes, and the pendulum swung. In the days of Blackstone there were 160 different felonies for which the penalty was death. The trend continued until there were 222 capital crimes (including the shooting of a rabbit, the theft of a pocket handkerchief and the cutting down of a cherry tree). Only in the last century has there been definite and permanent recognition of the supreme value of life to the extent that capital punishment has been virtually restricted to the crime of murder.

Notwithstanding other indictments we may level at those responsible for the bloody orgies of the past, we cannot deny that they possessed imagination.

Included among the earliest methods of execution were crucifixion, stoning, poisoning, starvation, drowning and burying alive. Condemned criminals were sawed or chopped in two while still alive by the ancient Persians, Hebrews and Chinese. Flaying (skinning) alive was a common method of execution in the Far East. The European variation on this method involved the victims being subsequently impaled; i. e., stuck on a sharp stick. Another oriental favorite consisted of the victims being eaten alive by insects or sewn in a bag with poisonous snakes. The Chinese torture of the knife, the Japanese execution of the 21 cuts, and the Peruvian method described as slicing to death all involved the victims being cut to pieces as slowly and painfully as possible. From 1426 to 1772 criminals were sometimes pressed to death in England.

This method was also used at Salem in 1592 during the witchcraft trials. Boiling, which had at one time been in frequent use by the Chinese, became the punishment for poisoning in England in 1530, and was used on the Continent from the 13th to the 16th centuries, although some rulers considered frying preferable to boiling.

"Drawing and quartering," French style, involved pulling the criminal literally to pieces, after preliminary torturing, utilizing four of the strongest horses available. "Breaking on the wheel" was popular during the 18th century in France and Germany. The customary procedure was to bind the criminal, face up, to a large wheel and beat him to a pulp with a sledge hammer or iron bar.

Burning alive was one of the first and most widely used methods of execution. We find mention of it in the Old Testament as a punishment for incest and prostitution. Every year during the Holy Inquisition scores of persons were burned at the stake. The Protestants adopted a similar method in dealing with those who plotted against the true faith. Burning was by no means reserved for heresy, however. Witchcraft in particular was punished in this manner.[2]

AN HONORABLE DEATH: EXECUTION BY BEHEADING

Beheading is one of the most ancient and popular of all forms of capital punishment. It was used by the ancient Greeks, Romans, Egyptians, Chinese, and Japanese. Here again there were variations. The method most susceptible of error on the part of the executioner involved the use of a rather light sword and required considerable strength and good timing—so much so that the condemned on occasion would offer a bonus should the man handling the knife sever the head with one stroke.[3] There were many cases of bungled executions. This unfortunate situation led the French Government to seek advice from the secretary of the French Academy of Surgery, and resulted in the development of the guillotine in 1792.

Like beheading, being shot to death by a firing squad is considered an "honorable" way to die; and this method is and has been for many years favored in the case of a military execution. Hanging, on the other hand, is considered a dishonorable way to meet death. This distinction seems to me to be highly academic.

Hanging, in many and varied ways, has been the most popular, if not the most foolproof, method of execution. In England the practice developed of letting the bodies hang and rot in order to bring the message more forcefully to the populace. Early hangings resulted in death by strangulation. The modern method, dating from the time the "long drop" was originated, consists of dislocation of the neck, by breaking the spinal cord. An executioner named Berry, in Yorkshire, did considerable research to the end that the drop should be long enough to bring about "instantaneous death" but not so long as to cause mutilation; and he published a "drop table" in 1885, containing considerable helpful information concerning the rope, scaffold, technique, etc.

Centuries ago animals were treated like human beings—or vice versa. Pigs, horses and cattle were frequently executed for murder.[4] In 1474 a male domestic fowl was tried "for the heinous and unnatural crime of laying an egg," and sentenced, together with the egg, to be burned at the stake.[5] In cases of bestiality, both the man and the animal, on being found guilty, were sentenced to death, usually both being burned alive together. Inanimate objects were sometimes tried and executed (e. g., "haunted house", wherein a murder had occurred). Allied to the capital punishment of animals and inanimate objects was the practice of disinterring human corpses for the purpose of posthumous execution, sometimes by hanging, in other cases by burning. Today we utilize all our resources to keep a condemned man healthy till the fatal day; but if he should die, or manage to commit suicide, we dispense with the formality of execution.

Penological reform started with the repeal of torture as an additional punishment and continued with the repeal of capital punishment for petty crimes, eventually leaving murder as the most outstanding of the few crimes involving the death penalty. The trend throughout the world appears to be toward the abolition of the death penalty. In approximately 30 countries the death penalty has been eliminated by law or tradition.

There has been a fluctuating tendency toward abolition in the United States. From the first, America has had fewer capital crimes than England. The English colonies in this country had from 10 to 18 capital offenses. Today there are 7 capital crimes, excluding treason, in the 48 States. California lists five in addition to treason.[6] In this connection it is interesting to note that all of the 110 men executed in California from 1938 to 1953 were sentenced to death for the crime of murder in the first degree.[7]

The death penalty may now be imposed by 42 States, the District of Columbia, and the Federal Government. Of these, 35 States and the United States provide that the jury shall determine when the death penalty is to be imposed; 4 States provide that the jury may recommend the death penalty, but the judge is not bound by the recommendation; and 3 States require capital punishment. Twenty-six of the thirty-five States (and the Federal Government) that allow the jury to determine punishment divide mur-

Footnotes at end of speech.

der into degrees and allow the death penalty only in the case of first-degree murder. Nine States abolished the death penalty but later restored it, with life imprisonment as an alternative. One State, Maine, abolished, restored, and again abolished the death penalty.

Electrocution, hanging, lethal gas, and shooting, are, in the order of their popularity, the methods of execution in the United States. The electric chair was first used in New York in 1890. Twenty-two States now use this method of execution. Eleven States execute by hanging. Eight States, including California, use the gas chamber. Lethal gas is reputedly the most humane method of execution. There is considerable argument on this point, however; and unfortunately, there are no living experts available to settle the dispute.[8]

THE MODERN TREND: NO CAPITAL PUNISHMENT

The trend toward abolishing capital punishment is also reflected in the fact that only a small percentage of those persons who commit murder are actually executed. Most murderers are never sentenced to death, and many who are sentenced to death manage in one way or another to escape that penalty. Statistics on this point are not consistent and are obviously not completely reliable. Raymond T. Bye,[9] basing his figures on 1917 statistics, says that 1 man in 70 who commits a homicide in the United States suffers death for it. Warden Lewis E. Lawes [10] sets the figure at 1 in 85. Harry B. Chamberlin, operating director of the Chicago Crime Commission and an ardent supporter of capital punishment, utilizing Cook County figures for the year 1921, found that less than 3 percent of those who committed murder were executed.[11] Dr. Joseph Catton, clinical professor of medicine at Stanford University, in his book Behind the Scenes of Murder, takes the homicide rate for 1938 and shows that only 1.8 percent of the murderers were executed. In 1953 there were 62 persons executed in the United States. In that same year there were over 7,000 cases of murder and nonnegligent manslaughter.[12] At that rate the criminal's chances of escaping execution are better than 100 to 1. Obviously not every homicide is willful murder, but even if half of them can be so classified, the odds favoring the criminal are still 50 to 1. In California, during the 10-year period 1945–54, there were at least 3,500 homicides compared to 87 executions.[13]

Still further evidenec of the growing reluctance to execute criminals is found in statistics relating to the time which passes between a sentence of death and actual execution. Undoubtedly, most of the time is consumed by conscientious lawyers and judges working tirelessly to eliminate any possible error and prevent a miscarriage of justice. I suspect, however, that some of the delay can be blamed upon a natural reluctance on the part of an appellate court judge to take action which would cost a human life when there is any legal justification, however slight or obscure, for referring the matter to an entire court or higher tribunal. I hope this suggestion does not offend any of my superiors. Actually, if I were a supreme court judge and if someone were to accuse me of being sentimental, I would not be insulted. Sentiment and practical commonsense exist side by side in every decent human being. Only nazism, communism and similar totalitarian doctrines rule out all sentiment as a reason for human action. In any event, for whatever reason, it does take a long time to execute a criminal. You may remember the Sacco-Vanzetti case. They were arrested on May 5, 1920, tried in May, June and July 1921, and executed on August 23, 1927. Here in California, Caryl Chessman, on January 22, 1948, committed the crime for which he was sentenced to death on June 25, 1948; and he is still alive in "death row" today. These are admittedly exceptional cases. Let's examine the statistics then covering the period 1938 to 1953 in California. One hundred and ten persons were executed. Each one spent an average of 16 months in condemned status—the range was from 6 months to 6 years 1 month. Five men each spent over 1,000 days in death row.[14] This is about par for the course, although it may seem at times that the wheels of justice move at an exceptionally slow rate of speed in California. Twelve Federal prisoners were executed throughout the United States during the 10-year period from 1945 through 1954. Each prisoner spent an average of 16½ months in condemned status. Bonnie Heady and Carl Hall were executed in less than a month. Excluding them, the average time elapsing between sentence and execution was 19½ months. [15]

A BIBLICAL SANCTION: THE ARGUMENTS PRO

The arguments in favor of capital punishment are quite persuasive. The abolitionists have no copyright on the Bible, as the following quotations indicate: "Who so sheddeth man's blood, by man shall his blood be shed." [16] "He that killeth with the sword must be killed with the sword." [17] Many New Testament references recognize the divine appointment of human government, and the validity of the penalty of death.[18] Eminent theologians assert that quotations used by the abolitionists are wholly misapplied when used against capital punishment and the penal institutions of lawfully constituted governments, whose authority was never challenged by Christ.[19]

The swift and certain execution of the ancient law, punishment by a means bearing a just proportion to the enormity of the crime, is the best deterrent known. Death is still the king of terrors, and the only terror that holds some men in check. Under the modern system of pardons and paroles, turkey dinners and cadet uniforms, there is in reality no such thing as life imprisonment. The fiends are often released, only to commit more murders. There is too much loose talk about the sacredness of human life. A life is sacred only when it makes itself sacred; when it respects the lives and rights of others. Capital punishment should be abolished, but not until the murderers of the world abolish it first. Desperate murderers, like venomous reptiles and wild beasts that prey on men, should have no place in the society of peaceful men. A cold-blooded murderer, having cunning intelligence without moral restraint, is infinitely more dangerous than any other animal on earth. Why slay the man-eating tiger and carefully preserve the human beast?

Although capital punishment does not restore the life of the murderer's victim, neither does any other punishment. The death of the murderer, however, does secure society against him. Too many persons indulge themselves in gushing sentimentalism over criminals. They overemphasize the fact that life, education, and environment are the forces that victimize and penalize every criminal. If society is wholly responsible, why not apologize to the cutthroat and pension him for life? If you don't hang him, why imprison him? He surely needs neither gallows nor cell if the blame is all on the universe at large.

The death penalty cannot be condemned as ineffective in those jurisdictions where persons in authority fail consistently to invoke the penalty. Those States which have abandoned capital punishment without a resulting increase in the murder rate had failed for a long period prior to its final abolition to enforce the penalty effectively. Uncertain, tardy justice is the cause of most anarchist outbreaks in which lynchings occur.

Even the most ardent advocates of life imprisonment as punishment for murder admit, without hesitancy, that it is necessary to provide the death penalty for murders committed by men under life sentence. This in itself is a complete admission that life imprisonment does not produce sufficient horror in the mind of the killer to deter him. The importance of the death penalty for murder lies in the fact that it has proved to be a deterrent. The abolition of the death penalty in this country usually has been for short periods, followed by its restoration when the murder rate rose. Specific cases can be cited to prove that in particular instances an individual planning murder would commit his crime in a jurisdiction that did not apply the death penalty, thereby proving that the greater penalty would deter him, whereas the lesser would not.

There is still one more reason for retaining capital punishment: The people—those whom we seek to protect—want it. In 1948, in England, capital punishment proposals in connection with the criminal justice bill before Parliament for consideration were the subject of wide discussion. Most of the people were against abolition. A Gallup poll conducted for the Daily Telegraph, showed 69 percent for retention and 13 percent for repeal.[20] Abolitionists say the public is not enlightened. That argument is always used to rationalize a minority point of view; but it is no more valid in this case than in any other case where two points of view exist and the question is resolved in accordance with the democratic process.

ANOTHER BIBLICAL QUOTATION: THE ABOLITIONISTS' ARGUMENT

The abolitionists are equally persuasive. They, too, open their argument by quoting Scripture: "Vengeance is mine; I will repay, saith the Lord." [21] He says further, "Judge not that ye be not judged." [22] No human instrumentality is fit to pronounce and execute an irrevocable judgment. Only God with His infinite wisdom and charity should wield that awful power. It is part and parcel of Christian belief that any idea of vengeance for the commission of criminal or sinful acts is the privilege of God Himself. Christ repudiated the old principle of lex talionis in the well-known passage: "Ye have heard that it hath been said, An eye for an eye, and a tooth for a tooth: but I say unto you, That ye resist not evil: but whosoever shall smite thee on thy right cheek, turn to him the other also." [23] That no human being is beyond all hope of reformation is implicit in Christianity.

The punishment of criminals is based on one or more of the following theories: retribution; deterrence; reformation; and, in the case of capital punishment, the need of eliminating those who menace the life and security of society. The idea of punishment solely as retribution, which is merely a polite word for revenge, is gradually disappearing. This idea is yielding to the more modern, progressive, and scientific attitude that retribution is not justification for any system of punishment, nor are its results beneficial.

Historically, capital punishment has failed as a deterrent. According to Hume, the historian, 72,000 thieves were executed in the reign of Henry VIII; and 19,000 criminals of one sort or another perished at the end of a rope during the reign of Queen Elizabeth. These are truly appalling figures, and yet we can find no evidence that these extreme measures caused crime to diminish.

From all available statistics we must conclude that capital punishment, as applied today, still fails as a deterrent. Warden Lawes [24] concluded, after extensive research, that the death penalty has no apparent ef-

Footnotes at end of speech.

Footnotes at end of speech.

Footnotes at end of speech.

fect as a deterrent. Karl F. Schuessler,[25] basing his conclusion on appropriate statistics covering the period 1931–46, and comparing States that have retained the death penalty with abolition States in the same section of the country having similar social and economic characteristics, states that his "studies * * * disprove the claim that the death penalty has any special deterrent value." The Royal Commission on Capital Punishment, studying the problem in Great Britain during the period 1949–53,[26] observed that "there is no clear evidence in any of the figures we have examined that the abolition of capital punishment has led to an increase in the homicide rate, or that its reintroduction has led to a fall." Barnes and Teeters [27] state, after considering available statistics, that "the rate of homicide is approximately the same in each of the States within a given area. * * * The presence of the death penalty appears to have nothing to do with the amount of homicide."

Those who favor the retention of the death penalty make much of the fact that some States abolished and later restored the death penalty. The conclusions to be drawn from these experiments are, however, by no means so decisive as would at first sight appear. In each case the cause of the restoration was the occurrence of some sensational or particularly brutal crime, and there is no evidence that the particular crime would not have occurred had the death penalty been part of the penal code. Missouri, Oregon, Arizona, and Washington deserted the abolition column shortly after World War I. The rise in the number of murders was mistakenly attributed to the absence of capital punishment, though there was a general increase in crime throughout the United States at that time and other States were going through the same experience.[28]

Justification for abolishing the death penalty does not rest alone on statistics. Other compelling factors should be considered. Those who favor the retention of the death penalty can point to isolated and very rare instances where a paroled murderer repeated his crime, or where an individual contemplating murder sought to accomplish his crime in a State where the death penalty did not exist; but there is neither reason nor justice in the policy of hanging or electrocuting a hundred men for the sake of deterring one monster. Furthermore, for every one of these cases, abolitionists can cite a case where orgies of homicide have followed a single execution. Actually a killing—legal or otherwise—encourages more killings.

If the death penalty is a deterrent, we should logically let the public witness an execution so that the spectacle might save someone from a crime he might otherwise commit. Felony prisoners should have reserved seats. We shouldn't put a prisoner to death as painlessly as possible. If the efficacy of punishment be found in its severity, such severity should be increased until it results in minimizing crime. By making our executions as private and as humane as possible, we admit that if any influence at all is exerted, it must be debasing or positively harmful.[29]

When cornered, a proponent of capital punishment will admit that the death penalty may not presently be an effective deterrent because it is so seldom imposed; but he hastens to assert that it could be a deterrent if used more often. Well, it will not be used more often. Human nature being what it is, the situation will not change. The trend is in the opposite direction. If it is to prove a deterrent, it must be carried out so rigorously that it inevitably involves a grave risk of the innocent being executed; and if it is to be surrounded by sufficient effective safeguards as to avoid this risk, then it has to be carried into effect so seldom that it loses practically all its reputed deterrent effect.

Retentionists base their argument on the supposition that life is man's most valuable possession, and that the death penalty is the only effective deterrent of capital crime. How then do they explain the fact that we must guard a condemned prisoner night and day to prevent suicide. The argument is seriously weakened, also, by the undeniable fact that many are perfectly willing to risk death in order to retain, or obtain, their liberty. And if we want him dead, why must we work so hard to keep the condemned healthy till his execution? One night, at Sing Sing, three eminent surgeons fought around the clock to save Frank Piala from dying of appendicitis so he could be electrocuted.[30]

Murder, of all crimes, is the one where fear of the penalty, under any circumstances, is least likely to be present. No person who kills another in a fit of overmastering passion, anger, or hatred can be influenced in any way by the fear of execution. The act is over and done with before reason returns. The insane murderer, whether the insanity is permanent or temporary, is in a similar position. As regards the premeditated and carefully planned crime, here again there is no thought of consequences, for the murderer is convinced that having planned the perfect crime, discovery and punishment are impossible. This latter type of murderer is impossible to deter. The more brutal the man, the more appropriate the subject for a death penalty, the less likely the subject is to be deterred. The odds in his favor—50 to 1—satisfy him. Fortitude is not a trait possessed by only good people. True, this type of murderer is apt to repeat the crime; but if we execute him for that reason, why not execute the homicidal maniac, or the person who has attempted murder and failed, or the 17-year-old murderer.

Most murderers are not likely to repeat the crime. In the great majority of cases the murderer is not a criminal by nature, as we understand the term. Most wardens agree that, as a group, these individuals are the most reliable and dependable in the institution.[31] Most convicted murderers have never before been convicted of a serious crime. Information available from those States that have substituted life imprisonment for the death penalty does not suggest that the prisoner serving a life sentence for unlawful homicide is more likely to commit murder than the prisoner serving a similar sentence for any other crime.[32] The reformation of the individual offender is usually regarded as an important function of punishment. But it can have no application where the death penalty is exacted, if "reformation" is taken to mean not merely repentance, but reestablishment in normal life as a good citizen. Experience indicates that the prospects of reformation are at least as favorable with murderers as with those who have committed other kinds of serious crimes.

There is another compelling reason which cries out for the abolition of the death penalty. Many of those persons executed in the past have been mentally ill, though legally sane. For over a century, our criminal law has clung to the so-called right and wrong test of sanity laid down in McNaghten's case in 1843. Psychiatry has long since discarded such concepts of responsibility. Mental disturbance has little or no connection with ability to distinguish right from wrong. Recognition that there is a type of person who, despite being entirely cognizant of the fact that an act is homicidal and punishable, cannot refrain from its commission, is essential to a proper understanding of the problem of murder. The Royal Commission on Capital Punishment, 1949–53, concluded that, "The test of responsibility laid down by the McNaghten rules is so defective that the law on the subject ought to be changed." [33] A recent remarkable decision of the United States Court of Appeals for the District of Columbia Circuit, in the Durham case criticizes our present concept of criminal responsibility and presents a more enlightened formula.[34] In my opinion, the fact that in some States, including California, the "irresistible impulse is not legally recognized," is further evidence that our legal definition of insanity is inadequate and not in accord with medical knowledge and experience.[35] No doubt about it, the "right and wrong" test must go, and it will. Meantime, however, it's the law and the hangman is skulking in the background whenever a mentally ill person is tried for murder.

As we seek a better solution to this problem, the theory of diminished responsibility should receive consideration. This doctrine is of fairly recent birth, and it recognizes the existence of a type of criminal who, while being neither entirely responsible for his actions, as in the case of the normal individual, nor altogether irresponsible, as in the case of the insane person, is of a state of mind which signifies the existence of such a degree of weakness of intellect as to justify a reduction of the crime with which the culprit is charged, from that of murder to culpable homicide. The death penalty prevents any concept of diminished responsibility, short of full responsibility or exculpation, being acceptable.

Along this same line, the "old" law with respect to provocation required in order to reduce a killing from murder to manslaughter [36] should be changed to permit a jury to return a verdict of manslaughter when they are satisfied that the accused was deprived of his self-control by provocation, and that a reasonable man might have been so deprived, notwithstanding that the provocation was by words alone.[37] Granted, words alone will seldom constitute adequate provocation to a reasonable man; but the question should be left to the jury.

Occasionally, those who advocate retention of capital punishment argue that taxpayers should not be required to support a murderer for life, when execution is so much cheaper. This argument has frightening implications and, I trust, appeals to very few people. In any event, we execute, on an average, seven persons a year in California. This doesn't even put a dent in our felony prisoner population of approximately 16,000.

When we speak of the sacredness of human life, we think rather of the innocent victim and of those bereaved by his slaughter than of the fate which society pronounces on the slayer. But no pity for the victim, no sentiment or horror which the crime arouses, can absolve us from the obligation to deal with the offense and the offender in the interests of humanity and of the welfare of the community.

Finally, in defense of abolition, we must realize that innocent persons have been executed. We don't know how many. We only know of a relatively few cases where by some stroke of fate, the innocence of a wrongly convicted and executed person has been established. Perjury is not unknown. Juries do make mistakes. An appeal does not ordinarily mean a retrial. Appellate courts—for good reason—cannot second-guess the trier of fact. The question is not, Is he guilty? but rather, Was he lawfully convicted? Admittedly any case of wrongful conviction is monumentally rare. But such cases have occurred, And they almost certainly will occur again.

Most of our States allow the court or jury to impose life imprisonment or the death sentence. This is proof that most people

Footnotes at end of speech.

Footnotes at end of speech.

Footnotes at end of speech.

recognize the existence of a distinction in degree, even in premeditated murder; and that there are murderers (the majority if judged by the percentage who receive life sentences as compared with those condemned to death) who, even in the opinion of its advocates, do not deserve the death penalty. But what man, or group of men, is qualified to determine the precise point at which this fine line should be drawn?

We have briefly considered both sides of the argument, and can safely draw certain conclusions: Although it may appear that the death penalty should be the most effective deterrent, there is no proof that it is. On the other hand, there is no proof that it is not. Capital punishment has obviously failed as a deterrent when a murder is committed. We can number its failures, but not its successes. We do not know how many people have refrained from murder because of the fear of execution. The death penalty can be justified only if it is proved to be necessary and effective as a deterrent. If two alternative measures will serve equally to protect from or suppress crime, the adoption of the lesser of the punitive measures is indicated. Apart from the questions of humanitarianism, justice and ethics, the risks inherent in the adoption of any stronger measure to the freedom of the individual are ever present. Here then is the $64 question: Is the death penalty the most effective deterrent? We can't answer that question definitely one way or the other on the basis of available statistics.[28] I neither propose nor predict the early abolition of the death penalty. On the contrary, human nature being as it is, the burden of proof seems to be on the abolitionists; and it is likely that capital punishment will be retained (possibly in a more limited form) unless and until it is proved not to be the most effective deterrent.

[29] A century ago in England, in order to produce the maximum deterrent effect, the execution of a criminal was made a public spectacle, attended by curious or morbid crowds, in which thieves and robbers plied their trade. Pickpockets had a field day, for example, whenever one of their associates was publicly hanged. As death penalties multiplied, capital offenses multiplied, until the whole abominable system collapsed. In 1868 public executions were abolished in England. New York State discontinued public hangings in 1835; and one by one most of the other States followed this example.

Thirty-eighth Anniversary of the Independence of Lithuania

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 16, 1956

Mr. ROOSEVELT. Mr. Speaker, it is, indeed, a pleasure to joint with my fellow Representatives here today in honoring the noble and courageous people of Lithuania who today commemorate the 38th anniversary of their declaration of independence, which was proclaimed on February 16, 1918. Their observance of this great day will be celebrated silently in the homeland, for the Communist oppressors have forbidden the Lithuanians to express the love and devotion they hold for the principles of freedom and democracy.

The Soviet Union applied the typical Communist methods in an effort to enslave and destroy the will of the sturdy people of Lithuania and has sought to force them to give allegiance to Moscow. Despite the loss of their liberties and the brutal treatment they have endured, the Lithuanians refuse to recognize Communist Russia as their overlord. They continue to offer resistance to the Soviet Union. Their determination not to yield to the aggressors exemplifies the strong character of these extraordinary people.

The Lithuanians have, since 1940, offered active resistance to Soviet rule of their homeland. Well aware of the consequences of acting against the Soviet rule, they continue in their drive for freedom. Despite a 15-year program of Russification, we read press reports in 1956 which indicate that the spirit of these heroic people has not broken. They stand ready, fortified by their belief in Christian ideals, to shed their blood to achieve independence and break away from the Communist yoke. They have faith and hope and they will not despair before they see the dawn of victory.

The history of Lithuania has been mixed with both glory and tragedy. In their early history the Lithuanians were called upon to defend Europe when the Tatars came from the East and threatened western civilization. They suffered persecutions beyond human endurance during their 120 year subjugation under Russia.

When they achieved their independence in 1918, the Lithuanians lived a happy and prosperous life. They made much progress and added many contributions to the culture of Western Europe. Lithuania became a respected member of the League of Nations in 1921.

Once again after two decades of a happy experience under a freely elected government of their choice, they were engulfed by the tyrants of Soviet Russia. They were incorporated into the Soviet Union against their will, without even the opportunity to express themselves in the matter. The United States, as well as other democracies who espouse the cause of freedom and justice, continue the policy of nonrecognition of Russia's aggression in the Baltic States.

The desire of these gallant people to obtain their liberties and freedom is so strong that they will never succumb to the principles of communism. Our sincere wish on this solemn occasion is that the flag of freedom will soon wave again over this gallant nation.

I am confident that their untold sacrifices will not be in vain for their determination and faith in God will lead them to victory over the aggressors and right will prevail over evil.

Nepal's Independence Day

EXTENSION OF REMARKS
OF
HON. ADAM C. POWELL, JR.
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 16, 1956

Mr. POWELL. Mr. Speaker, I wish to extend to the people of Nepal, His Majesty Mahendra Bir Bikram Shah Deva, and Mr. Iswary Raj Misra, First Secretary, Chargé d'Affaires ad interim in the United States, sincere felicitations and best wishes on the occasion of the fifth anniversary of independence, February 18, 1956.

From 1846 to 1951 Nepal was virtually ruled by the Rana family a member of which always held the office of prime minister, the succesion being determined by special rules. The ruling Rana family had seized power and installed themselves as hereditary prime ministers and commanders in chief, and in other key positions. The king was maintained as a figurehead. His life and contacts were supervised by the Ranas.

In 1950 events moved fast. His Majesty the late King Maharajadhiraja Tribhuvana Bir Bikram Jang Bahadur Shah Bahadur Shamsher Jang escaped from the clutches of tyranny and became the symbol of the revolutionary movement to oust the Ranas. The revolutionists recalled King Tribhuvan back to his throne, where he presided over the first year of Nepal as a democracy.

On February 18, 1951, His Majesty the late King Tribhuvan announced far-reaching constitutional reforms. By his forthright actions, the King successfully overthrew the rule of a Nepali clan and so freed the country from a feudal yoke. The Ranas held Nepal together because they ruled with a strong hand, spent much on the army, and had a short way with political opponents. The new government tries to win popular support by spending money on education and social services.

Nepal is passing through a difficult period of transition from an autocratic to a democratic regime. In March 1955 King Tribhuvan passed on, and Prince Mahendra became King of Nepal. The revolution freed the country, but Nepal remained in political turmoil. Nepal's new King, His Majesty Mahendra Bir Birkram Shah Deva, is working hard to solve the political crisis which he inherited from his father.

King Mahendra is devoted to his responsibilities of leadership of his people. Despite opposition, one of his first acts was to call a conference of all political and social organizations in Nepal to request from them suggestions pertaining to the establishment of a stable democratic regime. King Mahendra is trying to evolve a stable democracy in a country which, in a few years, has risen from almost obscurity to a key strategic position. He has promised to hold the first ever general elections in Nepal, and strive for the maintenance of democratic government.

For the present King Mahendra, while desiring to place power in the hands of a popularly elected prime minister, is left as Nepal's supreme ruler. Meanwhile the eyes of the world are fixed upon Nepal until the stable regime of King Mahendra's dreams is firmly established.

Nepal is one of the United Nations' new members. She is also an associate member of the Economic Commission for Asia and the Far East, an agency acting within the framework of the policies of the United Nations, designed to assist the governments of the region in their efforts to reconstruct and develop the economic structure of their countries. Under the Colombo plan of aid to south Asian nations, Nepal receives substantial financial help.

The United States heartily supports the ideals of democracy everywhere. East and West meet in Nepal in a very specific way. From the United States and other sources emanate programs to help Nepal emerge out of feudalism; to strengthen its economy; encourage it to set up democratic institutions, and so ward off infiltration which threatens everywhere on the periphery of communism's empires. The hundreds of miles of the Himalayas stretching across Nepal's frontier no longer constitute an impregnable fortress. The United States realizes this fact and is trying to help this nation overcome its lack of defense—economic, military, and geographic.

I salute Nepal on this momentous occasion of independence day and pray for her continued peace, prosperity, and progress as she embarks upon a new year of national life.

Frank Sinatra Plans Worldwide Entertainment Tour for Charity

EXTENSION OF REMARKS
OF
HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 8, 1956

Mr. McDONOUGH. Mr. Speaker, the House Committee on Education and Labor is currently considering legislation to provide for the interchange between the United States and other countries of creative and performing artists in the field of art, drama, music, and the dance. This program has been proposed to meet the challenge of communism and to promote goodwill and understanding between the United States and other nations of the world by a greater exchange of cultural ideas which reflect national character and custom.

This is, in my opinion, an excellent proposal for improving international relations and is, to some extent, an extension of the overseas tour program in which many American artists in the entertainment field have already participated.

I have been apprised of the fact that Frank Sinatra, perhaps the most popular entertainer in the world today, currently is in contact with our State Department in arranging a forthcoming worldwide tour of charity performances, the first ever undertaken on such a scale by any top-name American entertainment figure. In this highly commendable project, Mr. Sinatra would take several weeks out of his very busy professional career to tour the world late this year in a series of benefit appearances, with all proceeds going to a major charity in each country visited. If this tour, which Mr. Sinatra proposed, materializes, he will indeed become a great goodwill ambassador for our Nation.

It is worthy of remark how frequently Mr. Sinatra and his fellow artists in the realm of show business offer their time and talents to public-spirited enterprises, and how infrequently the general public learns of their unselfish generosity.

Frank Sinatra, long an international favorite, is motivated in this undertaking by his determination to show the rest of the world what can happen in America to a boy born in humble surroundings. To this project he is contributing more than his time, talent, and prestige. The time which he will take out of his busy and lucrative work schedule in order to make this tour, which he himself proposed, will mean thousands of dollars out of his own pocket. However, he believes that the benefits that could accrue to the United States in terms of good will and improved world relations as result of this tour cannot be measured in dollars.

The sincerity with which artists like Frank Sinatra bring their services to good causes is amply demonstrated by the fact that they are busy at it the year around. Within just the past few months, for instance, Mr. Sinatra has actively campaigned for and aided such projects as the American Heart Fund, the sale of Bonds for Israel, the Peanuts for Polio, and other phases of this year's March of Dimes, and other worthy causes, not to mention numerous personal appearances in behalf of charitable benefits. Within the past few weeks he took the time to appear in a special short subject sponsored by the National Conference of Christians and Jews and shown in the theaters of the Nation as part of Brotherhood Week.

Frank Sinatra's activity in these fields is the more remarkable when considered in the light of the tremendous demands and obligations exacted by such a successful professional career.

Recently this actor and singer added to his already full schedule the new responsibility of motion-picture production. His new company, Kent Productions, Inc., has just completed its initial motion-picture production, a film titled "Johnny Concho," for the United Artists Co. In addition, he is about to add musical conducting to his professional activities with an album for Capitol Records which will feature not Mr. Sinatra's famous singing voice, but rather his conducting the original compositions of a group of great but underrated people, the composers in Hollywood, whose works contribute so much to present-day motion-picture enjoyment. And, in addition to all these activities, Mr. Sinatra

still takes time to respond generously to worthwhile and public-spirited undertakings.

Mr. Sinatra has long been a true crusader for a better world. The Academy of Motion Picture Arts and Sciences has given him a special award in recognition of his film The House I Live In, a short subject devoted to furthering tolerance and a better understanding between peoples. In another recent instance he was selected as star of the year by the Interstate Circuit, one of the Nation's largest thater chains, a tribute citing the fact that he never rejects a request from any meritorious cause.

Having done so much for good purpose here in America, Mr. Sinatra now seeks, through his proposed tour, to aid worthwhile causes in other countries as well.

The fine citizenship and unselfish spirit manifest by Frank Sinatra and by many other outstanding figures in the entertainment world are indeed deserving of the sincerest commendation, as well as the warm appreciation of the people of the United States.

In the motion picture and recording industries, Mr. Frank Sinatra today is considered tops at the box-office. With his great contributions to aid in worthy causes, he should also be considered a top humanitarian and a great American.

Sour Bridge Harmony

EXTENSION OF REMARKS
OF
HON. RAY J. MADDEN
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 16, 1956

Mr. MADDEN. Mr. Speaker, last session of Congress created a special committee to investigate the finances involved in the toll collections of the White County Bridge Commission, which operates the bridge over the Wabash between White County, Ill., and Indiana.

Our colleague, Congressman WINFIELD DENTON, has been doing great work as chairman of this special committee. Important facts and revelations have been uncovered regarding the fantastic methods used in disposing of these toll receipts over the years in order to postpone the day when toll collections would be abolished.

The following news article by Fred Othman, which I hereby submit, contains some interesting comments on the White County Bridge:

SOUR BRIDGE HARMONY
(By Fred Othman)

NEW HARMONY, IND., February 15.—The Rappites came to New Harmony in 1821 with the first purely communistic settlement in the world. It didn't work. Came then the Owenites, who believed in brotherly love, and this wasn't successful, either.

Finally there arrived Roy Clippinger with his bridge across the beautiful Wabash, the best established toll bridge there ever was, and harmony in pitcuresque New Harmony is hard to find today.

This bridge was built in 1931 at a cost of $600,000 and since then it has collected more than $3 million in tolls. The bonds have been retired, but the cash registers of the toll collectors continue to rattle.

This has been an expensive bridge to operate. An audit by the General Accounting Office back in Washington indicates that it is the only bridge that ever bought itself an encyclopedia. This bridge sends flowers to its friends. It owns a baby blue Cadillac. It is the proprietor of 60 bottles, or $71.40 worth of Hadacol, an alcoholic tonic that used medicine shows a few years back to extol its virtues.

The white-haired Roy, who hails from Carmi, Ill., across the river, and who used to be a Congressman, himself, is manager of the White County Bridge Commission, an official body created by act of Congrecs.

When the Hadacol show came to town, Mr. Clippinger thought it would be nice to invite the local orphans to see it. To get 60 youngsters inside the gate, he—or the bridge—had to buy 60 bottles of highproof tonic.

So Congress is investigating, and on hand is its demon investigator, Representative WINFIELD K. DENTON, Democrat, Indiana, who can't understand why Mr. Clippenger still charges 30 cents for a round trip across his bridge. Representative DENTON insists it ought to be free.

He held his formal inquiry in the annex to the high-school gymnasium and on tap were a couple of dozen irate toll payers. They agreed with Representative DENTON that this bridge has paid for itself so many times over that the payees ought at long last use it without charge.

Representative DENTON said the bridge should be turned over to the States of Illinois and Indiana. Engineers from both testified they didn't want it until it was put in safe condition. Other engineers said it would cost about $1 million to fix that bridge. Mr. Clippinger said he only had $25,000 in the till.

He said he didn't see any way of repairing it, unless the tolls were doubled to 60 cents a round trip. He said he only took in $10,000 a month in tolls now and he needs $20,000.

"How long will it take you to pay for the repairs?" asked Representative DENTON.

"We'll never pay for it at the present rate," snapped Mr. Clippinger.

"That's just what I was afraid of," said Representative DENTON. "Now, Mr. Clippinger, you already have collected more than $3 million. The way this thing is going our children's children will be paying to ride on this bridge. It is the longest established toll bridge there ever was."

"If we could raise the tolls again, we could get the work done," Mr. Clippinger insisted. He thought a moment, and he said he had insurance on the bridge and that would pay for anything that happened to it.

"I mean I did have insurance until you started talking about it being unsafe," he added. "When I get back home, I probably won't be insured at all."

The proceedings ended on an inconclusive note. The big bridge man and assistants headed west across their bridge in the Cadillac; the customers in New Harmony walked out of the gymnasium, muttering.

Ukrainian Independence

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 14, 1956

Mr. ANFUSO. Mr. Speaker, on the eve of the Ukrainian Independence Day, on January 21, an impressive commemorative dinner was held under the auspices of the Ukrainian Congress Committee of America and the Ukrainian Association of Washington at the Mayflower Hotel. The occasion was the celebration of the 38th anniversary of the independence of the Ukraine, and it was dedicated to the liberation of all captive nations in the Communist colonial empire.

This message of Communist colonialism and imperialism is being carried forward by the Ukrainian Congress Committee under the leadership of its national chairman, Dr. Lev E. Dobriansky, who is professor of economics at Georgetown University. It is stressed in a memorandum sent to President Eisenhower during the recent Anglo-American Conference, in which excerpts are cited from significant messages sent by Senator WALTER F. GEORGE, chairman of the Senate Committee on Foreign Relations, and Under Secretary of State Herbert H. Hoover, Jr., on the occasion of the commemorative dinner.

Because of the importance of this memorandum with regard to Communist colonial domination of the Ukraine and the other non-Russian nations in the Soviet Union, I am inserting it into the RECORD and commend it to the attention of my colleagues:

JANUARY 28, 1956.

The Honorable DWIGHT D. EISENHOWER,
President of the United States,
Washington, D. C.

DEAR MR. PRESIDENT: On the occasion of the Anglo-American Conference attended by Prime Minister Churchill 2 years ago, it was our dutiful privilege to submit for your studied consideration and that of the Secretary of State certain views regarding the moral and political bases underlying the struggle of the free world against Russian Communist colonialism and imperialism. The publication of the full text of the communication, under the caption of "Unity Based on Principle," was sponsored by the Honorable JOHN F. KENNEDY, Senator of Massachusetts, in the CONGRESSIONAL RECORD of July 24, 1954 (pp. A5366–A5537). In general form, the agreements reached by the conference on principles of action seemed to accommodate our views insofar as Ukraine and the several other non-Russian nations in the Soviet Union are concerned.

The second Anglo-American Conference with Prime Minister Anthony Eden affords us the opportunity to reaffirm all the basic views expressed previously on the hard reality of the Russian Communist empire, the universal application of the traditional American principle of independence and national self-determination, and our unshakable dedication to the spirited meaning of your own words, "We shall never acquiesce in the enslavement of any people in order to purchase fancied gain for ourselves." No event or development has occurred in the past 2 years to alter in any shape or form the views advanced by us during the first conference. On the contrary, world developments in this period have only served to justify them further and to reinforce our complete support of the peaceful liberation of the captive peoples which, as you have recently declared, "has been, is, and, until success is achieved, will continue to be a major goal of American foreign policy."

However, the known concern of the British Foreign Minister over the effects in Asia and elsewhere of the spurious propaganda unleashed by the Russian Communist leaders, Khrushchev and Bulganin, on the subject of colonialism and imperialism leads us to

stress here the urgent need for exposing to the world the full depth and breadth of Russian Communist colonialism and imperialism since 1920. Our most potent weapon in the informational and propaganda field is truth, but in this vital respect the West has scarcely made full use of it. Merely to counteract with proper denials on the contemporary impact of western colonialism is plainly inadequate for us to win the minds and hearts of millions in Asia, Africa, and elsewhere. Positive and courageous steps in unraveling the truth about the colonialism and imperialism of Moscow, which in nearly 40 years has formed an empire unsurpassed in the pages of history, appear necessary to impress upon the nations of Asia and Africa the prospect that faces them in the event of continued neutralism or appeasement. Such steps would begin to implement the sense of Congress expressed in the last session by its unanimous passage of the McCormack resolution on Communist imperialism and colonialism.

In a recent policy address Secretary of State Dulles alluded to the empire character of the Soviet Union itself when he stated that "We do not believe that nations and peoples who want to be independent should be forced into unwelcome dominance by others, merely to produce monolithic power" (Confident of Our Future, October 10, 1955, p. 8). History clearly shows that 20 years before the further expansion of Russian Communist colonialism into the Baltic States and Central Europe, an independent Ukraine, Byelorussia, Georgia, Armenia, Azerbaijan, North Caucasia, Turkestan, and Idel-Ural were destroyed by the imperialist forces of Russian communism which in the form of the Soviet Union has in vain attempted to produce this monolithic power. The peoples of Asia and Africa would readily understand and appreciate this stage-like development of Russian colonialism once the truth is put before them. For the problem of national independence in Indochina and elsewhere and the surging forces of enlightened nationalism in Asia and Africa are essentially the same as those in the vast Russian Communist empire which includes the captive non-Russian nations in the Soviet Union.

We shall not succeed in meeting and defeating the psychological challenge of Moscow until we ourselves face up to the truth and use it with operational effectiveness. Countless leading Americans are urging that we do this now. In an outstanding message on the occasion of a recent commemorative dinner in Washington, celebrating the 38th anniversary of the independence of Ukraine, the eminent chairman of the Senate Foreign Relations Committee, the Honorable WALTER F. GEORGE, points out the desire of the American people to promote national self-determination and states, "It is my hope that the time may soon come when the peoples of formerly independent states, such as the Ukraine and the Baltic States, will have opportunity freely to choose their own governments and thereby to give full expression to their national aspirations." On this same occasion, attended by Members of Congress, the executive and judiciary branches, and representatives of almost every captive nation, the message on national independence and human rights, signed by the Honorable Herbert H. Hoover, Jr., expresses similar sentiments and states: "We wish the same advantages for all other peoples of the world, particularly those who are now living under Communist domination."

With much concern for our moral and political position in Asia and Africa, it is our earnest hope that this conference soundly appraising the fraudulent gesture of the recent Bulganin note, will give fitting expression to the cruel reality of Russian Communist colonialism and crystallize the thoughts and feelings of all patriotic Americans in the traditional spirit of anticolonialism, national independence, and sovereignty.

With God's many blessings upon your health and leadership, I am,

Sincerely yours,

LEV E. DOBRIANSKY,
Georgetown University.

Statement of Thomas Kennedy, Vice President, United Mine Workers of America, Before the Joint Committee on the Economic Report, February 15, 1956

EXTENSION OF REMARKS
OF
HON. CARL D. PERKINS
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 16, 1956

Mr. PERKINS. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include a statement of Mr. Thomas Kennedy, vice president of the United Mine Workers of America, before the Joint Committee on the Economic Report on February 15, 1956:

My name is Thomas Kennedy; I am vice president of the United Mine Workers of America. I propose to discuss only those parts of the economic report of the President which have a relationship to the coal industry.

In the letter of transmittal of this report to the Congress, President Eisenhower on page 1 made this observation: "Some groups of people have not, however, enjoyed a full measure of prosperity, and we must keep that fact before us as we build for the future." I represent and speak for one such group in communities in the jurisdiction of the coal industry where surplus unemployment or depressed areas are the rule rather than the exception.

Page 61 of the report deals with the matter of helping local communities reduce unemployment, and it is pointed out very properly in the report that this is a matter of national as well as local concern. The area assistance program referred to in this section of the report, however, does not reach into the heart of the unemployment situation. The bringing of new industries into these areas carries with it the thought and the idea of vocational training; but I submit that in the coal areas vocational training would hardly fit into the picture because we find that new industries very seldom employ persons beyond 39 or 40 years of age. In the mining industry the ages run from 18 to 65 and over. It is not an idle statement when we suggest that such a program would apply mostly to younger employees. However, there is one section of the economic report, which possibly makes it proper or permissible for loans for "the purchase and alteration of existing facilities." My point is that we have idle mines in the bituminous and anthracite coal regions, industries already in existence, but idle now, and which industries, if properly aided by the Federal Government, might resume operations and give employment to thousands of men in the surplus labor areas in the coal fields.

I refer to one example in particular. The Anthracite Hazleton Shaft Colliery of the Lehigh Valley Coal Co., which employed approximately 800 men with approximately 1,000 employees in the overall picture, was drowned out during the recent hurricane Diane. The pumps were lost and the mine is now idle and has been idle since last September. This was the basic industry in the city of Hazleton, Pa., with a payroll of about $3,500,000 per year. The coal company claims it does not have the money to dewater this mine and have operations resumed.

We shopped around Washington, without results, following the hurricane to find out if any branch of the Federal Government could do anything to put this mine back in operation. The matter is also being considered by the administration in the Commonwealth of Pennsylvania. Surely, this is a matter which comes within the purview of the economic report wherein loans or outright grants should be made to put this mine in operation.

In many of the surplus labor sections unemployment compensation is rapidly being exhausted. The economic report suggests that unemployment compensation is the bulwark for sustaining purchasing power. These payments generally run for a period of 26 weeks. It would become a greater bulwark, if these unemployment compensation payments were made for the duration of the period of unemployment or until such persons were eligible for Federal security payments.

Table D, page 186 of the economic report, gives figures on the age bracket and average duration of unemployment compensation payments. From these figures we get the fact that in 1946 we had 141,000 persons with a duration of unemployment over 26 weeks; while we had in the last quarter of 1955 239,000—or an average for the year 1955 of 335,000 individuals affected by unemployment over the 26-week period. These people might be classified for employment purposes as being liquidated.

Surely, there is room here for the Federal Government in conjunction with the States, if necessary, to take care of this situation by the payment of supplemental unemployment compensation for the period of idleness beyond that provided by the various States.

International trade, imports, exports, tariffs, etc., are also covered in the economic report; and on this particular matter I again call the attention of the Congress to the increased dumping of residual or waste oil on the eastern seaboard. In my statement to the Congress when the reciprocal trade bill was being discussed, I pointed out that residual oil dumped on the eastern seaboard, mostly from Venezuela, displaced 30 million tons of coal in 1954, mostly bituminous coal. Recent figures for 1955 indicate that 36 million tons of coal were displaced by the dumping of the Venezuela waste oil. I again call to the attention of Congress that this waste oil is coming not from a free country, but from a country where labor is in chains and where advocates of democracy and justice are refugees.

Evidently, our Government is very anxious to support Venezuela, judging from the statement recently released by Mr. Arthur Flemming, Director of the Office of Defense Mobilization, when he sounded a note of warning that the unusually cold weather of this winter has increased the demand for fuel oils. In his announcement, Mr. Flemming emphasized that he was acting on the recommendation of the President's Advisory Committee on Energy Supplies and Resources Policy by requesting oil importing companies to indicate any additional imports of residual fuel oil beyond what was already specifically programed which they might deem necessary to meet current and prospective ocnsumer demand from now until April 30. This alarmist attitude, in my estimation, is utterly ridiculous and probably the most one-sided

statement ever issued from any Government office. The viewpoint is without foundation because the facts of the situation indicate that the available supply of coal in this country is of such sufficiency to meet the fuel requirements of the Nation that there need be no worry about the importation of residual oil at all. Emphatically speaking, it looks to me as though this statement was a sounding board for the oil companies which control tremendous wealth and power in the Nation. In a nutshell, the Flemming statement was little concerned about the coal industry or its problems.

To solve some of the problems in the coal industry we should have a national fuel policy which would put each of the fuel industries in its proper competitive position.

Stabilization of the coal industry itself, especially the anthracite, is of utmost importance, if the communities with a surplus of labor are to participate in the general prosperity referred to in the economic report.

The dumping of waste oil should be stopped.

An intensified research program for greater uses of coal should be built up by the Government.

Attention should be paid to the idea of building up our exports of coal to Europe and Asia, with ocean freight rates established on a stable basis.

Action should be taken on the part of the Federal Government whereby supplemental unemployment compensation will be paid for the duration of unemployment beyond the period of duration provided for by State legislation.

The foregoing are suggestions which I shall be glad to amplify in discussion before this committee, and which I hope will meet with the approval of the committee.

Problem of the Small-Business Man

EXTENSION OF REMARKS
OF
HON. ARTHUR G. KLEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 31, 1956

Mr. KLEIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement which I made for publication in the newspaper printed by the East Side Chamber of Commerce of the City of New York. This problem of small-business men has long been a source of concern to me; and it is my hope that this Congress will take appropriate action to assist the small-business man, who is, in my opinion, the backbone of American business and industry.

STATEMENT FOR EAST SIDE CHAMBER OF COMMERCE BY CONGRESSMAN ARTHUR G. KLEIN

I hope that Congress, during its second session will give full consideration to the problems and to the needs of the small-business man. I, for one, mean to do everything I can to have this consideration given because I believe it to be basic to the well-being of millions of people and to our general economic welfare.

I expect that Congress will have to make many exertions in this respect. The administration's warmth for big business has been manifest, and has taken many forms. For instance, in the past year, corporation profits have gone up 26 percent; corporation take-home pay has had an equal rise, and big-business failures have gone down 15 percent. As against that, we have the sad fact that small-business failures have gone up by 21 percent.

It seems to me that it is possible to embody in our legislation further help to small business and for the prevention of monopoly. I have nothing against big business as such. But monopoly is another matter and the squeeze on the small-business man must be lifted.

I believe, too, that the small-business man will be helped by economic programs such as increased housing. We learned from the President's state of the Union message that the administration proposes authority to contract for 35,000 additional public housing units. This is utterly inadequate; 135,000 units were provided for in the bill passed by the Democratically controlled Senate in 1955. This should be a minimum figure. For such public housing is indispensable to the broad housing needs of our growing population and constitutes an important spur to small business. Every young married couple that is able to set itself up in a home of its own means a customer for the small-business man who has commodities to provide and services to render. Housing equipment, furniture—all that goes into the maintenance of a home and the growth of a family, are important to the small-business man. They are also a key to the cotninued high standard of the American people which became a goal of government during the F. D. R. New Deal and the Truman Fair deal administrations.

I have also felt it a matter of some concern that provisions should be made for aged widows and widowers, and single people generally, to have access to public-housing projects. They, too, are an integral part of our population; and with the rise in the general age level of the American people, ordinary decency requires that we give some thought to and make adequate provisions for aged, single people to be able to live in the public housing that takes the place of the slum buildings from which they have been evacuated. Theirs, too, is a case of important, economic value to the small-business man. The elderly man or woman who has to move out of his district because of a public-housing project, or that has to move in with a child of the family, has far fewer economic needs than one who maintains a home of his own or her own. Small business, it seems to me, has a vital stake in this, and should give support to the legislation on this score that I have introduced into Congress.

A school-building program of suitable dimensions and adequate to meet the needs of our largely increased school population is still another project that should appeal to the community at large and to the small-business man in particular. They are all interlocked. Adequate school facilities and ample teacher forces mean that much more for the neighborhood store and businessman.

Another concern of the small-business man is the administration's proposal to increase the first-class postage rates. I am strongly opposed to this as unjustified in and of itself, and as imposing a particularly heavy burden on the average family, the average laboring man, the average storekeeper, and the average businessman. As a matter of fact, the Post Office losses are not due to the first-class mail. They are due, largely, to the second-class mailings. In any event, the Post Office is not and should not be regarded in the same way as we regard a private business venture any more than a municipal fire department or police department can be so regarded. A fair and moderate postage rate is absolutely essential to the normal conduct of our business life. It is a stimulant to exchange. It would be an unjustified saddling of still another burden on every individual small-business man, and every individual family to increase the postage rate. I am against it.

Above all, I am concerned with the fact that since the last half of 1952, and under the policies of the present administration, small-business profits are down 66 percent, small-business investors' returns are down 57 percent, and small-business failures are up 36 percent. I am concerned because in 1954 alone there were three times as many business mergers as occurred in 1949. This is a trend toward monopoly that is most disturbing. I am concerned that the small-business man's share in the defense procurement dollar shrank in the years 1954 and 1955. This is a trend that must be resisted. Ours should not be a government of big business any more than that of any other segment of the population. Ours should be a government of all the people. That definitely includes the small-business man.

The Communists Are on the Move Again With Aid, Trade, Arms, Good-Will Missions, Student Exchanges, Athletes, and Neutrality Propaganda, Adlai Stevenson Warns—I

EXTENSION OF REMARKS
OF
HON. FRANK THOMPSON, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 16, 1956

Mr. THOMPSON of New Jersey. Mr. Speaker, the New York Times of Wednesday, February 15, 1956, reports that Gov. Adlai E. Stevenson charged in a speech in Seattle, Wash., that the Eisenhower administration has left the country unprepared for a new Communist cold-war offensive. He described the Nation's situation as more perilous than ever.

The presidential candidate charged the administration was trying to sell instead of explain United States foreign policy to the one-third of mankind not yet committed to the Soviet Union or to the West.

He declared that, because of conflicting ideas in Government departments, the administration is attempting to conduct one foreign policy for the Nation and another for the Republican Party.

Meanwhile—

Mr. Stevenson asserted—

the cold war has entered a new phase. The Communists are on the move again—with aid, trade, arms, goodwill missions, technical missions, student exchanges, athletes, and neutrality propaganda—while people in high places in our Government shout "no help to neutrals—you've got to be for us or against us."

The issues confronting the Nation at this time, are, I believe, graver than at any time in our history. The calm and confident tones with which Khrushchev addressed the 20th Congress of the Soviet Communist Party and the text of the speech shows that the crisis which we face is of a dimension and quality never before encountered.

It is because I believe that Governor Stevenson has made one of the most im-

portant speeches of our time and discussed the problem with dignity and clarity that I include excerpts from his speech here.

I have introduced two measures which I believe will assist us to meet this crisis. One, House Joint Resolution 474, would establish a joint congressional committee to be known as the Joint Committee on United States International Exchange of Persons Programs.

It gives me great pleasure to be able to say that Senator J. W. FULBRIGHT, author of the great act of the Congress on exchange of persons, has introduced a companion measure in the Senate as Senate Joint Resolution 120, and Senator HUBERT H. HUMPHREY has joined Senator FULBRIGHT as cosponsor of the measure. In the House Members who have joined with me in sponsoring the joint resolution include the gentleman from New Jersey, HUGH J. ADDONIZIO, the gentleman from New York, VICTOR L. ANFUSO, the gentleman from Pennsylvania, GEORGE M. RHODES, and the gentleman from New Jersey, HARRISON A. WILLIAMS, JR.

I am hopeful that many more of my colleagues from both parties will join in introducing this measure in the House. I am including the text of my invitation to them to join in sponsorship of this joint resolution as part of my remarks. I have developed therein why I believe such a joint congressional committee is highly important now and what I think its functions should be.

A second measure of mine, H. R. 8920, provides for the promotion and strengthening of international relations through cultural and athletic exchanges and participation in international fairs and festivals. Minnesota's distinguished Democratic Senator, HUBERT H. HUMPHREY, has introduced a companion measure in the Senate as S. 3116.

I am confident that if these two basic proposals are enacted into law we would be in a tremendously improved position for meeting the Russian drive at this critical time in our country's history.

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., February 10, 1956.

MY DEAR COLLEAGUE: I have introduced a joint resolution, House Joint Resolution 474, to establish a joint congressional committee to be known as the Joint Committee on United States International Exchange of Persons Programs. Such a joint committee will be able to make an important contribution to these international exchange programs.

It gives me great pleasure to be able to say that Senator J. W. FULBRIGHT has introduced a companion measure in the Senate as Senate Joint Resolution 120, and Senator HUBERT H. HUMPHREY has joined Senator FULBRIGHT as cosponsor of the measure.

I am hopeful that you and many other colleagues of mine from both parties will join with us in introducing this measure in the House. The text of our joint resolution is enclosed herewith for your study.

We believe that international exchange of persons has proved to be a valuable means of developing closer cooperation among the nations of the free world. The need for such cooperation is every day more apparent. The United States Government is using this technique both for building better understanding of our country abroad and for technical cooperation and economic development. Large exchange programs are now operated by the Department of State. Students, teachers, prominent specialists and leaders in many fields are exchanged and outstanding cultural performers are sent abroad under these programs. The Congress authorized these programs through the Smith-Mundt Act (Public Law 402, 80th Cong.), the Fulbright Act (Public 584, 79th Cong.) and several other acts. American technical experts are sent abroad and foreign nationals are brought to the United States for training under the International Cooperation Administration (formerly FOA and point 4).

The Congress receives reports from the Secretary of State on these programs and reviews their operation annually in connection with appropriations. The Smith-Mundt Act also provides for a United States Advisory Commission on Educational Exchange which reports directly to the Congress on a semi-annual basis.

All of these programs are reviewed separately, and by different congressional committees. They are extremely complex both from the point of view of administration and source of funds, and all use dollars and foreign currencies and rely to a large extent on the efficient use of private resources here and abroad.

It is, therefore, not surprising that some confusion has persisted in the Congress as well as in the public mind as to the relationships that exist between these programs. Yet broad public understanding and public acceptance of these exchange programs are essential if Congress is to support them. It is, we believe, imperative that this understanding be achieved and the confusion ended in order that these important activities can achieve the most useful results.

No concerted or continuing review of these programs and their relationships to each other has ever been undertaken by the Congress. Such a review is of the utmost importance and would be of inestimable benefit to the Congress and to the public. It would help all of us to make a more realistic appraisal of these programs.

The Joint Committee on United States International Exchange of Persons Programs which our joint resolution would establish will provide the necessary review to insure the most effective planning, operation, and administration of these important facets of our international relations.

Discussing the perennial crisis of exchange appropriations in Congress, Senator H. ALEXANDER SMITH, writing in the October 1955 issue of the news bulletin of the Institute of International Education, points out that although private-exchange programs long antedate Government activity in this field, the role of the Federal Government is most significant and in recent years has become nearly indispensable.

Over the past few years, as he makes clear, a definite pattern has emerged in the process of getting appropriations for the Government's participation in international educational exchange programs, for instance: The President requests funds for an adequate program; the House of Representatives slashes this figure nearly in half. The Senate restores the full amount; and the final figure is a compromise between the two. The result, the Senator observes, is clearly insufficient appropriations, and he calls for grassroots understanding.

May I hear from you as to your interest in this legislation at your earliest convenience?

With kind regards.

Sincerely yours,

FRANK THOMPSON, Jr.,
Member of Congress.

[From the New York Times of February 15, 1956]

EXCERPTS FROM STEVENSON'S SPEECH AT SEATTLE DEMOCRATIC DINNER

SEATTLE, WASH., February 14.—Following are excerpts from the text of a speech by Adlai E. Stevenson at a Democratic fund-raising dinner here tonight:

"This is one of our great doors to the Pacific and beyond lies Asia—our customer and competitor, our friend and enemy. And Asia, I daresay, may well be the area of decision in the great conflict of our times between development by consent and development by coercion, between communism and freedom.

"Just as growth and development are the most significant facts about this new western area of the United States, so it is about Asia. There the political revolution has been delayed a century or more and with it has come the technological revolution that, thus redoubling the sudden violence of the transition from the past to the future, Asia means to develop and quickly, for they have discovered from us of the West that misery, oppression, hunger, and disease are not the immutable destiny of man.

"So they mean to improve living standards quickly. Can they do it the western way, our way, with democracy and the voluntary cooperation of the people or must they do it by dictatorship and forced cooperation—the Communist way?

"Well, these are great questions that are going to be answered on your doorstep and sooner, I fear, than many of us think or hope."

DIFFERENCE ON METHODS

"There is no division among Americans on party grounds with respect to our desire for peace or our foreign policy objectives, but there are crucial differences among us as to methods, and the vigor with which we shall pursue them.

"I am not, the newspapers and writers to the contrary notwithstanding, one of those who feels, or says for partisan advantages, that all the Administration, the President and the Secretary of State, have done in this field, is wrong or have wholly failed.

"But, likewise, I am shocked when I read every day that all is well. That any criticism of this administration and its frequent and foolish failures is just campaign oratory, and that whatever a Democrat says about the conduct of our foreign affairs must be taken with a grain of salt.

"If debate and discussion of our most important problem by partisans is to be discredited and ignored, then how, when, and by whom are the people to be informed about their most important concern?

"Because these are our most important concern, because they are the issues of survival and, in need of life and death, I am persuaded that no greater misfortunate could befall us than an electorate asleep or complacent or indifferent about the world and our central position in it. * * *

"The fact of the matter is that as we enter the second debate since the last war, devastated, bleeding Russia is more powerful than ever before and enfeebled, war-torn China is a prevading influence through Asia.

"We have been spending $40 billion a year for peace and security—and there is none. There isn't even preponderant power in the new weapons any longer, as we are now learning from escaping facts. Yes, and resigning figures.

"Instead of resting complacently on last summer's rosy summit, the spirit of Geneva (which was promptly stamped 'made in Washington') has suddenly given way to the realization that our situation is more perilous than ever.

"France is paralyzed and sorely pressed; Germany dismembered and restless; the guns

are rumbling again in the Formosa Straits; nationalism is ready through awakening Islam; Soviet arms and influence are creeping into the Middle East (and we welcome anxiously these days assurances that security of Israel, which we helped create, is a genuine concern of our Government).

"BRINK OF WAR

"And, meanwhile, the uncommitted third of mankind is listening to what we say and watching what we do unhappily. Too often what they hear and see leaves the emphasis on Goa and colonialism, on 'the brink of war.' And atomic devastation of Asians, on more military pacts. And less economic assistance, and finally on confusion and contradictions that reveal all too clearly an administration which tries to sell foreign policy instead of explain it; which tries to conduct one foreign policy for the Nation and another for the Republican Party, at the same time—to the dismay of our friends, the delight of our enemies, and the confusion of the neutrals.

"Meanwhile, the cold war has entered a new phase. The Communists are on the move again, with aid, trade, arms, goodwill missions, technical missions, student exchanges, athletes, and neutrality propaganda—while people in high places in our Government shout 'No help to neutrals—you got to be for us or against us.'

"Our Government is unprepared for this new Communist offensive, which has been in the making since Korea and the death of Stalin. * * *

"On the basis of the record of the past 3 years, and in view of the decline of our prestige and influence, it is small wonder that the administration talks about keeping foreign policy out of the campaign, and its press agents assure us that all criticism is just 'campaign oratory.'

"* * * Too often, of late, we have been urged to forget that the essential quality of democracy—distinguishing it from those societies where citizens are not masters but slaves—is that we trust and rely not on catch words and phrases, like 'peace and prosperity,' but upon a whole people's judgment, because it is a wisdom superior to that of the wisest man or small group of men.

"And I want to affirm, as we start out new on this campaign, the conviction that it's our primary obligation to make the election next fall an expression of a whole people's informed judgment about our problems.

"* * * There are those who say that there is no longer any real difference between the Republicans and Democrats—and I must concede that this is an illusion the Republicans do their best to foster in election years."

THE FARM PROGRAM

"Secondly, a hasty reading of the proposals that are being fed into the congressional hopper these days would lead one to believe that a Republican President is revising recent Democrat platforms.

"But when we look beneath the surface, we see little more than a grudging concession to the minimum demands of political expediency, in a campaign year.

"We see a farm program patched together from old Democratic proposals by a political party in hasty retreat from its own program, which set out to get rid of the farm surplus and a substantial number of small farmers in the process.

"We see an education program advanced only when public demand could no longer be deferred—a program still too small to meet our national shortages.

"We see a highway program offered as a replacement for last year's proposal, which turned out to be a bonanza for the bankers and a device to keep the cost out of the Federal budget.

"* * * But an even more significant index to the present approach is to be found behind the scenes, in the administration of the program the erstwhile 'great crusaders' inherited from the Democrats, and to which they still pay lip service, at least in election years.

"Here we see a steady cutting back and emasculation that affects vital segments of our economy, like soil conservation, flood controls, resource development, food and drug administration, rural electrification, aid to small farmers, and so forth.

"Here we find the Secretary of Interior proposing to put a man in charge of our public grazing lands who has long defended the right of private owners to a feudal interest in the public domain.

"Here we find a long-time critic of public housing in charge of public housing, which already suffers from financial malnutrition that would have been shocking even to the later Senator (Robert A.) Taft.

"Here we find the administration fostering small-scale waterpower developments by private utilities instead of the full-scale multi-purpose projects. Here we find our Government obstructing that great regional development, the TVA (Tennessee Valley Authority)—and winding up in a malodorous mess when the Democrats finally exposed the Dixon-Yates deal.

"New all these things are being done by a regime in Washington that prides itself on its business-like management and efficiency—that, indeed, is manned by its echelon by the biggest of American business. So it is, I think, pertinent to inquire whether this record really can be construed as good business, good business for all the American people.

"I say it can not, that no business ever prospered which suffered from lack of foresight, which attempted to take out today's profits without thought of tomorrw.

"Business in this country is not secure, for example, when the income of American farmers has declined by 27 percent in 3 years, and when this whole, vital segment of our economy is in distress.

"It is the genius of the Democratic Party that we have been able to bring together all the elements in our political economy to put the farmer and the workingman and the consumer at the council tables of Government along with the businessman—and so bring forth programs in which all Americans move forward together, with no single interest gaining ground at the expense of another.

"I submit that this is the way it has to be if we are to realize the full promise of the future that lies ahead—the future of promise and peril in which this Nation is called upon to lead the free world and this, finally, is why I have undertaken this campaign of 1956—in the deep belief that my party, and only my party, can restore to Washington the combination of responsibility and human concern which this age demands of America."

The Communists Are on the Move Again With Aid, Trade, Arms, Good-Will Missions, Student Exchanges, Athletes, and Neutrality Propaganda, Adlai Stevenson Warns—II

EXTENSION OF REMARKS

OF

HON. FRANK THOMPSON, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 16, 1956

Mr. THOMPSON of New Jersey. Mr. Speaker, on July 27, 1954, President Eisenhower sent a message to the Congress requesting the sum of $5 million to be expended at his discretion to meet extraordinary or unusual circumstances arising in the international affairs of the Government. The message stressed the need to participate in international trade fairs, where the Russians had made tremendous gains in advertising their way of life through their products. The President went on to say that in the cultural and artistic fields as well, we need greater resources to assist and encourage private musical, dramatic, and other cultural groups to go forth and demonstrate that America too can lay claim to high cultural and artistic accomplishments.

The funds were appropriated in the closing days of the 83d Congress and the International Educational Exchange Service in the Department of State took charge of the cultural programs. The Department of Commerce was charged with the trade fair program and the United States Information Agency gave strong informational support to these activities overseas.

The administration and the Congress had come to the conclusion that, in the words of the President, "nothing is more dangerous to our cause than to expect America's message to be heard if we don't bother to tell it."

It may be truthfully observed that this represented a complete reversal in Republican thinking. That this is so is shown by the fact that a subcommittee of the House Education and Labor Committee under Republican leadership in 1954 rejected 14 bills calling for a similar program saying:

We cannot endorse any of them. We do not believe this is a proper area for the expenditure of Federal funds.

The 14 bills were sponsored by Democratic Members of the Congress which apparently made them unacceptable to the Republican leadership, yet the Democratic Members of the House voted the funds requested by the President without chiding him for the treatment given the Democratic proposals, or for his failure to mention these measures and the repeated claims of the present administration that this program was conceived by the President in 1954.

In a recent letter to the Congress Theodore C. Streibert, Director of the United States Information Agency, said this program was undertaken in the face of the urgent necessity of combatting the growing Communist cultural offensive which has posed a great threat to our position throughout the world. The program, he stressed, has been carried out for the past 2 years under the authority of the President's emergency fund for international affairs—Supplemental Appropriation Acts, 1955 and 1956—by the Departments of State and Commerce and the United States Information Agency.

Mr. Streibert said that—

The program has facilitated presentations throughout the world by outstanding United States performing artists and athletes who have been enthusiastically received. It also has supported United States exhibits at important trade fairs and exhibitions in every geographic region, which, likewise, have attracted great interest. Because the program has proved successful and because of increasing Communist activity in similar pro-

grams, it has been decided to request the Congress to place the program on a permanent basis.

The program so authorized will continue to be the President's program, one to which he gives his interest and support. All authorities in the bill run to the President and it will be his decision as to the duties and responsibilities of the departments and agencies which will carry it out. In this way continued flexibility will be insured.

Funds available to this program will continue to be used in part to underwrite performing artists and athletes in their tours abroad to the extent that admission receipts are insufficient to cover the total costs involved. Such funds will also support United States participation in international cultural and sports festivals and competition. The funds will also help finance United States exhibits of varying types at international trade and industrial fairs abroad.

On January 30, 1956, I introduced a bill, H. R. 8920, "to provide for the promotion and strengthening of international relations through cultural and athletic exchanges and participation in international fairs and festivals." This legislation was first introduced by me as H. R. 6874 on June 16, 1955, and hearings were held on my measure by the House Education and Labor Subcommittee on Distinguished Civilian Awards and Cultural Interchange and Development on July 5 and 6, 1955.

It gives me great pleasure to be able to say that Senator HUBERT H. HUMPHREY, the distinguished Democratic Senator from Minnesota, introduced a companion measure to my bill as S. 3116, on February 2, 1956.

It is our hope that the Federal departments and agencies concerned with this program will report on our bills as requested in the very near future in order that the Congress may commence hearings on them. In this connection it is important to bear in mind that the Senate Appropriations Committee said, in its report to the Senate on the President's emergency fund last year, that this fund should be made a part of the regular budget. It is with this recommendation in mind that I have developed and sponsored this legislation.

I include as part of my remarks a letter I have received from Theodore C. Streibert, director of the United States Information Agency, and an excerpt from the fourth review of operations of that Federal agency; an article from the Washington Star by Brian Bell regarding a tour abroad by the Air Force Orchestra of which my friend and colleague from Pennsylvania, CARROLL D. KEARNS, was guest conductor; and an article from the New York Times on the Seventh Army Symphony, which musical organization has been highly successful in winning the respect of Europe.

These articles afford striking evidence of the impact abroad of American cultural achievements.

UNITED STATES INFORMATION AGENCY,
Washington, January 30, 1956.

The Honorable FRANK THOMPSON, Jr.,
House of Representatives.

DEAR MR. THOMPSON: I have read with interest the bill H. R. 8497, which you recently introduced, placing on a permanent basis the program currently being carried out under the President's Emergency Fund for International Affairs, to demonstrate American cultural and industrial achievements abroad.

I very much appreciate your long-standing interest in this progrom and your vigorous support of it. As you are aware, the program has been exceptionally successful, and its impact upon world opinion has been gratifying. I am in complete agreement with you that permanent statutory authorization is now most desirable.

Your constructive thinking in this matter has been of great value to us, and I want to express to you the Agency's sincere thanks.

Sincerely yours,

THEODORE C. STREIBERT,
Director.

UNITED STATES INFORMATION AGENCY, FOURTH REVIEW OF OPERATIONS, JANUARY 1–JUNE 30, 1955

HIGHLIGHTS OF THE HALF-YEAR

These were foremost among United States Information Agency activities during the first half of 1955:

The Agency contributed to world understanding of the ratification of Western European Union, admission of Germany into NATO, progress toward a workable plan of world disarmament, freedom for Austria and democratic gains at the Bangkok and Bandung conferences.

The Agency energetically carried out its responsibility of achieving maximum psychological benefit from activities supported by the President's Emergency Fund: United States participation in international trade fairs (administered by the Department of Commerce) and presentation of American cultural attractions to audiences overseas (administered by the Department of State). Using press, radio, films, and personal contacts, USIS[1] representatives increased the size of attending crowds and heightened the favorable impression made by these events.

The Agency stepped up its work of promoting worldwide understanding of the United States' comprehensive atoms-for-peace program.

In the pages that follow, these activities and others are described in greater detail.

America's cultural stature

Through all media the Agency acquainted the public in many foreign cities with the appearances of United States artists and musicians.

One of these events—concerts in the Far East by the Symphony of the Air (formerly the NBC Symphony)—was so popular that 2,000 Tokyo students stood in line for 27 hours for tickets, and a Nippon Times headline proclaimed: "A Nation Falls for 94 Men."

The program to demonstrate United States cultural achievements also included:

USIA's Music in America exhibit, which drew large crowds in India, England, Scotland, Wales, and Sweden.

A display of American watercolors in the Philippines, which earned highly favorable comment from the Manila Chronicle, tireless critic of the United States.

Highlights of American Painting, which went to 22 cities and towns in Turkey, Norway, Ethiopia, and Spain, where Spanish Minister Robert Alcover declared that America exports "more than cannons, arms, and dollars."

Handcrafts of the United States, which brought South Americans evidence that, as Rio de Janeiro's Diario Carioca said, "even in the country of mass production, the traditional handcrafts peculiar to European civilization are maintained."

Among other cultural events publicized abroad were:

Salute to France, Paris performances by top American musical and stage personalities, and subsequent appearances in other cities by many of these artists. Salute attractions included the Philadelphia Orchestra, the New York City Ballet, and performances of Medea, Oklahoma, and the Skin of Our Teeth.

Concerts by the noted American violinist, Isaac Stern, in Iceland and Yugoslavia.

Near and far-eastern concerts of Negro spirituals by the Jubilee Singers.

Spectacularly successful performances of the opera Porgy and Bess in Europe and the Near East.

Of this cultural program, U. S. News & World Report said: "American performers are making a good impression and causing many foreigners to revise their idea of America as backward in the arts."

United States at overseas trade fairs

The agency gave strong informational support to official United States exhibits at 14 international trade fairs. For example:

The United States exhibit at the Verona fair demonstrated American farming methods to a half million Italians.

In Frankfurt, thousands saw a typical American home.

In Paris, the United States exhibit caused the French Minister of Industry and Commerce to observe: "It brings us a lesson in optimism from a people whom we believed a short time ago to be threatened by a depression—which never occurred."

[From the Washington (D. C.) Sunday Star magazine of February 12, 1956]

CONGRESSIONAL CONDUCTOR

(By Brian Bell)

A Pennsylvania Representative is equally adept at conducting a symphony orchestra and the affairs of his congressional district.

Representative CARROLL D. KEARNS, once a professional opera singer, guest-conducts the Air Force Orchestra. Sharing the podium with his longtime friend, Col. George S. Howard, regular conductor, Mr. KEARNS has led the musicians in Europe, Iceland, and this country.

Last year, Mr. KEARNS joined the Air Force Orchestra in Denmark and conducted the Irish Suite by Leroy Anderson at 10 concerts there and in Germany. The sight of an American legislator conducting a symphony orchestra was surprising but appealing to the Europeans.

"It was a thrilling experience," Mr. KEARNS said. "One official told us the concerts were worth more to the United States toward improving foreign relations than 500 communiques or a thousand speeches.

"The orchestra gave an all-American program. The audiences were familiar with Beethoven, Brahms, and the great masters, but the idea was to bring our music to them—show them we had fine composers, too.

"An especially big hit was a solo on the harmonica, a German instrument, from Gershwin's Rhapsody in Blue. The audiences also demanded encores from our singer, who did some Negro spirituals.

"When I conducted, I always made a reference to the musicians as our 100 musical ambassadors—which I think they were. The boys said they liked the promotion."

Mr. KEARNS again joined Colonel Howard on the podium earlier this month, in the Representative's home district. They conducted the all-State band, composed of the best high-school musicians in Pennsylvania, at Meadville.

In Congress since 1947, Mr. KEARNS first appeared with the Air Force Orchestra as a baritone soloist, back in 1948.

"We gave the performance at the Department of Interior auditorium after only one rehearsal," Mr. KEARNS remembered. "I forgot the last eight bars of my number but George and the boys played on beautifully."

---

[1] The Agency's overseas personnel and activities are known as USIS (U. S. Information Service).

Mr. KEARNS worked his way through college as a railroader. He received his doctor's degree from the Chicago Musical College.

While at the latter institution he sang in five operas with Irene Dunne, later to become a famous movie star. Mr. KEARNS spent 3 years with the American Opera Co. and was a concert baritone.

He was a teacher and supervisor of public schools in Greenville, Pa.; dean of men and head of the music department of Slippery Rock State Teachers College and Superintendent of Schools at Farrell, Pa., before being elected to Congress. He knew Colonel Howard when the latter was head of a music college.

Mr. KEARNS has high praise for the Air Force Orchestra and believes it to be the third best in the world, rating only the New York and Boston symphony orchestras ahead of it. He says he considers overseas appearances by our military musical groups are fine weapons in diplomatic psychological warfare.

The Air Force band and orchestra can resolve itself into a 100-piece marching band, a 90-piece symphony orchestra, an 85-piece symphonic band, a 25-voice glee club (the "Singing Sergeants") and 5 dance bands including the "Airmen of Note" and the "Crew Chiefs."

The band has appeared on 4 continents and toured 26 countries. It played to 100,000 people nightly for 17 consecutive nights at Chicago's Soldier Field and 50,000 people daily for 34 days in Toronto, Canada. It played before 250,000 people at Soesterburg, Holland, and holds attendance records in 21 foreign cities.

The orchestra's weekly recorded broadcast, A Serenade to Britain, a half-hour show transcribed for the British Broadcasting Corp., is heard by an estimated 11 million listeners. World-wide USAF Band radio programs have 40 million listeners weekly.

Mr. KEARNS is justifiably proud to conduct this fine group of musicians. The orchestra plans to practice more or its musical diplomacy abroad and the legislator-conductor will be with them in the future when he can get off from his full-time job on the Hill for his part-time vocation on the podium.

[From the New York Times of February 5, 1956]

MILITARY ORCHESTRA—SEVENTH ARMY SYMPHONY WINS EUROPE'S RESPECT

(By Paul Moor)

STUTTGART.—Josef Haeusler, music critic on the Badisches Tageblatt in Baden-Baden and a man whose opinions are respected in Germany, recently wrote the following about a concert by an American orchestra in the studios of the Southwest German Radio:

"Characteristic of the orchestra is an exceedingly responsive, bright, at times sharp or even aggressive sonority, which, although it suffers from occasional unevenness of intonation, revels in its brilliance and intensity. This is transmitted through the strong impulses of a deep and vital pleasure in performing, which makes the playing a living expression."

He was writing not about any of the major American orchestras that have toured Europe in the last few years, but about the Seventh Army Symphony, an improbable military organization (the only one of its kind in the world) that is also quite possibly the busiest symphonic group in the world—it played 258 concerts all over Europe in 1954 and 1955—and certainly one of the most successful American good-will ambassadors on the international scene.

HIGH STANDARDS

Providing uncompromisingly high-standard programs for GI and civilian audiences, the orchestra has won enthusiastic audience reception and respectful critical attention wherever it has played during the 4 years of its existence.

It has maintained its excellence in the face of a tremendous problem that no conventional orchestra has to face: when a man's military service is over, he goes home, no matter what time of the year it is. The average time a man spends with the orchestra is only about 14 months, and the turnover is literally constant.

The orchestra was established in the spring of 1952, thanks in large measure to the sympathetic interest of Lt. Gen. Manton Eddy, then commanding officer of the Seventh Army. One story has it that the twitting General Eddy got from his German friends about the cultural level of "Hillbilly Gasthaus," and some other programs on the American Forces network, played a certain part.

ARMY MEN

The orchestra's schedule would probably kill an organization less young and resilient. These men are, after all, in the Army, and their duties as soldiers, on top of their rehearsal and concert activities, result in what would be a punishing routine even if one overlooks the tremendous amount of traveling required of them.

The educational background of its first violinist, 27-year-old Philipp Naegele—he studied at Queens College, Yale and Princeton and has a Ph. D. in music history and was a Fullbright scholar—is somewhat above the orchestra's average, but not terribly much so.

Pfc. Ronald Ondrejka, 23, former violist in the orchestra and its present conductor, has two degrees from the Eastman School of Music and formerly played in the Rochester Philharmonic. His predecessor was the brilliantly gifted Kenneth Schermerhorn.

Schermerhorn took over the Seventh Army Symphony from James Dixon, a Dimitri Mitropoulos protégé now at the University of Iowa. When Ondrejka's service time is completed early this year, his successor will be chosen in open auditions by a group of German symphonic and operatic conductors.

AUDITION WINNERS

In the case of the last three conductors, each was the orchestra's assistant conductor before winning the auditions for the top job. The orchestra's present assistant conductor is Pvt. Henry Lewis, a serious and gifted 23-year-old Negro who played bass in the Los Angeles Philharmonic for 4 years before he was drafted.

Probably the orchestra's greatest advantage, as far as competing artistically with European groups is concerned, is that special verve, dash, flair, or whatever you want to call it that musicians seem to have from being American and being young. They really play American—and this is what makes their audiences in Europe sit up and blink, for it is a quality of zest and alertness not identified with European orchestral tradition. At its best, the orchestra is technically no match for dozens of professional orchestras here, but that special quality, that flair, makes up for many technical shortcomings.

To the orchestra's particular credit is the fact that the Seventh Army Symphony has given many European audiences their first chances to hear works by Aaron Copland, Walter Piston, Samuel Barber and other American composers. But this is only part of the orchestra's accomplishment in the field of goodwill; for, by having won many a European's respect for Americans as composers and performers, it has also won a new general respect for the land whose uniform its members wear.

Readiness in the Furtherance of National Security

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 16, 1956

Mr. VAN ZANDT. Mr. Speaker, Adm. Arthur Radford, Chairman of the Joint Chiefs of Staff, delivered the following address before the national council meeting of the Reserve Officers Association, Sheraton-Park Hotel, February 11, 1956:

READINESS IN THE FURTHERANCE OF NATIONAL SECURITY

(Address by Adm. Arthur Radford, Chairman of the Joint Chiefs of Staff, before the national council meeting of the Reserve Officers Association, Sheraton-Park Hotel, Washington, D. C., February 11, 1956)

Joined as we are by the comradeship that has linked us in past wars, we can speak candidly and honestly to each other with the cordial understanding that comes from knowing our objectives are the same.

You need not be reminded that we meet in a precarious time. Past wars, together with the tensions of these modern times, have placed strains upon the seams of our world structure. Before the dangers are past, there probably will be further and more trying complications.

Jointly, the first desire of our Armed Forces, active and reserve, is the security and well-being of the American people. Having built an American system of life based on freedom, moral integrity, and justice, we want no alien way of life imposed upon us.

Because we seek the security and well-being of the American people, we must work for peace and strive to prevent war. Our national policies are dedicated to this achievement. Our efforts are bent to this end.

But, unfortunately, the postwar years have ben overshadowed by a world conspiracy which seeks control over all world areas in the name of international communism. Too frequently, this is only a banner for old-fashioned expansionism. Certainly, it is an aggressive conspiracy, as elastic and ingenious as it is persistent.

Today, the Communists are utilizing the more flexible tactics of cultural, economic, diplomatic and technical assistance. They are trying to infiltrate South Korea, southeast Asia, Africa, and South America. They are penetrating the Middle East with military and economic missions.

We know the Communist leaders often practice the tactics of zig and then zag—advance, retreat, and then advance again. Accordingly, it is necessary for us to remain well prepared to meet current and future Communist tactics which pose a less obvious, though no less dangerous, threat.

READINESS ROLE

Because of this, the role of the military in national security, in peace as well as in war, is a tremendous responsibility.

Our first requirement is to be strong enough, and ready enough, in all departments to deter any method of aggression that the potential enemy may choose.

In addition, and in case a deterrent is not enough, we must have a sound foundation of military power with which to counter an enemy's blows, and upon which to build the forces that can win a major war.

Of course, these two tasks are interrelated, and they overlap. Together they indicate clearly our primary role for service to the United States.

Our primary military role in the furtherance of national security is a readiness role. It is to help prevent war if possible; and to be ready to win it is if occurs.

For this, you and I must have the education, the background of military knowledge, and the scope of imagination which will always enable us to perform our roles in military areas.

Readiness is our watchword. It means preparedness. It is your response to your country's call; and it is mine too.

Readiness is fitness and competence. It takes years of practice. It requires training. Training means skill, and skill produces efficiency. From efficiency, we achieve economy of human life and resources.

FORCES

Right now the bill for defense is high.

Security from military aggression is a relative and inconstant condition toward which we strive but seldom achieve. There is no yardstick that one can apply mathematically to a nation and say categorically, "This is adequate" or "That is sufficient" for our security.

Twenty-five years ago the strength we have under arms today would have been adequate for our defense. A force considered adequate today might readily be insufficient or obsolescent a few years hence.

Actually, our security needs change with shifts in the world's distribution of power, with developments in science, with changes in political governments, and with economic fluctuations. For all practical purposes, there is a continuous process of evolutionary change.

Hence, the forces we seek to maintain must be qualitatively select. And so they are. United States Armed Forces today include ground, naval, and air forces in size and capability comparable to our responsibilities and to the threats we face. They are additionally designed to help satisfy our security needs over a long period of time.

All of you here tonight can recall from personal experience how costly military unpreparedness can be. It probably would be safe to say that you can recall personally at least two rapid buildups, and some of you may remember a third.

These peaks and valleys of the graphs depicting our military strengths over the years also depict our alarm in an emergency, and our apathy in peacetime. Such is the graph charted from Lexington and Concord all the way to Korea.

But no more. Gone are the cycles of feast and famine. In their place, we have a defense program which emphasizes an effective flexible type of power which can be maintained for an indefinite future.

Development of sound, long-term security requires stability—stability which is not materially disturbed by every psychological effort of unfriendly nations, or by wishful thinking on our part.

It also requires that we design our forces so as to assure a steadily increasing efficiency in phase with modern scientific advances. In no sphere of life is there greater activity and progress than in those matters which pertain to war.

In this regard, whenever our research and development programs produce improvements in weapons which indicate changes in warfare, the services change the emphasis as rapidly as it is safe to do so.

In fact, an orderly readjustment of our military forces has been taking place for the past 3 years. This adjustment has established a military strength level just below 3 million. The composition of air forces, fleets and ground forces have been affected, both in type and variety. But the changes have been made in an evolutionary manner, and as the result of deliberate and painstaking planning.

Sometimes the forces recommended by the Joint Chiefs of Staff are criticized by partisan enthusiasts for one service or another as having arisen from a "dividing-up-the-pie." Some critics say: One combat wing for the Air Force, two aircraft and a carrier for the Navy, and a half a division to the Army, plus a small dividend for the Marines—as though dividing up the pie would make everyone happy.

But such criticism is as unfounded as it is ridiculous.

If the Joint Chiefs of Staff could guarantee that any one of the armed services could by itself protect the Nation, we would subscribe enthusiastically to the proposition of putting everything we had behind the one service.

And if we could determine definitely that any particular element of one service were unnecessary, we would scrap it and put the money into something else.

But we cannot. No one weapon, or one service, or one form of military action is considered sufficient to meet all our security needs.

Hence, our program is geared to the maintenance of forces which could be used in a variety of situations whenever and wherever required. Our forces must stand ready to cope with limited wars waged by Communist satellites or a world war III, if one should be forced upon us. As President Eisenhower has said: "We will never commit aggression, but we must always be ready to defeat it."

Currently our primary emphasis is on airpower. We want the greatest airplanes in quality, the best aircraft carriers, the most efficient guided missiles, the finest crews, and a comprehensive system of bases. We also seek increases in the capabilities of other selected forces—armored, airborne, antiaircraft, antisubmarine, and amphibious forces.

Conditions, of course, may change for better or for worse. Should there be a fundamental change in the situation, the military requirements for security would change too.

COLLECTIVE FORCES

As if the determination of United States Armed Forces were not difficult enough, the United States also must continue its readiness to help our much needed allies maintain and build up their armed forces.

Is the money we are putting into our military aid programs a necessary investment? Or would it be better to add this money to the buildup of our own defense forces here in the United States?

In my judgment, it is a necessary investment. For an indefinite period—and that may be a very long time—our job is to stay strong and to help our allies stay strong.

There are many reasons for this. For example, should the natural resources, the industrial capacity, and the skilled manpower of other world areas become lost from the allies, and added to the Soviet Union, you can see that the strength on the Communist side of the ledger soon would be in their favor.

It so happens that the Communists are continuing to work for the piecemeal collapse of our friends and allies. Since this backdoor approach does not constitute a direct attack on us, they hope we will be tempted to sit back and let them undermine Western unity and defense.

Then they could pick off free nations one by one. They think if they can spread fright and disunity, we will become rattled; and some free nations will move in one direction while we move in another.

As it has happened before, so can it happen again. It would be folly for free nations merely to look on and tolerate all this, gazing as if at a hurricane, hoping it will not hit us, but making no real attempt to protect ourselves against it.

No one nation is really in a position to execute all its security tasks by itself alone. To achieve a lasting security, nations who desire to remain free must gear their programs to the requirements for security of others who cherish freedom.

Now the composition of collective armed forces is not a simple or easy decision for free nations to reach. Not all nations see things exactly like. Each has to evaluate the potential enemy and the courses of action he might choose. Each has to consider localized war-by-satellite moves, and the ultimate possibility of total war as well.

And when we put all our considerations together, we all do not necessarily arrive at the same conclusions.

But there are two conclusions which seem fundamental.

First, collective strength is a logical, most persuasive argument to materially minded Communist leaders. Knowledge that the free world can and will retaliate swiftly and decisively at places of our own choosing, is a powerful deterrent to Communist military ventures.

And second, by pooling our resources—material, human, and moral—we can best present a united front. While there must be, of course, certain enlightened limitations on the extent to which any nation contributes material and human resources, there should be no limitations on the extent of its moral contribution.

ROLE OF RESERVES

These are some of the facts of life. These are a few of the concepts which constitute the basis for the defense planning of our United States Armed Forces and the collective armed forces of the free world.

The keynote is readiness to fight today's war when, where, and if called upon.

We want peace—a lasting peace—but not at the expense of our freedom and the integrity of our human liberties. We hope fervently to prevent war by assuring the world that we are resolved to maintain a military and moral strength to meet an attack from any quarter at any time.

To these ends, Ready Reserve forces are essential to our defense posture. They are a realistic component of our current defense program, and they help stabilize our military programs for the long pull.

Gentlemen, this is an important area of military programing in which I hope we never become self-satisfied. Building and maintaining Ready Reserve forces will require constant vigilance, direction, planning, and programing. The heart of your program must be readiness.

We in the Department of Defense know your contribution to the total military strength of the Nation. Your country needs you. You have tremendous responsibilities. I hope you will always do everything possible to help increase your readiness, and the readiness of our Active Forces, in the furtherance of our national security.

H. R. 1823

EXTENSION OF REMARKS

OF

HON. LEE METCALF

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 16, 1956

Mr. METCALF. Mr. Speaker, roadblocks are troublesome things. They delay you in getting wherever it is you are going. Sometimes they force you to change your plans because of the delay. Often, of course, they are necessary for

the public welfare or safety, and the inconvenience can be overlooked for a short time.

But a permanent roadblock standing in the path of more than 40 million Americans year after year is another thing. It forces those millions of Americans to seek some detour, some means of reaching a destination they fear can never be reached via the blocked main highway.

It is a roadblock like this that has resulted in attempts for the past several years to build a detour such as H. R. 1823.

The roadblock, so old and solid that it appears incapable of removal even with the concerted effort of these millions of Americans, is the inadequate appropriations granted each year for recreation facilities in the national forests of our country. At first glance this roadblock might appear to be penny-wise and pound foolish. But even that old phrase does not fit the situation—this roadblock is penny foolishness.

The detour has been under construction during four Congresses. It is still not open to traffic, but with one more push during this construction season it can reach its goal.

What is this detour? In the main it is the same route as was proposed in the Tackett bills of the 81st and 82d Congresses and the Baker bill of the 83d Congress.

It establishes public recreation use of the national forests as a congressional policy; there is no such policy now.

It sets aside 10 percent, but not more than $5,500,000 yearly, of the revenues of national forests for development, maintenance, and operation of national forest recreation facilities, safety, and sanitation; for more than 40 years there has been a similar setting aside of forest revenues for roads, schools, and trails, but there has been none for recreation.

It provides that in those few forest areas where fees are charged for use of recreation facilities—and it should be noted such charges already are being made—all of the money received must be spent on recreation facilities. And it limits the recreation fee-charging authority of the Forest Service in two ways. The Service would be permitted to make charges only for use of those recreation areas which are especially equipped and substantially improved. And the Service would be permitted to make charges only for those areas in which the amounts estimated to be so collected would justify the expenditures necessary to make the collections. The Forest Service estimates that only for 200 of the 4,700 improved picnic and campground areas could fees be charged under the standards established by this legislation. At present, the Forest Service's fee-charge authority is not limited by law. Also, it should be pointed out that receipts from such charges as would be made under this bill would be deducted from the amount of funds made available under the other section of the bill which calls for setting aside of 10 percent of all national forest revenues for recreation facilities.

May I point out that the House Appropriations Committee of the 81st Congress, in its report on the Department of Agriculture appropriation bill for fiscal year 1950, declared:

> One of the activities of the Forest Service requiring considerable amounts of money is that of the construction and maintenance of facilities in recreational areas on the national forests. The committee believes it is entirely possible as well as right and proper that the Forest Service should impose a schedule of charges upon those using the national forest recreational facilities sufficient to offset the expenditures required for the construction and maintenance of the facilities. The principle of requiring the recreationist to pay the cost of services incident to his use of the facilities is recognized and such requirements are imposed and enforced in many places in the Forest Service.

I have been pleased to learn of the widespread support which is being given this bill, H. R. 1823. Many sportsmen's and conservation organizations have been joined by other groups in backing the measure.

Among the national and international organizations which are supporting this bill are: National Wildlife Federation, Izaak Walton League, Wildlife Management Institute, International Association of Game, Fish and Conservation Commissioners, Outdoor Writers Association of America, National Parks Association, American Nature Association and the General Federation of Women's Clubs.

Grassroots support is evident in abundance also. Among the many State and local groups which have affirmed their backing of the bill are the Conservation Federation of Missouri, League of Ohio Sportsmen, Vancouver Chapter of the Washington Wildlife League, Montana District Council of Lumber and Sawmill Workers, and many more.

The national forests, comprising 181 million acres in 38 States, Alaska and Puerto Rico, provide the last great public-access area for millions of sportsmen. The Nation's farmlands and private forests can no longer accommodate the growing army of Americans seeking recreation in the out-of-doors.

More leisure time, the ever-shortening workweek, longer vacations, better highways, more automobiles, improved living standards—and perhaps above all a deeply felt desire of mankind to get back to nature—explain this movement. Barbecue grates in the backyards, picnics in the city parks, camping trips in the solitude of the forests—all are a part of this trend. It is becoming vital for the health of America that we citizens have opportunity to get away from it all and enjoy our natural surroundings. Many of our social and health problems would be reduced if we could get more people into the open more often. Particularly in this regard, I think of the juvenile delinquency which is a national problem.

The importance of our national forests in this connection cannot be denied.

A major part of our big game herds, as well as large supplies of game birds and small game, are found in the national forests. Within these forests are some 81,000 miles of streams and more than 2 million acres of lakes, open to public fishing.

Over and beyond the millions of hunters and fishermen, many millions of citizens turn to the national forests each year for other forms of outdoor recreation: for picnicking and camping, for nature study, for winter sports, or for plain, unscientific enjoyment of fresh air and the out-of-doors.

Because of their wide distribution, the forests are the most generally accessible large public areas adapted to outdoor recreation in the country. National forests are only a few minutes driving time from urban areas; for example, Denver, Duluth, Sacramento, San Diego, Tallahassee, Spokane, Albuquerque, Butte, Phoenix, Portland—both Portland, Oreg., and Portland, Maine—St. Louis, Asheville, Erie, Houston, Salt Lake City, Seattle. The Angeles National Forest adjoins the great metropolitan area of Los Angeles.

The Forest Service does not encourage urban types of recreation because of a belief these should be enjoyed in city and county areas. The Service tries to keep the facilities simple and appropriate to the environment. The Service does not conduct tours, give lectures, or sponsor organized sports. National forest recreation supplements the recreational facilities of States, cities, and the national parks, and does not compete with or duplicate them.

No one form of outdoor recreation can satisfy all people. The national forest recreation development has been that for which the particular area is best suited and for which the need is evident.

Consider the variety of features and recreation resources of the various forests. Gorges, waterfalls, natural bridges, wildlife refuges, ponds, scenic drives, glaciers, totems, observatories where bear can be watched fishing for salmon, 120,000 miles of riding and hiking trails, cliff dwellings, wilderness areas, buffalo herds, ice caves, medicinal springs, prehistoric ruins, volcanic lava flows, old immigrant trails, Indian pictographs, the last home of the giant California condor, virgin timber, flows of mineral water, giant redwoods, deep canyons, Pikes Peak, cypress swamps, palm forests, scenes of Indian massacres, fantastic wind-and-water-worn rocks, bayous screened with Spanish moss, caves, beaches, fossil beds, ghost towns, ancient pueblo ruins, scenic lookout points, beaver colonies and their many dams, flower-filled Alpine meadows, tropical trees, orchids and tree ferns, huckleberries and mushrooms in profusion, and beautiful stands of all kinds of trees.

Just standing and looking at all those features would take several lifetimes. But the list of what people do in the national forests includes much more than mere looking. Hiking, camping, fishing, hunting, picnicking—all come to mind easily. Add to those such activities as swimming, boating, mountain climbing, horseback riding, pack trips, photography of wildlife and scenery, dude-ranch vacationing, canoeing, skiing, tobogganing, snowshoeing, bow and arrow hunting, wildflower viewing, rock collecting,

trailer camping, "John-boat" float trips, ice fishing, bird-dog field trials. Surely there is something here for everyone—just like a political platform.

People of all walks of life enjoy and use the national forests. For many of the poor people of this Nation they are by far the finest outdoor recreation facilities available. The man who is a low-wage earner is able to go into the nearby forest, camp out inexpensively, and enjoy the great out-of-doors fully as much as any of his more fortunate neighbors. Here he finds the greatest public hunting and fishing areas in the Nation—millions of acres without a "No trespassing" sign. The States manage the fish and game, and State licenses are required for hunting and fishing. The Forest Service and the State cooperate closely on management of the habitat.

The forests are open to all who come to enjoy them. In 1924 there were 4 million recreational visits to the national forests. In 1946, 18 million visits were reported. Last year there were 45 million recreational visits to the national forests. If the present rate of increase merely continues and gets no larger, the recreational use of the forests will be 80 million visits annually by 1963.

Of the past year's 45 millions who used the forests, nearly one-half are credited with having gone to picnic grounds, camping areas, and similarly improved locations. About one-third went into unimproved areas and wilderness areas as campers, hikers, hunters, fishermen, and trail riders. Most of the remainder were cared for at organized camps on land leased from the Forest Service; these people represented the least cost to the Federal Government inasmuch as full responsibility for the care and maintenance of the areas and buildings was assumed by the sponsoring organizations; in such cases the Forest Service usually needs only to follow regular inspections with suggestions for improvement. On the other hand, little is provided for the sanitation and care of camp grounds in the so-called wilderness areas, with the result that too often they are neglected. The heaviest cost to the Forest Service is in connection with the more than 20 million people who use the picnic and camping grounds. Yet the Forest Service in the latter instance is able to spend only some 8 cents per visit.

The importance of the national forests for the many forms of outdoor recreation is a fact created and recognized by the American public.

In my State of Montana, the Forest Service is able to spend only about $60,000 annually on recreation facilities. Only $60,000 for facilities that attracted 1,311,000 persons during 1954.

Tourism is a great industry in Montana. It is estimated that tourists spend $80 million a year in the State, making vacations the State's third largest industry.

National forest recreation is important from the standpoint of the economic well-being of many communities—not only in Montana, but across the Nation.

Because of the importance of the forests for recreation, in some areas the States, counties, and cities have attempted to fill the gap. These governmental units have contributed generously toward the operation and maintenance of national forest recreation areas which are greatly used by local people. In 1954, contributions in money, time and materials which were reported by the Forest Service from these sources totaled $1,250,000. California, Utah, Colorado, the cities of Tucson, Salt Lake City, Ogden, Denver, Los Angeles, and others are helping to keep conditions passable on some heavily used areas. Some 10 percent of this $1,250,000 was turned over to the Forest Service, and the Service performed the work; the remainder was done by the cooperating local governmental bodies and organizations themselves.

These local governmental units have been doing as much for recreation in our national forests as has the Federal Government. Our national forest recreation appropriations for the past 5 years have been as follows:

Year:	*Appropriation*
1952	$611,900
1953	646,000
1954	940,000
1955	970,000
1956	1,670,000

Richard E. McArdle, Chief of the Forest Service, has declared:

> Our most urgent and immediately pressing problem is to get on top of the job of adequate cleanup and maintenance of existing recreational improvements. Although we have had some recent increases in appropriations, although we have shifted part of the load to concessioners, and although we have been getting more cooperation from local agencies, we are losing ground.

Chief Forester McArdle mentioned another way in which the forests have been kept open for public use despite the lack of adequate appropriations. That is the shifting of responsibility onto the shoulders of concessioners. Concessioners have been allowed to operate most of the larger and especially equipped campgrounds and picnic areas—the few locations in which a special charge is made to users. Areas operated by concessioners help by relieving the Forest Service of the cost of cleanup and maintenance at these areas, but it is only a partial solution. As I noted earlier, the Service estimates that at most there are only 200 of the 4,700 improved campground and picnic areas that are large enough and improved to sufficient degree to be profitably operated as charge areas. The public fees at these charge areas now average 15 cents per person per day. In addition, of course, there are concessions for resorts, organizations camps, summer homes and winter sports areas, all authorized by permit. The total annual revenue from these limited charges is some $500,000. It is not being reinvested in forest recreation facilities, but is going directly into the Federal Treasury.

Because the money available from all sources simply hasn't been enough to meet present needs, much less keep up with the growing demand for more facilities, the Forest Service has found it necessary to close a number of recreation areas. At least, we in Montana have been fortunate. Thus far no national forest recreation facilities in Montana have been among those closed because of deterioration and lack of sanitation.

These recreation facilities, built in large part by the CCC and other emergency agencies 20 years ago, are simply worn out. And seemingly no amount of persuasion can wrest the money needed for these facilities from our traditional appropriations process.

Testifying before a Senate Subcommit on Appropriations in 1952, the Forest Service administrators estimated that an immediate capital investment of $7,169,000 was needed to provide satisfactory facilities for sanitation and public safety and to rehabilitate all essential public-use areas. They estimated at that time that $17,135,000 was needed to expand the capacity of existing recreation areas and to construct new areas to take care of the public overload. The total capital investment needed in 1952 was more than $24 million. They did not get the funds.

Now, 4 years and some 150 million visitors later, the Forest Service still believes that approximately $24 million would fill the capital investment bill, and that $3,300,000 yearly would take care of current cleanup and maintenance.

I believe that over the course of several years these needs could be met by reinvesting a portion of the forest receipts in these recreation facilities. Forest receipts in fiscal 1955 exceeded expenditures by some $18 million. The profits went into the Treasury.

It is because of the failure after failure which has been the lot of all attempts to increase the flow of appropriations for forest recreation purposes that I introduced H. R. 1823. The purposes of this bill should be familiar; hearings were held on similar bills during both the 81st and 82d Congresses, the Tackett bills, and during the 83d Congress, the Baker bill. This is not a new proposal.

In the 81st Congress the bill was objected to on the Consent Calendar. In the 82d Congress it was tied up in the Rules Committee. In the 83d Congress it failed to receive consideration in the Agriculture Committee because of the press of other legislation.

In business a continual reinvestment of a portion of the profits is just plain good business. In government, however, it brings forth objections from purists who held that such detouring of the appropriation process is not provided on the map of government. I appreciate their concern for the purity of this theory. But I also know of the crying need for increased funds for recreation facilities in the forests. And I know of the continual failure to win necessary appropriations. Detours are not shown on the road maps, but they exist and they serve a worthwhile purpose.

I believe that if the detour permits the reinvestment of funds only in those cases where the revenue is plowed back into the operation itself, there is a sound basis for distinguishing that practice from that of setting aside funds out of general revenue.

We have several precedents for this reinvestment of revenues.

The Migratory Bird Stamp Act of 1934 allocates funds in this fashion.

The Pittman-Robertson Act of 1937 and the Dingell-Johnson Act of 1950 provide for excise tax on sport, hunting and fishing equipment, and the funds so collected are administered by the Fish and Wildlife Service under a Federal wildlife restoration program.

Above all, for more than 40 years there have been two such precedents right in the national forests themselves.

Ever since 1908, 25 percent of all money received from the forests has been reinvested in public roads and schools in counties in which there are national forests.

And since 1913, 10 percent of all national forest receipts have been reinvested by the Forest Service for construction and maintenance of roads and trails within the forests.

I might note that the reinvestment for recreation of another 10 percent of the receipts or not more than $5,500,000 annually, as proposed in H. R. 1823, will not reduce the funds set aside in the above two acts.

Also it should be pointed out that in those two acts there is no limit on the amount that can be expended yearly. The proposed $5,500,000 limit on recreation facility expenditures in my bill is one the Forest Service believes will be adequate for current work and a reasonable amount of progress on the backlog of needed capital investments—and so that limit on spending is provided in the bill. This is no blank check.

Recently two special governmental commissions—the Commission on Intergovernmental Relations, known as the Kestnbaum Commission, and the Commission on Organization of the Executive Branch of the Government, known as the Second Hoover Commission—made comments of interest.

The Kestnbaum report recommended that the allocation of revenues for particular purposes as done under the Pittman-Robertson and Dingell-Johnson Acts be discontinued, but the Report made no criticism of the allocation of revenues which have been made in the case of the national forests for more than 40 years. Further, in listing arguments against its recommendations, the committee reported:

> The Pittman-Robertson and Dingell-Johnson Acts have been supported strongly by State and Federal wildlife and conservation organizations. * * * State fish and game officials, almost without exception, favor the present pattern of operation under these acts. * * * The State conservation officials do not believe that earmarking in itself is undesirable. Many cases of earmarking commonly accepted, such as the apportionment of tax to schools, roads, township, county governments, have been in effect for many years. * * * Earmarking becomes undesirable only when so large a portion of the available total funds are earmarked that legislation looses its flexibility and ability to adjust for changing needs.

The Kestnbaum report also recommended "that recreational programs be formulated and carried out with full recognition of the fact that all levels of Government have a responsibility for developing and maintaining adequate facilities for recreational purposes, and that these facilities be administered with adequate protection against the hazards of fire, bad sanitation and undue traffic risk. Provision of recreational opportunities has become increasingly important because of changes in conditions and ways of life. Our increasing population, urbanization, and mobility, and the advent of the shorter workweek and paid vacations have changed tremendously the recreation habits and desires of the people. All levels of government have a definite responsibility for providing adequate facilities for outdoor recreation."

The Second Hoover Commission's report on water resources and power recognized the need for more funds for forest recreation, noting that facilities in national parks, monuments and forests are overcrowded, that waterfowl numbers and fishery resources are on the decline, that there is a critical present need for great outdoor recreational facilities for both weekenders and vacationers. The Hoover Report declared national recreation needs will be accelerated in the years just ahead because of increasing population, shorter work periods and greater leisure, and advances in spendable income.

Fifty years ago when the Forest Service came into being, it was directed to operate the national forests with this goal:

> All land is to be devoted to its most productive use for the permanent good of the whole people, and not for the temporary benefit of individuals or companies. * * * and where conflicting interests must be reconciled the question will always be decided from the standpoint of the greatest good of the greatest number in the long run.

I believe that in keeping with this statement of basic policy, our national forests must be enabled to meet the recreational needs of millions of Americans. I believe that, in view of past experiences, the only way to adequately meet these needs is through passage of H. R. 1823.

Most people do not like detours. I do not like them; they usually are not as well designed as the main highways; they may not stand up well under long usage; they may take longer to arrive at the destination. But they do arrive there. And that has not been the case on the roadblocked main highway for forest recreation appropriations.

H. R. 1823 is a detour. But it is not the first detour that has been built. Other such detours in connection with the national forests are still standing up well after more than 40 years of use. The choice is clear. It is time to open this detour for the American public.

Golden Opportunity for the Kremlin

EXTENSION OF REMARKS
OF
HON. HAROLD C. OSTERTAG
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 16, 1956

Mr. OSTERTAG. Mr. Speaker, Premier Bulganin of Soviet Russia has twice proposed a treaty of friendship with our Government in recent weeks. President Eisenhower wisely rejected the offers, pointing out that it is deeds and not words, which create international confidence and bespeak the true motives underlying national policies—deeds, for example, such as assisting to the status of nationhood some 600 million people—the record to which the West can point, since World War II.

Today, on the 38th anniversary of the independence of Lithuania, Premier Bulganin and his colleagues in the Kremlin have a golden opportunity to prove their good faith, by a comparable deed which could illuminate the pages of history for all time to come. All they need do is restore independence to Lithuania, as an initial step in a systematic program of freeing all of the subjugated peoples behind the Iron Curtain.

Such a deed could lift men's spirits throughout the world. It would give substance to the Kremlin's protestations of noble motives, and dispel the specter of nuclear warfare that now haunts the world.

Will the Kremlin seize this golden opportunity? I am afraid not. And until it does, we shall do well to examine carefully any proffers of friendship.

Meanwhile, let us join in tribute to the unconquerable spirit of the peoples of Lithuania and their Baltic neighbors, whose will-to-resist has never been broken. Their courage in the face of tyranny, their inflexible determination to restore their lands to freedom and independence, will unquestionably be rewarded, one day, in the reemergence of sovereign, independent nations.

American Legion Auxiliary Observes Lincoln's Birthday in Springfield, Ill.—Address by Mrs. B. D. Ward, National President

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 14, 1956

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks, I am inserting the address of Mrs. B. D. Ward, national president of the American Legion Auxiliary, at the annual Lincoln Day ceremonies on February 12 at Springfield, Ill. Mrs. Ward in her address pointed out the outstanding characteristic of the martyred President, namely, the gift of understanding. Would that the world in this generation could have the foresight of Mr. Lincoln.

LINCOLN'S BIRTHDAY MESSAGE

To Mr. Lincoln's tomb, I bring the annual birthday remembrance of American Legion Auxiliary members around the globe. This wreath is but a symbol—that his name lives on with us, ever green; and that our gratitude for the Nation he preserved us continues, unbroken, from generation to generation. In every other respect, it is the least of the gifts we bring him on this 147th anniversary of his birth.

Perhaps the greatest of these gifts—and the one he would appreciate most—is the gift of understanding much about him that was obscured by the confusion of events, the prejudices, and the conflicts of his own times. Today we face many of the same problems that he faced in preserving the union, only on a larger scale. For these United States are now charged with providing leadership for liberty-loving nations in a world that is half free and half slave. And, as self-governing citizens of this Republic, each of us must make and support decisions of far-reaching consequence. As we fully awaken to the heavy responsibilities upon us, we can do worse than look back for guidance to the examples he made us.

He met the problems of a nation divided against itself with infinite patience and capacity for restraint, seeking only to reconcile those differences and make in whole again. Today we face a world that is in the same deplorable plight. Our problems are even heightened by the fact that we are without common language, customs, and culture to help bridge our differences. We have great use for his patient understanding, his forbearance, his compassion, his deep respect for the rights of others.

His unshakable faith in liberty as a God-given right, and in the power of men to govern themselves was not betrayed in his time, nor must we let it be in ours.

He accepted crushing responsibilities and, in the face of formidable opposition, stood for what he believed—not because it was universally popular, but because somebody had to do it. The tasks that lie ahead of us call for much of the same high dedication and stamina on the part of each individual citizen. We are not finding that lacking.

And so, if I could speak to Mr. Lincoln today, it would be to assure him that now, nearly 100 years after his lifetime, mothers in increasing numbers are recognizing their responsibility to sit down and teach their sons and daughters these fundamental truths that he somehow found for himself: The fact that freedom is not free. That it has to be worked for. The fact that right is not always the master of might. That each of us holds the power for self-determination, and that the right way for us can often be a hard path to follow. The fact that time is not automatically on the side of the good and the just, but rather, on the side of those who utilize it best. And, finally that if our heritage of liberty and idealism has been worth fighting for and dying for, it is equally worth living for and working for. As these truths go marching on, in the hearts and in the minds of your countrymen, may they always make for a happy birthday, Mr. Lincoln.

Big-City Congressman Discusses Farm Problems

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 14, 1956

Mr. ANFUSO. Mr. Speaker, in the November 1955 issue of Capper's Farmer there is published an article which I wrote for that well-known farm magazine, entitled "Why I Voted for High Price Supports." I believe that many of my colleagues will be interested in the views expressed there.

Under leave to extend my remarks in the RECORD, I wish to insert the article, which reads as follows:

A BIG-CITY CONGESSMAN TELLS "WHY I VOTED FOR HIGH PRICE SUPPORTS"

(By VICTOR L. ANFUSO)

(Brooklyn's "Farm" Congressman: Congressman ANFUSO, author of the accompanying article, is an influential member of the House Agriculture Committee, not because of his knowledge of farming but for what he knows about consumers' food problems. Consumers do not resent farm programs, Mr. ANFUSO declares. High supports for farm commodities assure them of plentiful food supplies at reasonable prices. Food surpluses are good, Mr. ANFUSO believes. But they are getting too much bad publicity. He thinks surpluses could be used to fight communism among hungry and discontented people. He is sponsoring legislation that will make it easier for foreign countries to buy our surpluses. He was in Europe this summer looking for possible ways to increase our farm exports. VICTOR L. ANFUSO came to this country in 1914 at the age of 9, son of an immigrant Sicilian shoemaker. He started his career as a shoeshine boy in Brooklyn streets. A lawyer by profession, he was a colonel in the super-secret OSS in World War II, where he gained some of his experience with Communists. He was responsible for a quarter million letters from American to Italian citizens urging them to vote against left-wing candidates in postwar elections. He is well known also for his fight against juvenile delinquency.)

I honestly can't tell a field of soybeans from clover, and you can sell me buckwheat for cottonseed. But talk about the price of a shirt, or loaf of bread, and I'm your man.

Make no mistake, I'm in Congress to look out for the downtown working man and his family. Three million of them in Brooklyn expect a lot.

As the first city member of the House Committee on Agriculture, I'm obligated to tell the consumer side of the food story. Our big New York metropolitan delegation demanded a spot for consumers on the committee, and I gladly accepted.

Simply, our story is that we need abundant food supplies—at reasonable prices. That's all. If we have that, we're not going to kick. It seems to me there isn't as much consumer resentment about farm programs—and their cost—as is generally supposed.

The attitude of Brooklyn people toward you, the farmers, I believe, is typical. It's this: the working man and his wife don't give much thought to where food comes from—unless prices are high. Then, you get it in the neck along with the middleman. On the other hand, when retail prices are down, they don't give you much credit either.

When a Brooklyn housewife complains to me about the high cost of food, I tell her four things:

Farmers get only a fraction of the total food price. She knows a loaf of bread costs between 16 and 18 cents. But she's surprised to learn the wheat in that loaf is worth only 2 cents to the farmer. Also, if farmers got all their feed grains free, it still would make only a difference of a penny in the price of a quart bottle of milk. The rest goes for transportation, processing, wholesaling, retailing, and to the union truck driver who delivers the goods. She can understand this, for 9 chances out of 10, her husband is a union man.

Farmer income is not high, relatively. She's surprised to learn an average farmer's wife must make ends meet on less spendable income than she does. Her husband probably earns more than $2,800—the average for factory workers.

Grocery and clothing prices would be higher if farmers didn't produce as much as they do. Food costs are not out of line with other things she buys.

Farmers don't have bargaining power to maintain income, like union members do. Nor can they shut down production to fit demand, like industries do. Price supports are the best substitutes for these things, so far.

For these same four reasons I voted for price supports at 90 percent of parity. I know of several "downtown" Congressmen who went along with me after I pointed these things out on the House floor. Frankly, it was these "city" votes which made the difference in the House 206 to 201 vote this year to restore 90 percent supports.

I tell my Brooklyn constituents—and Congressmen who expect me to guide them on farm legislation—it's a myth to believe reduced supports mean reduced consumer prices. High supports assure them of abundant supplies at reasonable prices. While I'm not wedded to straight-on 90 percent, I do think the principle is sound. Eventually, I'm sure we'll be able to develop an even better program.

But flexibles don't solve anything—and they don't help consumers either.

There are other things we can do to lower consumer prices—and still provide a fair return to farmers. For example, Agriculture Committee Chairman COOLEY and I have introduced the so-called terminal markets bill. This calls for modernizing marketing facilities for handling perishable commodities in cities. Building up-to-date markets would cut costs—lead to lower prices for vegetables, poultry, meats, eggs, and dairy products.

We could also spend more research dollars on the use of commodities you produce. A lot of money each year goes for researching farm production problems. While that's extremely important, we should put new emphasis on developing new and more efficient uses for farm commodities. We all benefit from that—and we all pay for it, too, through taxes.

High supports, to my way of thinking, can encourage you to produce needed abundance. On the other hand, they also assure you a living wage if you are forced to trim back production. This, flexibles don't do.

As for surpluses, I think they're a good thing—a sort of consumer insurance which is better than money in the bank. I sincerely believe that some of your own leaders are going overboard in saying surpluses are bad.

We all know how important surpluses are in event of drought, crop failure, or war. But we don't have to wait for a bomb to drop to make them pay off. I know from first-hand experience that lack of food causes discontent. Discontent is fertile soil for communism.

A bushel of wheat, a case of dried whole milk, or a case of macaroni often will do a lot more good in winning support of hungry people than a 6-inch shell or a machine gun.

I suggest two things. First, we should make it easier for foreign countries to get our surpluses. I am sponsoring a bill in Congress to let them get it on credit. Millions of people in countries tottering between East and West are hungry. But their governments often don't have the cash with which to buy our surpluses. My tour of Europe this summer pointed this up sharply. We should also pay at least part of the overseas freight cost of surpluses destined for welfare purposes abroad.

Second, I propose we offer free, and in good faith, our surpluses to the needy people in Iron Curtain countries. This should be done on a people-to-people basis—from American citizens to, say, Russian citizens. If the Soviet government permits it, fine. If they spurn the offer, we would reap favorably publicity throughout the world. I also think time is getting ripe for direct trade with Iron Curtain countries.

Those are some of your farm problems. But consumers have their problems, too. We are as anxious for you to know our prob-

lems as you are for consumers to understand you. Don't underestimate that. This is by no means a one-way street.

One of our biggest worries, and you can understand this, is that more farmers and farm workers might be forced off the land and onto city streets. I believe flexible price supports would speed this up to a dangerous exodus. This would mean more competition for city jobs, increased unemployment.

It could set up a chain reaction eventually reaching back to the farm—by reducing demand for farm products. That's against the best interests of those who produce food and those who consume it—and that includes all of us.

Those of us from industrial areas want to keep our factories humming and our workers working. But how can this be done if we let farm income decline? Unless Congress restores 90 percent supports, you are in for more farm income declines this year and in 1956.

I am alarmed by one of the biggest ironies of our day: Industry is going on to new record-high profits and workers are making more money this year than ever. Practically everybody is enjoying boom-times. Everybody, that is, but the farmer. If this isn't changed soon, agriculture may pull the rest of the economy down into a national depression. We fear the economic chain reaction of a farm depression.

You can see what city folks think of farm prosperity when you consider these facts:

A $1 billion decline in farm income results in a drop of $240 million in farm spending for machinery and equipment. American farmers normally use more steel a year than the amount used in production of automobiles. You use more petroleum than any other single industry. You use enough rubber each year to make 24 million tires. You use enough electricity to supply the combined needs of cities like Chicago, Detroit, Baltimore, and Houston.

This means city jobs.

Farmers also must realize that expenses of city families have risen to a record high in recent years. And when wages fail to keep up with the cost of living city workers reduce their purchases of farm products.

A lot is being made about the fact that farmers now are in the minority, in Congress—and thus may not get a fair break. I don't think this is as dangerous as some people would have you believe. You are engaged in producing food, clothing, and raw materials. You comprise the Nation's No. 1 industry. As far as I can see, food will always come from our farms. We as consumers need to keep you producing.

"Old farm hands" on the Agriculture Committee, like Kansas' Representative CLIFFORD HOPE, keep me in close touch with your problems. In turn, they expect me to keep them abreast of the consumer side of things. This exchange of viewpoints is probably my biggest value on the committee—to you as farmers and to the consumers I represent. This balance is working smoothly—even though I'm 1 of 34 on the committee.

In Congress, I have appealed and will continue to appeal to my city colleagues to help provide the legislation you need. On the other hand, I expect to call upon the lawmakers from rural areas for their support of legislation needed by city people. This means things like increasing the minimum wage and more adequate housing.

When you talk about farmer-consumer relationships, you finally reach the inescapable conclusion that there is a definite interdependence between us. That's just as true as the fact that farm prosperity is essential to the prosperity of the Nation.

We in the cities are hearing a lot about a "consumer revolt" that's supposed to be coming along over farm programs. Frankly, I don't see any sign of one. Are we supposed to rebel? If we are, we don't know it.

I do think, however, that consumers don't know your story as well as they should. They're more confused than angry about price programs and surpluses. If they had access to the facts, I am sure they would understand. I am just as sure you would understand if you knew all the facts about consumer problems.

The machinery to build better understanding between farmers and consumers already is present. Your great farm organizations—whether they recognize the fact or not—have the responsibility of keeping you posted on consumer problems. By the same token, organized consumer groups—such as labor unions—must present your problems to their members. Business and civil organizations, as well as the chamber of commerce, also have a duty to perform in this regard.

Industries, such as agricultural chemicals and machinery makers, have a big stake in a strong agriculture, and should play their part.

When you get right down to it, the American economy is one great unit and all phases of it must be geared to the general welfare and prosperity of the Nation as a whole. Congress must recognize this and provide for it.

Destroying the farmer is no help to the city dweller. The fact is that prosperous farmers are essential to the prosperity of the industrial workers.

Often I'm asked: "How come you're on the Agriculture Committee with that bunch of farmers? What do you know about farming?"

My answer, simply, is this: You don't have to know how to milk a cow to recognize dairy trouble. Farm business is everybody's business. If the farmer is in trouble, we, as consumers, want to know about it. We're proud enough to think we can help.

United States Technical Cooperation and Assistance Program

EXTENSION OF REMARKS

OF

HON. VICTOR WICKERSHAM

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 16, 1956

Mr. WICKERSHAM. Mr. Speaker, I feel compelled to say something about a small bomb that Ezra is about ready to set off that will materially affect the United States technical cooperation and assistance program abroad. It is nothing new or surprising to us for Mr. Benson has just about "slid" the dirt farmers of this country out of business and into bankruptcy by his agricultural policy so aptly described in the editorial in the December issue of Harper's, which called the American farmer a pampered tyrant and indicated that the farmer is a burden to the taxpayers, and that their dole is a permanent right.

At first I was surprised when I heard that Mr. Benson is carrying out a specific act which will pull the rug out from under our agricultural and technical-assistance program abroad.

Right now Mr. Benson has his movers actively engaged in moving the Foreign Training Division of USDA's Foreign Agriculture Service out of the South Agricultural Building into isolated, shabby, and unsuitable offices in a temporary building located at 900 Independence Avenue. What a shame.

It is this foreign training staff of about 40 trained men and women who serve as receptionists, liaisons, training specialists who plan training programs for agricultural diplomats, administrators, and agricultural technicians who come to the United States to find out what has made the farmers and agriculturists of the United States of America the greatest and most successful in the world. These people spearhead the agricultural training programs connected with the internationally-known program for which our great Oklahoman, Dr. Henry G. Bennett, gave his life in Iran while on duty supervising point 4 program activities.

This week, February 13–17, this all-important staff will set up headquarters in this temporary building known as the Escanaba Building, where unemployed people gather to seek work through the United States employment agency located there. A unit of CIA, formerly located in that shack, moved out to other quarters. Remember, this is the place foreign diplomats will gather when they come to this country to get information regarding agricultural training and information. It is also the concentration point where unemployed persons go to seek jobs. This is not the kind of environment to which we should subject important foreign people who we are trying to impress.

Some of our foreign visitors might want to buy some of our surplus farm products. Who knows.

Again I say it is a shame. It is this bad trait of Mr. Benson that keeps him forever tripping the farmers of our good country. He cannot blame this latest move on his letter writers. It appears now that he may be trying to destroy this international agricultural program which also reaches out into economic development, international friendship, international political fields.

Could it be that Benson's efforts to destroy or make ineffective the training for foreign agricultural dignitaries and technicians is a part of Mr. Dulles' "lead us to the brink policy," and so forth?

Fomenting Trouble in the South

EXTENSION OF REMARKS

OF

HON. L. MENDEL RIVERS

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 16, 1956

Mr. RIVERS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the News and Courier, Charleston, S. C., Friday, February 10, 1956:

FOMENTING TROUBLE IN THE SOUTH

As might have been expected, the northern press is in full cry over the disturbance at the University of Alabama. "Mob rule" and "disgraceful" are the epithets that frequently appear in editorials on rejection of a Negro student.

What example, ask northern editors in shocked tones, is the United States setting for the world in race relations?

The example, we agree, is disgraceful—but not for the reasons cited in the antisouthern press. The fact is that the United States Government, prodded by radical interests, has fomented race trouble where peace once reigned.

If the United States cannot keep its nose out of trouble within its own country, what chance has it to deal with huge native populations overseas?

Adlai Stevenson, speaking personally in favor of integrating the races, nevertheless has wisely said that this is a matter of the spirit, not of armed forces. He told a Negro audience that use of force to mix the races would amount to civil war.

President Eisenhower, in his press conference Wednesday, expressed the hope that "we could avoid any interference" as long as the State of Alabama will do its best to straighten the situation out.

Suppose Alabama cannot, or will not, "straighten out the situation" to the satisfaction of the Eisenhower administration and its radical allies. Will the Commander in Chief order out the troops to keep a Negro coed in classes at Tuscaloosa?

If so, by Mr. Stevenson's definition, civil war will have begun.

Will that not be the signal to Moscow to start world war III? Who will pull the trigger?

The incident at Sarajevo involved a minor colonial dispute. But it started World War I and set the stage for World War II.

Radicals, with false talk about equality and morals, are playing with powerful forces within the United States today. We believe the campaign of hatred against the South is part of a larger pattern. Whether inspired by Communists or only misguided politicians, it is wrecking the American Republic.

We do not wonder that foreigners fail to understand what is happening in the United States. Some of our own citizens cannot think clearly across the Mason-Dixon line.

A Danish society has offered a scholarship at the University of Copenhagen to Autherine Lucy, the colored student rejected by rioters in Alabama. The Danes, living in a white man's country, have missed the point. One colored student in a white college poses no threat to peace and harmony. But in Alabama, the forced entrance of one student is only a beginning. Southern white people look at a black sea flooding behind the small break in the dyke.

Would Denmark be willing to admit a majority or close to a majority of Negroes to its universities and schools? If so, perhaps a trade could be arranged. There are 15 million Negroes in the United States, and the population of Denmark is 4.3 million.

Ignorance may be in part to blame for race pressures in the South today. We happen to believe that more sinister forces are involved. Whether it is ignorance or evil, one fact stands out clearly in the United States. It is that our country is not prepared or qualified to take on the task of world policeman.

Two things are necessary to police the world. One is completely ruthless force. Russia has that. If the Kremlin wanted to put a Negro co-ed into the University of Alabama, she would go there though every white person in Alabama had to be machine gunned.

The other thing needed is patience—patience and diplomacy. Britain used it for nearly a century with colonial peoples, backed up occasionally by discreet use of troops.

The United States Government today lacks patience and diplomacy in dealing with the South. We hope it does not attempt to use armed force.

Adm. Harry E. Yarnell and Maj. Gen. J. F. C. Fuller: Views About United States Intervention in World Wars I and II

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 14, 1956

Mr. SMITH of Wisconsin. Mr. Speaker, intervention on the part of the United States in World Wars I and II has long been subject to debate by historians, and probably always will be. The swelling ranks of informed critics of United States interventionist policy have now been joined by two more distinguished officers: Adm. Harry E. Yarnell of the United States Navy, and Maj. Gen. J. F. C. Fuller of the British Army.

In an informative editorial in the January 14, 1956, edition of the well-known newspaper, the Tablet, of the Roman Catholic diocese of Brooklyn, N. Y., their views are summarized.

The editorial follows:

IT COULD HAVE BEEN DIFFERENT

Adm. Harry E. Yarnell, former commandant at Pearl Harbor and onetime Commander of the United States Asiatic Fleet, gave an interview from retirement on his 80th birthday.

He said that the United States would be better off if it had not entered either the First or Second World Wars. The Spanish-American War, he said, was completely unnecessary.

The admiral, of course, will hear from all of the interventionists that he doesn't know what he is talking about. But, as the passions recede, it becomes more than ever troublesome for internationalists to justify these ventures.

The well-known British military authority, Maj. Gen. J. F. C. Fuller, has told us that, if Americans had kept their noses out of Europe in 1917, nothing worse could have happened than a compromise peace, probably less frightful than the peace settlement that followed defeat of the central powers.

General Fuller has further said that American intervention in the second European war was no service, either. If we had remained on the sidelines, he stated, the equally detestable dictatorships of Hitler and Stalin quite likely would have bled each other white. Any gains in territory Hitler might have foreseen at the expense of Russia, according to General Fuller, were bound to fade away.

It may be argued that these are merely attempts to read the crystal ball. But so are all of the arguments of American interventionists that the participation of the United States in these wars was necessary to national survival. They contend, without proof, that the Nazi colossus would have been astride the world if we had not fought, and they ask where we would be now if that had happened.

The answer to that is that the chances of their being right are no better than those of General Fuller in envisioning an opposite result. In either event, we would be here, with our manpower and economic potential unimpaired, a far smaller national debt, and with our dollar little impaired. Texas would not be so high.

But, all other things aside, the problems of "victory" have proved far more grave than those of tension or even of war. Ten years after the achievement of technical military victory, no problem has been solved, the expense is on the same order as in actual time of war, the military cannot relax, and our attempts to manage the world have been a colossal flop. Nothing has ever quite turned out the way it was intended to. Maybe the worst fate that could have been visited upon any nation considered a potential threat to America was to saddle it with the tasks arising from military "victory." We have not been able to master them. Who else could?

"And Joseph Opened All the Storehouses"

EXTENSION OF REMARKS
OF
HON. ROBERT C. BYRD
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 2, 1956

Mr. BYRD. Mr. Speaker, under previous leave to extend my remarks, I wish to include an editorial which appeared in the February 15 issue of the United Mine Workers Journal. The editorial, written by Mr. Phil E. Zeigler, editor, the Railway Clerk, follows:

This country is approaching an age of plenty and it is time we learn how to distribute abundant production to those who could, and need to use it.

Surely, our civilization is not so stupid that, after producing enough for all, it has neither the will nor the brains to distribute it where it is needed most.

The current farm surpluses, which are depressing farm prices, is a problem in abundance on which we can bring to bear all our ingenuity to turn the present embarrassing farm surplus into consumer dividends. That makes it necessary to find families who could use more food and devise methods of getting it to them. We must ignore rules of a scarcity economy and make new rules to utilize our abundance.

If we must dump our farm surpluses, let us have consideration enough for our own people to dump them at home, instead of abroad, where it would disrupt world food production and force down farm prices among friendly nations who do not appreciate dumping practices.

Official figures indicate that 9½ million of our Nation's families are still living on incomes less than $2,000 a year. Apparently, in spite of our boasted prosperity, we have made little progress in reducing the "one-third of the Nation's ill-clothed, ill-housed, ill-fed." Among these people is the place to dump our food surplus.

E. W. Kleckhefer, farm editor of the Louisville Courier Journal, suggests that we must think first of our abundant farm production as inventories and reserves instead of surpluses; instead of thinking of getting rid of our bounty, we should think in terms of declaring dividends on our prosperity.

Editor Kieckhefer outlines a dividend plan to absorb our abundant farm production limited to taxpayers with incomes of less than $5,000 a year. This would apply to 70 percent of the Nation's families, or about 115 million people. Books of coupons would be issued on the basis of income-tax returns.

This is how the dividend plan would work. Suppose there was a large surplus of milk in springtime or summer. The Secretary of Agriculture would declare a dividend on dairy products stating that each coupon was worth 30 cents if used in the purchase of a pound

of butter or a pound of cheese each time the housewife bought a quart of milk.

"This would promote the sale of fluid milk," declared editor Kieckhefer, "which gives the farmer a good return on his investment, and at the same time stimulate consumption of dairy by-products. The two, working together, would reduce or even eliminate the necessity of a Government buy-and-store program for butter, cheese, and dry milk. A great number of combinations for the use of such dividends could be developed."

The dividend plan would not remove the necessity for a Government storage program for such commodities as wheat, corn, and cotton, but in the long run, such a farm dividend program would move into consumption a vast quantity of farm products and move them to the people who need them most.

Steps Toward Peace

EXTENSION OF REMARKS
OF

HON. LAURENCE CURTIS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 16, 1956

Mr. CURTIS of Massachusetts. Mr. Speaker, persons living in the 10th Massachusetts District were leaders in sending to the President last November an open letter urging steps toward peace. Under leave to extend by remarks in the RECORD, I include such letter and also a memorandum on the subject.

AN OPEN LETTER TO THE PRESIDENT OF THE UNITED STATES

DEAR MR. PRESIDENT: In the spirit of your repeated declaration that no stone should be left unturned in the quest for a durable peace, we wish respectfully to suggest that you appoint a commission of perhaps 20 men and women, preeminent in their fields, to make an exhaustive study of this vast and complex problem.

The problem, as we see it, encompasses far more than lies within the field of the Government, which is concerned, primarily, with its military, diplomatic, and political aspects. It reaches into the fields of religion, racial prejudice, nationalism, economics, mass psychology, and many other fields.

We all know that heretofore the search has been fruitless; that wars have persisted with cumulative and aggravated horrors. But we cannot admit that the futility of past attempts foreshadows failure for fresh efforts. We cannot concede that man is biologically and inherently a destructive, suicidal creature. The certainty that another major war would inflict on all mankind, on victors as well as vanquished, on civilians as well as combatants, on children and women, the most cruel calamity in history, impels us to plead for sympathetic consideration of this new approach.

We recommend that you muster the proposed commission from both the business world and the professions—industrial and financial leaders, clergymen, scientists, lawyers, farmers, labor leaders, educators, statesmen, philanthropists, historians, publicists, and others. We believe that the coordinated, matured judgments of the clearest minds might provide a program for the country at large, a program that would supplement and fortify the comprehensive efforts which the Government is making. Under your inspiring leadership, Mr. President, far more could be done in every community in the land—by study groups, debates, lectures, forums, and the like; far more in schools and colleges, far more by the radio and TV and the press. Millions could be spent with profit on such endeavors.

We recommend that this commission be asked to give serious consideration to the establishment of an agency, somewhat similar in structure to the American National Red Cross, which is a nongovernmental body yet closely associated with the Government. The Red Cross has its charter from the Congress of the United States; its honorary President is the President of the United States; eight of its board of directors are appointed by the President. But, at the same time, in its operations it is autonomous; it raises its funds from the people (in its fiscal year 1953–54 well over $85 million) and it carries on its multifarious activities largely by the work of its volunteers, in its 7,700 branches and chapters throughout the country. Furthermore, it has taken a leading part in the creation of similar institutions in 70 other countries, joined together in the League of Red Cross Societies.

Such steps would give further evidence to the world that our vast military machine must be maintained, only because we live in a world of international discord and anarchy, from which we have, so far, been unable to escape.

Such an undertaking, we submit, might have many far-reaching benefits:

It might stimulate to positive action many segments of our people who today, without leadership, participate only passively in the search for peace.

It might stimulate other countries to take similar action, as has the Red Cross.

It might lead the way for a spiritual and moral resurgence throughout the country and perhaps the world.

It might, in fact, prove the catalyst which would bring all these and many other forces together in such an overwhelming demand for peace that no government would dare ignore their mandate.

To be sure, many individuals and organizations are hard at work on this problem, but no one, to our knowledge, has proposed a definite, feasible plan so far-reaching and so likely to gain the cooperation and support of our countrymen.

Nearly a hundred years ago, an obscure Swiss businessman crossed the bloody battlefield of Solferino the day after the battle and, viewing the abandoned wounded, dying, and dead, vowed that such inhumanity must no longer be endured. From that day forth, Henri Dunant, renouncing all else, began sowing the seed which became the great far-flung humanitarian organization the Red Cross is today. Does not our proposal present to you, Mr. President, a similar opportunity for a great organized movement of our people, leading, under God, to a lasting peace?

Respectfully,

Prof. Edward L. Adams, Ann Arbor, Mich.; William H. Armstrong, Amherst, Mass.; Dr. Floyd G. Ballentine, Lewisburg, Pa.; Dr. J. Dellinger Barney, Boston, Mass.; W. Lee Beardsell, Belmont, Mass.; Dr. Conrad Bell, Waltham, Mass.; Alfred A. Benesch, Cleveland, Ohio; Carrol M. Bill, East Weymouth, Mass.; George W. Billings, Milford, Mass.; Earl D. Bond, Bryn Mawr, Pa.; Henry C. Boynton, Trenton, N. J.; Dr. Thomas D. Brown, New York, N. Y.; Frank M. Buckland, West Hartford, Conn.; Freeman F. Burr, Wayne, Maine; Frank W. Buxton, Brookline, Mass.; Dunbar F. Carpenter,[1] Winchester, Mass.; Dr. George O. Clark, Newburyport, Mass.; Aubrey E. Landry, Washington, D. C.; Homer H. Smith, Gloucester, Mass.; Albert A. Cobb, Lakeland, Fla.; Harry F. R. Dolan, Cambridge, Mass.; Lewis M. Dougan, Middle Granville, N. Y.; Harold T. Dougherty, Westfield, Mass.; Walter Prichard Eaton, Sheffield, Mass.; William Edmunds, Wellesley Hills, Mass.; Dr. Robert H. Ellis, Portland, Oreg.; Owen David Evans, Prospect Park, Pa.; William P. Everts, Cambridge, Mass.; Dean Floyd Field, Atlanta, Ga.; Maj. Gerald F. Furlong, Hampton, New Brunswick, Canada; Arthur M. Goodridge, Cambridge, Mass.; George W. Harrington, Providence, R. I.; Duncan G. Harris, New York, N. Y.; Edmund Heard, Mathews, Va.; A. Stedman Hills, Washington, D. C.; Conrad Hobbs, Boston, Mass.; Arthur Drinkwater, Cambridge, Mass.; John F. Cole, Somerville, Mass.

Jewett, Austin, Tex.; William N. Johnson, Mattapoisett, Mass.; Walter D. Lambert, Canaan, Conn.; Frederic W. Lane, Tacoma, Wash.; Samuel W. Lewis, Lancaster, Mass.; Walter Lichtenstein, Cambridge, Mass.; Robert Livermore, Topsfield, Mass.; Edward F. Loughlin, West Concord, Mass.; Marklove Lowery, Utica, N. Y.; Albert G. Mason, Milton, Mass.; Wilbur Morse, Long Beach, Calif.; James H. Morss, North Abington, Mass.; Walter G. Mortland, New York, N. Y.; Clifford Norton, Chatham, N. J.; John H. Page, Phoenix, Ariz.; George W. Presby, Melrose, Mass.; Dr. Richard R. Price, Hutchinson, Kans.; C. Newton Prouty, West Brookfield, Mass.; Wynn M. Rainbolt, Pine Valley, Calif.; Montgomery Reed, Cambridge, Mass.; Rev. James A. Richards, Winter Park, Fla.; Avery Robinson, New Lebanon, N. Y.; Herbert G. Robinson, Aurora, N. Y.; George F. Root, Concord, Mass.; Dr. Ernest Sachs, North Haven, Conn.; Robert A. Sanborn, Brookline, Mass.; William N. Seaver, Melrose, Mass.; T. Mott Shaw, Concord, Mass.; Frank H. Stevens, Marblehead Neck, Mass.; Ralph W. Stone, Harrisburg, Pa.; William B. Swinford, Norman, Okla.; Harold Tappin, Far Hills, N. J.; Cecil H. Taylor, New Milford, Conn.; Myron E. Terbush, Utica, N. Y.; George A. Towns, Atlanta, Ga.; Fred H. Train, Orange, Mass.; Ralph H. Watson, Greenwich, Conn.; Charles F. Wellington, Boston, Mass.; Ross K. Whiton, Springfield, Vt.; George A. Whittemore, East Orange, N. J.; Frederick M. Wilder, Port Hueneme, Calif.; Charles R. Woods, Southboro, Mass., members of the Harvard class of 1900.

[1] Deceased.

MEMORANDUM TO ACCOMPANY RELEASE OF ENCLOSED OPEN LETTER TO PRESIDENT EISENHOWER

GENTLEMEN: Eighty-three of my classmates of Harvard, 1900, living in 22 States and 3 foreign countries, have joined me in an open letter to President Eisenhower suggesting the appointment by him of a broadly representative, nonpolitical commission, with him as honorary president, to study the multifarious problems leading to a durable peace. The letter was intended for publication about a month ago but was withheld until we felt sure that its publication could in no way disturb the President.

We believe that the solution of the problem lies outside the usual scope of formal governmental action, and turn to the President because he has set himself above political partisanship in his search for peace. He is perhaps the only individual in the world who could animate such a movement as we propose. He above all others has moved boldly to do away with the causes and curses of war. We are appealing to him in the spirit of his intense desire for world peace.

We believe that the proposed plan will fortify and strengthen the various agencies set in motion already by the President, including atoms for peace and the activities of Mr. Stassen. We are convinced, however, that, pending the day when a durable peace is in sight, national defense must be maintained at the highest level.

We have suggested an organization on the lines of the Red Cross but do not feel sure that this would be the most workable and

effective arrangement. The Commission might well devise a better one. Our sole desire, in this respect, is that a large number of people of the United States, whose judgment will ultimately be decisive, should have an active part in the search for peace, without the restrictions unavoidable in purely governmental action.

We hope that the commission, if the President sees fit to name one, will be of such a character that its conclusions will command nationwide and even worldwide respect; that they will demonstrate the deep yearning of the President and the American people for a lasting peace, safe, protective, and honorable to all nations and all peoples.

CONRAD HOBBS,
Boston, Mass.

The Medical Aspects of Automotive Crash Injuries and Deaths

EXTENSION OF REMARKS
OF
HON. KENNETH A. ROBERTS
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 16, 1956

Mr. ROBERTS. Mr. Speaker, as the sponsor of House Resolution 357 calling for an investigation of the causes of our constantly increasing traffic accidents, I ask unanimous consent to have inserted in the RECORD the speech, the Medical Aspects of Automotive Crash Injuries and Death, delivered by Fletcher D. Woodward, M. D. Dr. Woodward is chairman of the American Medical Association's committee on medical aspects of automobile injuries and deaths.

Last year there were nearly 2½ million automobile casualties, 38,000 of whom were killed. Last year 1 out of every 12 automobiles was in a serious crash. Mr. Speaker, this is a serious problem, growing in magnitude each year, and I feel it should be given national attention.

The speech follows:

THE MEDICAL ASPECTS OF AUTOMOTIVE CRASH INJURIES AND DEATHS

(By Fletcher D. Woodward, M. D., Charlottesville, Va.)

Next to the victim and his family the physician is the most interested in the prevention of such crashes, for he is the one called upon day and night to pronounce death upon those beyond medical help and to treat those who have been injured.

His first duty is to see that adequate first aid is rendered and that proper transportation is furnished. To this end he, in collaboration with the American Red Cross, has developed through the years manuals for the education and guidance of his fellow physicians as well as the layman and the trained lay worker. This phase of medical care along with definitive care of the wounded is probably the only good that came out of our recent wars. To keep abreast of the rapid medical advances the committee on trauma of the American College of Surgeons, under the chairmanship of Dr. Arnold Griswold of Louisville, Ky., along with its other objective of fostering safetly design of the automobile itself, is preparing a new edition of such a manual and sponsors, along with the American Red Cross, the education of fellow physicians and lay workers in this important phase of care of the injured.

The physician's second duty is in the definitive care of the injured, and of these results he is justifiably proud. In his work with this problem his third responsibility soon manifested itself, which was the prevention of injuries and deaths by redesign of the machine itself. This aspect will be discussed later.

In the care of the injured statistics show that the recovery rate of the injured was much better in World War II than World War I. There was a further improvement during the Korean conflict. Prompt and efficient first aid, better and prompt transportation, the treatment of shock, more blood transfusions, better anesthesia, the use of antibiotics to control infection, along with improved surgical technics, were responsible for this gratifying improvement.

The medical profession, although not self-satisfied with its present-day accomplishments in the care of the wounded, is highly gratified with its results. However, if the problem of automobile crash injuries and deaths is viewed as a whole from the medical aspect, as it should be, it is obvious that there is much to be done. By study of how, where, and why these injuries occurred, it soon became apparent to the physician that prevention was possible in many instances and that he should direct his energies to this end. However, for many years his was literally a voice in the wilderness. The public accepted the grim statistical reports of the National Safety Council with indifference and complacency. The automobile manufacturers frankly stated that they were not only not interested but did not intend to call the attention of the public to the fact that an automobile was necessarily a dangerous or lethal machine. But by slow and methodical compilation of statistics by the individual physician, by universities and by public and governmental agencies, it became apparent that redesign of the machine itself could prevent many of these injuries and deaths. The use of safety belts and body harnesses would help to prevent the high percentage of injuries to the head, face, and legs of the guest passenger. Also, the use of crash padding on the dash, an ejectable windshield, collapsible steering wheel and column, the eradication of projecting knobs and buttons, the firm anchorage of seats, higher seat backs to prevent whiplash neck injury, safety locks on doors to prevent their popping open on impact, polarized headlight lenses and windshields, warning devices on the speedometer, dull paint to prevent glare, better shock absorbers, and many other simple and sensible suggestions were offered.

I am happy to report that now many of the manufacturers, led by Ford, are studying this problem and installing safety devices on their cars, and if the installation of such safety devices can be made competitive, then the many people and agencies responsible for this happy event can sit back and applaud; otherwise a Federal agency will be sought to establish and require of all manufacturers these minimum safety requirements.

The physician will then have more time to study his personal responsibility in prevention by study of the medical aspects of driver licensure and the medical reasons for crashes, although the purely medical reasons may not be over 2 to 3 percent of such crashes. Still, even 2 percent of a million is 20,000 injuries.

To this end the American Medical Association is directing a study of the Medical Aspects of Driver Licensure. This study includes a review of the visual and hearing and physical requirements, the incidence of Meniere's disease, petit and grand mal, as well as other diseases of the nervous system, the cardiovascular system, physical conditions, drugs, insulin shock, and alcohol.

We also feel that physicians should be included in an advisory board to study the physical and psychological factors in repeat offenders. To that end research funds should be made available to see if the chronic speeder and reckless driver conforms to a psychopathic personality pattern.

Among the things which we now know and can employ to reduce this carnage, in addition to safety features in the car itself, are the control and punishment of the drinking driver. It has been estimated that he was involved in 25 percent of the fatal accidents last year, but due to apathy on the part of the public, State legislators, and judges little has been accomplished.

I know of no more important project for your organization than to work for the enactment and impartial enforcement of a law to convict and punish the guilty drinking driver. A test to establish intoxication is available, is simple to conduct, and its results are conclusive—namely the drunkometer breath test. The Virginia Federation of Women's Clubs is sponsoring such legislation under the able guidance of its State safety chairman, Mrs. Randall Wade Everett, Jr., of Arlington. Many law and medical organizations are sponsoring similar legislation and I would like to commend to you for consideration a resolution passed last month by the Albemarle County Medical Society of Virginia.

Four-Motor Crocketts

EXTENSION OF REMARKS
OF
HON. GLENARD P. LIPSCOMB
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 16, 1956

Mr. LIPSCOMB. Mr. Speaker, the fullest utilization of modern jet aircraft by scheduled air carriers may be accomplished only by an efficient route pattern. Anything short of the most direct routes between major world centers will result in higher operating costs and an inevitable subsidy burden on the American taxpayers.

An even more serious result of uneconomical routing in our international air pattern would be a lack of demand for more modern equipment and the elimination of an incentive to produce bigger and faster aircraft.

The Washington Daily News deals with this important subject in an editorial which I would like to insert in the RECORD at this time:

FOUR-MOTOR CROCKETTS

In our fair land, we glorify the pioneer in song, story, editorial, comic strip, movie, TV, and radio horse opera.

Yippee; it's them there boys with the long rifles, coonskin hats and the bold vision who're the backbone of the country, it says here. And they are richly rewarded by their sturdy fellow citizens, it also says, who are firm in the conviction that the intrepid, questing spirit of ol' Dan'l Boone, fostered by a generous sense of fair play, can press back our present-day frontiers of applied science, industrial enterprise, and international trade just as it conquered the Cheyenne and the coyote.

Yeh.

And when you put goggles on that coonskin helmet, and stick him in a cockpit, you've got Lindbergh and the Spirit of Free Enterprise, '76, the Alamo, Henry Ford, Kitty Hawk, and rugged individualism till hell won't hold it.

Yeh.

You also have commercial aviation, subsidies, politics, and high-priced lawyers and lobbyists spending the taxpayers' dough in

imaginative and remarkably unnecessary ways.

Today, down at the Civil Aeronautics Board in the Commerce Department, lawyers will start wrangling over why Pan American Airways, pioneer across the Pacific, should or should not fly that particular ocean efficiently.

When Pan-Am pioneered across the Pacific twenty-odd years ago, the most efficient way—in fact the only possible way by air—was by the islands—Hawaii, Wake, the Philippines, and so on, for fueling reasons. About 7,000 miles.

Today, with stratocruisers, DC 7-B's, and so on, the most efficient way is by the great circle route (a taut string on a globe gives you the great circle) between points. About 4,800 miles.

Pan American would like to stay efficient, and fly the great circle between Seattle and Tokyo, which it also pioneered, surveying it before anyone else.

Northwest Airlines claims it, too.

The Government (Civil Aeronautics Board) has the authority to say which, or both.

A lot of political potboiling went on a few years ago, with routes to Tokyo from California, Washington, and the Pacific islands on the CAB's stove; but, when dinner was finally served, a Democratic Party feast of pure reason, with President Truman and former Democratic Gov. Mon Wallgren helping to select the menu, had Northwest Airlines not only exclusively flying the great circle but also cut in on the island route from Seattle as well.

So, in effect, the Government said to Pan-Am: "No; you stay inefficient. If it costs you and the taxpayers money, why, nuts to it."

However, the whole thing has come up again; certification is up for renewal, and technical advances make such nonstop flights more and more promising, both as to cost and dependability. President Eisenhower has ordered the CAB to take another look.

This whole situation, historically, results from a basic difference between the way the United States and other nations fly international routes.

Other nations generally have a policy that one flag carrier each is enough for them to subsidize over international airways (SAS for Scandinavian countries, BOAC for the British, KLM for the Dutch, Air France, etc.). But the United States has a policy of subsidizing parallel United States lines. This costs the taxpayer more, of course. The theory has been that this subsidized "competition" improves service, and has been good for our country's international aviation position. Some critics say this is bunk; that foreign airlines equal ours in maintenance and many as superior to ours in service.

All we want to point out here is, that if it is necessary to subsidize a competitor to force the pioneer to keep on pioneering, it would seem to us that the way to do that would be not to tie flatirons on the pioneer's feet, but to make the competition truly competitive.

Let both lines fly both routes, even Stephen.

In that way, the taxpayer might have a way, through the subsidy he pays, to find out which line is doing the best job.

Aside from the passenger penalty which the longer route imposes on Pan-Am, one silly effect of the present Pacific arrangement is that Tokyo mail from the United States is hauled 7,000 miles by one line and 4,800 miles by the other, but both for the same price. This nutty arrangement is like pretending it takes no more gas or driving time for a truck to go from here to Miami via Chicago than by driving there direct.

The CAB cannot only unhook itself and the taxpayers from the evil effects of previous peanut politics by straightening this situation, but can also, it seems to us, give a little reality to the romantic notion described in our first paragraphs: that pioneers, in this country, reap the rewards of their pioneering; they aren't penalized for it.

Forestry Development in Florida

EXTENSION OF REMARKS

OF

HON. D. R. (BILLY) MATTHEWS

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 16, 1956

Mr. MATTHEWS. Mr. Speaker, several years ago I met a young man by the name of Robert N. Hoskins, who is industrial forester with the Seaboard Air Line Railroad Co. I have found since then that this young man is dedicated to promoting the forestry resources of our Nation. I have seen him in action several times at forestry programs in my own 8th District of Florida, which is in the very heart of the pine tree area of Florida. As a member of the House Committee on Agriculture, and also as a member of our Subcommittee on Forestry, I have been inspired by the excellent work that Mr. Hoskins is doing in promoting an integrated utilization program of our forest resources. I am pleased to enclose an account of a recent forestry demonstration at Williston, Fla., in my district, which was attended by many of our citizens, and which was planned by Mr. Hoskins. I am also including an editorial which was in the Florida Times-Union in its issue on Friday, January 20, 1956, and titled "The South Rediscovers Its Woodland Wealth":

More than 600 persons attended an integrated utilization program which was sponsored by the Seaboard Air Line Railroad Co., held Friday, January 20, on the old Williston airport property. The entire program was supervised by the railroad's industrial forester, Robert N. Hoskins.

Featured speakers on this occasion included Congressman D. R. "Billy" Matthews; Warren T. White, assistant vice president, Seaboard Air Line Railroad; Harry E. Wood, State supervisor of vocational agriculture; and J. Edwin Moore, assistant State forester, and W. S. Swingler, Assistant Chief of United States Forest Service. Speaker-Designate Doyole E. Connor, of Starke, delivered the address of welcome.

This program was billed as a 12-ring circus in the woods with the major accent being placed on wood utilization.

In charge of the discussions on production of crossties was Robert W. Cook, chief tie and timber agent, Seaboard Air Line Railroad at Jacksonville; pole production had as its discussion leader Sam Balser, Southern Wood Preserving Co., Atlanta, Ga. Production and treatment of fence posts was under the direction of Tony Jensen, Assistant Extension Forester, Gainesville, and Wilburn Farrell, county agent of Bronson. Production of pulpwood was under the direction of Harry D. Johnson, assistant manager, woodlands division, St. Regis Paper Co., Jacksonville. Discussions on forest insect damage were directed by E. P. Merkel, Forest Entomologist of the Southeastern Forest Experiment Station, Asheville, N. C., while the timber stand improvement discussions were supervised by James E. Lavely, farm forester, Florida forest service, Ocala.

Ernest A. Clevenger, vice president of the Corley Manufacturing Co., Chattanooga, Tenn., served as discussion leader on sawmilling with George B. Williams, vice president of Turpentine & Rosin Factors, Jacksonville, and Ralph Clements, Lake City Branch, Southeast Forest Experiment Station, being in charge of the demonstration featuring new methods in the production of naval stores. George W. Mosely, president of the Florida Forest Equipment Co., from Jacksonville supervised the mechanical tree planting phase and Harold Mikell, district forester, Florida forest service, Ocala, supervised the fire-control equipment demonstration. Maintenance and operation of chain saws had as its group leader, Fred Mullino of the Florida Forestry Equipment Co., Jacksonville, and supervising the demonstration and actual discussion on the use of the Little Beaver Tree Girdler was Joe Beal, field assistant of the International Paper Co., Bronson, Fla.

This program was an all-day affair with sandwiches, coffee, and coca-cola served free, courtesy of the Seaboard Railroad. The Ocala F. F. A. string band provided music for this gathering.

The program was a cooperative one sponsored by the Seaboard Air Line Railroad Co.; teachers of vocational agriculture from Marion, Levy, Citrus, Alachua, and Gilchrist Counties; the Florida forest service, Soil Conservation Service, and the Extension Service.

[From the Florida Times-Union of January 20, 1956]

THE SOUTH REDISCOVERS ITS WOODLAND WEALTH

Another step in the South's deepening realization that its forests are its greatest natural resource is being taken today in the forestry demonstration near Williston, sponsored by the Seaboard Air Line Railroad Co.

Experts from throughout the South will participate in the program in which all phases of wood production and utilization will be stressed. There could be no better contribution to regional development.

Latest demonstration of the key role of forests in the current southern industrial boom was last week's announcement by the Growers Container Corp. of plans to open a cardboard-box factory in connection with expansion of production by the local St. Regis Paper Co. plant. That announcement served to focus attention on how the South is becoming a national center for the many industries based on pulp and paper processing, because the region now supplies more than half the Nation's annual pulpwood production.

But that is only the beginning of the story of wealth from the forests. The Timber Resource Review of the United States Forest Service this fall forecast that eventually the bulk of United States lumber production will be concentrated in the South, basing its forecast on research showing that the region possesses far greater potential for expansion in timber growth and manufacture than any other. Already timber is a $2 billion a year industry in the region.

The Review cited the prospect of an amazing increase in demand for building materials, expected in the years to come because of population trends that are already manifest. This rising demand will bring a new golden age of lumbering in which the southern pine will be more valuable than ever before, the agency believes.

That the South is becoming aware of the opportunity is indicated in the growth of the Tree Farms Movement. During the first 9 months of 1955 alone, southern tree farm acres were increased by nearly 3 million.

With two-thirds of its land area in forests, Florida will be a leader in this new

era—if its capacity is scientifically developed. Such forestry demonstrations as the one scheduled today in Williston are calls to Floridians to awaken to the riches around them and to avail themselves of the knowledge without which those riches must remain untapped.

Dedication of Stoddard Reserve Center Memorial

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 1, 1956

Mr. DONOHUE. Mr. Speaker, I should like to include the brief address I made on the occasion of the dedication, last October 23, 1955, of the United States Army Reserve Training Center in Worcester, Mass., as a memorial to the late Lt. Col. Lincoln W. Stoddard, a World War II combat veteran with 44 months' service in the Pacific theater of operations.

Colonel Stoddard, who relinquished a commission to enlist as a private in the 180th Field Artillery Battalion of the Massachusetts National Guard's famous 26th—Yankee—Division, received five decorations and numerous citations for "performance beyond the ordinary call of duty."

Colonel Stoddard, son of Mr. and Mrs. Harry G. Stoddard, of 7 Massachusetts Avenue, was associate editor of the Worcester Telegram and the Evening Gazette when he died suddenly while on Golden Rule campaign work.

The address follows:

SPEECH AT THE DEDICATION OF LINCOLN W. STODDARD ARMORY, WORCESTER, MASS, OCTOBER 26, 1955

It is a privilege to take part in these armory dedication exercises in tribute to and in memory of our late heroic friend and neighbor, Lt. Col. Lincoln W. Stoddard.

In the definition of the dictionary, an armory is a large building in which to store war instruments, containing a drill hall and related military facilities.

In a deeper Christian sense an armory is an arsenal of discipline. The discipline of mind and will that is here developed by military practices is founded upon the religious belief that man is a spiritual being created by the Almighty. Such a discipline achieved is the highest ingredient of a truly civilized society.

The unhappy necessity for this armory is our practical recognition that there are similar institutions in another land where the training discipline is based upon the atheistic principle that man is merely a material thing existing only for the service of the state, which is almighty. It is vital, therefore, that we remain constantly prepared to meet not only any sudden forceful acts, but even more, perhaps, the insidious pagan influence of the opposing atheistic power.

In this armory American youth is disciplined in military proficiency to fight, and die if necessary, in defense of the God-given blessings of life. In the atmosphere of the Christian discipline here, our American youth understand that the ultimate objective of their military skill is peace; a civilized peace, in which the Creator's gifts to mankind of individual liberty, justice, and freedom can be humanly enjoyed. So long as we commonly understand and are dedicated to military discipline for that purpose, America will prevail against any totalitarian state.

Lincoln W. Stoddard was a man of superior mind and will and talents. He loved his family, his fellow men, his country, and its freedoms with religious convictions. He thoroughly understood the discipline of man under God. In the spirit of that discipline, he was willing to give up his life for his country and his own principles. It is, then, supremely appropriate that we dedicate this armory in his memory. To all who enter and leave here, the name of Lincoln W. Stoddard will be an inspiration of reminder that the discipline they receive is to be consecrated only to the Christian objective of promoting peace on earth and good will among men. That is the inspiration which he has left to all of us.

The Moderate Position on Integration

EXTENSION OF REMARKS
OF
HON. STEWART L. UDALL
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 16, 1956

Mr. UDALL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial entitled "Politics and Civil Rights" from the Washington Post and Times Herald; an editorial entitled "Bad Taste and Bad History" from the New York Times; column by Walter Lippmann entitled "Integration in Politics"; and a letter from Hamilton Basso entitled "Moderation as Solution."

Mr. Speaker, temperate voices on the school-integration issue are finally making themselves heard above the din of radical opinion. It is encouraging to know that Adlai Stevenson does not stand alone as an advocate of orderly transition by gradual adjustment and human understanding.

It is my conviction that we must foster this spirit of moderation if this problem is to be solved the democratic way. As our colleague from Tennessee [Mr. EVINS] commented Tuesday, above all this is "a time for reason."

As evidence of the moderate point of view, I present forthright editorials which appeared this morning in the Washington Post and Times Herald and the New York Times, a recent column by Mr. Walter Lippmann, and a penetrating letter to the New York Times by a native southern author, Hamilton Basso.

These articles follow in order:

[From the Washington Post and Times Herald of February 16, 1956]

POLITICS AND CIVIL RIGHTS

Adlai Stevenson's plea that political leaders of both parties keep the public-school segregation issue out of the 1956 election campaign seems to have little hope of realization. With feelings so inflammable on either side, politicians can hardly forbear to ignite them. Yet they may touch off a disastrous explosion. The torch held aloft by Governor Harriman when he urged withholding Federal funds from States where school integration is not achieved forthwith may make a lovely light; but it will do nothing whatever to promote either integration or education. In its way it may be as dangerous as the cross burned on the altar of white supremacy by the rabid crew represented by Senator EASTLAND. And the bald attempt by Vice President NIXON to make political capital out of the fact that the Supreme Court happened to decide the school segregation cases during a Republican administration seems as shabby as it is mischievous.

We are at a climactic stage in the development of race relations in the United States. An historic pattern is being swept away. Ancient wrongs which find their only justification in a tradition based on bigotry are at long last being righted. It is only natural that Negroes who have suffered these wrongs should be impatient to inherit their full rights as citizens of the United States. Justice is so clearly on their side that it is almost an affront to ask them for moderation and continued patience. Nevertheless, moderation and continued patience are likely to bring them to their goals much more speedily than intransigeance and intemperance.

If the school segregation issue falls into the hands of the extremists and the political exploiters, an evolutionary process which came to maturity as a result of American economic and social growth—and which the Supreme Court merely recognized and ratified—will be frustrated and delayed. For it is plain that a harmonious integration of different races is one of the many matters that cannot be accomplished by the points of bayonets. This is by no means to say that justice and law and order ought not to be resolutely enforced by governmental authority. It is to say simply that kindliness, tolerance, mutual trust and good will are indispensable ingredients of every social adjustment.

"It is my conviction," Hamilton Basso wrote the other day in a distinguished letter to the New York Times, "that once the South is rid of its fear that it will be required to reorganize the whole of its society within a few months or years it will begin noticeably to obey those impulses of decency, kindness and honorable behavior which, because of the statements of its extremists, would now seem to be blocked off." The South's extremists respond to extremists from the North—and vice versa. No doubt it was this consideration that led the Supreme Court to order integration in flexible terms attuned to varying conditions; it ordered a "prompt beginnin," not an immedate completion. And it ordered compliance to be judged in the judicial atmosphere of Federal courts, not in an executive agency subject to political pressures. The firmness with which such action can be taken was demonstrated yesterday by a Federal court in New Orleans which declared Louisiana's 1954 segregation laws unconstitutional.

This is preeminently a time when the test of statesmanship is restraint. The change in customs and institutions demanded of the South involves the birth of a new era. Birth is never without birth pangs. It calls for compassion and understanding.

[From the New York Times of February 16, 1956]

BAD TASTE AND BAD HISTORY

Spokesmen for the Republican Party in the coming campaign are clearly going to make the most of the present administration's record in promoting the integration of Negro citizens into the normal life of America. They have much to be proud of in that record, and they are entitled to boast about some genuine advances.

But there is such a thing as carrying partisan claims in this area too far. Vice President NIXON did exactly that in talking

about the segregation decision of the Supreme Court in his Lincoln Day dinner speech before the National Republican Club in this city. Mr. NIXON listed some truly impressive gains for our Negro citizens. But then he said: "And, speaking for a unanimous Supreme Court, a great Republican Chief Justice, Earl Warren, has ordered an end to racial segregation in the Nation's schools." And, he added, "we did this, mind you, we did this all in just 3 years."

By thus directly linking the desegregation decision to the political campaign Mr. NIXON has done an immense disservice to the Chief Justice, to the Court and to the Nation. Statements such as his feed the fires of the die-hards; weaken the authority and the prestige of the Court; reinforce the will to resist; heighten emotions that are already dangerously high, and enhance the crudest kind of political partisanship.

Furthermore, the implications are not even accurate. Though the Chief Justice was, of course, appointed by President Eisenhower, only one other Justice of the Supreme Court was named during this administration. Each of the remaining seven is a Truman or a Roosevelt appointee. If anything could be bipartisan, the unanimous desegregation decision was; and it is as misleading to include it in the list of Republican accomplishments as it would be to claim it for the Democrats.

Let Mr. NIXON ponder the words of a well-know Republican when he was asked about the desegregation decision being "brought out under the Republican administration." He replied: "The Supreme Court, as I understand it, is not under any administration." That was the way President Eisenhower felt about it in May, 1954, and we have no doubt that that is the way he feels about it today.

INTEGRATION IN POLITICS

(By Walter Lippmann)

There is mounting evidence of grave trouble ahead over integration in the public schools of the Southern States. For in recent weeks we have come nearer to the question which can divide the country dangerously. Is the decision of the Supreme Court to be put into effect gradually and with the eventual consent of the leaders of southern opinion or is the Federal Government to be called upon to enforce integration against the resistance of the South?

This question poses as fateful a dilemma as any internal American question that has arisen for several generations. It arouses great human passions which cannot be reconciled, which can only be assuaged and accommodated in this generation. They are passions which boil up quickly into violence, and they can be kept within bounds only when and only while there is great wisdom and resolution in the leaders of the country.

The temptation to play politics with these passions is almost overpowering. And it is the approach of the national election, the struggle between the two parties and also the struggle within the parties, particularly within the Democratic Party, which have brought the dilemma to the surface.

It is significant that the closer a public man is to the presidency, the more will he shrink from the idea of Federal enforcement, as distinguished from persuasion and accommodation. Governor Stevenson has been notably firm and decisive and the President, though his words were a bit cloudy, is certainly not considering intervention by the Federal executive power. It is the politicians, the men who have little or no prospect of themselves being in the White House and bearing the President's responsibility, who are heating up the issue.

There is no likelihood that the Republicans in Congress will agree to take the issue out of politics. For it is a most damaging issue to raise among the Democrats. Nor is there much likelihood that Governor Stevenson's rivals for the nomination will forbear to raise it. It is such an easy way to make things difficult for him.

The issue will have to be debated in the open. The fundamental question to be debated is whether integration is to be promoted by persuasian or by Federal enforcement. These are two different roads, and no one should think he can go down both of them at once.

Consider, for example, the Powell amendment which would withhold Federal aid from States or school districts that do not integrate their schools. Let no one suppose that the Southern States will give in and accept integrated schools because some Federal money is withheld from them. To suppose that they will give in is to mistake the temper of the South, particularly the temper of the deep South.

What, then, are Representative Joseph L. Martin and Governor Harriman going to propose next, once they find that withholding money does not induce the Southern States to yield? If they start on the path of coercion, the authority of the executive power will be engaged and new measures of coercion will be demanded to uphold that authority. For unless the Federal Government is going to confess that it is beaten, it must—taking the path of Federal enforcement—become more and more coercive.

No one should doubt that the attempt at Federal enforcement will intensify and harden the resistance of the South. Those who are disposed to try to work out integration gradually will resent the Federal Government's efforts to coerce them. The problem of integration will become progressively more insoluble in the South, the racial passions will become increasingly sharp, the sectional feeling increasingly disruptive.

Let us stop and think before we let irresponsible politicians push us into the whirlpool.

The way things are developing is a reason for asking ourselves whether the decision of the Supreme Court does not need to be supplemented. As it stands now, the question of what constitutes a "prompt and reasonable start toward full compliance" is left to the judgment of the Federal courts. Now what would be a prompt and reasonable start, say, in the District of Columbia might well be impossible, hasty in Mississippi. Success in putting into effect the principle of the decision requires a program which must vary with local conditions. It is, for example, an enormous step forward when universities in the South admit Negro students. And it would be the part of wisdom in a State like Alabama to regard admission to the university as being for present purposes "a prompt and reasonable start."

The question is whether through some sort of council of eminent citizens guiding principles might be agreed upon which would give to American opinion a standard around which it could rally.

MODERATION AS SOLUTION

To the EDITOR OF THE NEW YORK TIMES:

Shameful and saddening as was the attack upon Autherine Lucy at the University of Alabama, it is not impossible that it can be productive of good.

As you said in your editorial of February 8 Mob Rule at Tuscaloosa, it is not surprising that there should have been this flare-up of violence. My point is that this very flare-up may be diverted to useful ends. What do we do now?

I should first like to suggest that the first thing we do is to realize that even a Supreme Court ruling cannot change a way of thinking that has persisted for generations. It is also my suggestion that we realize—and here the burden of realization falls on the South—that when a sovereign State yields to mob rule it no longer fits into the definition of a sovereign State.

ATMOSPHERE OF WARFARE

In a letter which you published on April 10, 1955, in commenting upon a visit to the South, I mentioned that the mood and temper of the section was one of secession. I have just returned from another visit to the South, and now I find that the atmosphere is one of open warfare.

The segregation issue has more than got out of hand. What has happened over the past 12 months is that it has got into the hands of extremists on both sides. In one set of trenches we find those represented by the mob, which at least for a time brought the State of Alabama to heel. In the opposite set of trenches we have those elements in the North who would almost seem anxious, judging from certain questions put to Adlai Stevenson, to compel the immediate end of segregation by returning the bayonets of reconstruction to the South.

It was Miss Lucy's misfortune to be caught in the crossfire. I find it impossible to believe that she would have been so maltreated a year ago. But just as the attack upon her must not be brushed aside as undergraduate irresponsibility, neither must the action of one mob be taken to represent the prevailing spirit of the South.

PREVENTING FEAR

I may be disagreed with, and even proved wrong, but it is my conviction that once the South is rid of its fear that it will be required to reorganize the whole of its society within a few months or years it will begin noticeably to obey those impulses of decency, kindness, and honorable behavior which, because of the statements of its extremists, would now seem to be blocked off.

Moderation admittedly has become almost a dirty word. However, if we examine the decision of the Supreme Court, what we find is that the Justices revealed a very clear preference for moderation. And here we would all of us, North and South, be well advised to follow the lead of the court.

Extremism will get us nowhere. The answer is neither mobs nor bayonets. There indeed can be no answer unless it is provided by the moderate leadership of both sides, supported by equally moderate men and women who are able to join together in patience, tolerance and mutual goodwill.

If what happened to Miss Lucy helps bring this about, she will deserve our thanks as she now requires our apologies.

HAMILTON BASSO.

Albert Einstein College of Medicine of the Yeshiva University

---

EXTENSION OF REMARKS

OF

HON. HERBERT ZELENKO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 16, 1956

Mr. ZELENKO. Mr. Speaker, I have the honor of introducing an excerpt from the speech delivered by the Honorable James J. Lyons, president of the Borough of the Bronx, New York City, at a dinner in honor of the Honorable Hulan E. Jack, president of the Borough of Manhattan, New York City. The dinner was sponsored by the Albert Einstein College of Medicine of the Yeshiva University on February 7, 1956, at the Hotel Roosevelt in New York City.

President Lyons stated:

Quite by accident I came across an incident which indicates the kind of institution we have. It so happens that a young lady who attained the second or third highest grades in Hunter College applied for admission. However, her financial situation was such that it was impossible for her to meet the total of $1,000 tuition plus other expenses that would be incurred. She was a brilliant and outstanding student and the admissions committee was of the opinion that she would make a very capable physician. However, being such a young school with heavy financial burdens, the admissions office did not want to take the responsibility to guarantee seeing her through school. Dr. Belkin heard of this and said it would be a tragedy in this young student were prevented from becoming a doctor because of lack of money. He asked the admissions committee to reconsider and accept her and said the college would find the money to give her a scholarship for her full 4 years. This, the admissions committee did, and it was only then that Dr. Belkin learned that this brilliant young lady was a Negro.

I think we can all be especially pleased that this medical student will have the opportunity through the Albert Einstein College of Medicine to serve her people and her country.

I am very proud to be the president of the Bronx, which is host to such an institution. This is a typical example of true democracy in action and should serve as a beacon and guide to all public officials and educators in every section of our great country to whom is entrusted the solemn duty of preserving and enhancing the American way of life.

Ninety-first Anniversary of the Emancipation Proclamation

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 16, 1956

Mr. DINGELL. Mr. Speaker, this year the Nation marks the 91st anniversary of the Emancipation Proclamation. Under leave to extend my remarks, I should like to have printed in the RECORD the following letter to Mr. Luther Keith, of the Detroit, Mich., Catholic Interracial Council, who was the chairman of the council's program and dinner held on Sunday, February 12, 1956, commemorating this anniversary:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., February 8, 1956.

Mr. LUTHER KEITH,
Detroit, Mich.

DEAR MR. KEITH: Please express to the members of the interracial council my sincere regret that I am unable to attend the anniversary program dinner this Sunday at St. Leo's Church.

This year, as the Nation marks the 91st anniversary of the Emancipation Proclamation we would do well to pay tribute to the courage and the faith in American ideals of our Negro citizenry which is so dramatically demonstrated by the recorded history of the past 91 years.

In making such a tribute we may observe, in retrospect, that what has been characterized as "Negro progress" has been, in fact, American progress; for what has appeared to be a struggle by a segment of our people to rid themselves of second-class citizenship has been and is a struggle of the whole American community to realize our dream of true democracy.

Today Americans are becoming aware that the disease of prejudice and hatred affects the whole Nation, regardless of the immediate objects of such prejudice and hatred. It breeds lawlessness and violence and in recent months it has erupted into revolt against the supreme authority of the land. Such lawlessness and violence have served to characterize a national disgrace which has consumed the energies of large numbers of our people which might otherwise have been directed to bringing greater and more abundant benefits to the national community and to the local communities in which they live. Such lawlessness and violence have served to focus the floodlight of national and world scrutiny upon the advocates of 19th century social patterns in this, the 20th century. Under this scrutiny the course which our Nation must take becomes crystal clear. We cannot turn back the clock, even for a moment. We cannot cast aside 91 years of sacrifice. We cannot close, even slightly, a door that is not yet fully open, nor can we hesitate to open it all the way. We cannot deal indecisively with elements which place bias before decency and personal hate before law and order. We must face these matters now and we must act now to hold the Nation to the course it has taken 91 years to chart.

In commemorating this 91st anniversary, as we acknowledge the confidence of Negroes in America, let us as a national community resolve that our confidence in America and our faith in the future is no less than theirs, and let us do so by concrete legislative and social action.

With best wishes for a most successful and enjoyable affair.

Sincerely yours,

JOHN D. DINGELL.

H. R. 3084

EXTENSION OF REMARKS
OF
HON. JOHN V. BEAMER
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 16, 1956

Mr. BEAMER. Mr. Speaker, under unanimous consent, I wish to include in the Appendix of the RECORD, the attached editorial from the Indianapolis Star in regard to H. R. 3084, which would amend the so-called Hatch Act:

[From the Indianapolis Star of February 9, 1956]

IT'S ABOUT FREEDOM—REMEMBER?

The proponents of Federal meddling-in-everthing are setting out to fight Indiana Congressman BEAMER'S bill to take the Hatch Act hatchet out of the backs of the States. They are using the same strategy employed in the happily unsuccessful fight against the natural gas bill. They are attempting to hide the real issue under a smokescreen of emotional balderdash.

The Washington Daily News has set the tone in announcing its discovery that "one sleepy Capitol Hill day recently" the House passed the Beamer bill to clarify the jurisdiction of the Hatch Act. It lives again through the knightly accomplishment of the Hatch Act enactment in 1939. It recalls "shameful abuse of official authority," "coercion of Federal jobholders for political purposes" and the plight of jobholders made "to kick in to campaign funds or knuckle under to party bosses." The recalling of all this does, to be sure, serve a good though extraneous purpose. We had almost forgotten what a vile place Washington was in 1939. But let's talk about the Beamer bill.

The Washington News examines the supposed reasons for the Beamer bill. It surmises these to be (1) that most States now have their own clean politics laws, (2) that the Federal Civil Service Commission "isn't equipped to enforce the law properly," a shortcoming which had escaped us, and (3) that "complaints of violations sometimes are motivated by personal antagonism."

We look in vain for a discussion of the issue.

Shades of Davy Crockett. Hasn't the Washington News heard about State sovereignty?

The issue of the Beamer bill is clear and simple. It is that the Federal Government has no bloody business telling a State Government whom to hire or whom to fire or why, or what shade to keep its domestic political linens. The Beamer bill is a measure to make this point clear to the Federal Civil Service Commission, which despite the supposed lack of equipment is doing a pretty effective job of harassing States under the authority of the Hatch Act. It was because the issue is so simple that the House passed the bill, to all practical purposes unanimously since, as the News noted, no member called for a record vote and none was taken.

How come the proponents of bureaucracy and meddling were sleepy that day we don't know. But now that they have been aroused they are going to do their best to befuddle the issue in the Senate, by prattling about purity in politics. We should not let them get away with it. We should make them discuss the issue.

Religious Persecution Behind the Iron Curtain

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 16, 1956

Mr. ANFUSO. Mr. Speaker, the Communist war against religion and religious freedom continues unabated in the Iron Curtain countries. Despite occasional reports to the contrary, there has been no letup in the campaign of the godless against everything that is sacred and holy. All great faiths are menaced by this atheistic communism, which is seeking to destroy all religions and every trace of religious freedom.

A very tragic case in point is that of Archbishop Joseph Beran, of Prague, Czechoslovakia, who has been imprisoned by the Communists nearly 5 years ago and was forcibly removed from Prague and is being kept at an unknown place. To the people of Czechoslovakia yearning for true freedom, Achbishop Beran is to this day a symbol of their struggle for freedom. His suffering and the inhuman terror to which he is subjected during these 5 long years are inextricably bound with the suffering and the terror of the people of Czechoslovakia.

As these innocent men continue to suffer amidst the stony silence of the civilized world, I wonder at times whether we have become callous or insensible to the crimes being perpetrated against them. The free world must not forget

them in their lonely hours of agony and mental suffering. We must speak out anew in condemnation of this godless evil which has brought so much misery and suffering upon mankind. We must continue to demand the freedom of Archbishop Beran and others who are suffering a similar fate. We must continue to encourage these people so that they can be morally and mentally strengthened to survive the inhumanities to which they are subjected.

By our silence we seal their fate. By raising our voices in protest we give them hope and we bring to the attention of the world the true facts of religious persecution in the Communist-dominated lands. As long as innocent men like Archbishop Beran remain behind Communist bars, there is no freedom of religion behind the Iron Curtain.

Tune In and See the GOP as Guest Artist on the Liberal Hour

EXTENSION OF REMARKS
OF
HON. DON HAYWORTH
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 16, 1956

Mr. HAYWORTH. Mr. Speaker, the following article on the administration's 1956 program is reprinted from the March 1956 issue of the Democratic Digest, entitled "Tune in and See the GOP as Guest Artist on the Liberal Hour." I ask unanimous consent to have this article printed in the Appendix of the RECORD:

YOU'LL LAUGH, YOU'LL CHILL, YOU'LL THRILL—TUNE IN AND SEE THE GOP AS GUEST ARTIST ON THE LIBERAL HOUR—WORLD-FAMED QUICK CHANGE ACT

"Each leap year, before the election
When their old slogans go sour,
Comes a pause in GOP occupations
That is known as the Liberal Hour."
—*Old American Ditty.*

President Eisenhower's 1956 series of messages to Congress heralds the formal opening of the Republican Liberal Hour, also known as GOP leap year, which runs from the Presidential campaign curtain raiser to election day.

Though it still is not definite that Mr. Eisenhower will be the GOP candidate again in 1956, his accent this year on the Republican forward theme is as politically polished as his Republican dynamic progressive presentation in 1952, if not more so. His proposals 4 years ago prompted his Democratic opponent, Adlai Stevenson, to comment on the election year phenomenon of modern times, wherein the Republicans quadrennially woo the people by borrowing phrases and ideas from Democratic platforms.

"Now, because of the timing of the conventions," Mr. Stevenson said, "this inevitably leaves them 4 years behind. But I suppose plagiarism must, nevertheless, be considered a form of progress.

"And this is open season for that kind of progress. This is the time when even the most obsolete Republican becomes momentarily reconciled to the machine age. * * *

"Now it's a misfortune—deserved, I fear—of the Republican leadership not just to be taken too seriously during these moments of imitation. This forward look sometimes seems to me like a costume taken out of the closet every 4 years for the big masquerade ball. It often looks nice after a dry cleaning, but the stuffed shirt still shows."

Under Mr. Eisenhower, the Republicans have made their most determined effort in more than 40 years to assume the guise of a "liberal conservative" or "progressive moderate" party. Though it didn't favorably impress the voters in 1954, the GOP strained mightily to look as if it had taken on the so-called "Eisenhower image" during that off-year election test. In fact, the Republican exertions along that line were so strenuous that some observers were moved to declare that President Eisenhower had stolen the Fair Deal-New Deal thunder, and had left the Democrats no issues on which to campaign in either 1954 or 1956.

Commenting on that extraordinary illusion a year ago this month, Democratic Chairman Paul M. Butler said:

"We do not mind when President Eisenhower borrows Democratic policies, for he always returns them. But those of us who are genuinely devoted to those policies could wish that his attachment to Democratic ideas were a little less fleeting—as in the cases of his pledges on 90 percent parity prices for farmers, TVA, Civil Service protection, Federal aid to education, rural electrification, and a long list of other programs."

Sad to say, "the shadow and substance" contrast in the administration's programs has always been glaring, with the score for GOP lip service to important causes running consistently far ahead of the GOP's performance record. This feature of the Republican approach to national problems now attains its full flower as the President and his advisers shape up the Republican program for 1956.

From the state of the Union message, and from other administration pronouncements before and since the opening of the final session of the 84th Congress, it is clear that the Republicans are "proposing action in many fields where they have heretofore been content to hold the line and leave the initiative to the Democrats," as Columnist Doris Fleeson observes. Though many of the new administration gestures for progressive causes go against the traditional GOP grain, even the most conservative Republicans "can be expected to go along for victory's sake," Miss Fleeson also notes.

In short, we are now witnessing what seems to be a concerted Republican turnabout to new measures for farm aid for Federal aid to schools, highway building, public housing, aid to distressed communities, social-security expansion, more Federal health services, water resources development and other important projects pressing for nation attention. The Republican "get right for '56" movement even extends to a reversal on the administration's defense cuts and a stand for increased foreign aid.

Without exception, these are fields in which the Republican administration and the congressional Republicans together have managed to erect a massive blockade to progress over the last 3 years, while pursuing policies which have vastly speeded up the entrenchment and enrichment of special interests.

The leap year burst of liberalism in the White House has been brought about by election-year pressures combined with cold-war realities, reported Robert C. Albright in the Washington Post. Noting that the Democrats suddenly found themselves faced with a little competition in their plans for more liberal outlays for schools, health, social security, and other things, Mr. Albright added:

"How much of these budgetary increases were of a token nature, important as a talking point but not badly upsetting the administration's already laid fiscal plans, was still a subject for debate."

Considerations of that nature were responsible for the view, widely expressed among Capitol reporters, that the 1956 state of the Union message, in the phrase of one Washington pundit, was one of the best messages President Coolidge ever sent.

Good reasons for such journalistic skepticism are to be found in the GOP record on virtually every question before the Nation in 1956. One of the many cases in point is the new Benson 6-point program for agriculture, which President Eisenhower has endorsed 100 percent and expanded to 9 points.

Though carefully designed to make the farmers forget the GOP's empty 1952 promise of 100-percent parity for agriculture in the market place, the GOP's 1956 promise does not seem likely to ease concern among husbandmen and tillers of the soil over 3 straight years of declining income. Neither does it seem likely to lessen their disillusionment over the administration's failure to keep its pledge on 90-percent parity supports.

The new proposals include such promises as a vigorous purchase program to remove market gluts, an enlarged program of soil conservation, and incentive payments to farmers for diverting croplands to grass, trees, and forage (the soil-bank plan), an expanded rural-development program for low-income families, and stepped-up research.

The record, alas, shows that the administration has been headed in the opposite direction in all these fields. In practice, the Republican program has featured curtailed credit for farmers, budget cuts for REA, elimination of public-power preference clauses which are essential to continued expansion of rural electrification, higher interest rates on disaster relief loans and on Farmers' Home Administration loans, and a reorganization of the Soil Conservation Service, which has seriously impaired its usefulness.

In the matter of assisting low-income farm families. Under Secretary of Agriculture True D. Morse and other Benson lieutenants have talked as if the best thing that could happen to the small farmer would be for him to get out of farming.

Still retained in the administration's program are the flexible or sliding-scale price supports despite the fact that the parity ratio in 3 years has dropped from 95 percent to 80 percent (as of mid-December 1955). Still guiding the administration is the Benson concept that price supports are merely insurance against "undue disaster." With farm prices down 18 percent, farm income down 17 percent, and the parity ratio down 15 percent since the GOP took office, and with a further decline for 1956 forecast, the question of where "undue disaster" begins grows more pressing.

Another feature of the GOP's 1956 reform in the farm area is that all the attractive Republican innovations are borrowed from their political opponents. The administration's soil-bank program, for instance, is similar to an acreage reserve plan which Democrats twice proposed in 1955, and which the administration opposed each time.

The new soil-bank proposals are actually a revival of a program conducted just before World War II under the 1936 Soil Conservation and Domestic Allotment Act, as amended in 1938, in the Roosevelt administration. At that time, however, it was operated in conjunction with—and not as a substitute for—specific price supports to supplement the income of farmers, who agreed to use their diverted acreage for soil building, rather than soil-depleting cash crops.

At other important points in the state of the Union message, there are equally interesting and equally belated administration turnabouts.

The administration now is ready to abandon its banker's highway bill, which last year drew wide condemnation as a piece of extreme fiscal irresponsibility. Even Mr.

Eisenhower's own Comptroller General criticized the administration's proposal to issue $21 billion in highway bonds without counting that huge outlay as part of the Federal debt. Under that plan for every $1 spent for new roads, 55 cents would have gone to bankers and bondholders to pay debt costs. The administration's tardy shift from that scheme removes a major obstacle to action for badly needed highway improvements on a pay-as-you-go Federal-aid program which Democrats have pressed for all along.

The administration at last recognizes that something substantial should be done for public-school construction. It is ready to up Federal aid to $250 million a year, from the token $66 million it offered in last year's Eisenhower's program. However, the new proposal still suffers by comparison with the Democratic program it imitates. Meanwhile, another year has been lost in making a start toward meeting the Nation's critical classroom shortage.

The administration now is ready to increase Federal outlays for medical research and new medical research facilities. Meanwhile, the Nation feels the ill effects of 3 years of administration slashes in funds for medical research, and 3 years in which President Eisenhower recommended not one penny for research facilities construction.

The administration now makes another gesture for housing proposing 35,000 additional public housing units in each of the next 2 years. It still is far behind the modest goal of 135,000 units annually which Mr. Republican himself, the late Senator Robert A. Taft, set as a minimum back in 1949. Meanwhile, the Nation's substandard housing and slum blight problem grows apace, and the Federal agency in this field deteriorates steadily under the administration of the arch-foe of public housing whom Mr. Eisenhower appointed in 1953.

Mr. Eisenhower now calls for faster progress without delay in water-resources development. Why has his administration failed to request funds for a single new multipurpose project in its first 3 years in office? Why has it dragged its feet on 107 reclamation and resources development projects which Congress authorized in 1955?

The administration understandably is silent at this time about its partnership policy in the public utilities field, under which the Nation's public power development program has been brought to a complete halt while the administration engineered the Dixon-Yates deal and the Hells Canyon giveaway.

The administration now speaks reassuringly of efforts to aid small business and check monopoly. Its promise is vague, at best, but there is no uncertainty about the GOP record, which shows that since the last half of 1952 small-business profits are down 66 percent, while big-business profits are up 46 percent, small-business investors' returns are down 57 percent in contrast to a 36 percent gain in returns of big-business investors, business mergers in 1954 were triple the mergers in 1949, bank mergers are at an all-time high.

The administration now is coming forward with a program to aid distressed communities and a disaster-insurance program, both diluted versions of programs initiated by Democrats in Congress.

So it goes all along the line—amending the 1953 Refugee Relief Act, correcting inequities in the Taft-Hartley Act, statehood for Hawaii and Alaska, liberalizing foreign trade, improving transportation. In almost every case, the administration's action comes 3 years late, the proposals copy Democratic programs.

This is, of course, the liberalism of Coolidge and Hoover, adapted to a later time. The fundamental Coolidge-Hoover philosophy shows through most clearly in the administration's tax stand. It now puts Federal debt reduction and a balanced budget before tax relief. Anything else it condemns as irresponsible. As Senator LYNDON JOHNSON observes, the administration acted exactly contrary to its proclaimed 1956 principles in 1954, when its tax program to help corporations and the larger income earners contributed several billions to an unbalanced budget and an enlarged Federal debt.

The 3-year Republican slowdown at home accounts in large measure for the decline of American leadership abroad, and for the worsening of the free world's prospects in the cold war. On the foreign front, the administration now moves to assume a less negative posture. For one thing, it has upped its defense budget for next year $1 billion over the current year. However, most authorities agree that this increased spending will not bring a military buildup. The extra billion will go to pay for last year's unbudgeted pay increases for the armed services, and for higher steel costs. What actually is happening, as Ernest K. Lindley observes in Newsweek, is that we are now getting less bang for a buck. Actually, it's a case of less defense for more money.

On foreign military and economic aid, the administration is trying to modify its 3-year deemphasis of international cooperation. Concerning this fourth quarter reverse play, the Nashville Tennessean comments:

"Even before the New Year dawned, White House and State Department experts were painfully reexamining the muddled foreign policy which left them groping after Geneva's depressing second meeting. All they have left, as Senator RUSSELL, of Georgia, notes, is more and more expenditures abroad where Russia's mountebank salesmen have appeared, and that might bankrupt the country if carried on indefinitely.

"At the same time the Defense Department admits its pennypinching policies have handicapped the country in building for security, especially where the Air Force and guided missiles are concerned. After having brushed off repeated warnings, it now is frantically trying to catch up with the procession * * *.

"Republican alarm is shown in the sudden swing New Dealward, to the great displeasure of party conservatives in and out of Congress. But even this shift is no spur of confidence when it is realized that the same team is out there in the international bowl with the destinies of the Nation in its hands."

Such is the true picture of the state of the Union, which the President views through rose-colored glasses. In no case does he sound an adequate alert to the multitudinous problems which the Nation faces.

There is, of course, in the 1956 Eisenhower messages greater recognition of the Nation's needs than has ever before come from the Republicans. This is election year. "Which is why the administration is proposing greater liberality in various items," as Eric Sevareid observes in a CBS news analysis.

That is a form of progress, to be sure, but it should blind no one to the temporary nature of the Republican Liberal Hour.

As Washington columnist Thomas L. Stokes notes, Calvin Coolidge, if he were still living, "would be flabbergasted if he could pore through the pages of President Eisenhower's farm message and what he said in the annual message * * * and read how much is proposed that not even the most imaginative would have dreamed of in Calvin Coolidge's generation."

Mr. Stokes recalls Silent Cal's remark at one point in the farm depression of the 1920's: "Farmers never have made money. I don't think there's much we can do about it."

But something was done—in fact, a great deal—in two imaginative Democratic administrations, over the bitter opposition of the Republicans. That change has established the parity principle for agriculture as a permanent American goal—a goal which has been attained under Democratic government, and for which the American people will continue to fight until Coolidge's party also fully accepts a fair deal for our basic agricultural industry.

In the quarter century since Coolidge, the Republicans have been forced to modify their stand, resorting more and more to imitation of the Democrats. At the same time, they have opposed this change as hotly as their political strategists thought they dared. Right now, they are in deep trouble again for resisting the change more openly than was politically expedient.

The Late Chauncey W. Reed

SPEECH
OF
HON. NOAH M. MASON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, February 10, 1956

Mr. MASON. Mr. Speaker, the terms statesman, legislator, lawyer, and American are used in their finest senses when they are applied to our beloved colleague, CHAUNCEY REED, of Illinois. It is with great sorrow that we face the loss of one whom we have loved as a man and respected as a Member of this House. It is with a sad heart that I pay tribute to CHAUNCEY REED.

Ever since I came to Congress I have regarded him as a close, personal friend—perhaps the closest among my colleagues. He entered Congress 2 years before I did; and in the 20 years of our association here, there has never been a time when I could not rely upon his good judgment.

The deeper I am touched the more difficult it is for me to give expression to my feelings. I know of no better words to express what I presently feel than the words of the following poem that I have committed to memory. The poem expresses both sympathy for the loss of a dear one, and the hope of immortality and reunion.

There is no death! the stars go down
To rise upon some other shore,
And bright in heaven's jeweled crown
They shine forevermore.

There is no death! the dust we tread
Shall change beneath the summer showers
To golden grain, or mellow fruit,
Or rainbow tinted flowers.

There is no death! although we grieve
When beautiful familiar forms
That we have learned to love
Are torn from our embracing arms.

Although with bowed and breaking heart,
With sable garb and silent tread
We bear their senseless dust to earth,
And say that they are dead.

They are not dead! they have but passed
Beyond the mists that blind us here
Into the new and larger life
Of that serener sphere.

Tho' disenthralled and glorified,
They still are here and love us yet:
The dear ones they have left behind
They never can forget.

Close Mexican Border to Minors

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 16, 1956

Mr. HOSMER. Mr. Speaker, I introduced legislation both in this Congress and the 83d Congress aimed at closing the Mexican border to United States minors who are not accompanied by their parents or cannot show legitimate reason for going to Mexican border towns.

These border towns are notorious sink-holes of vice and illegal narcotics. They are the last places that our impressionable youth should be allowed to visit unescorted. Southern California's juvenile delinquency problem has been exceedingly complicated because presently minors do have free access to these border towns.

In making these statements no offense is meant or should be inferred as to the Mexican Government and its officials. They recognize the problem and are doing all in their power to clean up these areas. The fact remains, however, that until they are cleaned up, they are no place for America's youth to roam.

An exceedingly unrealistic attitude has been taken by the State and Justice Departments in reporting unfavorably on my proposal. Particularly as respects to an assumption that passage of the legislation would give affront to our neighbors to the south. From what I can gather, they do not want American youngsters in these border towns complicating their policing problems any more than we want them down there. Rather than an affront, I believe we would gain the gratitude of Mexican officials for adopting the border-closing measure.

The following article carried by the February 7 issue of the Long Beach Press Telegram is just one of many examples why the Mexican border should be closed to minors:

LONG BEACH BOY, 16, ADMITS TRAFFIC IN MARIHUANA ACROSS BORDER

(By Fred Bolinger)

A 16-year-old former Jordan High School boy calmly admitted to detectives today that he hitchhiked to Tijuana recently and brought a "tin" of marihuana for resale in Long Beach.

The marihuana, which cost $8, can be rolled into 100 "joints," or cigarettes, and marketed at $50 to $100, Detective Inspector George E. Doyle reported.

The youth whistled to show his complacence as he was quizzed by Doyle and juvenile officer James A. Sprague.

He didn't reveal the slightest concern over the fact that by possessing marihuana, he had committed a felony, officers said. The boy has been "in and out" of the narcotics racket for more than a year, Doyle said.

When the boy went to Tijuana he was on probation for having been involved in narcotics crimes. Answering Doyle's questions, the youth revealed that he went "across the line in daylight, alone, hitchhiking both ways."

He couldn't recall how many trips he'd made to Mexico during the past year to buy narcotics, but Doyle said 10 or 12 trips probably would be "near right."

The "tin" of marihuana was found wrapped in a Mexican newspaper dated February 2.

It was uncovered in the boy's bedroom, in the home of a friend. The latter had befriended the boy, allowing him to live there while he taught him the plasterer's trade.

The friend told Inspector Doyle that he and his wife thought he "was a nice boy" and felt sorry for him and therefore took him into their home.

The boy was to be returned today to the juvenile court referee for investigation of probation violation. The local juvenile bureau will file a petition asking that the youth be made a ward of juvenile court.

If the court should consider the boy incorrigible, the lad would be tried as an adult and sent to the California Youth Authority if found guilty of the felony.

Police arrested the boy Sunday night after officers fired four shots into a car in which he and three adult narcotic suspects were fleeing in the vicinity of Long Beach Boulevard and Adams Street.

FHA Should Trust Local Agencies

EXTENSION OF REMARKS
OF
HON. CHARLES A. VANIK
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 16, 1956

Mr. VANIK. Mr. Speaker, please permit me to call the attention of the Members of Congress to an editorial which appeared in the Cleveland Plain Dealer under date of Wednesday, February 15, 1956, entitled "FHA Should Trust Local Agencies":

FHA SHOULD TRUST LOCAL AGENCIES

Two of the witnesses at Monday's 1-day congressional hearing on housing, Oscar H. Steiner and Upshur Evans, presented some hard facts on the difficulties of getting anywhere in low-cost housing with the Federal Housing Administration as a partner in the enterprise. Their testimony, based on practical experience, should receive special attention in Washington if Congress is going to do anything about removing some of the Federal roadblocks to urban redevelopment.

The position of Steiner, who is president of Community Development, Inc., was that the FHA is more of a hindrance than a help in getting such housing under way and built. He spoke as the builder of a project in Parma with FHA assistance, and of housing now abuilding at East 79th Street and Woodland Avenue without FHA. His experience with FHA soured him.

Director Evans of the civic-minded, nonprofit Cleveland Development Foundation, which helped financially in Steiner's 79th-Woodland homes, reviewed the many hurdles and long delays in the foundation's Garden Valley projects. After nearly 2 years, some bricks may be laid there beginning in April.

The urgency of getting low-cost housing for those in the slums, so unfit hovels can be wiped out, was stressed by other witnesses at the hearing. This is an old story, but it deserves frequent repeating. And it points up the dilemma that is continually being compounded by the built-in delays caused by Housing Act rules.

The answer for getting some momentum in doing the job, in the views of Steiner, Evans and others, is increased local autonomy. FHA's fixed extensive preliminaries not only don't help in getting started, they exasperate private businessmen and public officials who enter into prospective projects with good will and high hopes, then see them dashed. And the FHA regulations have had the effect of forcing higher building costs which tend to defeat the purpose of the projects.

If the city and the Federal Government cannot trust local institutions like the Development Foundation, reputable private builders and public bodies in arriving at sensible, adequate solutions for pressing problems, then it can trust no one.

We hope the lessons being learned here and in other large cities which have been reviewed by the congressional committee will bring the desired changes in legislation. As the queen observed of Wonderland, you have to keep moving quickly in slum elimination just to keep up with yourself, and you have to run twice as fast if you want to make any progress.

Foreign Affairs

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 16, 1956

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I include an article written by C. L. Sulzberger, and appearing in the New York Times of January 13, 1956. This article is not a very optimistic one; its tenor is clearly nonoptimistic:

FOREIGN AFFAIRS—BRINK OF WAR POLICY IN THE MIDDLE EAST

(By C. L. Sulzberger)

PARIS, February 12.—At present Soviet foreign policy is relatively static in Europe. To the west, where living standards contrast favorably with those of the U. S. S. R., Moscow concentrates on freezing positions and digesting previous gains. But to the south and east, in Asia, where endemic conditions are deplorable, policy remains dynamic. Bolshevik ideology and Russian power continue to push outward.

This Asian program has three facets. In the center it drives from the Oxus frontier over Afghanistan and toward India. To the east it adjusts to the new Communist behemoth, China, support for that massive state and inherent rivalries with it. And to the southwest it turns into the Levant. There, by pressure, by guile, by diplomacy, and by maneuver it seeks to extend its influence toward Suez and the Persian Gulf.

Convinced of communism's inevitable global triumph, Molotov is practicing his own "brink of war" strategy in the restless Middle East. All the inherent contradictions that Marxism sees in the capitalist world are unfortunately prevalent there: Anglo-American-French rivalries; psychopathic legacies of past colonial empires; dynastic strife and ugly religious fervor. The West insists this is its own Pandora's box.

WARM-WATER ASPIRATIONS

We may resent the Kremlin's intervention. But surely we should not be surprised. Since Czarist days Russia has looked eagerly to warm-water ports and oil. Molotov memorialized Hitler in 1940: "The area south of Batum and Baku in the general direction of the Persian Gulf should be recognized as the center of the aspirations of the Soviet Union." Moscow asked of the Allies bases in the Dardanelles and Bosporus, positions in the Red Sea and a voice in northern Africa. The Montreux Convention that governs the Turkish Straits expires next November. U. S. S. R. diplomacy is now lining up support for a new deal in that region.

The Russians previously have faltered in the Middle East. Even a weak Iran was able to eject them from its northern provinces.

Ankara's obstinacy frustrated the Soviets in Turkey. But the situation that developed in 1955 was too favorable for the Kremlin to neglect. An unnecessary crisis was permitted to develop in Cyprus creating a gap between the Greeks and Turks and opening the road for penetration. Simultaneously we challenged the U. S. S. R. by fostering the Baghdad Pact. Communist reaction was to leapfrog across this northern tier, already split at Turkey's western border, and peddle arms and influence among the Arab States.

This left us in a highly embarrassed position. Colonel Nasser, who aspires to Arab leadership, has used his new weapons to successfully blackmail the West. He confides great admiration for Tito, who showed him how to get help from both power blocs without joining either. Nasser is an apt pupil. The satellite arms deal with Cairo changed a strategic balance the Allies sought uneasily to preserve. By June, Egypt alone will have a military edge on Israel. The approach of this date therefore brings the world closer to the brink of war. Israeli jingoes urge their government to strike before then. Later, they fear, the Arabs will prepare an overall assault. Meanwhile the West, insisting Russia can have no say in Palestine, assumes responsibility for a peace it may be unable to keep.

COMMUNISM GAINS STRENGTH

Cairo is just as intent as Moscow on destroying the Baghdad Pact. Feudal Saudi Arabia presses its vendetta against the Hashemite dynasties in Jordan and Iraq. To obtain funds for subversion and propaganda King Saud has overdrawn his royalties with American petroleum companies by more than 2 years. From Cairo to Damascus underground communism gains strength. Three north Lebanese trade unions are now controlled by party agents. Syria's labor federation has succumbed. An agent of Britain's Iraq Petroleum Co. predicts that within 5 years communism may take over Syria.

Already it has penetrated the colonies of miserable Arab refugees who are not allowed to work in the states that harbor them. It has managed to make great headway among Moslem Nationalists. Nasser says: "We know there are underground Communists here. If they can convince the people that we are agents of the West they can gain control."

Even in Turkey new pressures are commencing. Unwise investment policies have brought that country to the verge of bankruptcy. Ankara has asked us for an emergency loan of $300 million. We have refused unless planning is revised. Now Moscow tells the Turks: Your economy sags because American pressure forces you to maintain a wartime footing.

For the first time the Soviets appear ready to gamble on an audacious Middle East policy. They have even cold-bloodedly encouraged the area to the brink of Palestine war. Why? Last summer in Geneva Moscow became convinced world conflict is excluded as too dangerous. A little holocaust is therefore worth the risk. For by its own insistence only the West could be involved.

Mr. Max Abelman

EXTENSION OF REMARKS

OF

HON. VICTOR L. ANFUSO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 16, 1956

Mr. ANFUSO. Mr. Speaker, it is indeed a privilege for me to insert into the CONGRESSIONAL RECORD a brief but warm letter which recognizes the efforts of Mr. Max Abelman in helping the 1955 fund drive of the United Hospital and Visiting Nurse Association of Brooklyn.

Mr. Abelman is a great humanitarian known throughout New York State for his charitable deeds. His heart and his energies know no bounds and his helping hand is everywhere. A community that has men of this type is indeed very fortunate.

The letter, addressed to Mr. Abelman, is written by Mr. J. William Stuart, chairman of the 1955 United Hospital campaign in Brooklyn. It reads as follows:

FEBRUARY 6, 1956.

Mr. MAX ABELMAN,
Brooklyn, N. Y.

DEAR MAX: It is difficult for one volunteer to thank another. It is especially the case with thanking you because so much of your work is obviously done without the expectation of reward. Nevertheless, I do wish to express my appreciation for the efforts you have put forward in helping achieve the success enjoyed by the 1955 United Hospital Fund and Visiting Nurse Association of Brooklyn Campaign.

It is only through the work of community-minded individuals like yourself that our voluntary institutions continue to offer the high quality of service from which we all benefit. And I fully realize that your efforts on behalf of the Fund are only one aspect of your multifaceted interest in public service. This is well testified to by the recent honors awarded you.

Please accept my wholehearted thanks,

Very sincerely yours,

J. WILLIAM STUART,
Brooklyn Chairman, 1955 United Hospital Fund and Visiting Nurse Association of Brooklyn Campaign.

The 38th Anniversary of Lithuanian Independence

EXTENSION OF REMARKS

OF

HON. WILLIAM E. McVEY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 16, 1956

Mr. McVEY. Mr. Speaker, on February 16 Lithuanians throughout the world will be observing the 38th anniversary of their homeland's independence. This observance offers us an opportunity to pause and reflect upon the suffering of the enslaved Lithuanians and to consider what we and the other free nations can do to encourage them during this time of oppression and to assist in making possible their eventual liberation.

The glorious history of this nation discloses the constant struggle for freedom which it has made against the tyrannical forces of aggression and proves that the liberty and freedom of any nation cannot be taken for granted, but preserved only by eternal vigilance and a strong national defense against enemies from within and without. During her period of independence, 1918–40, Lithuania made remarkable progress in every phase of life and received the recognition of the other free nations for her cultural, educational, and economic growth. All of these achievements were suspended and destroyed when this country became occupied for the second time by Russia in 1940; then by the Nazi forces, 1941–44; and then reoccupied and ruled by the Soviet forces up to the present day. Even though Lithuania's national status has been eradicated by Communist Russia, her people have not despaired and are fully united in their determination to reestablish their complete independence and to once more resume their tasks of development and progress.

On this anniversary day I wish to assert my own hope that in the not too distant future all obstacles in the way of peace will be hurdled and that the day of freedom will again come for these courageous people.

Coal Industry Sees Increased Demands on It To Meet the Nation's Energy Needs

EXTENSION OF REMARKS

OF

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 16, 1956

Mr. PRICE. Mr. Speaker, as a member of the Joint Committee on Atomic Energy, I am deeply interested in the entire subject of energy and the relationship of all our resources of energy. My district includes large coal reserves and important mining operations. Because of my interests in the atom, coal and energy generally, I am deeply impressed by the statement made by Mr. Tom Pickett, executive vice president of National Coal Association, 802 Southern Building, Washington, D. C., before the Joint Committee on Atomic Energy, in which he discusses the importance of the coal industry to our national prosperity and defense, and the possible impact of the peaceful uses of atomic energy. I think the statement is an enlightening, constructive, and fair contribution to our knowledge. It indicates some of the things that the coal industry is doing to develop new markets, as through the conversion of solid fuels to gas and oil. The enterprising coal industry in my State of Illinois is constantly alert to new markets and I can foresee a long period when the coal industry will be in an expanded era of production. I ask leave to print Mr. Pickett's statement in the RECORD.

STATEMENT OF TOM PICKETT, EXECUTIVE VICE PRESIDENT, NATIONAL COAL ASSOCIATION, TO THE JOINT COMMITTEE ON ATOMIC ENERGY, FEBRUARY 15, 1956

The National Coal Association is the trade organization of the bituminous coal mine owners and operators whose total production is two-thirds of all the commercial bituminous coal produced in the United States.

The coal industry has a deep interest in the progress of atomic energy, both from the standpoint of its military potential and the peaceful applications. The association has reviewed the principles involved through a committee established for that purpose. The committee is composed of the following: Kenneth A. Spencer (chairman), president,

Pittsburg & Midway Coal Mining Co., Kansas City, Mo.; Joseph T. Berta, president, Pittston Clinchfield Coal Sales Corp., New York City; L. Russell Kelce, president, Sinclair Coal Co., Kansas City, Mo.; R. H. Knode, chairman of the board, Stonega Coke & Coal Co., Philadelphia; George H. Love, president, Pittsburgh Consolidation Coal Co., Pittsburgh; A. R. Matthews, president, Pocahontas Fuel Co., Inc., Pocahontas, Va.; M. L. Patton, vice president, Truax-Traer Coal Co., Cincinnati; and R. E. Salvati, president, Island Creek Coal Co., Huntington, W. Va.

As a result of our committee's study, the board of directors of the National Coal Association on November 1, 1955, adopted a resolution setting forth the policy of the coal industry on atomic energy.

At the outset, it should be made clear the coal industry recognizes the need to continue the development of nuclear energy under Government sponsorship. We recognize that in the anticipated growth of the Nation and rising demand for energy, all sources have a very important part to play, including coal, oil, natural gas, and atomic energy if it is developed to the point of economic feasibility under our free enterprise system. There are many unsolved problems in the field of energy other than in the nuclear program. They should be given their proportionate share of consideration and research by the Government.

The resolution above referred to is as follows:

"Be it resolved by the Directors of the National Coal Association, That the following facts and principles should be considered by the executive branch of the Federal Government, the Members of Congress, the Atomic Energy Commission, and the American people, in determining the role of the Federal Government in the development of atomic energy:

"I. In the progression of humanity, in furthering world trade, in advancing the cause of peace, and in maintaining the world leadership of the United States, there is a need to continue Government sponsorship of the development of nuclear energy. To this end, the National Coal Association recognizes the need for the Government to support the national laboratories and to carry out the basic as well as applied research in the field of atomic energy.

"II. Future development of economically feasible nuclear power is necessary to provide power for underdeveloped areas of the world, to assist nations which have power shortages, and to protect the future of the United States in the power field. The National Coal Association therefore recognizes the need for the Government to continue the power demonstration program to optimize the conditions under which atomic power is generated.

"III. The public interest requires that atomic energy be utilized principally in whatever ways or processes it will contribute efficiently to the energy requirements of the United States and the world. The conversion of solid fuels to gas and to liquid fuels through the utilization of atomic energy promises great benefits to the people of the United States. The national laboratory effort should be directed toward minimizing atomic energy fuel processing costs, increasing the safety of reactor systems against the public hazards, and developing high temperature materials of construction to the end that all sources of energy will receive their fair share of the total effort to achieve progress.

"IV. The United States is one of the few nations of the world blessed with sufficient reserves of fossil fuels to meet the Nation's power requirements at low cost for centuries to come. In the United States the most economic source of steam-generated electric power in the foreseeable future will be plants fueled by coal, oil, or natural gas. Under the competitive stimulus of our free enterprise system, the ingenuity of the American people will bring about the most beneficial results that can be obtained from all energy sources, including coal, oil, natural gas and atomic energy.

"V. The public interest demands dissemination of actual cost information with respect to nuclear fuels to the greatest extent compatible with national security. To the extent that Government subsidies are necessary in the development stages of the nuclear program, the public should be informed as to the magnitude thereof. There can be no reliable forecast of the comparative costs of power generation until nuclear fuel costs, and the cost of the safe disposal of radioactive wastes, are established.

"VI. The Nation's best interests are not served by unwarranted optimism about the early availability of low-cost nuclear power."

The reading of the resolution reveals in itself that the coal industry is in agreement with some of the conclusions and recommendations contained in the report of the Panel on the Impact of the Peaceful Uses of Atomic Energy. We have scrutinized the report of the panel and we believe it contributes a great deal to the public knowledge about present and prospective energy supplies and requirements.

One outstanding contribution to the public knowledge resulting from the report of the panel is the focusing of attention on the expected vast growth in energy demands and the part which the coal industry must play in meeting those demands. The public must also be made aware of the importance of coal and the capital outlay required for expansion to meet that vast growth in demand.

The report and its background material show that the Nation will rely on the coal industry for a large share of its increased energy supplies. They include figures furnished by the United States Bureau of Mines showing that by 1980 the Nation will need as a minimum 784 million tons of coal (nearly double the amount produced in 1955). The figures further show that in 1980 the Nation may need in excess of 1 billion tons of coal per year. These estimates are based on the assumption that synthetic liquid fuels will not be required during the period under discussion. When coal needs to be converted into synthetic liquid fuels to supply requirements for that type of energy, the demands on coal will be much greater.

The increasing demands for energy raise the question of whether there are adequate reserves of fossil fuels to meet the requirements. The facts furnished by the Bureau of Mines show the United States has nearly a trillion tons of economically recoverable bituminous coal. That is enough to last a thousand years, even if we are called upon to double the current rate of production. Further analysis of figures supplied by the Bureau of Mines shows that approximately one-fourth of those reserves are recoverable at or near present costs (enough to last nearly 500 years at the current rate of production). Again, the Bureau of Mines figures show nearly 300 billion tons more of those reserves (enough to last an additional 500 years at the current rate of production) could be recovered at from 1¼ to 1½ times present costs. There is, therefore, an ample supply of bituminous coal to furnish the energy demands on our industry not only for the quarter of a century within the purview of the panel report but for the next millenium.

We not only have the coal—we have the ability to produce it. The production record through two World Wars and that in Korea is evidence of that ability. The progress achieved in the last 15 years is further reassuring evidence that the Nation can rely upon the coal industry for its energy demands. In 1940 only 35 percent of underground coal production was mechanically loaded, and national productivity averaged slightly over 5 tons per man per day. At the present time more than 82 percent is mechanically loaded and national productivity averages 9 tons per man per day. The panel report recognizes that where mining conditions are favorable production reaches 20 tons per man per day for underground mines and 40 tons per man per day for strip mines. The Bureau of Mines estimates that national average productivity will increase to 15 tons per man per day by 1980. Mechanization in all phases of coal mining is increasing at a steady rate. The Bureau of Mines states that significant developments are expected in all phases of the coal economy, including mining, transportation, improvement in present utilization, and in new or expanded uses.

Kenneth A. Spencer, chairman of the National Coal Association's Atomic Energy Committee, in his statement before the panel on the impact of the peaceful uses of atomic energy, stated the following:

"The Bureau of Mines quite properly sees improved mining equipment for underground, strip and auger type mining, also improved methods of transportation, such as conveyor and pipeline systems, all of which will increase the economically recoverable reserves of coal. There are, however, other developments which will further enlarge recoverable reserves and reduce the delivered B. t. u. cost of coal. Substantially improved methods of preparation make possible the utilization of coal which was previously not commercially salable. The recent introduction of new low-cost explosives has substantially reduced that important cost of strip mining, thereby affecting both total mining costs and reserves which can be mined. The development of new processes in which coal is simultaneously used as a source of fuel and raw material, such as the low temperature char projects, make feasible integrated operations on previously unusable reserves of lignite.

"If we look down the road 25 or 50 years as we are doing in this atomic energy study, we will, no doubt, see the commercial development of coal gasification at the mine and perhaps the underground gasification of coal. All these factors will tend not only to increase recoverable reserves, but also reduce the delivered B. t. u. cost, particularly to utilities."

We concur in the panel's recommendation that "the Commission recognize that military requirements for uranium are the present reason for ore-price guaranties and that a free market should be the objective for the era of expanded peaceful uses without guaranties." We endorse the panel's recommendation that "the guaranteed price schedules for the production of special nuclear materials should be declassified to make possible public examination of this important financial device." We agree with the panel that "the inherent requirement for less secrecy and freer flow of significant information concerning the peaceful uses of atomic energy is greater than the encouragements to this end contained in the 1954 act."

The panel deserves to be congratulated for its contribution to the public knowledge about the benefits to humanity which are possible of attainment from atomic energy in such fields as agriculture, food preservation, medicine and health, and industrial processing. Obviously research in those fields should be the subject of intense effort. We note that progress in these fields is not dependent upon progress in the power field—the panel report contains a statement that the practical limit of radioactive products which science, medicine, and industry can absorb "will probably be much less than the annual fission waste from a single power reactor, such as is now being constructed at Shippingport, Pa."

As set forth in our policy resolution, and as indicated in what has heretofore been said today, we agree with the panel in its conclusion that there is a need to continue Government sponsorship of the development of nuclear energy, for the progression of humanity, for furthering world trade, for advancing the cause of peace, and for maintaining the world leadership of the United States.

We do, however, find ourselves in disagreement with some of the overoptimistic and too-enthusiastic interpretations, implications, and conclusions drawn from language in the report, as well as some of the inferences deduced therefrom. For example, we cite those portions of the panel's report which imply that there is an "urgent" need for the development of nuclear power to meet the domestic energy demands. In this respect, portions of the panel's report are inconsistent with other portions. On the one hand, it leaves the impression that the development of nuclear power is necessary to maintain our expanding economy, and states that there is "urgency" associated with "the need for establishing atomic energy as a power resource available to assist in maintaining maximum expansion rates of our economy." On the other hand, the report recognizes that "there is no current urgent need for new sources of fuel for the production of electric energy."

Again, the panel report raises the question of the ability of the coal industry to increase production, while, at the same time, it recognizes the ever-increasing productivity of the industry which is predicted to continue. A resolution of that question may be achieved by reference to the facts as set forth on pages 4 and 5 of this statement.

The report points out that "the growth of electric power expresses in one simple index the American miracle of productivity and living standards," and it recognizes that growing energy demands must be fully met in order to sustain a dynamic and expanding economy. It contains a forecast that United States total electric-generating capability will grow from 103 million kilowatts in 1954 (it was in excess of 113 million in 1955) to somewhere between 358 and 600 million kilowatts in 1980.

We commend the panel for its selection of the growth of electric power as a simple index of the American miracle of productivity and living standards. The record of the electric utilities for uninterrupted low-cost power was made possible by the coal industry's ability to deliver B. t. u.'s on a dependable schedule where needed and at costs competitive with those of other fuels in the most populous areas of the United States. As to the future, I quote again from Mr. Spencer, who stated to the panel: "It is the considered judgment of the leaders of the coal industry that we will be in a position to supply fuel for the growing electric-energy needs of the United States at a reasonable cost for many, many years to come."

If the most optimistic hopes of the nuclear power enthusiasts are met, the Bureau of Mines figures show that in 1980 either 552 million or 938 million tons of coal will be required to meet the Nation's energy needs, depending upon whether the low or the high forecast of electric-generating capability materializes. It should be noted that the optimistic forecasts quoted by the panel would have nuclear power generating less than a quarter of the Nation's electricity in 1980. These statements emphasize the Nation's long-range dependence upon coal as the primary source of low-cost power. We believe some atomic generated electricity may help supplement coal in supplying the Nation's need for that energy. We believe atomic energy will neither destroy the coal industry nor reduce the Nation's need for a strong, healthy coal industry with a maintained capacity that can be expanded to supply enough fuel to sustain a dynamic and expanding economy.

The public should be informed as to the magnitude of government subsidies which are considered necessary in the development stages of the nuclear program. We do not object to these subsidies under the power demonstration program while atomic power is still in the development stages. However, we do wish to point out that vigilance on the part of the Atomic Energy Commission and your committee will be required to prevent abuse of the authority to subsidize the development phase of nuclear power. AEC Chairman Lewis L. Strauss illustrated this point in a speech delivered by him on November 9, 1955, when he said:

"The information paid for in this manner must, of course, be new information which will supplement existing knowledge, otherwise it cannot be said to contribute to the advancement of the art. This means that the Government, generally speaking, will not invest in projects which appear to duplicate each other. Under this philosophy the Commission could not justify giving financial assistance to research and development work on 2 or 3 reactors which are of the same type and size, and which, therefore, could be expected to produce the same or very similar data."

On February 9, 1956, Chairman Strauss announced that the AEC had accepted as a basis for negotiations, the Yankee Atomic Electric Co.'s proposal to construct, with Government subsidy, a pressurized water reactor plant. Mr. Strauss said, "Research and development work to be done for this plant would supplement work required in the development of the pressurized water reactor, a plant of the same general type, which is being built at Shippingport, Pa., in a project jointly sponsored by the Commission and the Duquesne Light Co."

We don't know whether the Yankee atomic plant is sufficiently different from the Shippingport plant to warrant Government subsidy. We do say, however, that your committee and the Atomic Energy Commission has an important task in seeing that a Government-subsidized plant does not essentially duplicate a previous plant. If this task is not adequately performed, the program to subsidize development of the nuclear program could be converted into a distortion of our free enterprise system.

In the coal industry's policy resolution, we take the position that "The Nation's best interests are not served by unwarranted optimism about the early availability of low-cost nuclear power." We are pleased to note that the panel report brings this matter into sharp focus. The panel feels that a better-informed public opinion, stabilized in the framework of sound public policy, is necessary to provide a balance to special-interest pressures. The report states that "The public attitude which now exists could result in the Commission's being charged with delaying accomplishment of the full benefit of peaceful uses of atomic energy"—a charge which the panel feels is completely unjustified. We concur with the report on this matter.

An informed public opinion with respect to atomic power is vital in many ways. For example, the report states that among the factors which may accelerate or retard the growth of nuclear power is the possibility of extensive programs for the construction of publicly subsidized or publicly owned nuclear power plants. If the public is given all possible factual information about the nuclear power program, including the full amount of those cost elements which can be determined at this time and the magnitude of the problems which must be overcome before nuclear power can compete with conventional fuels, the public will then decide if there is need for extensive programs for the construction of publicly subsidized or publicly owned nuclear power plants.

As set forth in the report, "Some highly publicized statements, however, do not take these facts into serious consideration. Announcements of plans are sometimes mistaken for accomplishment of objectives. This would be of no serious consequence in itself, if it did not tend to affect future conditions. Words sometimes outrun deeds. Some real facts, such as the use of the threat of development of low-cost atomic power as leverage over conventional fuel and transportation costs, may well be magnified out of proportion in the public mind. This overmagnification in the public mind might add up to real losses of potential atomic benefits and reduce the value of peaceful atomic development as an element of United States leadership."

There are other ways in which this "overmagnification" reacts to the detriment of the public interest. The Nation's dependence upon conventional fuels for the bulk of its energy requirements means that the coal industry must have available to it ever-increasing numbers of trained engineers. Individual companies and associations within the industry have through the years established scholarships for the education of mining engineers. More are in contemplation. We expect to be able to meet our need for trained technicians. However, if our young people are erroneously led to believe that nuclear power will soon supplant conventional fuels, difficulties may be encountered in attracting sufficient numbers to this important field.

If this "overmagnification in the public mind" continues to grow, the Nation may well suffer from curtailed research on improved efficiency in the generation of electricity from conventional fuels. The Bureau of Mines points out that electrical generating plants at present consume about 1 pound of coal per kilowatt-hour, and this is expected to be reduced, through continued progress, by at least 0.05 pounds per kilowatt-hour for each 5-year period. The Bureau also states that "Direct conversion of coal into electricity is a possible interesting development but one that will not come into fruition until beyond the period under discussion." "Overmagnification" of the prospects of nuclear power might cause some curtailment in efforts along these lines.

There is a way to correct the public's erroneous impression that low-cost nuclear power is on the verge of achievement. It can be done by the dissemination of facts. We believe the information contained in the panel report should help a great deal to bring about a "better informed public opinion." The panel suggests "the technical and economic realities of this stage of development of peaceful uses, especially in the field of atomic power, are not as yet entirely favorable, that present profitability is doubtful, and that future profitability is still not certain."

The panel points out that "An atomic-power reactor is a complex, expensive, and potentially hazardous machine. It is not a small black box in which one only has to put a lump of fissionable material. It cannot be transported in the luggage compartment of an automobile. It requires for its fabrication highly specialized techniques and materials. Its design demands a knowledge and ingenuity possessed today by relatively few people in the world. The task of bringing this source of power into reality is as great as is the challenge it offers to our society."

As set forth in the report, "Unless and until research and development demonstrate that atomic power can be economically feasible, there can be no substantial impact." The panel says that not until 1960 will we "have adequate technological information at hand on which to base judgment of the economic possibilities of atomic

energy as a power resource." The report recognizes that "If the nuclear energy industry is to become economically self-sufficient, more economical treatment methods of wastes must be devised," and that the insurance problem will have to be solved before privately owned reactors can be put into operation. At a recent press seminar on nuclear power, Mr. Kenneth Davis, head of the AEC Reactor Development Program, said: "In fact, we don't today know really how to do the chemical processing for as little cost—just for this part of the nuclear fuel cost alone—as we can probably afford to pay. So there are still many unsolved problems here since the fabrication and the chemical processing are both rather large."

We believe, as the Panel does, that proper dissemination of factual information of this type will contribute to a better informed public opinion with respect to nuclear power. Spectacular statements based on unwarranted optimism about the future availability of low-cost nuclear power have been all too common in the past. There is need to counteract the erroneous impression which has been communicated to the general public with facts—facts of the type contained in volume II of the report: "The fissionable material consumed by the nuclear plant represents but a small part of the nuclear fuel cost. When fabrication, reprocessing, and handling are included, nuclear fuel cost increases many times. The fuel cost computed in this manner for the *Nautilus* is about 50 times the cost of fuel oil for equal shaft power generation."

Instead of unfounded over-optimism, persons in a position to influence public opinion should disseminate information about the reasonable probabilities together with the known facts. It was recently revealed that power from the Shippingport reactor, which is the first full-scale power reactor which will be put into operation, is expected to cost in the neighborhood of 52 mills per kilowatt-hour in the early years of operation. This figure compares with a 3 to 8 mill range for power from conventional fuels. With proper publicity of the known facts, we will have a better informed public opinion.

In conclusion, I want to emphasize the following facts: The coal industry does not ask curtailment of basic and applied research in the field of atomic energy. We do seek a better informed public opinion through the dissemination of the known facts which bear upon the possibility of achieving low-cost nuclear power. On the basis of the known facts, we believe that in most sections of the United States the most economic source of steam-generated electric power in the foreseeable future will be plants fueled by fossil fuels. We believe that for the foreseeable future the maintenance of a dynamic and expanding economy will depend upon the availability of ever-increasing amounts of low-cost energy from coal. We have the coal reserves necessary to meet the Nation's needs. We have the know-how and the manpower to produce that coal. We confidently expect to meet the Nation's expanding energy demands within the framework of the free-enterprise system, without subsidy, and we believe the Nation's dependence upon coal warrants close congressional scrutiny to the end that legislative inequities against the coal industry shall be eliminated. We do not fear inroads upon our market by nuclear power—we believe that for many years to come the atomic-energy program will consume far more coal than is displaced by nuclear power.

Thank you for the opportunity to appear here today on behalf of the bituminous-coal industry.

Prayer

EXTENSION OF REMARKS
OF

HON. JAMES W. TRIMBLE

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 16, 1956

Mr. TRIMBLE. Mr. Speaker, it is comforting to know that our young people are interested in prayer. One of the most interesting articles that I have seen lately is that by Miss Dorothy Carolyn Putnam, who is a freshman at the University of Arkansas. Her home is in Fort Smith, Ark.

She is a lovely person, and it is with much pleasure that I insert her article, which appeared in the Arkansas Methodist in the issue of December 1, 1955:

PRAYER—EXPOSURE TO GOD

(By Dorothy Carolyn Putnam [1])

It is interesting to speculate what would make the deepest impression on a visitor from the planet of Mars to our Earth. It might be the Empire State Building, towering above the other mighty skyscrapers of New York City. Or it might be our coal mines and oil wells, assuming that there are no such things on Mars. Or he might be astounded at our airplanes, as they landed and took off from a major airport. Perhaps such an ordinary thing as a field of green grass would impress him most, if he had never seen one before.

But there is a good chance that the most mysterious sight of all would be that of human beings at prayer. We have witnessed it so often that we tend to overlook the wonder of it. What would we think if we were viewing for the first time a person or a group of persons, with their eyes closed, their lips framing words, but the One to whom they were speaking not visible in any direction? To whom are they talking? Where is He? Does He hear? Does He answer? Does their talking do any good?

These and many other questions might enter the mind of our imaginary visitor. As a matter of fact, they often enter our minds also.

WHAT PRAYER IS NOT

Before we try to work out an understanding of what prayer is, it may be useful to dispose of a couple of false notions.

Prayer is not primarily asking God for something. Some people seem to think that it is. The very question so often heard, "Does God answer prayer?" implies that asking is the chief thing about praying. But that is not the case at all. In order to be sure of this point, all we have to do is to go through the Lord's Prayer, which Jesus gave His disciples as a model for them to follow, and see how much asking it contains. In the Lord's Prayer we begin by speaking to God, and about Him. We say that His name is to be held in reverence. We express the great hope of the coming of His kingdom, and the doing of His will on earth as in heaven. Not until we are half-way through do we express any petitions at all, and these are of a most general sort. We ask for our daily bread, which means not merely a loaf of bread but all that we need for our day-to-day existence. We ask that God will forgive us our sins, as we forgive those who sin against us. And we ask that we be not led into any more temptation than we can stand. That is all. Then our thoughts turn back to God once more, and we acknowledge that the kingdom and the power, and the glory belong to Him forever.

There is nothing here in the way of a request that tomorrow may be a nice day for the Sunday school picnic; or that we may get a job we are hoping for very much; or even that such and such a sick person may be made well. Certain phrases of this sort we would hesitate to insert into the Lord's Prayer. They don't seem to belong to it. The Lord's Prayer is not primarily about us at all; it is chiefly about God.

This is not to say that God is necessarily displeased if we ask Him for this or that occasionally.

The main point of prayer does not lie in asking.

Let us go a step further. Prayer is not primarily saying words. It may take the form of words spoken aloud, or words shaped silently by the lips, or meditation that is virtually wordless. When a group of people worship together, they almost have to say words in order to keep together in their approach to God. But in private prayer, the saying of words is strictly secondary. What is primary is the content and direction of a person's thoughts, what they are about, and in which way they are heading.

In particular, praying is not necessarily the same as saying prayers. We may do the former, and not mean much by it.

Real prayer is a matter of the "bent" of our souls. If what we say we want, and what we actually want, coincide, well and good. But if they are different, it is the latter that really counts.

WHAT PRAYER IS

A good definition of prayer is that it consists of a time exposure of the soul to God.

A good example of prayer is Jesus in the Garden of Gethsemane during the agonizing hours just before the soldiers came to lead him away to be crucified. In this crisis he withdrew from his friends, to be alone with God. The words which he said have come down to us, or at least some of them: "My Father, if it be possible, let this cup pass from me; nevertheless, not as I will, but as Thou wilt" (Matthew 26: 39). Three times He prayed, using these same words. He was opening His soul wide to God. He was facing toward God, so that God's goodness, love, and purpose might register fully within His own life. He was making sure that God's will would be His will in this emergency, and that is prayer, at its highest.

A good analogy of prayer is Nathaniel Hawthorne's story of the Great Stone Face. The man in the story had lived in the presence of Him. That is what we mean by prayer.

What, then, shall we do when we come to pray? First of all, think about God. Turn our faces toward Him. Turn our thoughts toward Him. Turn our lives toward Him. At bedtime, we can run over in our minds the many evidences of God's goodness which we have seen that day.

When we pray in the morning, we turn Godward in the same way. This new day speaks to us of God. We see Him in it. We think about Him. Then our thoughts quite naturally get around to ourselves during this new day. What does He want us to do and be today? What would our lives be like if they resembled Him?

Wherever and whenever we pray, this is the basic pattern: opening our souls to God, and giving Him a chance at our own lives; thinking first about Him and then

[1] Miss Dorothy Carolyn Putnam is a member of the Midland Heights Methodist Church, Fort Smith. This article was a meditation given at the concluding service of the Midland Heights Youth Activities Week in August. Miss Putnam is a member of the Midland Heights MYF.

about ourselves. Prayer of this sort can take place in church, on a hike, in the course of a drive along country lanes or through city streets, during an examination in high school, or washing dishes at home. It may take a half hour, or a split second. If it follows this pattern it is true prayer. In the nature of things, we often come to God with some particular problem or burden on our minds.

We can and should come to God also with other people on our minds.

Having done and thought these things, we rest back finally in a sense of peace, like a good swimmer relaxing in the water, knowing that the water will support him if he doesn't struggle too much. We have been face to face with the Eternal. We see our own lives and life about us in a clearer light. We are reminded that around us and beneath us are the everlasting arms. Everything is all right with us, with those we love, and with the things in which we are interested. This is not guarantee against misfortune. It is rather the confidence that, whatever happens, nothing can really harm us. Nor is this the easy peace of dodging hard decisions. Rather it is the contentment of facing them squarely with God's help. And so we rest or work, in quietness and confidence. In His will is our peace.

DOES GOD HEAR PRAYER?

If radio's slim fingers can pluck a melody
From night and toss it over a continent or sea;
If the petaled white notes of a violin
Are blown across a mountain or a city's din;
If songs like crimson roses are culled from thin, blue air,
Why should mortals wonder if God hears prayer?

DOES HE ANSWER?

If we no longer think of prayer primarily in terms of asking for something, then this question takes an entirely different turn.

The highest answer we can hope for in our prayers is God Himself. If we pray long and hard, if we expose our souls consistently to God, His likeness will be stamped upon our lives more and more. We shall resemble Him increasingly. We shall enter into closer and closer fellowship with Him. Our lives will become more orderly and purposeful. Bewilderment and anxiety will decrease. We shall live as though we were seeing the invisible—which indeed we are.

What more can we want than this? This is the Christian life at its fullest. This is the secret of life itself.

Adventures in Interfaith

EXTENSION OF REMARKS
OF
HON. HERBERT ZELENKO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 16, 1956

Mr. ZELENKO. Mr. Speaker, I represent a district in which there is located one of the finest of modern hospitals, the Jewish Memorial Hospital. Recently, a local publication, the Interfaith Observer, published a story about the Jewish Memorial Hospital which deserves to be more widely read. I am pleased to introduce it herewith:

ADVENTURES IN INTERFAITH: JEWISH MEMORIAL HOSPITAL, WHERE THE ONLY CREED IS AID FOR THE ILL

Right in the heart of Washington Heights in a building located on Broadway and 196th Street, there is an institution that symbolizes, in its own distinctive way, the varied character of the communities of Washington Heights, Inwood, Riverdale, and West Bronx. It is the Jewish Memorial Hospital, an eight-storied structure set behind a well-kept lawn, which is now entering upon its 51st year of service.

A recent news story about the hospital further attests the interfaith character of the institution. Shortly after President Eisenhower had his heart attack, the children of the arts and crafts' division of the hospital's outpatient department decided to send him a get-well message. They did so in the form of a hammered-out copper plaque on which they wrote "get well." The signatures are revealing. The children who joined in this action were: Terry Kruska, Teddy Vlassopulos, Carolyn King, Adibah Salim, Theresa Claus, Carol Urban, Rose Overbeck, Michael Pappa, Chris Potter, Mamie Simmons, Lucy Flores, Roslyn Hirsch and Juliet Diaconis. In this variety of names there is the clearest indication of the universal character of Jewish Memorial Hospital.

This is not an accident. Jewish Memorial Hospital has, from the beginning, set out to be a community institution serving all of the people who need it without regard to race, color, creed or origin. It is no wonder that tributes to this striking quality were paid to the hospital on the occasion last year of the opening of its new Research Laboratory Building.

The event itself was a heartening demonstration of cooperation and good will. Among those who spoke and who sent messages of greeting were Dr. Ralph Bunche, the distinguished American who won the Nobel peace prize several years ago; Father James J. McNally, of the Church of Our Lady Queen of Martyrs, one of the best-known religious centers in the area; Mayor Robert F. Wagner; Rabbi Israel Goldstein; and the president of the board of trustees of Jewish Memorial Hospital, David Schwartz. Their words on that occasion are worth remembering.

Dr. Bunche said: "This dedication signals a new advance in the development of a distinguished institution which for nearly half a century has rendered invaluable service to the community. Its portals welcome the needy. Its staff and facilities are open to all races and creeds."

Mayor Wagner greeted the institution with the following tribute: "The addition of this important new facility for the expansion of the many noteworthy services provided by the Jewish Memorial Hospital is in keeping with the magnificent tradition of progress and contribution to our community's welfare that has been continuous since the Hospital's founding."

Mr. Schwartz speaking for the hospital trustees said: "We are also proud of the fact that no one seeking treatment in this hospital is asked about his race, or religion, or origin. A disease germ does not recognize those distinctions. Neither do we. A glance at our staffs and at our patients will show the nonsectarian universal character of our hospital services."

And Rabbi Goldstein noted this interfaith quality when he said: "It is a source of special pleasure to me that my participation in these ceremonies today is an encore to my participation in the ceremonies at the dedication of your main building some years ago. The participation of clergy of several denominations then as now is no doubt a tripleclad guaranty of your success. Actually, it is a tribute to the broad character of your ministry of healing which does not ask whether a person is Christian or Jew; black or white; but only whether he is in need of the service you have to offer."

A notable instance of this pioneering program was in the institution's Know Your Hospital Program, whereby groups of children from the neighborhood schools (and of adults too, for that matter), have been invited to our building and to see for themselves just how the institution carries on. This has been particularly effective in reducing among children a fear of hospitals.

A year ago, the New York Times devoted a full feature to this program of acquainting children with a hospital, and in that way, bringing them closer to that community institution in terms of understanding and knowledge.

Last year, the hospital celebrated its Golden Jubilee; the completion of 50 years of its existence and services to the city.

Like every institution that serves the community, the hospital in the last analysis, must thrive on the understanding, knowledge and support of the people in its area. It invites groups of citizens; fraternal groups, parents' and teachers' associations, churches and synagogues, youth organizations and schools to arrange for association with its many activities. Above all, it invites and hopes for the understanding of the people of the community to whose well-being it is dedicated.

Obstruction Tactics

EXTENSION OF REMARKS
OF
HON. SAM COON
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 14, 1956

Mr. COON. Mr. Speaker, recently I placed in the CONGRESSIONAL RECORD an Oregon Journal editorial relative to "the blockaders"—some of the Federal power or nothing advocates. The following editorial from the La Grande (Oreg.) Observer points up the continuing obstructionist tactics of "the blockaders":

OBSTRUCTION TACTICS

The Northwest Public Power Association has launched an attack against the applications of the Pacific Northwest Power Co. to build two dams on the Mountain Sheep and Pleasant Valley sites on the lower Snake River.

This opposition was not unexpected but there seems to be very little in their argument to justify the opposition.

The Mountain Sheep and Pleasant Valley sites are below the Hells Canyon site and are not a part of that controversy.

About a year ago, the Northwest Power Co. announced that they were interested in exploring these sites and were granted a preliminary permit to carry on the testing.

The two dams will develop about a million kilowatts at a cost of about $200 million * * * first power would be available in about 4 years.

But now that application to begin construction has been made, the public power group has suddenly decided there should be a federally built dam at this location.

Heretofore, the Nez Perce site, which is below the Mountain Sheep and Pleasant Valley sites, has never been seriously considered as a Federal site. The main reason for this is because of the great damage that a dam at this location would do to the fish runs.

The Mountain Sheep site, which is the furthest downstream of the two sites, is just above the mouth of the Imnaha River. This leaves both the Imnaha and the Salmon open for fish runs. These are recognized as the two most important tributaries on the Snake for spawning.

A dam at the Nez Perce site, which would be over 600 feet high, would place an insurmountable barrier against the spawning runs and would do great damage to the fishing in the future.

The main objection which the public power group gives to the application of the Northwest Power Co. is that it would aid the creation of a power octupus.

It is not clear just what is meant by this term, or what sins they are attributing to the octupus.

It is significant to note that they do not offer any alternative plan for building the Federal dam at Nez Perce. It is the same old story: "We don't know when, if ever, we will build a dam, but we don't want anyone else to build one either."

The figures presented during the COON-NEUBERGER debate here recently indicated that the presently authorized Federal dams would require 27 years to complete at the present rate. Since the Nez Perce site is not one of these it is safe to assume that we would have to wait at least 30 years before we could expect power from this stretch of the river under Federal development.

It seems clear to us that this Northwest Public Power Association is interested in only one thing—socialized power.

They do not seem in the least concerned about the present need for additional power, or for working out any solution to the financial problems facing the Northwest in getting additional generating facilities under construction.

There's a dog-in-the-manger approach. They are saying, in effect, that they would prefer to see a power shortage develop with all of the loss of growth and employment that would go with it, rather than to have any new power made available to the region by private development.

It is time that we realized all this talk about John Day, Hells Canyon, Nez Perce, and others is only serving one purpose. To delay the construction of dams that will provide the badly needed power.

We will very soon begin paying the price for this delay, and it is a price that will come very high to all the people of the area.

Health and Welfare Funds

EXTENSION OF REMARKS

OF

HON. JAMES C. MURRAY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 16, 1956

Mr. MURRAY of Illinois. Mr. Speaker, considerable newspaper publicity has been given in recent years to the welfare trust funds of labor organizations. Much of the publicity has been critical of such funds.

I have been privileged, in recent weeks, to have received the statement of Michael J. Kennedy, business representative of the International Brotherhood of Electrical Workers Local 134, in Chicago, Ill., relative to that union's health and welfare fund, given at an apprenticeship graduation exercise.

This report discloses that health and welfare funds freely negotiated between management and labor, and fairly administered, furnish a complete answer to two erroneous views often expressed by extremists on the opposite sides of the political forum, first, that a combination of workers in a labor organization is detrimental to the welfare of the individual, and, second, that the Government is the sole proper administrator of funds devoted to the health and welfare of individuals. This report gives real evidence that such political contentions are destitute of substantive merit. It proves that the fund to which it relates is in the best interest of employer, employee, and the public.

I would like to insert in the RECORD the following address by Michael J. Kennedy disclosing the benefits provided by the health and welfare fund of such union, the number of participants in the fund, and the payments made by the union:

STATEMENT OF MICHAEL J. KENNEDY, BUSINESS REPRESENTATIVE OF INTERNATIONAL BROTHERHOOD OF ELECTRICAL WORKERS, LOCAL 134, RELATIVE TO UNION'S HEALTH AND WELFARE FUND

The electrical insurance trustees established its first benefit in the year of 1932 and that benefit provided each member with a $1,000 life and total disability insurance policy.

During the 12-month period from July 1, 1954, to July 1, 1955, 34 of our members passed away and their beneficiaries received a total sum of $34,000.

SECOND BENEFIT

The second benefit was established in 1937 and provided for a system of unemployment assistance in the form of $10 and $15 certificates, depending upon the number of hours worked by the member in each quarter and these certificates can only be applied to pay the $12.60 cost of his $3,000 insurance policy on his quarterly card.

During the 12-month period ending last July 1 our members received a total of 593 of these $15 unemployment certificates and 243 of the $10 certificates, for a total number of 836 certificates representing a total sum of $11,325.

THE THIRD BENEFIT IN 1942 AND PROVIDES FOR LOANS

The policy of the insurance trustees has been to make loans only to our members who are past 65 years of age and who are on pension.

And to qualify for these loans, when a member takes his pension at the age of 65 he then receives a pension of $50 per month from our international office and that same member also carries a $3,000 life-insurance policy in the Mutual Life Insurance Co. of local 134.

According to our bylaws, if the member's income from other sources does not exceed $2,500 per year, he has the privilege, if he wishes to, of borrowing $35 per month on his $3,000 life-insurance policy which he must deposit with the financial secretary, $17.50 from the local and $17.50 from trustees.

Two hundred and sixty-five members on pension, 185 receiving these loans.

FOURTH BENEFIT

The fourth benefit was adopted also in the year of 1942. It provided benefits only for our members in the Armed Forces of our country and their families.

These benefits provide that the electrical insurance trustees pay out of our insurance fund the $12.60 premium per quarter on each member's $3,000 life insurance policy, and also pay the premium on hospitalization benefits for his wife and children.

During the 12-month period ending July 1 we had 79 members still in the service and those benefits amounted to a total sum of $6,571.48 for that 1-year period.

It might be interesting to know that since 1942 up to the present time a total number of 773 of our members have been in the service and the premiums paid on their insurance has totaled $98,905.14.

FIFTH BENEFIT: HOSPITAL BENEFIT FOR MEMBERS

This fifth benefit was established in July of 1944 and it provides that our members be eligible to receive hospitalization benefits and surgical expenses.

During the 12-month period ending last June 1, 921 of our members have received a total sum of $156,789 in hospitalization benefits.

The sixth benefit was also established in the year of 1944 and it provided pension benefits of $1 per day for certain of our pension members who must qualify in a rather unusual manner.

Those pension members whom I spoke of and who are receiving loans of $35 per month on their $3,000 life-insurance policy are the only pension members who are eligible to receive this $1 per day benefit.

Those pension members will, after 6¼ years, have borrowed a total sum of $2,625 on their $3,000 insurance policy and at that time after 6¼ years they can borrow no more, as the balance of $375 is held in reserve to pay the $12.60 premium on his $3,000 insurance policy.

When that time comes, the pension member finds himself with only the $50 monthly pension from our international office and then he is eligible to receive these $1 per day pension benefits.

During 12 months, 78 members at $1 per day, total $28,470.

SEVENTH BENEFIT: HOSPITALIZATION BENEFITS FOR WIVES

The seventh benefit was established in March of 1947 and it provides for the wives of our members to receive hospitalization and surgical benefits.

During this 12-month period ending last July 1, 1,370 wives of our members received a total sum of $227,751 in hospitalization and surgical benefits.

EIGHTH BENEFIT: HOSPITALIZATION BENEFITS FOR PENSION MEMBERS

This benefit was established in 1948 and was only for the benefit of our pension members who had borrowed the full amount of $2,625 on their $3,000 life insurance policy, and who were receiving the $1 per day pension benefits.

This group are all past 71 years of age.

This benefit provided that those pension members and their wives receive full hospitalization benefits at the low cost of $23.80 per quarter.

At the last meeting of the electrical insurance trustees on last June 15, we eliminated entirely this cost of $23.80 per quarter to pension member for hospitalization benefits for himself and his wife, effective October 1 and in the future, these pension members will receive these hospital benefits at no cost whatsoever.

NINTH BENEFIT: HOSPITALIZATION FOR CHILDREN

Our ninth benefit was established in 1950 and provided hospitalization and surgical benefits for the children of our members.

During this 12-month period, from July 1, 1954, to July 1, 1955, the children of our members have received a total amount of $64,951 in hospital benefits.

TENTH BENEFIT: ACCIDENT AND SICK BENEFIT

The 10th benefit was adopted in 1952 and provides for all members working for electrical contractors, what is known as the accident and sick benefit.

This benefit pays to the member $30 per week for a period of 26 weeks while he is laid up because of sickness or because of an accident which he has suffered off of the job and while he was not working.

We've had an average of about 45 members per month who have received this benefit during this 12-month period ending last July 1 for a total sum of $73,160.

XI

1. The total amount of all benefits received by our members and their families during the 12-month period from July 1, 1954 to July 1, 1955 was $603,017.48, or an average of over $50,000 per month.

2. It might be interesting to know that out of a total number of 5,500 of our members who are working for electrical contractors during the 12-month period that I have just covered there was a total of 1,958 different members and their families who received sick and hospital benefits. This averages almost 2 out of 5.

XII

In conclusion I want to say a few words regarding the electrical insurance trustees and their responsibilities.

The board of trustees is made up of 5 members, 4 trustees representing the Electrical Contractors Association and I have been the fifth trustee representing our local union.

This 4-to-1 ratio is not important because any changes or amendments to the insurance agreement can only be made by the unanimous approval of all 5 trustees and also by the approval of local 134 and the Electrical Contractors Association.

Mr. Kennedy and the board of trustees of which he is a member are to be commended for their able administration of the funds intrusted to their custody, and for their voluntary and public accounting of stewardship.

Pollie Anner Myers Hudson

EXTENSION OF REMARKS
OF
HON. GEORGE W. ANDREWS
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 16, 1956

Mr. ANDREWS. Mr. Speaker, recently two Negro women were ordered by a Federal district court in Birmingham, Ala., to be admitted to the University of Alabama. The decision of the Federal district court was in compliance with the Supreme Court school case of May 1954, which in my opinion was a political decision.

I would like for the Members of the House to know something about one of the Negro women, and I include in my remarks the following excerpt from a story in the February 13, 1956, issue of South magazine. This excerpt has to do with Pollie Anner Myers Hudson:

Complying with a Federal court order, University of Alabama trustees admitted the first Negro in its 136-year history—Autherine J. Lucy, 26, of Birmingham. In denying her room and board, they hurled back at the Supreme Court some of its own language: applicants were studied with respect to welfare, safety, and other effects upon them and other students, and on sociological grounds.

Rejected because her conduct and marital record did not meet admission standards was another Negro, Pollie Anner Myers Hudson, also of Birmingham. No details were given in the board's terse statment. South went to official records, found these facts:

"Pollie Anner Myers, unmarried and pregnant, applied for admission the third week in September 1952. Two months later, November 14, 1952, she married Edward Hudson, whose 3-year sentence for burglary had been revoked in Jefferson County in 1948. Six months and four days after the marriage Pollie Anner Myers Hudson gave birth on May 18, 1953, to a male child. It was a normal birth, length of pregnancy was 40 weeks.

"Henry Myers, the woman's father, was sentenced from Elmore County on September 26, 1938, for 1 year and a day for possession of still and manufacture of whisky. Edward Hudson, from whom the Associated Press reported she was separated and seeking a divorce, was sentenced to 3 years in the penitentiary February 14, 1947, for daytime burglary of an uninhabited dwelling in Jefferson County. Probation was revoked October 8, 1948, and sentence was imposed. He was sentenced for a year and a day on August 28, 1948, on another charge of burglary on an uninhabited dwelling."

I wish each Member of this House and each member of the Supreme Court of the United States would ask himself this soul-searching question: "Would you want your teen-age sons and daughters to go to school with a person like Pollie Anner Myers Hudson?" Her attorneys, aided by NAACP attorneys, are continuing their efforts to force her admittance.

Echo Park Deletion—Cleverest Stunt Since P. T. Barnum Invented the "Egress"

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 16, 1956

Mr. HOSMER. Mr. Speaker, in the palmiest days of his great career as a showman, the incomparable P. T. Barnum discovered the profits of his animal shows were dwindling. The kind of naive folk in his tent became so intrigued with the strange and wonderous animals on display they stayed on and on to view them lingeringly.

This, of course, produced long lines waiting outside for room to get in. It vastly discouraged additional cash customers, anxious, but for the long wait, to pour more admissions into the great entrepreneur's coffers.

In a stroke of wizardry, P. T. solved the problem. He had a large sign painted with a giant directional arrow pointing in an appropriate direction with the bold legend: "To the Egress."

Trusting spectators unhesitantly followed the arrow to view what they believed would be another exotic animal, possibly even a cross between an emu and a tigress. They soon found themselves on the cold side of the exit.

The temporary deletion of Echo Park dam and power facilities from the proposed upper Colorado River storage project is the cleverest stunt since P. T. Barnum invented the "egress."

The supporters of the gigantic upper Colorado River project admit that in its present form it is "an engine without pistons."

Yet they are asking Congress to pass this incredible bill, and force the Nation's taxpayers to suffer a loss of more than $4 billion.

The "pistons" of the upper Colorado project was Echo Park Dam. Conservationists throughout the country fought Echo Park Dam because it would flood a part of Dinosaur National Monument.

Facing certain defeat, the bill's supporters finally informed the conservationists that Echo Park Dam would be taken out. The conservationists accepted this promise and withdrew their opposition.

It is apparent from the record that the conservationists have walked into a trap.

Although Echo Park may have been deleted temporarily from the bill at hand, it can no more be taken from the project than can history be abolished by destroying the pages on which it is written. If this Congress passes any bill, it simply means that Echo Park must be authorized later to help salvage the taxpayers' investment.

The Department of the Interior, the Bureau of Reclamation, and numerous individuals have testified repeatedly that Echo Park Dam is absolutely vital to the feasibility of the upper Colorado River project.

For instance, on January 18, 1954, Under Secretary of Interior Ralph A. Tudor testified before the House Interior Committee as follows:

Mr. TUDOR. We think Echo Park is a necessary part of the project, yes, sir.

Mr. ENGLE. You think it would be like taking the engine out of the automobile, then?

Mr. TUDOR. I might say it might be like taking the pistons out. We feel definitely that the feasibility of the entire project would be placed in hazard if Echo Park were left out and some alternative substituted.

There is nothing in the world to prevent Congress from returning Echo Park Dam to the bill. If the bill can be passed without its "pistons," obviously it will not work, and the "pistons" will have to be put into the engine.

By withdrawing their opposition to the bill, the conservationists are racing toward the egress. They are being lulled to sleep, and they will wake up some morning to find that Echo Park Dam is to be built in Dinosaur National Monument.

The record before Congress is replete with unqualified statements by Reclamation Bureau officials and others that Echo Park must be in the project or the project will not work, cannot pay out, and would fail to provide the development desired.

Here are excerpts from that record:

Mr. AANDAHL, Assistant Secretary of the Interior.[1] With respect to the need for the Echo Park Reservoir, our recommendations remain unchanged. We still recommend the construction of the Echo Park Dam and Reservoir.

Mrs. PFOST.[2] In your opinion, are there other sites that would be as beneficial to the project as Echo Park?

Mr. AANDAHL. No; I think Echo Park is way out ahead——

Mrs. PFOST. There is no other substitute?

Mr. AANDAHL. It is way out ahead of alternates that might be proposed.

Mr. W. A. DEXHEIMER, Commissioner, Bureau of Reclamation.[3] The proposed use of

Footnotes at end of speech.

the canyon sections of the Dinosaur National Monument for water and power developments was contemplated long before the original 80-acre area was enlarged to its present size of over 200,000 acres in 1938. A number of power-site withdrawals prior to that year are evidence of this fact. Recognition of the importance of these potential power developments was given in the President's proclamation enlarging the 80-acre monument. The supervision of the area by the National Park Service under this proclamation was not to affect the operation of the Federal Water Power Act of June 10, 1920, as amended, and administration of the monument was subject to the reclamation withdrawal of October 17, 1904.

The plan before you for coordinating the development of the water and power resources of Green and Yampa River Canyons along with their scenic and recreation values is therefore consistent with the language and spirit of the proclamation. The Department has no doubts as to the appropriateness of creating an artificial lake and adjoining facilities within the bounds of this particular national monument. It would not create a precedent for invasion of other parks. The precedent, if any, was created in 1938 when the boundaries were extended to the canyon areas with a clear understanding that water conservation and power development had prior right to the use of those areas.

Mrs. PFOST.[4] Mr. Commissioner, is Echo Park essential to the economic feasibility of the upper Colorado project?

Mr. DEXHEIMER. Yes. Although, by elimination of parts of the project, the economic feasibility might be established for something less. But it would not be, we think, the proper way to meet the ultimate or even the present needs of the upper basin.

Mr. DEXHEIMER.[5] It (Echo Park) is essential in the upper reaches of the area, and without it we would be unable to make the full development anticipated and would probably have to leave out even some of the participating projects which are recommended at the present time, or some of the units in participating projects, and it would greatly decrease the financial feasibility of the overall plan.

Mr. E. O. LARSON, regional director, region 4, Bureau of Reclamation.[6] Here are the principal advantages of including Echo Park Dam and Reservoir in the Colorado storage project plan:

1. With respect to storage capacity and power generation, Echo Park would be second in size to Glen Canyon in the reservoir system planned for the upper basin.

2. Evaporation losses per acre-foot of water stored in Echo Park would be less than any other major storage site in the upper basin.

3. Construction of Echo Park Reservoir in place of Dewey Reservoir, the best alternative outside of a national monument, would save an estimated 200,000 acre-feet of evaporation losses annually, a significant quantity of water in the arid West.

4. Echo Park Reservoir, located just below the junction of the Green and the Yampa Rivers, would be integrated with the upstream Flaming Gorge and Cross Mountain Reservoirs in regulating the flows of the rivers, that is, when they are constructed. In addition, it would contribute materially to the feasibility of reservoirs at Split Mountain and Grey Canyon sites downstream on the Green River. This is why Under Secretary Tudor mentioned that Echo Park was the wheelhorse in the upper basin.

5. The use of the Echo Park site is the key to the economical development of the upper end of the upper Colorado River Basin. The site is strategically located with respect to upstream power markets of the proposed system of dams and powerplants and the basin's many resources awaiting development, such as phosphate rock for fertilizer, chemicals, oil shale, coal, natural sodium carbonate, and many other important minerals.

Mr. SISK. Could I ask you this question, Mr. Merriell: Do you feel that Echo Park represents a more important feature of this project, let us say, than Glen Canyon, assuming that only a portion of the project could be built?

Mr. FRANK C. MERRIELL, Chief Engineer of the Colorado River Water Conservation District.[7] In some ways it does. In the first place, where this project will sell power, the first places are in the vicinity of Salt Lake and of Denver, and the most direct transmission that can be devised in the project is from Echo Park to each of those places. Now, that is the principal reason, and there are other collateral reasons. There is a possibility of a very great industrial use right close to Echo Park in the phosphate beds of the Uinta Mountains, and other possibilities in the Uinta Mountains, in the Grand Valley, in industrial use, whereas Glen Canyon is a long ways from there.

BRIANT H. STRINGHAM, Vernal, Utah.[8] Opponents of the project, most of whom are well-intentioned citizens, base their chief argument on the false premise that the building of Echo Park dam within the Dinosaur National Monument will set a precedent for the commercial invasion of all parks and monuments. This argument is not based on facts as the following official documents will show. These instruments also prove that it was definitely understood by officials and the people at the time the monument was enlarged that power and reclamation projects were to be constructed inside the monument at some future time, and that the area would be subject to several other existing rights.

On June 10, 1920, the Federal Water Power Act was passed creating the Federal Power Commission. This Commission was given authority to grant licenses to construct dams in national monuments according to the opinion given by Councilor Abbott representing the House Subcommittee on Reclamation and Irrigation. However, on March 3, 1921, the Congress amended the Federal Water Power Act taking from the Power Commission and giving to the Congress authority to grant licenses to construct dams within parks and monuments, but in doing so, the Congress added these significant amendments: "As now constituted or existing." Thus leaving the authority in the Federal Power Commission to grant licenses for construction of power dams in newly created monuments such as Dinosaur. President Roosevelt recognized this fact in his proclamation enlarging the monument.

Mr. GEORGE D. CLYDE, commissioner of interstate streams for Utah.[9] Mr. Chairman, I think the Echo Park Dam is absolutely necessary to this project. The Echo Park Dam, in my opinion, occupies the same position that I would, for example. I am pretty good with both arms and both legs. You can cut one arm off and I can still live, and you can cut two arms off and I can still live, and you can cut both legs off and I can still live, but I am not much good. And Echo Park dam is an essential unit in this thing because it is a basinwide project, and it must be considered in terms of the series of storage dams, their operation to provide for water for consumptive use, provide the water to meet the obligation to the lower basin, and to provide for power generation. All of those three are inextricably tied together.

Mr. DIXON.[10] You concur in his testimony that there is no substitute equal to Echo Park as a dam site.

Mr. CLYDE. Yes, sir; I am convinced in my independent analysis as well as review of many, many reports, that there is no substitute for Echo Park.

Hon. JOSEPH C. O'MAHONEY, a United States Senator from the State of Wyoming.[11] So I say without any hesitation or equivocation that the creation of the expanded Dinosaur National Monument in 1938 on the 14th of July had nothing to do with the preservation of any historical site or the preservation of any scientific area. On the contrary, it was an attempt to use for scientific purposes, for development purposes, water that had previously been recognized as one of the best sources of waterpower in the United States.

MILWARD L. SIMPSON, Governor of Wyoming.[12] Echo and Glen Canyon Dams are vital elements in the development of the upper basin States.

H. T. PERSON, dean of engineering, University of Wyoming, Laramie, Woy.[13] In regard to Echo Park Reservoir—this unit is one of the very important units in the team of storage units necessary for the fullest development of the water resources of the upper basin. Its strategic location below the confluence of the Green and Yampa Rivers, its low-evaporation losses and its contribution to maximum power production makes it an essential unit in the upper basin development. The grandeur, the spiritual and esthetic values of the canyons of the Echo Dam site are acknowledged. The Echo Park Reservoir will not destroy these values. Echo Park will eliminate some sections of river rapids—but there are hundreds of miles of river rapids in the vast areas of the upper Colorado River Basin. Echo Park Reservoir will make the recreational values of this vast area available to hundreds of thousands of people every year—rather than to just those few hundred daredevil river runners who now have that opportunity. Echo Park Reservoir is in the Dinosaur National Monument. However, the evidence is documented and clear, that the people of the area were given assurance in 1938 when Dinosaur Monument was extended to include the Echo Park area, that establishment of the extensive monument would not interfere with the use of the area for grazing, or with the development of the water resources of the area.

G. E. UNTERMANN, director, Utah Field House of Natural History, Vernal, Utah.[14] Much of the opposition of rabid conservation groups to a proposed dam in Dinosaur National Monument is baseless and unrealistic.

HERBERT F. SMART, Salt Lake City, Utah.[15] Conservationists opposed to the construction of this dam say there is a principle involved. Yet actually the only principle involved is one of the integrity of the Government and the people, including conservationists, in keeping promises and assurances, and abiding by conditions incident to the enlargement of the Dinosaur National Monument. The question of the inviolability of a national monument is not at issue here. The question of the inviolability of promises incident to the enlargement of the boundaries is involved. The integrity of our national pary system is predicated upon good faith, and conservationists interested in preserving the inviolability of our national park system should be the first to recognize and, in good faith, insist upon compliance with the conditions under which the Dinosaur Mounment boundaries were extended, namely, subject to power and reclamation withdrawals.

To many of us who have been a part of the conservation movement in the West, we are at a loss to understand the motives of conservationists opposing a project which will result in such a material gain to conservation objectives and principles. In the best tradition of Gifford Pinchot, the passage

Footnotes at end of speech.

Footnotes at end of speech.

Footnotes at end of speech.

of the Colorado River storage project will mean the greatest good to the greatest number for the longest period of time.

ANGUS MCDONALD, legislative assistant, National Farmers Union.[16] Sites other than those recommended by the Department of Interior have been suggested because it was contended that the building of a dam at the Echo Park site would be an invasion of the national park system and would forever mar the natural beauty of the area. The record will show that the original monument created by President Wilson consisted of 80 acres which would not include Echo Park and when President Roosevelt expanded the monument by Executive order in 1938, that he provided that expansion of the monument should not bar the building of power projects. In other words, the Echo Park site has never been part of the national park system. The mere fact that it was called a park did not make it a national park. It is also contended that development of the water resources of the upper Colorado and the Echo Park site would impair it as a recreational center and that in some way it would disrupt the Dinosaur Monument. Geography indicates that the bones of the dinosaurs, if any, would not be disturbed because the dinosaur graveyard is down the river from the Echo Park site. Impounding water behind the Echo Park would not submerge a single dinosaur bone. On the contrary the proponents of the project tell us that the creation of a huge lake behind the Echo Park would enhance the recreational opportunities and that roads would be built into the area so that many more thousands of people could enjoy recreational activities, whereas at the present time, the area is relatively inaccessible.

Hon. ARTHUR V. WATKINS, a United States Senator from the State of Utah.[17] This puts the shoe on the other foot. It is not a national monument that is being invaded—it is a matter of some misled or misinformed conservationists who are trying to urge that Uncle Sam violate his integrity and treat as mere scraps of paper solemn reservations in the public interest in the Dinosaur Monument area that precede the limited monument proclamation by 17 to 34 years. It illbehooves honest conservationists to take such an untenable position, because we who love our parks and monuments should strive to preserve as honorable and legal commitments the reservations of public lands for such a noble and worthy use as parks and monuments. Therefore, how can we, in the same breath, ask that equally binding and legal reservations for water development, be invaded, especially when the monument proclamation itself recognizes and exempts from the Dinosaur Monument land reservation these previous withdrawals for water resource development?

INDEX TO QUOTED STATEMENTS

Colorado River storage project: Hearings before the Subcommittee on Irrigation and Reclamation of the Committee on Interior and Insular Affairs, House of Representatives, 84th Congress, 1st session, on H. R. 270, H. R. 2836, H. R. 3383, H. R. 3384, and H. R. 4488 to authorize the Secretary of the Interior to construct, operate, and maintain the Colorado River storage project and participating projects, and for other purposes.

Lithuania Must Be Free and Independent

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 16, 1956

Mr. SMITH of Wisconsin. Mr. Speaker, I am pleased to have an opportunity to join with other Members of the House of Representatives in presenting my thoughts on the independence of Lithuania, as we observe its 38th anniversary of that event.

The people of the free world and especially the people of the United States have been shocked at the utter ruthlessness of Communist Russia in seizing a free nation such as Lithuania. It has suffered the fate of Latvia and Esthonia, but by the will of God and eternal vigilance on the part of the people of these three Baltic free states, liberty and independence will surely come. Russian aggression will be eliminated when the world realizes that there is no longer any room for ruthless aggression among civilized nations. The present Communist conspiracy will fall of its own weight when the Russian people realize they are but slaves of a totalitarianism that is a blight upon the face of the earth.

Mr. Speaker, the very great need at the moment is for free Lithuanians, such as the hundreds of groups which we have in this country, to keep alight the fires of freedom in high hope and in confidence that Lithuania will once again be independent and assume its proper place in the family of nations.

The history of events since Russia has occupied Lithuania is clear to all the world. Upon the pretext that Germany was about to occupy Lithuania, Soviet Russia moved in and occupied that country. When Communist army garrisons had been established in Lithuania, Latvia and Esthonia the red armies were moved from the Baltic States and placed along the Finnish frontier in preparation of an assault on Finland. This was in late November 1939. Soviet Russia at that time was merely looking for a pretext to move its armies of occupation into those unfortunate countries.

After occupation was well established the Communists spread false accusations against the Lithuanian government and in 1944 deputized one of its commissars to make sure that a pretext for occupation had been established. One of the false charges was that Lithuanians had been kidnaping and killing Russian soldiers and when the Lithuanian government demanded the right to be heard on these charges the Soviet government refused to honor the requests. The Lithuanian Commission on the other hand found the charges had been absolutely false but that made no difference to the Russian terrorists.

Attempts were made to negotiate a peaceful understanding between Russia and Lithuania, but these attempts were ignored and to this day, Mr. Speaker, the United States Government has refused to recognize the occupation of the three Baltic countries.

Mr. Speaker, this is to the credit of the United States and we must forever insist and maintain that under no circumstances will we be parties to the bargaining away of the right of independence for Lithuania and her sister Republics.

The challenge to Americans of Lithuanian descent is to continue to battle for a free Lithuania and the slogan at all times must be to carry on for freedom and liberty in a Christian country until the fight is won and recognition is achieved.

Mr. Speaker, I want to congratulate those Americans of Lithuanian descent who are carrying on this fight and may God sustain them in their efforts.

Peace Policies

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 16, 1956

Mr. McCORMACK. Mr. Speaker, in my extension of remarks, I include an editorial, Peace Policies, appearing in one of the leading newspapers of New Hampshire, in the January 30, 1956 issue of the Laconia Evening Citizen of Laconia, N. H.:

PEACE POLICIES

General Ridgway's articles appearing in the Saturday Evening Post emphasize his belief that the way to peace is to maintain a strong Army, Navy and Air Force and in this the general's position is identical with that of Congressman JOHN MCCORMACK, of Boston, known to many persons in Laconia, Tilton and Gilford because of his vacationing here, with Mrs. McCormack during the past 25 years. In December we wrote an editorial commending the congressman for his views as expressed on this point to a Boston interviewer.

And now comes an Associated Press dispatch from Washington which quotes Congressman MCCORMACK as contradicting the quotation attributed to Secretary of State Dulles in Life magazine that "strong action" by Dulles had prevented United States involvement in Indochina and in two other crises.

Mr. MCCORMACK, according to the report, said the United States "would have been over the brink and into war" if congressional leaders had not applied the brakes.

The caption on the front cover of Life read: "Three Times at Brink of War: How Dulles Gambled and Won." That was an

allusion to a quotation which Life attributed to Mr. Dulles: "Of course we were brought to the verge of war. The ability to get to the verge without getting into the war is the necessary art. . . . If you are scared to go to the brink, you are lost."

Congressman McCORMACK as a leader of his party attended a meeting in Mr. Dulles' office in April 1954 where there was talk of a "mass air attack upon the Communists who were besieging Dien Bien Phu," the French fortress whose subsequent fall presaged the end of the war in Indochina. Congressman McCORMACK told a reporter Adm. Arthur W. Radford, Chairman of the Joint Chiefs of Staff, favored United States intervention on the side of the French. He said congressional leaders advised Messrs. Dulles and Radford to "come up with a ful package" including agreement with Great Britain and France on what course to take. He said the leaders didn't say "Yes" or "No," but advised against going in alone which makes the Dulles article more of a political document than anything else.

One of the statements made by General Ridgway is that he was told Army cuts had to be made by the businessmen's administration at Washington. This subject is to come in for an airing, as well it should, if the weakness in our defenses alleged by General Ridgway is corect. A report of the Government Operations Committee of the House is coming out, we are informed, which declares that businessmen like Secretary of Defense Charles E. Wilson are not the panacea for problems of a nation hard hit by a cold war. After reading General Ridgway's disclosures we would sleep better nights if someone other than Mr. Wilson was settling questions of national security, and deciding how much of an Army, Navy, and Air Force constitutes an adequate defense. We admire Mr. Wilson as a business genius, but the indictment of his peace program by such an authority as Ridgway is too devastating to be ignored.

The St. Louis Post-Dispatch expresses a belief that President Eisenhower missed an opportunity to reaffirm the peaceful policies of his administration when he discussed at a press conference "the damage done by John Foster Dulles in the latest of that confused diplomat's international indiscretions."

"Whatever else this press conference should tell Mr. Eisenhower," asserts the St. Louis newspaper, "it should tell him he must again find the way to speak effectively to the millions of people who were so moved by him at Geneva."

We would say the President regained those noble heights, as an apostle of peace with honor, in his letter to Premier Bulganin, exposing the latest Soviet propaganda maneuver.

The Lesson at Alabama

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
February 14, 1956

Mr. MULTER. Mr. Speaker, the New York Herald Tribune for February 12, 1956, contains an intelligent discussion by Mr. Roscoe Drummond on the University of Alabama incident. I direct the attention of our colleagues to the article, which is as follows:

WASHINGTON
(By Roscoe Drummond)
THE LESSON AT ALABAMA

It is not fully appreciated, I think, that if the University of Alabama fails to permit Miss Autherine Lucy, its first Negro student, to continue in her classes, this action will be a violation of the gathering practice and tradition of colleges throughout the 17 Southern and Border States. By 1953, well before the Supreme Court's unanimous decision requiring ultimate desegregation of the entire public school system, state-owned universities in 12 of 17 Southern and Border States had opened their classrooms to Negro students. This transition of the publicly-owned higher institutions of learning throughout the South—private Southern colleges and universities similarly have been admitting Negroes—from total segregation to a mounting degree of integration has been accomplished with little stir and with relatively little fanfare. It has been largely accomplished by southern leadership at southern initiative to reflect the changing traditions of the South itself. These facts help to put the University of Alabama incident into clearer perspective. These facts show:

That in accepting Miss Lucy as a student, the university was acting in observance of the widespread and now nearly unanimous policy of the Southern and Border States with respect to higher education.

That in permitting a small mob of some students and some outsiders to drive Miss Lucy from the campus, the local and State law-enforcement authorities are denying to the president and faculty of the University of Alabama the lawful protection they need to carry out their decision and to bring the university into line with the policies of other southern colleges.

The interview which president Oliver C. Carmichael gave to the New York Herald Tribune last week demonstrates that the head of the university and the faculty are faithfully trying to keep this young Negro girl as a student.

Thus it seems to me that the Governor of Alabama, James Folsom, and the law enforcement officials subordinate to him are doing Alabama and the whole South a grievous disservice.

Their tolerance of violence means that they are permitting mob rule to prevent their own university from carrying out its decision to allow a Negro student to study on the campus.

Their inaction means that thus far they are conniving at the most indefensible kind of "interposition." That is, they are permitting mob violence to interpose itself in front of the slow but steady and persevering approach to educational desegregation at those very points where the South itself believes it can most wisely be carried forward—at the levels of higher education.

The Supreme Court has itself advised patience and caution. It is not calling at any point for simultaneous, instantaneous desegregation. It recognizes the complexity of the problem and directs the district courts to allow the decision to be carried out at different speeds in differing localities and at different educational levels.

But when the Governor of Alabama permits mob violence to keep a southern university from a desegration decision of the greatest moderation in line with the policies of other southern universities, he is doing violence to the South's own practices and is disserving the cause of moderation in every phase of the problem.

Desegregation in higher education has been a firm southern trend for the last dozen years. From 1944 to 1954, 26 State-financed colleges (previously all white) in 12 Southern and Border States began to accept Negro students, and the private colleges and universities followed about the same pattern.

By July 1954 the number of southern medical schools open to Negroes jumped from 2 to 10; by 1953 more southern law schools were admitting Negroes than refusing them; between 1950 and 1952, the number of southern nursing schools admitting Negroes increased from 18 to 30.

State universities of 3 (Alabama, Florida, and Georgia) of the 5 Southern States which have kept total segregation seem at the point of accepting Negro students.

This whole gradual trend has been free of violence. If the State of Alabama now permits violence to obstruct its university from embracing the policy of other southern universities, it will be undermining the very concept of moderation which the South has long been building.

American Legion Commander's Tribute at Lincoln's Tomb

EXTENSION OF REMARKS
OF
HON. AUGUST E. JOHANSEN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 16, 1956

Mr. JOHANSEN. Mr. Speaker, for more than a score of years it has been the custom of the American Legion to make an annual pilgrimage to the tomb of Abraham Lincoln on the anniversary of his birth.

In keeping with that custom, my fellow townsman, National Commander J. Addington Wagner this year delivered an eloquent tribute to Lincoln during the annual ceremonies at Springfield, Ill.

Under permission to extend my remarks, I include the address given by Commander Wagner:

For 22 years we of the American Legion have come as pilgrims to the tomb of Abraham Lincoln on the anniversary of his birth. This is a pilgrimage in which all our countrymen are joined in spirit. Long after the American Legion is no more, representative Americans will stand where we stand now, reverently and humbly seeking inspiration and knowledge.

Why is this so? I think it must be because Lincoln, perhaps more than any other American, succeeded in defining and expressing the deepest meaning of the American philosophy.

He translated the great documents of our Government into simple, understandable terms. By word and deed, he illuminated the spirit and the power that account for the greatness of America.

So today, here at Springfield and throughout the land, we pause to honor the memory of the man and to find new strength in his example.

Abraham Lincoln did not live to hear the praise and homage now given him by free men everywhere. At the summit of his service, he was called both pacifist and warmonger. Some ridiculed him as being too weak while others denounced him as a tyrant.

But Lincoln looked beyond his day. He possessed a sure and unshakeable faith in people—free and united people. From a position in the very center of the fiercest storm which ever raged in America, he was able to ask:

"Why should there not be a patient confidence in the ultimate justice of the people? Is there any better or equal hope in the world?"

Today, we are a stronger and a more mature nation. We have achieved and endured much since 1865. The nearly 3 million Legionnaires whom I am privileged to serve have fought to preserve that ultimate justice of the people of which Lincoln spoke. And it seems to me that our whole experience as a reunited Nation these past 91 years has proved two very significant things:

First, the principle of government by the governed is as practical as it is ethical;

And, secondly, looking at the world around us, self-government based upon the equality of men under God will endure as a system only if the United States of America endures and prospers.

Think of it. In less than one century a nation divided and at war with itself has emerged as the keeper of human liberty for all nations.

Such has been the shift of power and responsibility from the old world to the new.

Other nations now free might collapse * * * we pray to God that they will not—and the cause of freedom would still go forward. But if we fail—if America should falter in leadership or influence—there would be left no nation strong enough to sustain the free cause.

In view of this tremendous responsibility, there are those who say we are not as united as we should be—that we differ and argue too much among ourselves. I feel that the question is worth considering, particularly on this day and in Lincoln's light.

We are a proud people. North, South, East and West, we place great value on the personal independence that is part of our heritage. It is not our way to think or do alike, or to see things exactly as our neighbor does just for the sake of agreement.

Today, we have problems which seem to call for one solution in one area and a different solution in another. We are approaching the time for deciding who will lead us during the next 4 years and who will represent us in the Congress. We have varying opinions, as individual citizens, on foreign and domestic policies. All of this makes for vigorous debate and discussion.

However, let no one exaggerate the depth of these differences. The American Legion firmly believes that there is no issue big enough or precious enough to endanger our unity as Americans. So long as we keep our tempers down and our sights up on the goal of a free America capable of defending its freedom, we have nothing to fear.

Lincoln said it this way: "If destruction be our lot, we must ourselves be its author and finisher. As a nation of freemen we must live through all time or die by suicide."

That is what very nearly happened a century ago. Men disagreed and the disagreement was allowed to proceed from reasonable discussion to personal bitterness and, finally, to bloodshed. Extremists on both sides brought on circumstances in which honorable men could turn only to the battlefield.

Let us never repeat that mistake. The "justice of the people" will prevail, whatever the issue, provided we retain our common belief in the destiny and goodness of the land we love.

What concerns me far more than signs of healthy disagreement is the evidence of a declining public appreciation of patriotism itself.

More often than not, we hear the very word, patriotism, spoken with a note of apology. Too many of our best people spend their best efforts mocking those who desire to recognize and glorify our great American heritage.

This is a dangerous, irresponsible game. It could make the kind of mischief that would invite attack by those outside our country who seek to destroy us. Equally important, it tends to sow in the minds of our young people doubts and indifference about the system of government they will one day lead.

My friends, we need patriots. We need believers in America—men and women who understand and are proud of the blessed opportunities that come with American citizenship.

Our free institutions have survived assault from without and within. They can survive anything except a lack of interest and confidence on the part of the people.

Encouraging the development of that interest is one of the important works which the American Legion has undertaken. We shall carry it forward just as vigorously as we can. Because it directly involves the future security of America—because it helps to insure the enlightened patriotism which Lincoln dramatized in his own life—we earnestly hope you will join with us.

Keep Murphy Army Hospital Opened

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 16, 1956

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following cogent statement of Anthony D. Tieso, past State commander, Department of Massachusetts, Disabled American Veterans, which he delivered at the mass meeting held at Hovey Hall, Waltham, Mass., protesting the proposed closing of the Murphy Army Hospital:

STATEMENT BY ANTHONY D. TIESO, OF MATTAPAN, MASS., PAST STATE COMMANDER, DEPARTMENT OF MASSACHUSETTS, AT HOVEY HALL, WALTHAM, MASS.

National Commander Kenneth T. Lyons, members of the Federal Employees Veterans Association, ladies and gentlemen, I am representing the Disabled American Veterans, the Department of Massachusetts, upon the authority of State Commander, Judge David B. Williams. Commander Williams cannot be present due to the monthly meeting of our department executive committee.

The proposed closing of the Murphy Army Hospital is needless. The Federal Government wishes to deprive dependents of servicemen of Massachusetts of medical care and hospitalization on the grounds of economy. This, may I assure, is false ecenomy and will bring untold hardships and great expense to mothers, sons, and daughters of many a Bay State soldier.

For example, the nearest Army Hospital to Boston is at Fort Devens, a distance of over 45 miles from the capital of Massachusetts.

An expectant mother, receiving prenatal treatment, is forced to travel long distances for medical examinations and will not receive any reimbursement for her expenses. This will occur if Murphy Hospital is closed, though the Federal Government, by law, is supposed to give full medical care to the dependents of our soldiers.

They are not receiving anything free from the Federal Government. When a man enlists in the Army of the United States, he automatically receives the benefits of a serviceman.

When the United States takes away these benefits, it affects the morale of every man in the uniform of this country. Secretary of the Air Force, Harold E. Talbott, while speaking in Massachusetts some time ago, disclosed that enlistments are dropping at an alarming rate. This, according to Secretary Talbott, was due to lowering of morale because benefits are being stripped from the serviceman.

Massachusetts sent over 500,000 men and women into World War II. During the Korean conflict, over 100,000 Bay Staters served their country. Today many of them still wear the uniform of this country. They have distinguished themselves on the field of battle.

Now the Federal Government rewards them by attempting to close the Murphy Army Hospital in Waltham, an institution that is needed by the soldiers from Massachusetts.

Thousands of mothers, sons, and daughters, miles away from their loved ones in uniform, are to be the victims of economy. Economy will not keep this country strong against aggression. Only our fighting men, possessed with courage, strength, and a high morale, can keep this country strong.

But the Federal Government can cause untold damage to our Armed Forces. A soldier from Massachusetts will suffer immeasurable harm if the Murphy Army Hospital is closed.

The Disabled American Veterans requested President Eisenhower, the Members of the House and the Senate, to convert Framingham VA Hospital into a Federal soldiers' home. This request was denied by the Federal Government.

Today, the Disabled American Veterans of Massachusetts strongly protest the closing of Murphy Army Hospital in Waltham and urge you to do everything in your power to help the mothers, sons, and daughters of every soldier from Massachusetts by writing your Congressmen and Senators in Washington and protesting this move.

To me it is inconceivable that the Army should attempt to abandon the Murphy Army Hospital. I simply cannot understand why Senator SALTONSTALL sits idly by each year when these attempts are made to close this hospital which would affect thousands of servicemen and their dependents in this area.

Thank you.

"Liberals" Should Quit Being Soft on Communism

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 31, 1956

Mr. MULTER. Mr. Speaker, I wish to call to the attention of our colleagues the following address by President George Meany, of the AFL–CIO, which was delivered before the National Religion and Labor Foundation in New York on December 14, 1955. The address is published in the December 23, 1955, issue of U. S. News & World Report:

LIBERALS SHOULD QUIT BEING SOFT ON COMMUNISM

Too many in the free world fail to see the real nature of communism as the mortal foe of everything that we hold dear, of every moral and spiritual value. Too many in the free world are still prisoners of the illusion that communism is, historically speaking, a progressive system—extreme liberalism temporarily making bad mistakes.

Actually, communism represents darkest reaction. It is an antisocial system in which there are imbedded some of the worst features of savagery, slavery, fuedalism, and life-sapping exploitation manifested in the industrial revolution of early-day capitalism.

Too many in the free world seem to have lost their capacity for moral indignation against the most brutal inhumanities when they are perpetrated by Communists. It is painful, but we must face the cruel facts of life.

We of the democratic camp must develop a far more vigorous moral attitude.

We must rekindle our capacity to cry out against, to protest against, the Godless dogmas and savage crimes being perpetrated by Moscow.

Such struggles and such protests are not negative actions. They are positive. They are morally and politically constructive. I know of nothing more positive and constructive than a total struggle against the totalitarian cancer in the body politic of modern society.

It is rather disturbing to me that many people in our country who call themselves liberals are stone silent about the Soviet concentration camps. They never find the time to utter a word of condemnation against the Communist-imperialist destruction of the national independence and democratic rights of hundreds of millions of people in Europe and Asia.

It is shocking to see the studied attempts being made by Western diplomacy to tear to shreds the Charter of the United Nations under the guise of the so-called package deal with Moscow and Peiping. Can it be that the free world is so weak in its moral spirit that it does not recognize this deal as appeasement of the worst kind?

I am all for a fight to the finish against racialism in our own midst. Racialism is damnable and detestable in any form. But racialism in reverse—as now propagated in India and Burma by Khrushchev and Bulganin—is just as reprehensible.

And the Communist imprisonment of hundreds of thousands of hostages—so-called war prisoners—10 years after the close of the war, in violation of every human right and international agreement—is morally reprehensible. One would expect the true liberal to cry out in protest against human beings being carted, tagged and shuttled about for weeks in rail yards of Russia, as if they were carloads of coal or bags of potatoes.

Not until we of the free world can give rebirth to a vibrant moral attitude, to a burning indignation against such frightful bestialities, can the freedom-loving people be sufficiently stirred to gather the moral strength for resisting and defeating the totally antimoral dogmas and deeds of communism at home and abroad. Yes, this means above all a moral struggle against communism.

Communism is the very opposite of liberalism. Communism is the deadliest enemy of liberalism. Liberals should be the most consistent and energetic fighters against communism. Liberals must also be on guard against developing a certain type of McCarthyism of their own. They must shun like a plague the role of being anti-anti-Communist.

Only by refusing to be thus entrapped, can liberals shed every vestige of subconscious and conscious regard for comunism as a movement with which they have something in common.

Much more regard must be shown by the democracies for principles—for the principles of human rights and human freedom. We must never sacrifice principles to expediency. This means being rigid in support of our principles.

Moscow is sure it has history's timetable in its pocket. Hitler once thought so, too. We have nothing to fear from peaceful competition. They need our help. We do not need theirs. They have nothing that can help us. What they have can only hurt us. But what we have they want from us in order to help and save them from the follies of Communism and Soviet imperialism.

We must avoid the suicidal self-deception of the popular front and united front.

No country, no people, no movement can stand aloof and be neutral in this struggle. Nehru and Tito are not neutral. They are aides and allies in fact and in effect, if not in diplomatic verbiage.

In conclusion, I cannot emphasize too strongly to you: The conflict between communism and freedom is the problem of our time. It overshadows all other problems. This conflict mirrors our age, its toils, its tensions, its troubles and its tasks. On the outcome of this conflict depends the future of all mankind. I pray that, on the threshhold of the atomic age, we—all of the free world—can muster the moral courage and total strength to preserve the peace and promote the freedom of the men and women of every continent, color and creed.

Birthday of Kosciusko

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 19, 1956

Mr. KEATING. Mr. Speaker, February 12 marked a very special day in the hearts of lovers of freedom everywhere. All over the world it was celebrated as the birthday of Abraham Lincoln. In America and Poland at least it was celebrated as the birthday of Thaddeus Kosciusko as well.

The parallels between these two men are striking. Both men fought courageously, in their own ways and in their own times, for the liberty of man and for the right of each nation to determine its own way of rule. Both believed in the dignity of man. Both dedicated their lives to free man from oppression. Both contributed richly to make this Nation great. Their nobility of character, devotion to principle, and love of justice for all men continue to inspire us today.

Thaddeus Kosciusko was born on February 12, 1746. He came to this country in 1776 as one of hundreds of Polish patriots who won undying glory by aiding us in winning the Revolutionary War. These men were not soldiers of fortune or adventure seekers. They were true believers in the freedom of man. Most of them had fought for Poland for that ideal before crossing the seas to aid us in our cause.

Immediately upon arriving in this country Kosciusko applied for military service. He was accepted and charged with drawing up plans for fortifying the Delaware River. The success of this project earned him a commission as colonel of engineers in the Continental Army.

The remainder of his work in the War of Independence is a matter of history. How he directed the construction of fortifications at West Point. How he erected defenses at Saratoga which played such a vital role in our victory there. How he engaged in the Battle of Charleston and was among the first of the Continental Army to enter the city after the British evacuated. By the close of the war he was a brigadier general.

For a time after the war he remained in his adopted land, but when it became apparent that there was hope for a resurgence of freedom in his native Poland, he returned to join the fray. There he led a tiny but inspired army of patriots in its resistance to the Russian tyrant. The odds against him were great and the outcome inevitable, but he fought bravely on. Imprisoned once for 2 years, he was eventually exiled to Switzerland, where he died in 1817.

We honor General Kosciusko today, not only because he fought for our independence but because he was a vigorous champion of the universal cause of human freedom as long as he lived. His name, indeed, is enshrined in the hearts and minds of the American people. I am proud to state that a street in my home city of Rochester bears his name.

But let us bear in mind that while we here in this country enjoy the blessings of freedom, the native land of Thaddeus Kosciusko, who fought to make our land free, still suffers under the cruel yoke of tyranny. We have neglected the plight of Poland too long. She is too good a friend for us to treat in this fashion. Though we are engaged in cold but mortal combat with the forces of communism the world over, we cannot allow ourselves to forget others who have sacrificed for freedom and fought the common enemy. We should do all in our power to bolster up the spirit of our friends in Poland.

To that end, let us extend and expand the Voice of America and United States Information Agency programs, so that the voice of the free world will continue to penetrate the Iron Curtain.

Above all, let us protest to the United Nations concerning the many injustices going on today in Poland. In the past conquerors and exploiters of Poland have always permitted the Poles to retain intact their cultural traditions and their sense of national history, as well as their native language. Now, however, the heel of Moscow grinds deep. Reports from behind the Iron Curtain indicate that not only Poland's culture and history, but her language as well, are being systematically destroyed by the Russians. We must not let the names of titans such as Mickiewicz, Sienkiewicz, Padarewski, and Kosciusko die out. We must not let the flame of freedom they helped feed die out. We must protest to the United Nations the injustices in Poland.

The finest way in which we can honor the memory of that gallant Pole who came to our aid in 1776 is to dedicate ourselves to assist in every possible way to gain freedom for Poland and for all men everywhere. Let us reiterate our faith in freedom and reaffirm our determination to work to make the world safe for the democracy for which Lincoln and Kosciusko fought so bravely.

The Late Chauncey W. Reed

SPEECH
OF
HON. RICHARD H. POFF
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Friday, February 10, 1956

Mr. POFF. Mr. Speaker, one of the first helping hands extended to me when I came to Congress in 1953 was the firm, friendly hand of CHAUNCEY REED.

Not in an attitude of noblesse oblige and not in the manner of an all-wise statesman to an uninitiated freshman Congressman, but in a true spirit of human brotherhood he offered to guide me along the tortuous and sometimes frightening path which the new Member of Congress must follow. From that first meeting until the last my respect, admiration and love for him constantly increased. He was a man without moral fault and with many outstanding virtues. He was a man without an enemy and with many friends among his colleagues of the House. His passing leaves a void which cannot easily be filled in the ranks of the Committee on the Judiciary which he loved so dearly and indeed in the citizenship of this country which he served so faithfully.

I was privileged to attend his funeral last Tuesday in West Chicago, Ill., where he was born, raised, and schooled. One could not help but be impressed by the universal admiration in which he was held by those who knew him best and longest. The services were plain and simple, as I am sure he would have wished them to be, but dignified in their simplicity. As he lay in State in the auditorium of the local American Legion chapter of which he was a member, hundreds of his old comrades in arms and fellow citizens of the little community which he called home all of his life filed by in respectful silence and, with a salute, or a bowing of the head, or a falling of a tear, rendered tribute to this great man whose constituency was the world.

Truly, he left footprints on the sands of time, footprints which all who aspire to serve the people might pridefully follow.

The Armenian Uprising

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 16, 1956

Mr. DINGELL. Mr. Speaker, on the 35th anniversary of the historic February 18 revolt, freedom-loving Armenians worldwide pray for another uprising in Armenia and to the four corners of the Soviet Union by the various groups who like the Armenians live in a reign of terror. And this uprising must come before the whole of Armenia's youth are done away with, as reported in a recent series of articles by Mr. V. Valadian, an analyst of Soviet affairs and well-known Armenian writer. Valadian said:

Soviet papers reported that 4,000 Armenian youth had been sent to forced labor in the Kazakh steppes. The dispatch of Armenian young people to Kazakhhistan has continued without pause, that the total has reached $10,000 or thereabouts. Most of the young men and women are students. Others are construction workers.

This in itself is an example of how the Soviet maintains its iron rule on its subjects, by steadily draining the country of its freshest, most promising youth. The youth who the Soviet fears may be the leaders of another February 18, 1921.

There are many significant events in recent and contemporary history which are not well known. Some important events which took place more than three decades ago, events in which freedom-loving men fought valiantly against the then growing power which today threatens the very basis of our way of life, are not as familiar to us as they should be. The revolt which the Armenian people staged against the Communist tyranny of the Kremlin 35 years ago is one of those little known but important events.

The Armenian people had lost their national political independence more than 500 years ago, but throughout that long period they had contrived to maintain their national entity and had firmly clung to the idea of national independence. Toward the end of World War I, they saw their chance, seized upon it and declared their independence in May of 1918. At that time Russian communism, as an international force, was in its infancy, though a definite threat to the newly born Armenian Republic. Even so, the new state managed to stave off both Turkish nationalist and Russian Communist threats for more than 2 years. But toward the end of 1920, it was clear that, unless the Armenians were aided by the West, their independence as well as their freedom was doomed. Unfortunately that gloomy prediction was fulfilled. In the fall of that year, when nationalist Turks and Communist Russians launched their simultaneous attack against the Armenians, their country was overrun and their independence destroyed. By the end of December, Communist Russians succeeded in bringing most of Caucasian Armenia under the Soviet hegemony.

In the course of the next 2 months the Aremenian people learned the brutal nature of Soviet tyranny, which in its train produced intolerable oppression and caused endless misery. In mid-February of 1921 the Armenians, under the inspiration of their fearless leaders, revolted against their Communist oppressors. They acted in complete unison and with such determination and resolve that in a few days they expelled their unwelcome overlords from the country, and on February 18 they again asserted their national independence. This revival, however, proved to be of short duration. In the course of less than 2 months, Russian Communists gathered strength and again attacked Armenia, this time with a larger force. By early April, Armenia was once more engulfed in the massive blood-bath of Communist tyranny.

For almost 35 years, Soviet tyranny has been maintained over Armenia with an iron hand, and its oppressive yoke weighs heavily upon the people there. The helpless Armenians, however, even when subjected to inhuman treatment by the ruthless minions of the Kremlin, have not relinquished their claim to freedom and their right to national independence. Theirs was one of the first successful attempts to overthrow Communist tyranny. And today nothing would please us more than to see them freed from the clutches of deadly communism and once more regain their national political independence. In commemorating that revolt, we not only pay tribute to the memory of those who gave their lives for a noble cause, but we also express our profound admiration for those who still steadfastly cling to the ideals held in common by all free men.

Selfish Power Interests Oppose the Colorado River Storage Project

EXTENSION OF REMARKS
OF
HON. WILLIAM A. DAWSON
OF UTAH
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 7, 1956

Mr. DAWSON of Utah. Mr. Speaker, many people are puzzled by the hostile attitude of southern California toward the Colorado River storage project, particularly when it can be clearly seen that the project would be of substantial benefit to southern California by prolonging the effective life of Hoover Dam and in many other ways.

I believe the truth of the matter is that a majority of the people of California, at least those who are well informed, are not opposed to the Colorado River storage project. The opposition is coming from a small, selfish group who are growing rich by using the upper basin States' share of Colorado River water to generate low-cost hydroelectric power and who are frantically fighting anything that will bring an end to this situation.

With the tremendous power subsidy they are receiving from use of our water, they have plenty of money to spend on propaganda. As a result, most of the people in their own area and many of those in other parts of the country have been sold a completely fallacious story on the effect of upper basin development on both upper and lower basins of the Colorado River.

The facts of the situation I have outlined are set forth in an editorial which appeared in the Denver Post, and which I now insert in the CONGRESSIONAL RECORD as an extension of my remarks:

HERE ARE THE STAKES ON THE COLORADO

Do you know how much the power consumers of California have gained from the upper Colorado River Basin States' failure to provide upstream water storage for their own use? Well, we've given our California friends $12 million since 1938.

If we don't get some water storage projects by 1988 (which is the 50-year contract period covering payout of Hoover Dam) our total charity to California will have been $115 million. Who are the beneficiaries of our largess? The Metropolitan Water District of Southern California, the city of Los Angeles, the Southern California Edison Co., and the California Electric Power Co.

No wonder California is willing and can afford to dump dough into congressional sabotage of our storage project. Here's the story:

When the Government, under the Boulder Canyon Act of 1940, negotiated hydroelectric power sales contracts for Hoover Dam kilo-

watts with the California customers, it was necessary to consider annual depletions from Lake Mead resulting from upstream diversions. (The river had been "divided" theoretically by compact of the States and Federal Government some years before.) Those depletions were estimated from hydrologic studies covering the period 1938–88, which were the initial and termination dates under the power contracts.

It was assumed that the average annual decrease in water supply available to Lake Mead, because of increased upstream uses, would amount to 79,000 acre-feet. But, as things worked out, there has been no significant upstream depletion between 1938 and 1954. That means that there have been, in that 16-year period, about 111 million acre-feet more water available at Hoover Dam for power production than would have been available had progress been made in upstream projects. That additional water is equivalent to some 4.5 billion kilowatt-hours of electrical energy generated at Hoover Dam powerplant.

Now, that has been secondary energy, sold to the California interests at something like 1.30 mills per kilowatt-hour. Had that same power been generated by fuel in the Los Angeles area it would have cost about 4 mills per kilowatt-hour. Thus the municipal consumers of southern California and two private electric utilities have saved close to 2.7 mills per kilowatt-hour, without additional investment on their part and with only minor transmission losses.

Under the Hoover Dam power contracts all secondary energy is reserved to the California allottees; and the savings to them since 1938 have amounted to $12 million.

Every year that the lower California Representatives in Congress, the lobbyists for the city of Los Angeles, and the trained seals on the payroll of Southern California Edison and California Electric can block the upper Colorado storage project, it means money in the bank for them. And if they can hold it up for just about 30 years more, they will have won a prize of 43 billion kilowatt-hours of secondary energy at a total savings of $115 million.

Their bonus is not a result of any contractual right, understand. It simply represents a premium that they would realize from the presence of water physically reaching Lake Mead as a result of the Upper Basin States' failure to use even part of the water allocated to them under the Colorado River Interstate Compact of 1922.

In view of the foregoing is it any wonder that lower California would (or could) raise a rich lobbying fund to persuade Members of Congress and the people of the United States that the upper basin project is a "boondoggle"?

Behind the Curtain

EXTENSION OF REMARKS
OF
HON. FREDERIC R. COUDERT, JR.
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 16, 1956

Mr. COUDERT. Mr. Speaker, today marks the 38th anniversary of Lithuania's independence. It is a date that the freedom-loving people of the world will note. The feeling of Americans on this occasion is well expressed in the following editorial which appeared this morning in the New York Times:

BEHIND THE CURTAIN

The Soviet campaign against both meteorological and the Free Europe balloons has had the ironic result of calling increased attention to the Iron Curtain and the fate of the subjugated nations behind it. That fate is illustrated in the case of Lithuania, which in bitter silence at home but with appropriate ceremonies among its exiled sons and daughters observes today the 38th anniversary of its independence, still acknowledged by most of the free world.

Together with its Baltic sister states of Latvia and Estonia, Lithuania presents a prime example of Soviet perfidy. Lithuania was among the first nations with which the Soviets concluded a nonaggression pact similar to that now being offered by Premier Bulganin to the United States. But at the first opportunity the Soviets tore up the pact, seized the country, and converted it into a colony which they are colonizing with Russian Communists, who often assume the Lithuanian names of the victims they displace. The Lithuanians, however, like other subjugated nations, continue both passive and active resistance and take new hope from the espousal of the cause of freedom by their own exiled leaders organized in the Assembly of Captive Nations and by leading free world statesmen, including President Eisenhower and Prime Minister Eden.

The Soviets have tried to kill off the native surge for freedom by offers of amnesty to the "forest brothers" conducting active resistance and by their "Operation snow," designed to lure the exiles back into their power. But the cause of freedom has always proved itself to be stronger than slavery, and on the basis of that experience there is reason to hope that the Soviets will not succeed in reversing the course of history.

Thirty-eighth Anniversary of Lithuanian Independence

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 16, 1956

Mr. DINGELL. Mr. Speaker, we Americans who are cognizant of the benefits of a free Nation happily proclaim the achievement of that independence every Fourth of July. Lithuania normally celebrates their declaration of independence on February 16. Unfortunately, for 16 years Independence Day has not been an occasion for celebration in Lithuania. The freedom which Lithuania had gained on February 16, 1918 was lost when Hitler and Stalin signed their nonaggression pact and spelled the doom of Lithuania's independence. During the course of World War II, the Soviets subjugated the powerless Baltic nations and have kept them under bondage ever since. In the process of complete Sovietization many of the courageous Lithuanian people were executed and deported. However, it is encouraging to note that despite the totalitarian techniques of terror the Lithuanians to this day have steadfastly opposed the Soviet tyrant. The mere fact that the Soviets have found it expedient to use these terror tactics is tangible evidence that the struggle for freedom still exists in this captive country. Moreover, this heroic fight for liberation is a symbol for suppressed nations everywhere and has won the gratitude of all the free nations of the world.

On this 38th anniversary of Lithuanian independence the American people, ever mindful of the blessings of their own Declaration of Independence, join with all Lithuanians in hoping for the day when this enslaved nation will be released from its bondage and will once more be welcomed in the family of free nations. We are positive that their struggle will not be in vain.

Murphy Army Hospital

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 16, 1956

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following illuminating account of the status of the Murphy Army Hospital, at Waltham, Mass., which appeared in the Boston Post, on February 13, 1956.

The article follows:

PLOTTERS OF THE PENTAGON

The United States Defense Department has on its staff some first rate military strategists; this was demonstrated in World War II and, again, in Korea. The Department can boast, too—and probably does—of a number of political plotters, whose object is to thwart the public will as expressed by the people or their representatives in Congress whenever it seems convenient or advantageous to do so.

These plotters of the Pentagon have nothing but contempt for the people of Massachusetts. When Bay Staters indicate what is best for this area, the plotters sweep the suggestions and the fact under some large steel desk, and then proceed as coolly as so many potential dictators to do what they please.

Despite a congressional edict forbidding it, they have been working for 4 years to close down the Murphy Army Hospital in Waltham—and they partly succeeded. Despite protests of almost all the Massachusetts Representatives in Congress, they have already begun the cold-blooded liquidation of the Watertown Arsenal.

A congressional act prevented the closing of Murphy Hospital. To circumvent this, the Pentagon plotters began last fall moving an Air Force unit into the Murphy property. By way of showing just what able strategists they really are, they made the move a "secret," or "classified" project; that prevented ordinary citizens of Massachusetts from prying into the procedure.

Then they decided to convert a little more of the hospital to their own use to make it that much more unavailable to service men and their dependents. The plan was to get the Corps of Engineers installed there, too.

Then, with the Air Force in one section and the Corps of Engineers in another, how could the poor benighted public—the poor lowly civilians—possibly complain when the last bed was pushed out, the last patient

ejected or transferred, and the last ward closed down?

It was a plot worthy of schemers in a totalitarian country—or in an operetta. It might have worked, too, because the Pentagon schemers have stooges even on Capitol Hill, in Washington.

They managed to get—excuse us, to "sneak"—a rider onto a Senate appropriation bill which would have permitted the engineers to move in with the Air Force detachment. Between them, they would have taken over all the hospital space.

If Congressman JOHN W. MCCORMACK hadn't got word of the plot and got permission to go into the Senate and expose it, the hospital might well have been closed next March. The plotters were that close to having their way.

Why do they do it? We don't know. But we do know that their ultimate aim is to impose their will on the people, and we think it is long past time that they be reminded that this is a democracy at peace and not a military encampment at war.

The people, not the Pentagon, are still the source of power and policy in the United States.

Air Traffic Control Facilities

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 16, 1956

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include a letter from Mr. Stuart G. Tipton, president, Air Transport Association of America concerning my remarks in the RECORD of January 24, 1956, as to the inadequacy of the Nation's air traffic control facilities.

Mr. Tipton states that "the requirement for this improved air traffic control system is considered by the scheduled airlines as the most important single factor needful of attention in the operational field for both military and civil aviation."

Respecting recent proposals of highly qualified authorities that the military SAGE system may be used for both civil-military aviation control purposes, Mr. Tipton feels that such a multi-billion-dollar project is too expensive for purely control purposes, that it might be discontinued with improved world conditions but that it may be adapted to serve dual civil-military purposes. He further is of the opinion that the CAA Act of 1938 provides for a complete traffic control system which would serve all segments of aviation.

I include this letter without additional comment for the information of Members of Congress as I consider the views of Mr. Tipton and his association as worthy of deep consideration:

AIR TRANSPORT ASSOCIATION OF AMERICA,
Washington, D. C., February 10, 1956.

The Honorable JOHN W. MCCORMACK,
House of Representatives,
Washington, D. C.

DEAR MR. MCCORMACK: We were very pleased to read in the CONGRESSIONAL RECORD—House, of January 24, 1956, your comments concerning the need for a vastly improved air traffic control system to cope with the accelerated development of the air industry in the United States. The requirement for this improved air traffic control system is considered by the scheduled airlines as the most important single factor needful of attention in the operational field for both military and civil aviation. We appreciate your recognition of this requirement, and trust that your contnued efforts will have the needed impact upon the Congress and the public. It occurs to us that the following comments might be somewhat helpful to you in future discussions of this subject.

The immediate improvements which will result from implementation of the CAA 5-year plan should receive the endorsement and backing of the Congress, as well as the administrative branch. The item of $40 million for 1957, as submitted by the Bureau of the Budget for establishment of new navigation and traffic control aids, will result in considerable improvement in the flexibility and capacity of our present system, which we realize must be utilized for several years.

It should be recognized that, while these expenditures will go a long way increasing the capacity for the handling of air traffic, these are interim improvements, and that a new system of traffic control, specifically designed to meet the present high volume increases in operation and for the significantly increased speeds which are now and will be experienced in the future, must be undertaken.

This latter program must be started simultaneously with the interim improvement program for which the $40 million is under consideration. I am sure you realize the important relationship between the requrements of our military in the interests of defense of the country and the requirements of all other segments of aviation involved with civil enterprise and commerce. In spite of the difference in purpose of the military and civil operations, there is, nevertheless, a complete requirement for integration and common handling of all flight traffic insofar as air navigation and traffic control is concerned. This was the basis on which the common system concept was developed by Radio Technical Commission for Aeronautics in the Collier Award-winning report of Special Committee No. 31, entitled "Air Traffic Control." This concept embraces the recognition, as expressed in the Civil Aeronautics Act of 1938, that the Civil Aeronautics in the Collier award-winning report sponsible for the control of all traffic, both civil and military. While it is true that the Air Force, Navy, and other military components have certain air traffic activities operated by them and intended to augment the existing CAA air traffic control system, insofar as the continental United States is concerned this is due only to CAA deficiencies in rendering service which the miltary require.

In your comments before the House on January 24 you commented on one phase of this problem, under the heading "Civil-military issue." This comment was concerned with the President's recommendation for appropriations to permit the CAA to take over from the Department of Defense the cost of operating certain radar installations. These installations, known as RAPCON's (radar approach control facilities) in most instances should be operated by the CAA, except at a relatively few isolated locations where there is practically no civil traffic, if we are to have a common system. They were established by the Air Force and Navy to augment the CAA traffic-control program, as mentioned above. They were designed specifically to meet military requirements in designated areas. A number of civil airports and airways lie within the boundaries of these areas. The military requested the CAA to budget for the operations as early as 1951, in the interest of maintaining a common air traffic control system. The CAA has budgeted to operate only approximately 18 of the 56 RAPCON's.

In connection with the military SAGE project, we have supported a program advocated by the Air Coordinating Committee, wherein the Air Navigation Development Board, as the coordinating agency for the Departments of Defense and Commerce, was to explore the possibility of using this system as an interim air traffic control system in addition to its primary mission for military defense. It is our opinon, subject to confirmaton after further study, that the SAGE system—or certain components thereof—could be advantageously utilized for traffic control as an early aid in improving the total air traffic control system capacity.

On the other hand, we are very doubtful—and certainly do not recommend at this time—that the SAGE system should become the ultimate traffic control system. This position stems primarily from the fact that the SAGE system is one of such cost magnitude that it can be justified only by defense requirements under a highly troublesome world situation. It is entirely possible that, with an improvement in the future of relationships between nations, this high cost would not be justified from a defense standpoint—at least as a fully operational activity. We feel confident that this cost could not be supported purely for a traffic-control purpose. The SAGE system, involving a multi-billion-dollar budget, is far too complex and expensive for traffic control alone. On the other hand, it is possible to develop a system which uses many of the SAGE techniques in more simple application, which could be compatible with the SAGE system while it is in being and yet perform its traffic-control function independently should the SAGE activity be discontinued. Accordingly, we recommend the development of this more simple and less expensive pure traffic-control system, using the advanced automatic techniques commensurate with the problem at hand. This system could be supported by governmental budgets specifically assigned to the accomplishment of the traffic-control mission for both military and civil aviation.

Under the heading Who Will Operate System, and in connection with your comments on Senator MONRONEY's bill, S. 2828, you raise the point as to whether or not a new committee, board, or counsel divorced from either the Department of Commerce or the Department of Defense might be necessary. It is our belief that the creation of such an organization is unnecessary. As stated earlier, there is agreement that the Civil Aeronautics Act of 1938 has made provision for the Civil Aeronautics Administration to supply a complete traffic control system which would serve all segments of aviation, both civil and military. It is only necessary that this concept be supported by ample funds for the purpose, that there be a clear understanding by all concerned that this was the intent of the legislation, and that even though the term "civil aeronutics" suggests that the activity would embrace only civil operations, in reality, aircraft of all agencies would be handled in a common and coordinated manner. Along the line of your suggestion, we believe that the organizational structure of the top air navigation development board should be augmented by the appointment of a third member (non-government) who would act as full-time chairman.

The air navigational development board is responsible for systems enginering and planning and developing new and improved traffic control facilities. At the present time, the top ANDB consists of two voting members, the Secretary of Commerce and the Secretary of Defense or their appointees. Under the present structure of the ANDB there is

no manner of resolving differences arising between the two voting members. The appointment of this third member should assure aviation an effective traffic control development program.

Once again we would like to commend you for your foresight in recognizing this serious situation, and your expression that its resolution should be given early and thorough consideration by appropriate committees of the Congress. We would suggest that the program can be effectively advanced by support of the recommendation of the nonpartisan Harding Committee report (Aviation Facilities Study Group of the Budget Bureau) pertaining to the appointment of an individual of national reputation and broad understanding of civil and military aviation, to provide full-time, high-level leadership in bringing our aviation facilities in line with air traffic growth and progress.

We will gladly make any information we have and our services available to you on this most important subject, or on any other aviation matters.

Cordially yours,

STUART G. TIPTON, *President.*

Nations Mark World Day of Prayer

EXTENSION OF REMARKS

OF

HON. GORDON CANFIELD

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 1, 1956

Mr. CANFIELD. Mr. Speaker, under leave to extend my remarks, I would like to pay tribute to the church women of the world, who tomorrow are marking the annual World Day of Prayer, in this Nation and in 134 foreign lands across the world.

The church women have chosen for the theme of this year's observance "Thy will be done," words taken from that most perfect of all prayers. Beginning at dawn over the Fiji Islands and sweeping across the world in a great chain of prayer, man's innermost longings for world peace and understanding will be sent heavenward tomorrow in every dialect, every tongue.

A day that brings together all nations in a great fellowship of prayer cannot help but have an uplifting effect on all of mankind and who knows what great and wonderful things may be achieved through it? It was Tennyson who said, "More things are wrought by prayer than this world dreams of," and we in this country have recently had a demonstration of the power of this great and limitless resource. A few months ago the President of this great Nation was stricken and the hearts of the whole world were moved to pray for his recovery. A few days ago the President's physicians were able to report him well and sound and again prayers of thanksgiving rose from the lips of men and women in this and every nation on the globe.

I cannot help but feel that this tremendous outpouring of sincere prayer, plus the President's own deep and abiding faith, were able to bring about this happy circumstance.

When men and women lift minds and hearts to God in unselfish, sincere prayer, then lives can be changed, miracles wrought, hatred transformed into love and bitterness and conflict and peace.

Lithuanian Independence

EXTENSION OF REMARKS

OF

HON. HAROLD D. DONOHUE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 16, 1956

Mr. DONOHUE. Mr. Speaker, last Saturday, February 11, 1956, the Worcester, Mass., Lithuanian organizations celebrated Lithuanian Independence Day with an appropriate program held at the Lithuanian Naturalization Hall at 12 Vernon Street.

The program was sponsored by the Lithuanian Aid Association. Among the other societies taking part in the ceremony were the Lithuanian Community of America, Worcester branch; the Lithuanian Naturalization and Social Club; Lithuanian National League of America; Lithuanian Women's Club, Lithuanian Alliance of America, Branch 57; St. Casimir's; St. George's; St. Ludwig's and Birute societies; Lithuanian Aged Aid Society and the Lithuanian National Society of America.

Mr. Vincent Macys was general chairman, assisted by Michael Zemaitaitis, vice chairman; Leonard Kacinskas, secretary; John Dvareckas, treasurer; John Pipiras, financial secretary; Miss Anna Taraila, assistant secretary; and John Palubeckas, master of ceremonies.

In connection with the celebration, I have been asked to include the addresses delivered by myself and a most prominent Lithuanian American, Anthony J. Miller, Esq., over radio station WNEB in Worcester, Mass.

The addresses follow:

LITHUANIAN INDEPENDENCE DAY ADDRESS DELIVERED BY ANTHONY J. MILLER, ESQ.

As an American citizen of Lithuanian descent, I am proud and privileged to join in this program commemorating the founding of the Republic of Lithuania.

This annual ceremony is dear to the hearts of all Lithuanian-Americans because it is held to recollect that day of February 16, 1918, which marked the end of well over a century of suffering under a hostile, foreign rule. Lithuania, on that day, stood forth as an independent, democratic republic. There was cause for rejoicing and the future was faced with confidence.

This is the 38th anniversary of the independence of Lithuania. What did the Lithuanians accomplish during the brief period in which they were their own masters and the Government of Lithuania was of, for, and by the people of Lithuania?

Let me give you a few figures: In 2 decades when Lithuania was free the number of primary schools was increased from 677 to 2,696. There were constructed over 100 secondary schools, including 2 years of college, and 4,000 advanced students were enrolled at the great university at Kaunas. Every city in Lithuania of more than 5,000 population supported opera seasons with the world's great operas, many of them translated into Lithuanian, given under conditions making it possible for all who so desired to attend.

Everywhere there were special schools for music, art, and ballet. Industry and commerce reached peaks never before attained in a country of a population of not many more than 3 million. Practically everyone owned his own home or his own farm. This is the record made in 22 years when the people of Lithuania were free and the Government of Lithuania was of, for, and by the people of Lithuania. No people in all the history of the world ever made a record surpassing that of the people of Lithuania when Lithuania was free.

There is something in the Lithuanian blood that will not tolerate injustice and that can withstand the most savage inroads of tyranny. The source of the spirit of freedom that is in the Lithuanian people goes back many, many years. It was 1,500 years before the birth of Christ that the Lithuanians came to settle themselves in Europe. It is said that the origin of the Lithuanian race is lost in the mists of time. Probably it came from the Himalayan Mountains of north India, one of the tribes belonging to the Aryan group of thousands of years ago.

The settlement of Lithuanians in Europe was on the rolling plains along the shores of the Baltic Sea, a land of rich and fertile earth, heavily forested, and with wide rivers and many lakes. In modern times, it is described as a heart-shaped land of 33,000 square miles, lying between Russia and Germany, like a walnut in the jaws of a nutcracker.

From 1500 B. C. to this year of A. D. 1956 the Lithuanians have been a vital force for freedom in Europe and their descendants now numbering over a million who came to the United States of America have in this land of ours been a vital force for freedom.

When Tatar hordes swept out of the East, their objective being the overwhelming of Europe, the Lithuanians rallied to beat back the invaders. When to the West the Huns and other Germanic tribes came with fresh threats, again the Lithuanian people rallied and beat back the invading hordes.

In the first centuries after the birth of Christ the worship of the Lithuanians was that of a pagan mythology. Perkunas was the god of thunder and lightning, Zemininkas the god of earth, and Viehpate the god of life. Then came Christianity. One of the first of a long line of powerful Lithuanian leaders was King Mindaugas, who succeeded in gathering the other Lithuanian dukes under his banner and who 700 years ago was crowned King of Lithuania. For three centuries the unconquerable legions of Lithuania held the balance of power in Eastern Europe. The word of the Lithuanian was law through much of what is now Poland and Germany and beyond Moscow in Russia.

In 1572 the Polish throne was given up and in 1795 the country was overwhelmed by the legions of Russia. There followed the tide of diplomatic intrigue, the Napoleonic wars, and the oppression of the czars. Always did the Lithuanians refuse to accept their conquerors.

Three times in the 19th century they rose and revolted against overwhelming odds. Again at the dawning of the 20th century they revolted, their spirit still beyond the power of tyranny to crush. Loyal freedom-loving Lithuanians were torn from their homes and thrown in the hellholes of Siberia, but no power, no torture could quench their spirit.

Then in 1918 freedom came again to Lithuania. Again she was free to form her own government and take her place in the family of nations. In the 22 years of Lithuanian independence a record was written in successful self-government of which any people could be proud.

Today again Lithuania is in the enslavement of a brutal tyrant but the spirit of freedom, which centuries of oppression have never succeeded in crushing, lives on among the people of Lithuania.

On this anniversary day, then, I ask you to join with me in sending across the seas to our beloved but still enslaved people of Lithuania this message:

"Be not discouraged, be not downhearted. The night may be long and dark but the sun of the morning is soon to break upon you, your homes, and your land. Each day that passes brings your blessed country closer to inevitable independence. We shall not fail you and will work and pray together with you until your liberty is accomplished."

LITHUANIAN INDEPENDENCE DAY ADDRESS DELIVERED BY UNITED STATES REPRESENTATIVE HAROLD D. DONOHUE, OF MASSACHUSETTS

As your Representative in the United States Congress, I am honored to take part in these exercises commemorating the 38th anniversary of the declaration of Lithuanian independence.

As you are all aware, 38 years ago Lithuania made known to the world that it was an independent nation, exercising the right of self-government and self-determination. This declaration of Lithuanian independence was one of the great milestones in the history of a liberty-loving people whose struggle for self-government continued over centuries.

From the 16th century on, Lithuania was almost in a constant battle against aggressive neighbors, but never gave up hope to preserve the Lithuaian tradition for freedom. During 120 years of Russian domination, no less than five distinct major revolts took place in Lithuania. Back in the early 1800's, Czar Nicholas the First invoked a sweeping policy to Russify Lithuania. Repressive measures were taken against all forms of Lithuanian culture, literature, language, schools, religion, and governmental offices.

In 1863 and 1864, another revolt took place which failed after a struggle of 18 months. Another revolution in 1905 brought fresh hopes for independence, but failed.

During World War I, the German armies overran the country and remained there until the end of the war. During this time, uprising, negotiations, and minor rebellions did not cease.

On February 16, 1918, the Lithuanian National Council unanimously adopted a declaration calling for the reestablishment of an independent Lithuania on a democratic basis, with Vilna as the capital and the severance of all political ties which linked it with other nations. This declaration became Lithuania's proclamation of independence.

After the evacuation of Lithuania by Germany in November and December 1918, Russian troops arrived at the border of Lithuania and again made an effort to subjugate the nation. The last battle with the Red army was fought late in 1919 which culminated in a peace treaty signed July 12, 1920.

On September 22, 1921, Lithuania was admitted to the League of Nations, thus Lithuania became a full member of the international powers. The permanent constitution was adopted August 1, 1922. It was an instrument which followed the blueprint of western democracy. The state of Lithuania was an independent democratic republic; the people were accorded the constitutional rights of freedom of speech and assembly; the constitution guaranteed freedom of religion; the independent Lithuanian Government instituted land reforms; industrial production proceeded to ascend; neglected railroads were rebuilt and transportation improvement was inaugurated throughout the land; social legislation and education were expanded and it did not take long before the new independent democracy was functioning with the precision of nations much older.

The Lithuanian people proved, during the period of time from their declaration of independence up until the Hitler-Stalin menace devastated Europe, that its people could give the world a practical example of true democracy in action.

During the period from 1920 to 1939, the Lithuanian Government entered into peace treaties, nonaggression pacts and mutual assistance agreements with the Soviet Union. By reason of typical and well-known Communist duplicity and treachery, every one of these agreements was discarded and nullified by Russia when they saw the opportunity was ripe to enslave the Lithuanian people.

The long and dismal record of the mass liquidations, prison incarcerations and tortures brutally inflicted by the Soviets upon the brave and liberty-loving people of Lithuania would take hours to recite. It is a black page of world history vividly revealing the barbaric tyranny that godless Communist dictators imposed upon innocent human beings.

This terrible and frightening record is accurately drawn up in the final summary report of the Congressional Committee To Investigate Communist Aggression published on December 31, 1954. The basic findings, conclusions, and recommendations outlined in that report should awaken the consciousness of all still free peoples throughout the world to the danger and intent of the Communist conspiracy.

It is, indeed, a solemn warning of the cruel treatment any nation and people falling under the domination of the Kremlin iron heel will receive.

That is why we as your fellow Americans and this Government, in our own interest, cannot and should not relax our efforts of assistance to Lithuania, and all other enslaved nations under Communist domination, in regaining their rightful freedom.

The attitude of the United States Government in regard to the present status of Lithuania is, of course, universally known. The United States has never sanctioned the forced incorporation of Lithuania, with Latvia and Estonia, into the Soviet Union and still continues to recognize them as sovereign states. Many other free democracies also regard the Baltic nations as being deprived of their independence by an act of aggression having neither legal nor moral justification.

However, nonsanction is not enough. We must be increasingly insistent in demanding that the Soviet leaders restore the liberty of Lithuania and the other oppressed countries as proof of their declared intention to cooperate for peace in the world. There can never be any true and lasting peace in a world that is half slave and half free. The conscience of the still free world will never be clear until Lithuania has regained her freedom and let us rededicate ourselves tonight to that objective, praying that it be God's will to occur in the near future.

Hon. Chauncey W. Reed

SPEECH

OF

HON. PETER F. MACK, JR.

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, February 10, 1956

Mr. MACK of Illinois. Mr. Speaker, it was with great sorrow the Members of the House heard the sad news of the untimely passing of our beloved colleague CHAUNCEY REED. In his passing, the State of Illinois has lost a true statesman and we in this House have lost a treasured personal friend. His life should be an inspiration for others to emulate.

CHAUNCEY REED left his own monument. It is a dedicated Christian life founded on character, integrity, loyalty, and ability. It is a dedicated life of distinguished service to his constituents, to our great State of Illinois, and to all America. The State of Illinois and our country have lost a great man, but we are all better for having known him.

His friendliness penetrated rugged partisan barriers, especially in his legislative work with fellow Members, and radiated throughout this Chamber I treasured his friendship, advice and counsel and fond memories of CHAUNCEY REED will be inseparable from my service in the House of Representatives.

His loved ones should find solace in the fact that he left them a rich heritage of love and affection and devoted service to his country.

Bob Sikes: A Great Friend of Forestry

EXTENSION OF REMARKS

OF

HON. D. R. (BILLY) MATTHEWS

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 16, 1956

Mr. MATTHEWS. Mr. Speaker, I am very proud of the development of the forestry industry; in the State of Florida, and in particular in the Eighth District of Florida which I have the honor to represent. One of the most devoted friends of our great forestry program is the dean of of our Florida delegation, the Honorable BOB SIKES, who so capably represents the Third District of Florida. This last year Congressman SIKES made a number talks on forestry throughout our State. He made a splendid address at a meeting at the research station at Olustee in my district. I am pleased to include for the record another great address he made for the annual meeting of the American Forestry Association at Jacksonville, last October. Congressman SIKES' address follows:

A REPORT ON FORESTRY PROGRESS IN THE SOUTH

(By Hon. ROBERT L. F. SIKES, of Florida)

Ladies and gentlemen, I am happy to welcome you to Jacksonville, Fla., and to the South. I hope you will enjoy and profit by every minute of your stay here. I hope you will see the South and its forestry opportunities and problems not as a casual visitor but as a careful observer and that you will take back with you an understanding of what the South is achieving.

A few years ago one of our great pulp and paper corporations, the International Paper Co., issued a remarkable annual report called A Report to the People of the South. It illustrated how the prosperity of the people was dependent upon forestry progress being made on the company's lands. I'm sure that company would not object if I copied their expression of good public relations and expanded their idea in a report to you. So, I would like to give you who have come here from all over the Nation a report on forestry progress in the South.

I come from northwest Florida where many of the counties are more than three-fourths forested. It is a real piney-woods

country. Years ago I saw the great virgin pine cleared by the steam skidders, and the remains of logging railroads scattered like bones from a skeleton on a barren, wasted country. I have seen the annual fires set by men on horseback as far as they could ride. More recently I have seen the change to protection and a start toward proper management under which the great green regrowth of pine will reclothe our plains and hills with a new wealth. I have seen the development of the pulp and paper industry—there are three of these wonderful industries in my district alone—the International Paper Co., the St. Joe Paper Co., and the St. Regis Paper Co.—all with great well-managed land holdings.

I have lived with forestry in the South and therefore I must ask you to forgive the seemingly too frequent use of the personal pronoun. Forestry is a personal matter to me and a personal matter to the people of my district. Forestry must be a personal matter to you, too, as indicated by your presence and active interest in this meeting. Forestry is important not only regionally but also nationally. What the South does affects the Nation. Our success or failure in producing the forest products needed in war or peace will have a lot to do with the welfare and prosperity of everyone be he a Kansas farmer or a Brooklyn shoe clerk.

Through protection and development of its forest regrowth the South has become the great forest factory of the Nation. With 222 million acres of commercial forest land the South is producing and can be counted upon to continue to produce a great wealth of forest products. Incidentally, when I speak of the South I am including not only the Deep South but also Virginia, West Virginia, Kentucky and Missouri. I need not remind you of the great many uses of our forests, but a moment might be well spent in considering new uses as well as old. Let me give you an example: Two centuries ago in this area longleaf pine was cut and charred slowly to make pitch. The pitch was collected by the crude method of draining it into a pit dug in the earth. Fifty years ago longleaf pine was chipped or hacked and the gum collected in a box chopped into the base of the tree. Then, in addition to tar, we produced turpentine and rosin. Now with modern conservation methods of working the trees, using bark chipping, acid and spiral gutters and removable double-headed nails which do not damage the tree, we are producing high quality gum or oleoresin which is being used in a great number of products—medicines, paints, linoleum, paper and even as lubricants needed by jet airplanes.

Certainly we are making great strides in our forest products industries. Since World War II the South has experienced an industrial expansion never dreamed possible. Industrial capacity for paper making has doubled. I know that some people in the South and the Nation had their misgivings about this great paper company expansion. For example, when one big company wanted to expand its plant in my district 3 years ago, I was consulted and I deliberated for a long time due to the high timber drain estimates. I checked with company officials and foresters. We studied forest survey reports. Based largely upon the company's plans for sustained forestry my advice was to encourage the expansion. The forestry plans are being carried out and I feel that I can report that my decision has been fully justified as the wisest course of action.

We are in reality enjoying a cellulose age when you think of our multiwall paper bags and cartons which package almost everything from milk to concrete, the hardboard, insulating board, and newsprint, and hundreds of cellulose products. I hope you will visit one of our great pulpmills while you are here. I have also mentioned naval stores. You are in the heart of the colorful naval stores belt here and I hope you'll get out of your cars to examine some working trees and perhaps a central steam still. Our lumber industry is booming any many of our big lumber companies like the Neal Lumber Co. of Blountstown, Fla., and the Alger-Sullivan Lumber Co., of Cantonment, Fla., for example, are doing a splendid forestry job.

Last year the South planted 516,477 acres, three-fourths of the Nation's total planting. May I brag a little bit by saying that in tree planting the South leads the Nation? Florida, Georgia, Louisiana, and Mississippi lead all the States in tree planting. The State of Georgia is now producing more than 100 million trees per year. The State of Florida is increasing the capacity of its State nurseries to about 80 million. In addition to this, many of the paper companies have tree nurseries or are in process of establishing them. Their combined production will exceed 50 million trees this year. In this field we are making great progress but before we become complacent let's remember that the South still has 26 million acres of idle forest lands in need of planting and probably an equal area in poorly stocked woods where interplanting is needed to obtain full production. We need to produce 1 billion trees per year if we are to get on with the job.

As most of you know the tree-planting program is a cooperative State-Federal-private landowner venture began in 1924 under the Clarke-McNary Act. I am proud of the partnership relationships which have been time tested under this act and the Cooperative Forest Management Act of 1950 in which I had a part. These acts show what can be done by working together in true partnerships. Federal money and technical assistance are needed in all States, particularly the lagging States, and to provide uniformity of programs and to guarantee that the national interest is protected.

In the field of private forest management I am sure the South is leading the Nation and that in no other part of this Nation will you see as much timber marked for selective cutting, as much thinning and timber stand improvement work, and as much general private forest management activity anywhere as in the South. The only dark cloud in this bright picture is that most of this fine forestry is on the large holdings while the small landowner isn't keeping up. In fact, I believe the small woodlands are deteriorating. The small woodland owner rarely is getting the technical help he needs to put his woods under good management. All of the large timber companies have staffs of able foresters working on company lands and most of them will help the neighboring small woodland owners. In fact, I am told that some 150 conservation foresters employed by industry are helping small woodland owners and coordinating their services with the 112 farm foresters that are on the States' payrolls working under the State-Federal partnership set up by the Cooperative Forest Management Act of 1950. But that's a mere advance cadre of what is needed if we are within a reasonable length of time to help the 2 million small woodland owners of the South who own 157 million acres.

In research we are moving ahead slowly and painstakingly. Scientists are working diligently to find new uses for forest products and new ways to grow more and better trees. Some land which once grew majestic longleaf pines is now covered with worthless brush. How to remove this brush and reforest in an economical way is one of our biggest problems. Research will lead the way. Within 50 miles of Jacksonville are two Federal research facilities: The United States Forest Service Research Center at Lake City, Fla., and the Naval Stores Laboratory of the United States Agricultural Research Service at Olustee, Fla. In my district the Chipola Forest Station at Marianna is studying important production problems. In addition, the Union Bag & Paper Co. has a research center at Savannah and the West Virginia Pulp & Paper Co. has one at Charleston, S. C.

In the field of protection, I wish I could report to you tonight as I might have done a year ago that the South is making great progress. Here my optimism gives way to grave concern. We had about 86 percent of all the fires in the country, 95 percent of the area burned and about 90 percent of the area still unprotected. In the past year the South has really taken a terrible licking from wild fires. Let me tell you of only four cases which have been reported to me recently:

1. In one of our States an incendiarist, just for meanness, set 20 fires in one night. While thousands of acres of valuable timber were burning up, the State caught the incendiarist, hauled him before the local judge and he admitted his guilt. The judge sentenced him for 2 years and immediately suspended the sentence. The same judge the same day sentenced a man caught stealing a small quantity of food to 6 months at hard labor.

2. In the great Commonwealth of Georgia they had very disastrous fires in the Okefenokee Swamp area. The swamp was extremely dry and the area is very remote and inaccessible. Many fires in that swamp were caused by lightning but many of the large fires around the swamp were of incendiary origin. They entered the swamp where they could not be controlled. Later the wind blew them out of the swamp onto the high-valued pine areas where they destroyed millions of dollars' worth of timber. One man-caused fire near Fargo, Ga., burned about 90,000 acres of some of the best pine timber in the South. The effect of the fires in southeast Georgia during 1955 will be felt by the forest products industries in the Southeast for many years to come.

3. In my own State, Florida, there were many damaging fires last spring. Some of the most disastrous fires were in the Madison-Taylor County area. March 7, firebugs or incendiarists strung fires for about 6 miles. This fire soon roared out of control and was joined by the Foley fire that started March 10. These 2 fires were finally controlled on Sunday, March 13, but not until 57,000 acres were ravished. Eight thousand additional acres in the same general area were destroyed by numerous small fires during the same period. These were not ordinary surface fires; they were roaring, terrifying crown fires that destroyed everything in their path.

4. In North Carolina in May a fire swept across 200,000 acres before it was controlled. So hot was this fire that it rolled right over the coastal waterway. At a meeting held June 20 at New Bern it was brought out that the personally able State forester was not equipped and did not have the organization and reserves to handle a blowup situation. Why didn't he have an adequate setup? It was brought out in the hearings that the State forester was doing the best he could but he just couldn't finance the setup needed. Why didn't he have the money? As a Member of Congress I must take part of the blame but each one of you must also accept a share of the blame for this failure in protection. Here's why. The State forester of North Carolina received for protection under the Clarke-McNary Act of 1924 only $295,466 of Federal money. The State, counties, and private sources put in over 3 times as much—$988,105—giving him a total of $1,283,571, which was inadequate. Why doesn't he get adequate funds? In the past 10 years Federal expenditures for fire protection in this partnership have increased 50 percent, but this is less than the estimated

cost-of-living increase. During the same period State expenditures have jumped 335 percent. I can speak only from the Federal side. He doesn't get more simply because the Federal Government, which originally intended in 1924 to match the State funds, has failed to redeem its responsibility. This is the case with all of our States. I mention North Carolina because of the public interest in this case.

Why doesn't the Federal Government meet a full 50–50 share of the cost of protection from forest fires? Congress has tried hard to provide the appropriation which would do this. In doing so, of course, it is anxious to listen to advice of all of the people. You would think that everyone would advise Congress to appropriate adequate sums for its just share of protection, wouldn't you? I thought so too, until I found that our efforts were being hamstrung. For example, let me read you a resolution which was given wide circulation by the National Lumber Manufacturers Association: National Lumber Manufacturers Association Release NL–92–55 Sea Island, Ga., May 21:

"The industry leaders also recommended a gradual reduction in Federal forest fire protection payments to the States and urged development of multiple land use programs for the national forests."

The spokesmen of the lumber industry will tell you that their interests lie in economy and in the reduction of Federal taxes. But let us consider this point more fully—from the standpoint of the whole picture rather than of the tiny facet labeled forest fire protection and management.

Let me give you a few figures for the fiscal year ending June 30, 1951. According to the Handbook on Federal Grants-in-Aid published by the American Parents Committee, Inc.: The Empire State, New York, received $286,076,374 of Federal aid of which one-tenth of 1 percent, $284,079, was for all forestry cooperation, including protection. Ohio received $137,944,138 of Federal aid, of which only $77,220 was for forestry. Florida received a total of $86,973,619 of Federal aid of which forestry, including protection, amounted to six-tenths of 1 percent, $565,748. The total amount of Federal payments to States amounted to $4,041,215,778. Forestry, including cooperation with the States for forest fire fighting was two-tenths of 1 percent, $9,950,612. February assistance has never been adequately financed by the Federal Government. But every time we try to increase the appropriation for forest protection there are some who say that this is unnecessary, and the increase is not appropriate. The costly fires of last spring provide their own answer to this question.

I am hopeful that in the future forestry appropriations for Federal-State cooperation will be given more favorable consideration. You must make certain, however, that your Representatives in Washington actually represent you and carry out your wishes. If you want more Federal assistance in fire protection, go after it. Don't let lobbyists persuade the administration and Congress that Federal assistance isn't needed and that the States and counties will pick up the check. The States are already way head of the Federal Government now in protection expenditures and just haven't been able to do the entire job. It is time that the Federal Government met its responsibilities to share 50–50 in fire prevention costs as intended under the Clarke-McNary law of 1924.

I am sure you believe as I do that wildfire is no respecter of State lines and that the disastrous uncontrolled fire is an enemy—the enemy not only of Florida and the South but also of the entire Nation. Within the next decade how many board feet of lumber for boxes will be grown on the burned areas? How many units of naval stores so vitally needed in times of war will be produced from the scarred blackened trees of burned-over areas? Can the Nation, confronted with the threat of a world war III, afford to neglect such wastefulness? Let's not kid ourselves that because we have atom bombs we can win easily. The struggle may be a long one and victory may ultimately be won by the side which has best developed its long-term resources. All acres would be needed in full productivity not as idle or burned-over wastelands. Thrifty, well-managed forests could be essential for victory.

War is not inevitable. In the event we are favored with a peaceful future we will still need our forest resources. We will need forest products not only for domestic consumption but also to maintain our position in world trade. Economists tell me that there is a shortage of many types of woods in the world's markets. With its favorable location, its climate and soils the South can produce abundant forest crops. The South can be a strong factor in the Nation's domestic and international prosperity.

I'd like to sum up by saying in my report to you that the South is making forestry progress. We are proud of our forestry achievements of the last 50 years. We are proud of our area planted to trees, of the establishment of our great forest industries, of our large well-managed private forest holdings, of our publicly owned National and State forests, and particularly we are proud of the results of our forest research. In general, we are proud of our protection work too. Although we have just experienced a terrible setback in our forest protection, I would like to think that the terrible fires of this Spring won't occur again. But we all know that they will if the fire-fighting organizations aren't manned and equipped to stop them. They happened once and they can happen again if something is not done about it. I am deeply concerned and I know you must be too. We must do something to overcome this setback and to insure full progress ahead. We must stand up and be counted as to whether or not we will go forward in favor of adequate protection. Our forests are growing and our population is growing—therefore our problems are growing. We must go forward, changing methods with changing times, but steadfastly striving to achieve our goal. Let us ever keep in mind that our goal is the well managed and protected forest resource serving factories, with work and money for the people who live here and providing products for the Nation. We will neither accept nor compromise with anything else.

Five Hundred Negroes Attending White Colleges in Dixie

EXTENSION OF REMARKS

OF

HON. CHARLES C. DIGGS, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 16, 1956

Mr. DIGGS. Mr. Speaker, I would like to submit for the RECORD a news report headlined "Five Hundred Negroes Attending White Colleges in Dixie," which was published in the February 13, 1956, issue of the Washington Post and Times Herald. As all of us are aware, many of those persons who oppose altogether the implementation of the Supreme Court's decision on desegregation of public schools and the gradualists who oppose forthright action to comply with this order have seized upon the deplorable incidents which recently occurred at University of Alabama to say that this type of lawlessness is the typical response to be expected of citizens of the South in general. I submit this article as clear evidence that such a position is not based in fact.

In a quiet and orderly manner, integration in schools has begun in at least seven Southern States. There has been no such reaction among the citizens in these States as attended Miss Lucy's admission to University of Alabama. You will note that the acceptance of Negro students by the student body has been in the democratic spirit—as a matter of course.

It is significant also to note that despite the fact that Louisiana School Board's president has announced that the board will appeal the new Federal district court decision banning as unconstitutional laws devised to keep segregation, that school has enrolled more Negroes students in former all-white colleges and universities than any other State in Dixie. Its total is 116.

While commendation cannot go to any State for its resistance to the spirit of democracy in fighting against enforcement of constitutional guaranties for all American citizens, these facts point up that peaceful compliance can be had through forceful legislative, executive, and judicial mandates.

The article follows:

FIVE HUNDRED NEGROES ATTENDING WHITE COLLEGES IN DIXIE

ATLANTA, February 12.—More than 500 Negroes have enrolled in formerly all-white, State-supported colleges and universities from Texas to Virginia—with the marked exception of the deep South stretching from the Mississippi River to the Atlantic coast.

It was in this 4-State section of Mississippi, Alabama, Georgia, and South Carolina, that violent demonstrations accompanied the first attempts by a Negro student to attend classes at a State institution of higher learning.

And it was in this section that the first organized opposition arose to the United States Supreme Court's ban on public-school segregation.

Seven States bordering the one-time Cradle of the Confederacy have accepted Negroes in State-supported colleges with little fanfare. An eighth State, Florida, has never accepted Negroes but opposition has not been as outspoken.

The Florida Board of Control has sent out 62,000 questionnaires in an effort to learn how students, faculty, alumni, and perents would respond to mixed college classes.

A survey showed today that Louisiana has enrolled more Negroes in white colleges and universities than any other State in Dixie. More than 350 there are taking graduate and undergraduate courses.

Texas has more than 100 enrolled. Negroes are well represented in both Kentucky and Arkansas schools. Ten have entered the University of North Carolina, 17 in several Virginia colleges, and two (part-time) in Austin Peay State College in Tennessee.

In those States there has been none of the racial rioting which marked the entrance of Autherine Lucy into the University of Alabama.

Womack Rucker, one of 116 Negro graduate students at Louisiana State University, said, "I'm just another person in the class, and I receive fair treatment."

Mrs. I. E. I. Sephas, a student at North Texas State, said that "everybody has been wonderful to me. In every class, I have been fully accepted as another student."

Six graduate students attend classes at Southern Methodist, where Dean of Students

Mayne Longnecker said they appear to be "carefully chosen, well accepted and assimilated, and the relationship between them and their classmates is a pleasant one."

All State-supported colleges in Virginia, with the exception of three teacher schools for girls, have accepted Negroes at one time or another and Lester Banks, executive secretary of the Virginia NAACP, said "things have been so quiet, I haven't checked since October."

The University of North Carolina admitted its first three Negro undergraduates last fall, bowing to a Federal court order.

The undergraduates, brothers Leroy and Ralph Frasier and John Brandon, agreed that white students "act if we were of any other race. They are very friendly. We like it."

National Negro History Week

EXTENSION OF REMARKS
OF
HON. CHARLES C. DIGGS, JR.
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 16, 1956

Mr. DIGGS. Mr. Speaker, I would like to recall for my distinguished colleagues some remarks which I made last year at just about this time. We were then, as now, observing National Negro History Week. At that time international strife had centered our national concern upon the necessity for developing strong unity between ourselves and other peoples of the world who share a basic faith in democratic principles. We were using every means at our disposal to present the American case to the world in an effort to assure all people that American belief and practices upholds the concept of equality of men in matters of justice and opportunity. I felt impelled at that time to point out the significance of the program of the Association for the Study of Negro Life and History of the Cultural Heritage and the Contributions of the Negro Race to Society. It was pointed out that through the daily continuation of its program, the Association's purpose is to give America the opportunity to combat the evils of prejudice and fear which are the results of miseducation and noneducation that this country might better its own national human relations and retain its stature in word opinion. Its yearly observance of Negro History Week is a reminder to American people who rightly do say that education is an aid in the solution of racial problems, that such information is and has been available over the years. It has been produced by 31 years of research, documenting of information from legislative records, newspapers, our Nation's archives, and from numerous other accepted, legitimate sources of historical fact. This was a purpose which the association assumed because the facts, although always a matter of historical record, remained unassembled and undisseminated.

During the year since the last observation, progress in human relations has been gravely jeopardized in certain areas of our Nation and this state of affairs has resulted in severe internal conflict. In view of this situation, National Negro History Week ought to have a special concern to every Member of the liberal bloc of Congress as we face issues which concern principles of democracy as they are applied to American minority groups. The theme of the national observance for 1956, Negro History in an Era of Changing Human Relations, describes with accurateness the major issue which faces the legislators, political aspirants, the present administration and the citizens of this Nation—changing human relations. When, by way of example, the New York Times newspaper includes in 1 issue at least 9 news reports or articles upon issues of civil rights, we are forced to concede that human relations are of serious national concern, that changes are in demand and cannot be ignored or deflected until some undetermined time. Yet in reading our current daily news accounts, we know that too many legislators and leaders in government try to convince themselves and hide from the rest of the world the fact that in this country, designated the land of freedom and opportunity, discrimination, segregation, and injustices are inflicted against a large, even though minority, portion of the American citizenry and have no other reason for their imposition except race or creed. Although there are attempts not to admit these injustices or to minimize them, modern means of communication makes these efforts futile and ridiculous. Undoubtedly to ease the conscience and justify these imbalances between declared concepts and practice of democracy, as a long established custom the history of the contributions of the Negro to the welfare and progress of this Nation has been painstakingly omitted from the ordinary textbooks and other educational tools with which our school and university students, interest groups, and interested individuals of all age groups are familiar.

Negro citizens have no wish to be set aside and designated as a special group, even in their contributions to the society to which they belong, but until an honorable and democratic victory has been won in human rights and the history of the Negro is admitted and given its factual place in world history, the Association for the Study of Negro Life and History must pursue its course as one role in the minority group battle for life, liberty, and opportunity to pursue happiness. The objective is, as stated, "not merely to emphasize Negro history but rather the history of the world void of national bias, race hate, and religious prejudice." In view of the pronouncements on the role that truthful education can play in the solution to internal conflict, it is time that our legislators, educators, and citizens questioned the reason for almost complete silence in the textbooks used in schools and universities of this Nation on the subject of the role of Negro citizens in the development of America to its present position of world leadership in cultural and material aspects. Outside of the fact that there was an era of slavery of Negro people within this Nation, there is an appalling lack of information concerning the participation of Negroes in the life of our Nation and how they served the Nation in the Halls of Congress as far back as the 1860's, and in the halls of justice, in education, medicine, arts, and every other field of endeavor, and given their lives in this country's battles throughout the centuries of its progress.

National Negro History Week is not a weak gesture for short-lived acclaim, but a reminder to Americans as the association itself points out in the following quotation by Dr. John Hope Franklin, world historian, that "The strength of this Nation lies in the diversity of its cultural heritage as well as in its political unity and military might. No other nation can boast of such remarkable assimilation of peoples of differing cultural and ethnic backgrounds, all contributing to the richness and the strength of the whole. The dramatic and significant story of the Negro is one of the prime examples of what the strength of this Nation is and what it may become as it moves into a new era in human relations."

I would add only that it is these contributions by the various racial groups of Americans which gained for our Nation its place of respect. A judgment is not unchanging and the world which made the judgment of America watches us in our human relations. Our world status, if it is to remain unchanged, calls for our meeting the problems in human relations which do exist and taking forceful, effective action to erase them. Use of the means to proper education regarding the Negro is one step in the right direction.

Inaction on Jefferson Memorial Saddles Downtown St. Louis With Barren Wasteland — Globe-Democrat Series Urges Fulfillment of Long-Delayed Promise

EXTENSION OF REMARKS
OF
HON. LEONOR K. SULLIVAN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 9, 1956

Mrs. SULLIVAN. Mr. Speaker, the third in a series of excellent articles in the St. Louis Globe-Democrat on the Jefferson National Expansion Memorial, St. Louis Gave Up $8 Million for Riverfront Wasteland, details the contributions which the people of St. Louis have already made in behalf of the long-delayed project.

This article, like the preceding ones in the series, is by Ted Schafers and Ray Noonon, Globe-Democrat staff writers. Marsh Clark, who is on the Globe-Democrat's Washington staff, has also been working on this excellent series of articles, and I know of the extensive research he has been doing on this series.

Under unanimous consent to insert this series of articles in the Appendix of the CONGRESSIONAL RECORD, where I know they will impress the Members of Congress with the need for a $5 million

appropriation to begin work on the great project commemorating the Louisiana Purchase, I include the third article in the series, as follows:

ST. LOUIS GAVE UP $8 MILLION FOR RIVERFRONT WASTELAND

(By Ted Schafers and Ray Noonan)

(Third of a series)

St. Louis has given up more than $8 million in cash, property, and lost taxes because the Federal Government made a promise that was never kept.

More than 20 years ago the Government agreed to develop the Jefferson National Memorial on the downtown riverfront, but hasn't done it.

Besides making its financial contribution to the project St. Louis has been saddled for many years with a barren wasteland on the edge of its downtown district.

Buildings in the 40-block riverfront were razed to make way for a national shrine, to the West, which the city expected would have been completed many years ago.

There is little doubt that this desolate strip—has been a factor in the decay of downtown St. Louis.

St. Louis has thus far lived up to its part of the agreement, and has $5,250,000 of authorized bonds left to match additional Federal funds when they once again are made available.

Release of these bonds would make the total city contribution more than $13 million. Here is what St. Louis has anted, based on figures supplied by City Comptroller Milton Carpenter:

In 1935, St. Louis citizens voted a $7,500,000 bond issue as the city's share of the estimated cost of the $30 million memorial. The Federal Government was supposed to furnish the other $22,500,000. (In other words for every $1 from non-Federal sources the Government was to put up $3.)

An allocation of $6,750,000 of Federal funds was made in December 1935, for acquiring the site. These funds, granted 20 years ago, are the only Federal money made available to date for the memorial.

Out of the $7,500,000 bond issue, the city sold $2,250,000 of bonds for its share of acquiring and clearing the site. Interest on these bonds, the last of which will be retired in a few months, amounted to $871,875.

It is estimated the city has lost about $3 million in taxes on this riverfront property through its removal from the taxrolls. This includes $250,000 of taxes, which were delinquent when the buildings were razed, and the land turned over to the Government.

The value of streets and alleys in the area, which were vacated by the city and given to the Government, are estimated at $1,300,000. In addition, the city deeded to the Government the old courthouse, valued at $1 million, to be part of the memorial.

All added together—bonds spent, interest, taxes lost, and property donated—the city has given an estimated $8,421,875 toward the memorial, which still is only a parking lot.

And still, on tap is the $5,250,000 unspent portion of the original $7,500,000 bond issue.

Citizens of many States, regardless of their party affiliation, have worked hard for the memorial, and have dug into their own pockets to help. For example, in 1935 a public fund of $125,000 was raised to meet the expenses of holding meetings and formulating plans. Again, in 1945 through 1947, the people and business firms in St. Louis and other States raised another $225,000 to hold the nationwide architectural competition, which resulted in the Saarinen design being unanimously accepted.

This is not Federal money, but voluntary contributions from citizens.

During the long wait for the Federal Government to do its part the struggle to keep alive the dream of a magnificent Jefferson memorial has been carried on.

Some of those who have battled the hardest and hoped to see their inspiration come true, have died.

Two St. Louis civic leaders who sparked the project in the early 1930's, Luther Ely Smith and William C. D'arcy, died years later without seeing anything but a parking lot for all their efforts.

Mr. D'Arcy, an advertising executive, died in 1948, and Mr. Smith, an attorney, in 1951.

Elsewhere in the Nation there were enthusiastic supporters who did not live to see their dreams accomplished.

One was William Allen White, famed Emporia, Kans., editor, who died in 1944, and Amon G. Carter, Fort Worth, Tex., publisher, who died last year.

Congressman John B. Sullivan, of St. Louis, who tried to push an appropriation measure through Congress, died in 1951. His widow, Congresswomen LEONOR K. SULLIVAN, now is continuing the battle, supported on a bipartisan basis by other St. Louis area Members of Congress.

Disappointment after disappointment confronted those who sought completion of the memorial.

At a congressional hearing in 1950, supporters, including the late Mayor Joseph M. Darst, spoke hopefully of it being completed by 1953 for the sequicentennial of the Louisiana Purchase. That hope faded and died.

Too many years have passed since the Federal Government promised to build the memorial. Even though new hope has been aroused recently that at long last, the Government may do its part, the project may pass before it is finished.

This is the 200th anniversary of the founding of St. Louis which will come in 1964. This would be nearly 30 years after the memorial was first promised.

Completion before then certainly should not be too much to expect.

Globe-Democrat Reports Affront to City in Failure of Administration to Seek Adequate Funds for Jefferson National Expansion Memorial

EXTENSION OF REMARKS

OF

HON. LEONOR K. SULLIVAN

OF MISSOURI

Thursday, February 9, 1956

Mrs. SULLIVAN. Mr. Speaker, the St. Louis Globe-Democrat's series of articles on the Jefferson National Expansion Memorial has reported the background of this great project for the commemoration of the Louisiana Purchase and the opening of the West, and the work which has gone into the project—including a great deal of effort and expense on the part of St. Louis.

In this, the fourth article in the series, the Globe-Democrat reports the indignation voiced by St. Louis civic leaders over the "affront to our city" represented by the mere $150,000 suggested for the project in a supplemental budget request. We have asked for—and we need $5 million for the Federal share of this project as presently authorized. It is a project in which St. Louis has already invested much more than that.

This article in the series is by Ted Schafers, who collaborated with a fellow Globe-Democrat staff writer, Ray Noonan, in writing the preceding articles in the series. Under unanimous consent to include it in the Appendix of the CONGRESSIONAL RECORD, I submit the fourth article, as follows:

ONE HUNDRED AND FIFTY THOUSAND DOLLARS RIVER FRONT GESTURE CRITICIZED AS AFFRONT TO CITY

(By Ted Schafers)

(Fourth of a series)

The Government's recent $150,000 gesture in contrast to its $5 million promise toward a start on St. Louis' riverfront memorial is "an affront to our city," William R. Crowdus said yesterday.

Crowdus, an attorney, is president of the Jefferson National Expansion Memorial Association, an organization of prominent St. Louisans who have led the fight the past 20 years for this historic national shrine.

His criticism was directed at the action of the National Park Service last week in asking only $150,000 to cover cost of fencing and landscaping of the old courthouse here, which is part of the memorial.

The agency took no action toward getting the $5 million authorized by Congress in 1949. The only restriction Congress put on the $5 million was that no appropriation could be made until the budget was balanced, a condition that has now been met.

Announcing that a meeting of the executive committee of the memorial association will be held tomorrow, Crowdus said:

"St. Louis should no longer be discriminated against. There is no further legal or moral excuse for the Federal Government to delay its obligation to appropriate funds for the St. Louis memorial—at least to the extent of the $5 million authorized by the 83d Congress.

"The time has come for strong united action on the part of all St. Louisans," Crowdus continued. "Many millions have been appropriated by the Federal Government for national memorials elsewhere in our country.

"It is inconceivable that cities like Houston, Dallas, or Los Angeles or many other progressive cities in our country would have been as patient as we have been," he declared.

The fight for the memorial over the years has had the strong support of 5 St. Louis mayors, 2 Republican and 3 Democratic. Two are dead—William Dee Becker and Joseph M. Darst.

Mayor Raymond R. Tucker and former Mayors Aloys P. Kaufmann and Bernard F. Dickmann reiterated yesterday they are continuing the fight until the battle is won. Kaufmann is now president of the St. Louis Chamber of Commerce; Dickmann is Postmaster of St. Louis.

Said Mayor Tucker:

"When I appeared before Congress in 1953 I said then and my feelings have not changed, that I believe there is a strong moral and legal commitment on the part of the Federal Government and the city government to complete this project.

"Actually a contract has been signed, sealed, and delivered, but the work has never been done. The people of our Nation have been assured since 1935 that this memorial will be completed. However, all we have to show for a 20-year-old contract is a vacant lot.

"I will give the memorial my fullest support. Much of the revival of St. Louis is dependent on what is done with our riverfront."

Kaufmann stated, "It is my firm belief that development of the Jefferson National Expansion Memorial will be of incalculable benefit in our efforts to spur the economic and cultural development of Metropolitan St. Louis.

"The Mid-America Jubilee, to be held on the historic riverfront next September, will help tell the story of St. Louis' role in developing the Louisiana Territory and the West. Now is the time to proceed with the

permanent national memorial for which we have so patiently waited."

Dickmann pointed out he has lived with the memorial project since it was first started in 1933.

"I would like to stress that this memorial does not just belong to St. Louis," Dickmann said. "It is a memorial for all America. It deserves the support of all the States of the Louisiana Purchase, which it commemorates."

Morton D. May, president of May Department Stores Co. and Famous-Barr here, has been one of the many prominent St. Louisans who have worked hard for the memorial.

May said yesterday that the Government's failure to complete the project has been in a good measure responsible for the decay of downtown St. Louis and for the falling value of real estate in the downtown area.

"It is vital to the future prosperity of our whole city for the Federal Government to appropriate the necessary funds to get this project underway," he said.

"I believe it will be an inspiring monument, worth more than all the gold in Fort Knox, in uniting the people of this country and directing their thoughts to the ideals of the founders of our Republic. There could be no better site—the St. Louis river front—since here is where the Lewis and Clark Expedition started, and where the Santa Fe, the Oregon, and other famous trails began."

Edwin M. Clark, president of Civic Progress, Inc., disclosed that some months ago this group of civic and business leaders had pledged to strongly support plans to develop the Jefferson National Expansion Memorial area.

"From the St. Louis standpoint, a developed memorial area on the river front would serve as a cultural and recreational center for the entire city. But the memorial is important to a much wider audience. Its major purpose would be to serve as a national shrine."

Charles Nagel, director of the City Art Museum of St. Louis, was a member of the board of nationally prominent judges who unanimously selected the "Saarinen Plan" for development of the memorial.

Said Nagel:

"In 1948 Eero Saarinen emerged the winner in one of the greatest competitions ever organized in the country, thanks to funds contributed by St. Louis businessmen of large vision.

"Saarinen's design at once preserves the monuments of the past; fulfills the present need for parking, provides restaurant facilities, recreational and cultural activities, and provides a compelling and beautiful symbol of St. Louis' historic position as the 'Gateway to the West' and of its promise for the future as well."

Nagel pointed out 1964 will be the 200th anniversary of the founding of St. Louis and added, "We should press now for all appropriations and legislation needed for the completion of this great memorial in time for this important anniversary date."

Federal Aid: Federal Control

EXTENSION OF REMARKS

OF

HON. STUYVESANT WAINWRIGHT

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 5, 1956

Mr. WAINWRIGHT. Mr. Speaker, Long Island is unusually blessed with a number of good weekly newspapers. Their editorial policies accurately reflect the thinking on the major issues of the day. The Suffolk County News touches on one of these important questions: Federal Aid to Education. I am pleased to submit an editorial from the issue of February 3d.

FEDERAL AID: FEDERAL CONTROL

If you favor the Federal-aid-to-education program now before the Congress we suggest you read the arguments on the other side of the fence as submitted by the Empire State Chamber of Commerce, excerpts from which we publish herewith:

Every Federal-aid program involves control, and the Federal Government has the power to enforce control by cutting off payments to the States.

Federal control starts in Washington. It spreads down through the regional and State offices of Federal agencies. It takes innumerable forms—rules and regulations, approvals, disapprovals, audits, inspections, prohibitions, reviews, standards, policies, procedures.

All of it represents still another layer of bureaucratic supervision. Federal control means added overhead and handling charges for sending State and local tax dollars through Washington. Yet control is a necessary part of the Federal-aid system.

How could anyone in the State of New York seriously advocate Federal aid without strings? There is too much at stake in the tax dollars which are sent to Washington—too much risk of turning such assistance into a giveaway program.

Federal aid is supposed to provide a money incentive for the States to take action. How can the Federal Government expect to know whether incentive is supplied unless it lays down the rules? Federal aid is supposed to raise State standards. How can the Federal Government avoid dictating State standards?

New York should have a direct interest that Federal aid dollars are not spent in other States merely to lower somebody else's taxes, to set up artificial lures for New York industry, to fritter away on inferior public services, to spend on vote-catching projects.

A congressional act extending Federal aid may be fairly simple, containing a few basic conditions for observance by the States. But this is just the beginning. Then the Federal official enters the picture. What follows is a stream of directives controlling State and local action, always backed up by Washington, regional offices, and agents in the field.

The Federal law, for example, says that States must have a welfare plan and that State plans must be cleared through Washington. In New York State this innocent-looking requirement turned into something formidable.

The New York State department of social welfare was compelled to submit a plan satisfying Federal requirements which ended in a fat file 2 feet, 4 inches in thickness. According to a 1955 State commission which looked into the matter, the State plan was no mere outline of a program but in fact the totality of all laws, regulations, bulletins, policies, and procedures which, even remotely, are related to public assistance. For good measure the Federal agency itself issued a 600-page manual of requirements and recommendations for administration of State welfare programs.

Recent congressional proposals for Federal aid to school construction carry a provision which goes like this: "Except as specifically provided * * * no department, agency, officer, or employee of the United States shall exercise any direction, supervision, or control over, or prescribe any requirements with respect to, any State agency, school agency, or school to which any funds have been or may be paid."

But elsewhere will be found familiar provisions for Federal control—in this instance covering State plans for school construction, financing, determination of need, State and local contributions, standards for locating, planning, and constructing schools; and numerous other matters.

The United States Commissioner of Education was to be given power of approval over State actions; and if in his judgment he felt a State was not proceeding according to plan, he could withhold the payment of Federal funds. Such provisions would put the Federal Government in the business of school administration. New York State officials will recognize at once what is entailed in a Federal requirement for State plans.

Possibly that is why so little is heard from the State education department about Federal aid for New York.

Tax on Average Taxable Income: Explanation of Proposed Legislation

EXTENSION OF REMARKS

OF

HON. IRWIN D. DAVIDSON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 16, 1956

Mr. DAVIDSON. Mr. Speaker, I introduced today for appropriate reference a bill designed to mitigate the existing harsh and inequitable effects of the impact of high surtax rates on persons with fluctuating incomes. As proposed, the bill is made limited in scope in order to take into account the revenue cost.

Under the present statute, each taxable year is treated as a completely independent tax-producing unit. Accordingly, if an individual earns a greater amount in one year than in the next, he must pay tax in the first year upon the higher bracket rate in effect for such year without opportunity to offset against this amount—or the taxes paid with respect to it—the lower income of the succeeding or preceding years. The necessity to compute taxes on a year-by-year basis, while a necessary administrative expedient, is based upon the concept of a relatively constant income level. This bill seeks to even out the income on an annual basis for a limited number of years, even though it in fact may have been received in irregular amounts for these years.

As applied, the proposed legislation would permit an individual to treat the current year and the first or the first and second year preceding as one economic unit. Such individual would total his taxable income for the 2- or 3-year period involved—whichever produces the lesser averaged amount—and would be liable for tax as if he had received the averaged taxable income for each of the 2 or 3 years in question.

Thus, if an individual has taxable income for 1955 of $10,000, for 1956 of $20,000, and for 1957 of $30,000, the average taxable income for 1955 and 1956 is $15,000. If 1955, 1956, and 1957 are taken into account such average is $20,000. The taxpayer has an opportunity to utilize the first, or the first 2 preceding taxable years, whichever produces the most favorable result. In any event, since the averaging period permitted is

limited to 3 years including the taxable year, no problem of adjustment of returns or of computations made for a period beyond the statute of limitations is presented.

In order to prevent the application of the averaging principle where minor changes in income are present, the bill—subsection (b)—provides that the rule of averaging is not available unless the tax rates without application of the legislation differ by 5 percentage points or more. This would mean that the rate applicable to the income for the taxable year as compared with the first or second preceding taxable year must change brackets by 5 points. For example, an income of $10,000—taxed at 38 percent—would not be available for averaging unless the income in a later or preceding year was taxed at 43 percent—$14,000—rate. Such a rule will limit the revenue cost and confine application to true fluctuating income situations.

In order to prevent doubling up of benefits averaging is not available where the taxpayer switches from a joint return to a separate status or from a separate return to a joint return status during the period covered by the averaging; that is, the taxable year, the first preceding taxable year or the second preceding taxable year. The benefits of averaging are available, however, if the taxpayer's return, whether or not on a separate or joint basis, is consistently filed, either on a joint or separate basis.

The proposed legislation would not operate unless an election in form prescribed by the Secretary was filed. This will permit administrative control over the provision.

In the event that the averaging principle produces a decrease in tax for the taxable year, the taxpayer may apply such decrease against unpaid installments for the taxable year. If, in addition, it appears that a refund is also likely, then at the taxpayers' request the return for the taxable year and the preceding taxable year or years will be examined by the Revenue Service within 90 days from the filing of the return and a refund at the expiration of such period will be automatically granted. This will enable the legislation to provide practical, monetary relief for people whose incomes have dropped sharply. This may be obtained by offset against installment payments due or through actual cash refund.

Behind the Curtain

EXTENSION OF REMARKS
OF
HON. ANTONI N. SADLAK
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 16, 1956

Mr. SADLAK. Mr. Speaker, under leave to extend my remarks, I include and call attention to an editorial in this morning's New York Times entitled "Behind the Curtain." The comments are most timely and appropriate and completely in point with remarks I intend to make on the floor later in the day during the time set aside for commemoration of the 38th anniversary of Lithuania's independence.

The article follows:

BEHIND THE CURTAIN

The Soviet campaign against both meteorological and the "Free Europe" balloons has had the ironic result of calling increased attention to the Iron Curtain and the fate of the subjugated nations behind it. That fate is illustrated in the case of Lithuania, which in bitter silence at home but with appropriate ceremonies among its exiled sons and daughters observes today the 38th anniversary of its independence, still acknowledged by most of the free world.

Together with its Baltic sister states of Latvia and Estonia, Lithuania presents a prime example of Soviet perfidy. Lithuania was among the first nations with which the Soviets concluded a nonaggression pact similar to that now being offered by Premier Bulganin to the United States. But at the first opportunity the Soviets tore up the pact, seized the country and converted it into a colony which they are colonizing with Russian Communists, who often assume the Lithuanian names of the victims they displace. The Lithuanians, however, like other subjugated nations, continue both passive and active resistance and take new hope from the espousal of the cause of freedom by their own exiled leaders organized in the Assembly of Captive Nations and by leading free world statesmen, including President Eisenhower and Prime Minister Eden.

The Soviets have tried to kill off the native surge for freedom by offers of "amnesty" to the "forest brothers" conducting active resistance, and by their "Operation Snow," designed to lure the exiles back into their power. But the cause of freedom has always proved itself to be stronger than slavery, and on the basis of that experience there is reason to hope that the Soviets will not succeed in reversing the course of history.

Highland Park, Mich., Cleanest Town

EXTENSION OF REMARKS
OF
HON. CHARLES C. DIGGS, JR.
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 16, 1956

Mr. DIGGS. Mr. Speaker, permission is requested to place in the RECORD the following article from the February 9, 1956, edition of the Highland Parker, Highland Park, Mich. For the fourth consecutive year, the city of Highland Park has been the winner of a national contest sponsored by the National Clean-Up, Paint-Up, Fix-Up Bureau and designated the cleanest town in the 25,000 to 50,000 population class.

I am proud to pay tribute to the active, cooperative, and progressive community spirit which exists in this city, which is a part of my congressional district, and point it out as a splendid example of what can be done to arouse the citizenry to assume their civic responsibility for building and maintaining better communities. May other localities emulate Highland Park's course.

HIGHLAND PARK WINS CLEAN TOWN AWARD—WINS HONORS FOURTH TIME IN 4 YEARS

For the fourth consecutive year, Highland Park is the winner of the national "Cleanest Town" contest, placing first in its population class.

Joseph F. Battle, president of the National Clean-Up, Paint-Up, Fix-Up Bureau, announced the award yesterday and said an engraved trophy is being forwarded.

Highland Park was the winner for the fourth time in the 25,000 to 50,000 population class, which drew a record number of entries in the national contest.

The award was based on the report of the activities and results of the annual "Glamouree" campaign, which was directed by the Mayor's Civic Improvement Committee (MCIC).

Mrs. Jack Pickering was chairman of the MCIC "Glamouree' subcommittee. Dr. W. Mason Matthews is MCIC chairman.

Highland Park's "Glamouree" activities were a part of the national urban renewal program.

Plans for an area-by-area program for this year are being developed now by Richard B. Fernbach, city planner. The Board of Commerce also is planning a program beginning in April.

Mayor Paul V. Winkler yesterday congratulated all Highland Parkers who took part in the "Glamouree" and urged that increased efforts be made this year to expand the annual campaign.

"Highland Park's fourth consecutive award is a fine tribute and honor for the many persons who have contributed their share to making our city a winner in this national contest," he said.

"This award will serve as further incentive, I am sure, to this year's campaign. I am certain that Highland Parkers again will join wholeheartedly in making the 'Glamouree' a bigger success than ever before.

"Last year's 'Rainbow Alley' was a fine example of the projects we can undertake in our city. I hope that this program can be expanded and others developed so the 'Glamouree' campaign can receive further recognition.

"Every Highland Parker can take pride in the latest award. It is added recognition that Highland Park's community spirit continues from year to year."

Thirty-eighth Anniversary of Lithuanian Independence

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 16, 1956

Mr. BENTLEY. Mr. Speaker, Once again it is my pleasure and honor to call the attention of the House to the fact that today is the 38th anniversary of the independence of Lithuania.

This small Baltic nation only dated its modern independence from February 16, 1918, the date we are commemorating today. But the Lithuania people have a long and glorious history behind them. Their traditions, their culture, their language, their fierce desire for freedom, all are reasons why foreign occupation of their homeland since 1940 has not been able to quench the spirit of independence in their hearts.

During my work with the Select Committee on Communist Aggression of the 83d Congress, I was able to learn much of the details of the Soviet takeover and domination of Lithuania. Based upon

the information we received, it is my conviction that none of the Communist-enslaved peoples desire liberty more, that none of these peoples are prepared to sacrifice more for freedom than are the people of Lithuania.

This Government has never recognized the incorporation of Lithuania into the Soviet Union and, I am confident, has no intention of doing so. I know that all friends of freedom for the captive peoples were greatly encouraged by President Eisenhower's Christmas message in which he stated that the people and the Government hoped and believed in freedom for the enslaved peoples behind the Iron Curtain and intended to work through every peaceful means to bring about this freedom. This is, and will remain, a keynote of American foreign policy.

It is our hope that the recognition of occasions such as this and the sending of our expressions to the people to whom they refer will clearly demonstrate to the entire world that the American Congress and the American people whom we represent here are fully behind the President in his belief and determination. May the day come soon when all peoples who are now enslaved by colonialism, of the Soviet version as well as other kinds, will have the God-given right of self-determination and freedom to choose the political, economic, and social structures under which they wish to live.

Lithuanian Independence Day

EXTENSION OF REMARKS
OF

HON. PETER W. RODINO, JR.

OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 16, 1956

Mr. RODINO. Mr. Speaker, the Lithuanian people are justly proud of their long and glorious history. For centuries the Lithuanian Kingdom was a powerful force in the whole of eastern Europe. The Lithuanians not only succeeded in repelling at least some of the incursions of barbarian invaders coming from the East into northeastern Europe, but they also were champions and an advance guard of Christianity in that part of Europe. Late in the 16th century the Lithuanians united with the Poles, and formed a dual monarchy. However, a great deal of independence was retained by both countries. The union lasted for 200 years. During that time the destiny of Lithuania was wedded to that of Poland, and in the late 18th century when Poland was partitioned, a part of Poland and all of Lithuania were incorporated into the Russian Empire.

The loss of national independence by Lithuania did not mean the loss of the Lithuanian spirit of independence. Throughout their trying years under tsarist domination the Lithuanians learned that individual or group well-being could not be fully achieved or enjoyed without national political independence. They learned that in order to enjoy the benefits of their labor, they should have complete freedom in their homeland. Consequently, for more than 100 years, until the day whose 37th anniversary we are now celebrating, they worked ceaselessly for the realization of their most cherished ideal, for the independence of Lithuania. None of the restrictive and repressive measures of the Russian regime, none of its harshness, nor its proscription of the Lithuanian language and culture, none of these could prevent the patriotic and freedom-loving Lithuanians from striving for the realization of their national dream. They fought for it openly as well as clandestinely. They staged open rebellion against their oppressors more than once, but they had to wait until World War I for the actual achievement of their national independence.

When Lithuania became a democratic republic, the war was still raging, and most of Lithuania was still under enemy occupation. Soon, however, the war ended and all Lithuanians joined hands, not only in the fullness of joy to celebrate their victory, but also for the rebuilding of their now liberated country. In this task they were remarkably successful. In a few years normalcy was restored, and Lithuania was blessed with prosperity and progress and peace.

For more than two decades the Lithuanians lived in the happiness of freedom. But then came rude shocks from the sudden unleashing of evil international forces. Hemmed in between the vast military machines of Nazi Germany and Communist Russia, little Lithuania could not hope to cope with either. When World War II came, its independence was lost as the Russian Communists took over the country in 1940. During the course of the war the Lithuanians had to exchange one oppressive alien regime for another; they experienced the horrors of both communism and nazism. In the end it was the Red Army which held the country in its iron grip.

For more than 10 years now the Red regime has been there with its commissars and spy rings, with its informers and executioners, and it has literally changed the life of Lithuania to one of regimented horror. Of course, no Lithuanian under the Red Government is allowed to celebrate his national independence day. We of the free world, fortunately, do not share his lot. We do share, however, his feelings and his hopes. And on his behalf we solemnly celebrate this independence day. We ardently hope that soon he will be free to celebrate that day as we do it here.

Lithuanian Independence

EXTENSION OF REMARKS
OF

HON. AIME J. FORAND

OF RHODE ISLAND
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 16, 1956

Mr. FORAND. Mr. Speaker, mindful of the turbulent conditions of world affairs today, we join our prayers with those of the patient, brave, and persevering Lithuanian people in commemorating the 37th anniversay of their independence, an independence that was short lived and wrested from them by cruel tyrants.

Like all subjugated peoples, the Lithuanians, and their leaders in exile, realize that liberation will not come overnight, and that until it does come resistance will exact a terrible price in death and mass deportations.

They also realize that the time for small nations as self-contained entities is over and that they must seek salvation in a wider all-European organization. But for the present the fight for liberation must invoke all the values that go with the building of a nation, and independence.

In her never-ending valiant effort to gain this independence, Lithuania, like the other eastern European nations, led a precarious political life between the two powerful police states of Soviet Russia to the east and Nazi Germany to the west.

The infamous pact between Hitler and Stalin in 1939 brought about her conquest. In 1940 Russia moved in, while the Nazis in 1941 and 1942 took over the country. Terror was practiced by both regimes. Toward the end of the war the Russian armies again occupied Lithuania and once again initiated a reign of terror. Thousands of Lithuanians were executed and hundreds of thousands were deported to Siberia. At the same time an equal number of Russians were settled inside Lithuania and the attempt was made to obliterate the national sentiment and free spirit of the people.

Things have not changed in the past few years, all the terrible methods of the modern police state are still being practiced by the Russians.

Because of this domination over body and soul, there are no public demonstrations in that unfortunate country on what would otherwise be a joyous national holiday. Any such display or attempted demonstrations would be immediately halted with force and violence resulting in additional harsh punitive measures on the suffering populace by the Red tyrants. No matter how gallant the spirit of a people may be, it would be suicidal today to take isue with firing squads. In their stead we, here in the United States House of Representatives, will carry their feelings to all by raising our voices in their behalf.

We in America, and I am sure all other freedom-loving people, have not forgotten the unfortunate plight of the Lithuanian people.

We want them to know that we support them in their fight for freedom. We are not unmindful of the fact that under present circumstances they can do little for themselves; that the present government of their country is not one of the will of the people but rather one that has been imposed upon them by force.

We have not forgotten their valiant fights of the past against tyranny and dictatorship and we entertain a fervent hope that the day will soon come, as it did in 1918, when the great people of Lithuania will rise in their wrath and again break the Soviet yoke that they have carried around their necks, but not in their hearts.

The International Labor Organization

EXTENSION OF REMARKS
OF
HON. RALPH W. GWINN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, February 6, 1956

Mr. GWINN. Mr. Speaker, the United States Government has been a member of the ILO, the International Labor Organization, ever since its formation. This organization had a unique conception and is composed of representatives from industry, labor, and Government. The United States delegation, for example, consists of a labor representative selected by the AFL-CIO, an industry representative nominated by industrial groups including the United States Chamber of Commerce and the National Association of Manufacturers, and two representatives from the Government itself.

For many years the Russians did not participate in the work of the ILO. The Russians and other satellites decided to join this organization in 1954. Participation by Communist countries presents a serious problem inasmuch as there is no way for these delegations to include representatives either from free labor unions or from private employer groups. Marxism has no place for either free labor or free enterprise capital. The inclusion of Soviet countries in the ILO will completely destroy the tripartite character of the organization.

Congress is presently considering raising the ceiling on the United States contribution to the ILO from $1,750,000 to $3 million annually. The board of directors of the United States Chamber of Commerce at their meeting on January 27 adopted a resolution condemning Russian participation in the ILO and proposing a congressional investigation of the activities and structure of the International Labor Organization to determine whether the United States should continue its support of and membership in this organization. I believe this resolution by the United States Chamber is of great importance.

Mr. Speaker, I ask unanimous consent that it be included in my remarks for the benefit of my colleagues:

RESOLUTION ON THE INTERNATIONAL LABOR ORGANIZATION ADOPTED BY THE BOARD OF DIRECTORS OF THE CHAMBER OF COMMERCE OF THE UNITED STATES, JANUARY 27, 1956

Whereas the Chamber of Commerce of the United States reaffirms its belief in the fundamental objectives of the original constitution of the International Labor Organization which were:

"Universal and lasting peace can be established only if it is based upon social justice.

"Conditions of labor exist involving such injustice, hardship, and privation to large numbers of people as to produce unrest so great that the peace and harmony of the world are imperiled."

Whereas since 1934 we have cooperated and participated in the efforts of the International Labor Organization to effectuate these principles;

Whereas our participation has convinced us that the Internatinal Labor Organization is not accomplishing these objectives, but instead has shown that:

1. The activities of the International Labor Organization have gone far afield from the original concept of the achievement of social justice within the field of labor-management relations;

2. There has been undue interference with the internal affairs of nations, beyond the proper scope of international agreement;

3. The International Labor Organization is being used as a propaganda forum for statism and socialism;

4. The technical-assistance program has been subverted to the distribution of statist and Socialist ideologies and propaganda;

5. The tripartite system of representation by Government, employer, and worker delegates is a failure;

6. The entry of the Soviet Union and its satellites into the International Labor Organization has made a mockery of free and independent employer and worker representation;

7. By and large the staff of the International Labor Organization is nonobjective and dangerously devoted to the accomplishment of statist and Socialist ideologies;

8. The proper functions of the International Labor Organization are now being or could be performed by various other agencies now in existence;

Therefore the Chamber of Commerce of the United States is convinced that continued support of the International Labor Organization by the taxpayers and by the Government of the United States should be questioned seriously at this time, and recommends:

1. That the executive department should reexamine the activities of the International Labor Organization;

2. That there should be an immediate and thorough congressional investigation of the activities and structure of the International Labor Organization, to determine whether the United States should continue its support of and participation in this organization;

3. That, pending such investigation and subsequent decision, the United States should not increase its financial support or participation; and

4. Pending this investigation and decision, at the request of representatives of the United States Government, the Chamber of Commerce of the United States will again participate in the nomination of employer delegations to the International Labor Organization for the year 1956.

Thirty-eighth Anniversary of Lithuanian Independence

EXTENSION OF REMARKS
OF
HON. GEORGE H. FALLON
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 16, 1956

Mr. FALLON. Mr. Speaker, in these days when our hearts and minds are attuned to the unceasing entreaties for help and understanding for the oppressed over the world, no plea to our conscience and for our sympathy is more appealing than that of the people of Lithuania for national liberation. Although a tiny nation geographically and subjected to repeated foreign incursions and influence historically, Lithuania has never surrendered her ideals or permitted her longings for ultimate political independence to be crushed.

Over six centuries ago the principalities, which were to be the nucleus of present-day Lithuania, were united for the first time, and in the succeeding years the Lithuanians strived for political unity and the assertion of their own desires in the formation of a national state. Even with the steadily growing pressures of neighboring powers to force her to deviate from the course she had set for herself, she fought to preserve her national traditions and aspirations. Her efforts to destroy the bonds imposed by outsiders and to remain true to the principles of democracy, demonstrated the survival strength of her consciousness as a nation. Today we see that she has remained faithful to the memories of her glorious historical past and that she has never allowed the terrible wrongs she has suffered at the hands of invaders to stifle her undying passion for freedom and independence.

With humility and compassion we, the people of the United States, applaud this courageous Nation of Lithuania for her unending attempts to free herself from the Soviet yoke of avarice and oppression and reassure her again that the United States stands firm in her policy of self-determination for all the Baltic States. Following the First World War the Americans of Lithuanian descent handed a declaration to the President of the United States whose resounding words are still as true and meaningful today as they were then. In part this declaration read:

At this critical moment, when the world is called upon to solve a very important problem, namely, that of establishing a humane and assuring a lasting peace, we, the empowered representatives of the Lithuanian Nation, assume the privilege and duty of declaring that it is our sincere belief that lasting peace can be established only if every living nation be given the right to determine her own destiny.

It seems especially fitting, therefore, that we Americans, fellow sympathizers of the Lithuanian people in their fight for the cause of democracy and of freedom, should give our tenderest and strongest support to Lithuania on the 38th anniversary of her independence.

Safeguarding Free Enterprise

EXTENSION OF REMARKS
OF
HON. WILLIAM H. AVERY
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 16, 1956

Mr. AVERY. Mr. Speaker, under leave to extend my remarks, I wish to call attention of the Congress to legislation pending before the Committees on Interstate and Foreign Commerce and Ways and Means which I consider vital to the future welfare of the automobile dealers of America and to the Nation in general.

On February 14 I introduced H. R. 9251, H. R. 9247, H. R. 9248, and H. R. 9249, bills which strike directly at the heart of the problems with which the automobile dealers of this Nation are faced. They are designed specifically to safeguard legitimate and reputable dealers from the unethical practices of so-called fly-by-night operators in the trade. In general, they are similar to bills introduced previously for this group of businessmen.

I am convinced the problems which face the automobile dealers today are a menace to the economy of the entire Nation. I have introduced the aforementioned bills to emphasize the seriousness of the situation and as a means of stating my firm support of corrective legislation.

I have long held the belief that the preservation of this great Nation is coupled directly to economic considerations which have always been a traditional part of our culture and customs. Foremost among these considerations is the spirit of free enterprise, the right of an individual to progress independently through competitive endeavor. Our standard of living, the highest in the world, is testimonial to the virtues of this form of economic policy.

However, during the course of growth under the free enterprise system, there crop up periodically a parasitical group of irresponsible firms which threaten the livelihood of the entire trade. Such is the case now in the automobile sales industry. Unethical firms are operating on a shoestring, so to speak, with low sales prices resulting from the fact they offer no service on merchandise sold, little or no warranty of merchandise performance, and no intention to maintain business operations permanently in the same locality. These irresponsible operators are bilking the public of tremendous sums of money each year at the direct expense of reputable and legitimate automobile dealers, whose sales, warranties, and service result in an overhead too high to allow them to compete on the open market with the fly-by-night operators.

I am particularly troubled by any threats to small-business operations in this Nation. I consider small business, both in industry and agriculture, as the economic foundation not only of this country but of the world. And I also consider the thousands of American automobile dealers an integral part of this firm economic base upon which our Nation was founded and has prospered to the point of world leadership.

I have made specific reference to the automobile dealers of America, but my views also can and should be applied to include small-business operations of all types and forms. Proprietors of these business concerns are the backbone of community life in this country. They have spent much time and effort in establishing reputable firms which conscientiously serve the best interests of the community. These men and women are civic leaders as well as business leaders and their lives have been devoted to this dual role.

However, the service they offer to the community is costly to maintain and many are faced with the prospect of financial failure unless something positive is done to safeguard their economic lives from unscrupulous competition. Their loss would be an immeasurable blow to the economic and social welfare of this country. All they ask is the right to serve the Nation in a spirit of free enterprise, unhampered by unfair trade practices.

The Congress should not sanction any legislative devices which will tend to stifle free enterprise. Nor should it hesitate in removing parasitical growths which stand in the path of healthy economic growth. It must safeguard free enterprise. The bills which I have introduced serve that objective.

Lithuania: A Tribute on the 38th Anniversary of Her Independence

EXTENSION OF REMARKS
OF
HON. JAMES T. PATTERSON
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 16, 1956

Mr. PATTERSON. Mr. Speaker, nothing warms the heart of an American more than to witness the triumph of freedom over slavery and tyranny. For many years we Americans have been warmly sympathizing with the tragic plight of the peoples of Lithuania and feeling a rising surge of resentment against the appalling events of suppression and brutality to which the Soviet Union has persisted in subjecting them. Today, on the 38th anniversary of the declaration of independence of Lithuania, we pause, therefore, to give a resounding salute to the heroic Lithuanians who continue to fight to free themselves from Russian domination.

Over six centuries ago the ethnic groups that were to form the future state of Lithuania began the struggle for unification and sovereignty. During those same centuries the Lithuanians suffered repeated defeats and mistreatment by foreign armies. With her more powerful neighbors constantly pressing in on her and eventually partitioning or absorbing her, one might think her will to survive would have been crushed or her aspirations for national liberation diverted. But such was not the case with Lithuania, because underneath her factual incorporation into the political jurisdiction of other powers there remained the undying devotion to her ideals of national self-determination and a belief in the dignity of man and the right to determine her own political destinies.

Lithuania was one of the first of the victims of Soviet expansion to the west. Using the innocent-sounding phrase "peaceful coexistence" to blanket her real intentions in regard to Lithuania and the other Baltic nations, Soviet Russia progressively and systematically blotted out the slightest semblance to liberty and justice and by devious processes annihilated the political independence of the Baltic States. Lithuanians, however, deeply believe in the rule of reason, of justice, and of law and have never let their spirit be conquered. Recently the Moscow regime admitted its dissatisfaction with the economic and political situation within Lithuania and openly berated the Lithuanians for their "bourgeois nationalism." This term, it must be explained, means the natural Lithuanian aspiration for independence and opposition to Soviet rule. What an inspiration to the free world is this spectacle of indomitable national pride and of courage in the face of the most oppressive dictatorship of modern times.

We Americans cannot afford the luxury of complacency or escape our responsibilities to the peoples of Lithuania. The very existence of the Soviet tyranny is a threat to all democratic people in the world. May we take a page from the heroic history of Lithuania and proclaim today, as we have in the past, that we stand at the side of the true representatives of Lithuania and will always recognize the diplomatic and consular representatives of free Lithuania, giving unceasing support to her cause. Several years before she declared her independence, a small group of her delegates accredited to an international conference enunciated her desires for national independence. One section of that proclamation read:

> The Lithuanian nation with its own traditions, culture, national ideals, and its individuality, believes that the only way a nation can survive is to acquire its own rights in all domains of life, and that the nation should direct its own destiny.

No more sincere declaration of intent to be free can be found than this one, and it will act as a guide to us in our struggles against the forces of evil and tyranny.

Our Mental Health Problem—Mental Illness Can Be Cured

EXTENSION OF REMARKS
OF
HON. WALTER ROGERS
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 16, 1956

Mr. ROGERS of Texas. Mr. Speaker, under leave to extend my remarks, I include the seventh in a fine series of articles on mental illness prepared by Miss Louise Evans and Miss Mary Tom Rasco, reporters for the Amarillo Globe-Times in my district:

THE MENTALLY ILL CAN BE CURED
(By Louise Evans and Mary Tom Rasco)
THE MENNINGERS: APOSTLES OF MODERN PSYCHIATRY

When Kansas citizens decided to move their State hospital out of the Middle Ages into modern times, they found they had one unique asset—Topeka.

Here in one small city of less than 100,000 was concentrated 1 of the finest training programs in the Nation for workers in mental health. Concentrated here, too, was the material to work with—the 1,800 patients in the Topeka State hospital and the approximate 1,250 patients in the psychiatric and neuro-

logical wards of the VA Winter Hospital, and other hundreds in several other public and private clinics and training centers.

And, of course, in Topeka were the Menningers.

There are many other psychiatric clinics in the United States, and there are some schools of psychiatric thought at odds with the Menninger theories. But no one denies that the Menningers, by book, lecture, training of young psychiatrists, and sheer physical energy, as well as undeniable talent, have influenced the entire picture of American psychiatry.

THE DOCTOR HAD A THEORY

The first of the Menningers (the "g" is almost silent, but somewhat pronounced as in "singer") was Dr. C. F., who died in 1953 after 92 years of enthusiastic living. Dr. C. F. was an Indianan who started a practice of general medicine in Topeka in 1889. He had arrived in Kansas in the eighties to teach natural sciences, botany and biology. (Topeka, especially the grounds of the Menninger Foundation and the various Menninger homes within the city, reflects in landscapes of rare trees and shrubs, the old doctor's undying love for growing things.)

Dr. C. F. had a theory: He believed that the wide scope of human illnesses demanded that a group of doctors, preferably each with a specialty, should practice together. After a visit in 1908 to the Rochester, Minn., clinic of the Mayos, he announced to his sons, Dr. Karl and Dr. William, and a third, Edwin, that they were to grow up quickly, study medicine and form the Menninger Clinic.

At medical school, both Karl and William chose psychiatry, then a new specialized branch of medicine. In 1919, when Karl graduated from Harvard Medical School, he joined his father in Topeka, and Bill followed in 1925 with an M. D. from Cornell University Medical School. Edwin, because of an accident in which he lost an eye and an arm, did not study medicine. He is publisher of the Stuarat, Fla., newspaper.

MODIFIED FREUD TECHNIQUE

Town ordinance prohibited a mental institution within the city limits of Topeka, so the Menningers bought an old yellow frame farmhouse a short distance from the city. Now it is 3718 West Sixth on one of the most heavily trafficked streets in Topeka.

The farmhouse was remodeled into a 13-bed psychiatric hospital—the first in America to use Freudian psychoanalytic principles for treating hospitalized mental patients. But even Sigmund Freud, the Viennese who discovered the "unconscious" and who first opined that psychoanalysis could be used as a treatment method in hospitals, believed that the technique would have to be modified. The Menningers are the men who modified it through the experience gained from work with thousands of mentally ill adults and children.

The Menningers have been the apostles of modern psychiatry. Karl is the author of three books—"The Human Mind," "Man Against Himself," "Love Against Hate"—that are written in language any layman can understand. Bill is the preacher—if Ohio wants a multi-million-dollar program to renovate its mental health program, Dr. Bill can be relied upon to carry the word to the organizations in Ohio that can establish the program, be they medical societies or State legislatures. He talks the language of both. He has written "Psychialtry for a Troubled World," which grew out of his war experiences.

MODERN BUILDING CAME LATER

The Menningers believe State hospital systems should spend their money for skilled men to treat the mentally ill, not for fancy buildings that become virtual prisons. They have lived by that principle. The office building, across Sixth Street, was once a barn, a hamburger stand, and a gas station. A two-car garage grew into a headquarters for the nursing staff. Recently, however, they added to the hospital unit a modern stone building, the entire unit named the C. F. Menninger Hospital to memorialize the patriarch of the clan. But the famed Southard School for Children still is contained in two one-time houses.

The Southard School was named in the honor of Dr. Ernest Southard, one of the first great leaders in American psychiatry and Dr. Karl's mentor at Harvard. The Southard School and the children's unit at Topeka State Hospital, as well as the thousands of children's guidance centers that dot the American landscape, may all be traced back to the advice Southard gave his students. In fact, his final instruction to Dr. Karl was: "Go back to Kansas and establish a psychiatric clinic but don't forget the children. It is from them that we are going to learn most about the human mind and, therefore, about mental health."

For many years Arthur G. Hopkins, of Sherman, Tex., served as a trustee and vice president of the foundation. Hopkins, chairman of the board of directors for the Ma Tucker Enterprises in Sherman, died in 1952. A new building which houses recreational facilities on the Meninger Foundation land is a memorial to him, but until that time recreational facilities were housed in an old stable.

OUTPATIENT SERVICE

Included on the foundation grounds are two psychiatric centers offering at economical cost, treatment that can head off the complete mental breakdown with its subsequent costly hospital care.

One is the outpatient clinic, which, like the outpatient clinic of a general hospital for physical illnesses, offers diagnosis and treatment for those who can remain in their homes. The other is a day hospital, which is for the man who needs more care and attention than the outpatient clinic can furnish but who does not need hospitalization care at night. These patients stay in town, perhaps at boarding houses, and enter into the activity of the hospital routine during the day.

Sometimes the day hospital is used to furnish the gradual return into community life that a hospitalized patient may need.

The step from full hospitalization to outpatient status may be a hard one for a man to make. He often can resume his responsibilities and take part in community living only gradually. The day hospital helps him make this transition with the minimum of anxiety.

TEXANS ON BOARD

In 1941 the Menningers decided to broaden the base of their activities. They formed the Menninger Foundation and transferred to it all of their properties. The foundation has a board of trustees and governors consisting of more than 80 outstanding American citizens. Dr. Bill serves as general secretary, and Dr. Karl is the foundation's chief of staff and director of professional education. The foundation has approximately $400,000 each year in contributions to support its programs of research training and prevention of mental illness, but its annual budget for treatment and training is $2,500,000.

Four Texans are on the Board of Governors for the Menninger Foundation: Jerome K. Crossman, J. Rutledge Hill (first chairman of the Board of Texas State Hospitals and Special Schools) and John Rauscher of Dallas and Mrs. Arthur G. Hopkins, Sr., of Sherman, Richard W. Robbins of Guymon, Okla., is also a trustee. The governors represent varied fields of interest. They include Jane Froman, radio and screen star; Marshall Field III, philanthropist; Alf M. Landon, one-time Republican presidential nominee; Dr. Lillian Gilbreth, scientist and mother of the family about whom "Cheaper by the Dozen," was written; Floyd Odlum, financier and husband of the famed aviatrix, Jacqueline Cochran.

TRAINING PUSHED

The Menningers had trained a score or more psychiatrists in earlier years, but in 1946 they determined to found a school of psychiatry. In that year in all of the medical schools of this country, there were places for only 92 physicians to be trained in psychiatry.

Perhaps the Menningers were always teachers. They instituted a formal course in psychiatric nursing in 1931 and by 1933 were approved by the American Medical Association for a program in training resident physicians seeking to specialize in psychiatry. Also in 1933 occupational therapy field work at the clinic was approved. Postgraduate work in psychiatry and neurology were offered to physicians from 1935 to 1939. A psychology division was established in 1937 to provide internship for university graduates seeking field training. A like program was started for social-work students in 1938.

Therefore, they had a fine basis on which to start a school of psychiatry. They hoped to be able to train possibly as many as 25 psychiatrists at a time in the foundation's school.

But within a year they were to be handed what they considered an impossible assignment—although somehow they have managed to almost meet the goal.

DRAFTED BY ARMY

Dr. Bill had been Brig. Gen. William C. Menninger, M. D., throughout the war years. As chief consultant in neuropsychiatry to the Army Surgeon General from 1943 to 1946, he had been in charge of the mental health programs for some 10 million Americans in the armed services.

The Army had good reason to attempt a program of mental health among its inductees in World War II. Almost one-fourth of all rejections at induction carried the NP label.

Between World War I and World War II, the Veterans' Administration had spent well over a billion dollars in care of the "shell-shocked" soldiers left over from World War I and for those who broke down in civilian life afterward.

In April 1945, there were almost 50,000 neuropsychiatric patients in Army hospitals. Therefore, the armed services and the Veterans' Administration knew exactly what they faced in the toll of sick minds. The VA also knew that it would cost from $50,000 to $150,000 to care for each of these men, depending upon the type of custodial care given him if he developed a chronic illness.

Gen. Omar Bradley, head of the Veterans' Administration, took a long look at the 500 patients to be admitted to one VA hospital alone. Maybe 100 would be able to get along some way without treatment and another 100 would become chronic custodial cases regardless of effort. But the other 300 offered the general a choice: treated and restored by good psychiatric care, the cost might be $3,000 each—that is, about a million dollars; untreated, or unsuccessfully treated, they would become permanently disabled custodial cases, costing the Government $25 million, based on an average life span of 70 years.

The general made his choice. He flew to Topeka and asked the Menningers to start a training program that would help produce the estimated 2,000 psychiatrists needed for VA staff positions.

The Veterans' Administration took over Winter General Hospital on the outskirts of Topeka which was soon to be vacated by the Army, and turned it into a training hospital. Today Winter has 900 psychiatric beds plus 100 neurological beds. (Neurology is the medical science of disease of the nervous system. In neurological cases of irreparable

physical damage, psychiatric guidance helps the patient to live with a physical handicap.)

From January 1946, when the first veteran entered Winter Hospital, 13,500 patients have been treated and discharged from the psychiatric service alone. With the help of the Menninger Foundation and the medical school faculty of Kansas University, the hospital is outstanding in medical research, education, and treatment.

The general had asked the Menningers to train 100 psychiatrists a year, as well as many of the other psychiatric workers that would be needed at Winter. They have almost managed. The 500th fellow was named not quite 10 years after the first class of 27 physicians were enrolled. The annual rate has reached 100.

Among the current enrollees are 3 Texans, as well as men from 27 other States and 8 foreign countries. The alumni list of the Menninger School of Psychiatry shows 11 residing in Texas.

Winter, Menninger, and Topeka State Hospitals feel that any addition they make to the pool of skilled workers in the case of mentally ill will somehow reflect back in lessened work for their own institutions. They are willing to add to the national pool as they train sufficient numbers for their own busy wards.

Gabriel G. Kajeckas

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 16, 1956

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter, winning essay, and an article from the Washington Daily News regarding 1 of the 4 national winners of the Voice of Democracy Contest:

I was 1 of 4 equal national winners in the ninth annual I Speak for Democracy contest, sponsored by the United States Junior Chamber of Commerce, Radio-Electronics-Television Manufacturers Association, and the National Association of Radio and Television Broadcasters.

During the 9 years of the contest, over 9 million students have spoken in it. This year, about 1.5 million students participated.

I am a senior at Gonzaga High School in Washington, D. C., where I am an honor student and active in debating, dramatics, elocution work, the Sodality, cheerleading, am on the school paper's staff, and am treasurer of the Student Council.

I feel that it is a wonderful thing that the adult generation, through opportunities such as contests of this type, is providing American youth—the citizens of tomorrow—with an excellent background knowledge of the American heritage that we all prize so dearly.

I intend to go on to college next September, and after graduation from college, into some field of journalism, radio-TV, or public relations.

(My father is the counselor of the Free Lithuanian Legation in Washington.)

GABRIEL G. KAJECKAS.

N. B.—I was coached for the contest by Mr. Ronald Redmond, S. J., and Mr. Francis McDermott, both instructors at Gonzaga High.

THE ETERNAL ENGRAVING

(Winning Voice of Democracy contest script by Gabriel G. Kajeckas, Gonzaga High School, Washington, D. C.)

"Democracy cannot be defined." How many times have we heard this statement, and how many times have we agreed? Yet, we find that such is not the case, for democracy can be defined—here in my hand I hold its definition. It is small and insignificant, and yet it represents America, it symbolizes our way of life, it speaks for democracy.

What is it, you ask, that can be held in my hand, and yet represent the unlimitedness of America? The answer is simple, but so often overlooked. The answer is—a mere coin, a penny.

But how can a penny define democracy? How can something we take so much for granted, how can it speak for democracy? Because engraved on this little copper coin is the definition of democracy. Look at it, and you will understand.

On it, the first thing we see is the strong, determined profile of a great man, the man who made all men in this country free and equal, and without whom we would never have been one and indivisible—Abraham Lincoln.

Then we see the word "Liberty" engraved on the metallic surface. Liberty that gives my father the right to operate a restaurant if he so chooses; that gives your brother the right to be a printer; that gives each and every one of us the right to worship as we please, vote as we choose, and live as we wish. Indeed, this is more than just the word "Liberty" engraved on a small coin—this is a way of life for the American people.

Next, we turn our gaze to the words "E Pluribus Unum"—an ancient phrase, brought to life in our lives, meaning "one from many"—existing as a country of diverse interests, and yet a country of one in unity. But how can a country be unified in which there is a fruit stand next to a jewelry store, where a 160 million people of different nationalities, races, and creeds are intermingled—where 9 million of these people can exist in a concrete maze of tall buildings and winding streets—where a general and a rail-splitter can become President—where a youth can address an adult audience with his own thoughts and can be heard with attention?—This is a gigantic dream come true, a living miracle. And this, my friends, is the miracle of America. And the reason for this miracle—why we are the United States—is also stamped on this small copper coin. The reason for this miracle is—God. Therefore, "In God We Trust"—and it is in this trust that we are one, that we are free, that we have life, that we have the miracle that is America. These are the ideas generated by a small coin—a coin that we pass through our hands daily.—These are the ideas that add up to our definition of democracy—our democracy of freedom, equality, unity, and trust in God.

Democracy, my friends, is an old idea. But having been betrayed by so many ancient lands, it was brought to a new land—a land of red men and virgin forests, a land of peaceful rivers and fruitful plains inhabited only by the buffalo. And in this land, through the tearful sufferings of Valley Forge and the sweat and blood of Bunker Hill, this spirit was fanned into a roaring fire of freedom which became our democracy.

This spirit that has made our country the greatest Nation on earth is as old as the human race. But the forces of hate, lust, and greed are also as old as the human race, and from time immemorial have opposed all justice, honor, and law in the world.

And so, my friends, these representations of justice, honor, and law on this small coin are not enough to preserve our way of life—we, as the inheritors of this coin and its defined freedom—we must take these words from the coin and inscribe them on our hearts, and in our spirit—and then, through the common usage of a small coin, realizing its value as representative of our way of life—we can continue this flaming spirit of democracy.

And then, this little coin alone won't speak for democracy—then, we will speak for democracy, and if we speak for democracy, then the eternal engraving of the American people will read: "There will always be a democracy—and there will always be an America."

[From the Washington Daily News of January 6, 1956]

THE SON OF AN EXILE IS ONE OF THE VOICES OF DEMOCRACY

Gabriel Kajeckas is a tall, slim, mild-mannered high-school senior with a voice that can rage like thunder or whisper like a cat's footsteps.

His resonant voice and a subject he used it on won him first place in the Washington branch of the National Voice of Democracy contest.

ONE OF TWELVE

And yesterday at a junior chamber of commerce meeting it was disclosed that he has placed among 12 semifinalists in the contest, which originally involved more than 1 million high-school contestants.

Gabriel, 16, is the son of Mr. and Mrs. Joseph Kajeckas, of 1756 Euclid Street NW. His father is counselor at the Lithuanian Embassy—an embassy of exiles since the Russians overran Lithuania.

He repeated his contest speech at yesterday's luncheon.

SYMBOL

Using the penny as a symbol of democracy, Gabriel suggested Americans "inscribe the spirit of the penny on our hearts."

He said he "chose the penny because it is a tangible symbol of freedom which everyone is familiar with and because it and the phrase 'In God we trust' are always taken for granted."

Gabriel is a member of the debating team and dramatic society at Gonzaga High School. He has ambitions in journalism, and this year is editor of publications for the City Catholic Student Mission Crusade.

FOUR FINALISTS

Four finalists in the Voice of Democracy contest will be picked by 12 judges, including television's Dave Garroway, who listen to tape recordings of the speeches. The finalists will be announced late this month.

The contest is sponsored jointly by junior chambers of commerce, the National Association of Radio and Television Broadcasters, and the Radio-Electronics-Television Manufacturers' Association.

If Gabriel is one of the four winners, he won't have far to go to collect his prizes, including a $500 scholarship check. They'll be presented February 22 at the Shoreham.

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at $1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

Appendix

Proposed Lowering of Women's Eligibility Age for Pensions, Etc.

EXTENSION OF REMARKS
OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Friday, February 17, 1956

Mr. WILEY. Mr. President, on February 12, 1956, it was my privilege to deliver an address over Radio Station WGN, in Chicago, Ill., relating to the proposed lowering of women's eligibility age for pensions, and other steps to liberalize the social-security system. This address is in the form of questions and answers. I ask unanimous consent that the address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

SENATOR WILEY URGES LOWERING WOMEN'S ELIGIBILITY AGE FOR PENSIONS AND OTHER STEPS TO LIBERALIZE SOCIAL SECURITY SYSTEM

I would like to report to you tonight on a subject which is of concern to every single American.

Yes, through the courtesy of WGN I should like to report in some detail on a subject on which perhaps more of my Wisconsin constituents write to me than any other single subject.

That subject is social security.

During the coming weeks, all of us are going to hear a lot more about H. R. 7225. This is a bill which was passed by the House of Representatives last July. This legislation would amend the Social Security Act in a number of important ways. As the Senate Finance Committee and the Senate consider this legislation, we are all going to hear a lot more about extended coverage; about waiting periods, and about disability freeze. It is a subject on which all of us should be informed. I am now going to answer some of the basic questions on this problem.

PRESENT COVERAGE

Question. First off, Senator WILEY, just how many people are now reached by social security in the United States, and how much money do they receive in benefits?

Answer. Eight million out of our 165 million people now draw social security benefits. These 8 million receive about $5 billion a year. That adds up, of course, to an important contribution to the overall stability of our economy.

PROPOSED COVERAGE

Question. If the social security legislation now pending before the Senate Finance Committee is reported out and passed, Senator WILEY, how many more Americans would be added to the 8 million now receiving Government pension checks, and how much more would they draw from the pension fund?

Answer. Over 1 million more Americans would be eligible for social-security benefits. They would receive another $600 million in benefits immediately. Within a few years, the increased benefits would total more than $2 billion.

PROTECTION AGAINST SLUMP

Question. Senator, before you tell us some more about the exact coverage that this bill proposes, I wonder if you would share your own views on the extension of social security to so many Americans over the past 20 years?

Answer. I have always felt that the development of social security has been one of the most important reasons why our economy is protected against a serious slump.

Back in depression days—and I have gone through several of them—our penniless old folks went hungry. But today, for example, through social security we have developed economic insurance for the 14 million Americans who are now over the age of 65.

Question. What has private industry done along this line?

Answer. A great deal fortunately. I have been very favorably impressed with the development of private industry pension plans. They now cover more than 12 million citizens. Social security itself, covers nearly all these 12 million, plus about 50 million more.

And then there are other public plans—for example, for Federal, State, and local workers which account for about 7½ million additional people.

Not many folks realize that besides providing for pensions, we have developed a tremendous reservoir of pension funds—more than $65 billion.

That vast sum in turn is invested in part in corporate stocks and bonds. And that investment provides American business with needed capital for expansion.

NEW GROUPS ELIGIBLE

Question. Well, Senator, specifically, to whom will pension benefits be extended if this legislation passes the Senate?

Answer. Well, in the first place, I would like to say something to couples in this audience, who are looking forward to retirement. Under the present law, the man in the family can retire at 65.

Generally, men marry women younger than themselves. So, the men become eligible for old-age pensions several years before their wives. Under the present social-security law, a man may wish to retire at 65. But he often finds that he and his wife are not able to make ends meet on his pension alone.

So, the proposed legislation would make the wife eligible for her pension—which is about half the size of her husband's—when she is 62. This means that a retiring couple who have reached 65 and 62 would be able to get pensions totaling as much as $162.80 per month.

It is estimated that about 300,000 wives—300,000 couples—would receive this benefit if the legislation is approved.

Question. Do you favor this proposed provision, Senator WILEY?

Answer. Absolutely. It represents a commonsense, fair-minded answer to an important social problem.

Question. What about unmarried women workers at 62 under the proposed legislation, Senator WILEY?

Answer. The single woman worker at 62 will be able to retire immediately on a pension up to $108.50 a month.

AID TO WIDOWS

Question. Senator, turning to the problem of widows, I know that you have long been a champion of improved social security for them. What about benefits for them under the pending legislation?

Answer. Fortunately, quite a few benefits.

Statistics now show that there are 7½ million widows in the United States. In fact, 1 woman in every 10 between the ages of 45 and 54 is a widow. Between the ages of 55 and 64, 1 woman in every 4 is a widow.

Statistics also reveal the fact that 1 woman out of every 2 who becomes a widow has more than 20 years of life ahead of her. Furthermore, many of these women have dependent children still in their care. So, we are all glad to see that this legislation provides survivor benefits up to $81.40 a month for widows. This could bring under social security about 200,000 women at the present time.

MORE COVERAGE

Question. To what other groups would social security be extended under this proposed legislation?

Answer. Over 200,000 self-employed lawyers, dentists, osteopaths, veterinarians, chiropractors and optometrists would be newly covered by the proposed legislation. It would also bring benefits to some farmers who are not now covered. And it would extend the legislation to some owners or tenants on lands who have some self-employment income from their work as farmers.

DISABILITY ISSUE

Question. Let's turn now, Senator, to the controversial features of the proposed legislation. What phases will be debated most strongly in the Senate?

Answer. The disability clauses are probably the most controversial clauses of this legislation.

The main question revolves around the issue of determining the extent to which a person is totally and permanently disabled.

As currently written, the new plan would permit disabled workers to draw full pensions starting at 50. Wives and children of disabled workers however, would not get benefits until the workers reach 65.

The legislation also provides that such workers retired for disability would have to save long records of coverage under the pensions system in order to draw their benefits. Moreover, restrictions which are provided in the current legislation would limit the number who would get benefits up to around $100 a month, under this section of the legislation to about 250,000 disabled workers.

HANDICAPPED YOUNGSTERS

Question. How about disabled children?

Answer. The bill definitely extends benefits to disabled children. That means youngsters, who, for physical or mental reasons, are totally incapable of looking after themselves, unfortunately even after they reach the age of 18. Under the present law, the children of a retired worker or of a worker who was insured at the time of his death, receive benefits only until they are 18. But I have had many letters from parents who call attention to the fact that when these benefits stop at age 18, it imposed tremendous burdens. The bill would correct this situation. And I, for one, am 100 percent in favor of remedying the problem and not leaving these youngsters out in the cold, so to speak. It is estimated that only about 1,000 disabled children would receive benefits.

COST PROBLEM

Question. Senator WILEY, turning to still another phase, I know that your listeners would like to know how much this overall new legislation will cost them.

Answer. That is a very pertinent question. In the first place, if you receive $4,200 or more per year, you would have to pay a payroll tax of $105, instead of the $84 which you are now currently paying.

If you have $3,600 of earnings, you would pay $90 instead of the $72 that you are now paying.

Employers will be called on to match these tax payments. For example, a company with 100 employees would be subject to an added tax of about $2,000 a year. In other words, a total of $1.4 billion would have to be contributed by over 53 million workers and 4.4 million employers.

CHANCES EXCELLENT

Question. What are the chances of approval of this legislation during this session, Senator WILEY?

Answer. Chances are excellent, although there probably will be some changes made. The thing that everybody, legislators and citizens alike, will have to decide at this time is this: Do the higher payroll taxes which this legislation would require offset the value of easing the financial hardship facing a very important segment of our population? That is the $64 question. If our people are willing to pay the price, then benefits can be expanded.

SENATOR WILEY'S BILLS

Question. Your own record would indicate that you feel our people are willing to pay the price for liberalizing benefits, Senator WILEY.

Answer. Yes; I have introduced a good deal of social-security legislation for this very purpose of liberalizing benefits. Thus, I introduced in the present 84th Congress S. 591, which would reduce to 62 years the age at which women may qualify for old-age and survivors benefits. I believe that it will be best if ultimately the age will be reduced to 60 years. I have also introduced S. 1779, which would provide for voluntary coverage under Federal old-age and survivors insurance system for lawyers. Both of these bills have met with very fine response, not only in my own State of Wisconsin but from all over the country.

Also, in order to meet this problem of the increasing number of people who are over the age of 65, I have introduced S. 2279. It would authorize grants to States for the development and improvement of programs and services for the aged and aging.

CONCLUSION

I am anticipating early action on this new social-security legislation by the Senate Finance Committee. I will, of course, urge early Senate passage.

We must do a lot of planning and thinking in this field if we are to adequately meet the needs of our people. Social-security legislation is only one part of the story. Health, housing, recreation, constructive leisure-time pursuit—these are all other aspects of the needs of America's older citizens which perhaps we can discuss at another time.

It has been a real pleasure to be with you this evening.

Disaster Insurance and Adequate Building Codes

EXTENSION OF REMARKS

OF

HON. HUBERT B. SCUDDER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 16, 1956

Mr. SCUDDER. Mr. Speaker, under leave to extend my own remarks, I desire to include an editorial from the January 30, 1956, edition of the Santa Rosa (Calif.) Press-Democrat, entitled "Flood Damage Shows Need for Building Code." This editorial emphasizes that the lack of adequate building codes contributed to the extensive flood damage to both residential and business structures during the recent flood disaster in California.

Had a code been in effect that required such structures to be bolted to their foundations, there is no question but what the number of homes lost could have been reduced considerably.

The Banking and Currency Committees of the Congress are considering a plan for putting disaster insurance into effect. I believe this editorial to be apropos, and submit it to the attention of the Members of Congress. I favor the enactment of disaster insurance, but submit that to be effective it must be augmented by building codes requiring that buildings be secured to their foundations, and that other structural improvements be required.

The editorial follows:

FLOOD DAMAGE SHOWS NEED FOR BUILDING CODE

Among the lessons learned from this season's Russian River floods is the need of a building code in Sonoma County, Paul Nichols, county flood engineer, said in a recent talk before the Santa Rosa Rotary Club.

Three hundred structures were destroyed in the Russian River Basin by the flood. That's not counting the hundreds more that were damaged but can be salvaged or repaired.

By the dozens, homes were lost because there is no code in Sonoma County requiring that there be proper foundations, or that homes must be secured to those foundations in a sensible manner.

People who had bought or built homes in good faith and under the assumption that they were properly built found themselves ruined because there is no code, and no protection.

Some of the structures were on pilings instead of solid concrete foundations. They simply floated to destruction.

Some were on solid foundations, but not bolted.

"In a few cases, the only thing that held a building to its foundation was the pipes in the plumbing," Mr. Nichols reported.

While this is the most drastic lesson yet provided in Sonoma County as to the importance of a building code, it is far from the first one.

People have died in their homes from the poisonous fumes of improperly vented gas-burning heating devices.

Others have been burned to death in fires caused by overloaded or improper electric wiring.

Only the good faith and inherent honesty of commercial builders has kept the loss of both life and property from becoming monstrous. As long as there is no county building code, there can be no regulations or inspections to make certain that both safety and durability are built into new homes constructed for sale.

For many months, there has been before the Board of Supervisors a recommendation for a minimum-regulation building code exempting agricultural areas.

Had it been enacted, it would not have prevented the losses on the Russian River because it affects only construction done after its passage.

But construction is going on all over Sonoma County at the greatest pace in history. Its enactment would assure that all future construction is sound. It would guarantee against future losses such as the heavy ones which have taken place.

The President's Ordeal

EXTENSION OF REMARKS

OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 12, 1956

Mr. DINGELL. Mr. Speaker, because of the great timeliness of the subject matter in the article and because of its importance to all, I wish to call the attention of the American people to the contents of an article appearing in the February 16 edition of the Washington Post and Times Herald under the byline of that distinguished columnist, Mr. Walter Lippmann:

TODAY AND TOMORROW

(By Walter Lippmann)

THE PRESIDENT'S ORDEAL

It is reasonably plain that the President knew in advance of his latest checkup that the signs of his recovery would be favorable. Thus at his press conference a few days before he said that he would probably trust his own feelings rather than the doctors' report. This could only have meant that the favorable report of the doctors would not decide the matter.

Moreover, it stands to reason that he has heard considerably more from his doctors than the public has heard, or could have expected to hear, about what limitations he must expect to live under.

The decision whether to run again has not been clarified for him by the doctors. They could have told him that he must not run again. They could not, and did not, tell him that he could take his health for granted in making his decision. The President has made it clear that he himself is not taking his health for granted, and that—should he decide to run again—the question of his physical fitness to bear the burden of the office will be not only a legitimate but a necessary subject of public discussion. No one, in fact, has discussed the question of his fitness so frankly as has the President himself.

The decision which he must now make is whether he himself feels within himself that he is equal to the burden of his office, is equal to it not as he has known it during the past month but in its great periods of strain and stress and crisis. At Dr. White's press conference Mrs. May Craig, of the Portland Press Herald made a remark which, despite Mr. Hagerty's comment, everybody in Washington knows to be true—that the President has not recently had to bear the full load of the office. No doubt he has had a reasonably full schedule. But January was a comparatively quiet period both at home and abroad, a lull before the storms that are brewing in Congress, in the election campaign, and from the gathering momentum of the Soviet challenge in Asia and Africa.

The hardest question that the President has to resolve is not whether he might die in office. The doctors have given him as good an assurance on that point as they could have. Nor is it a question of his being incapacitated, though that eventually is, as he himself has said in one of his press conferences, a weak link in our constitutional system. The doctors' report is adequately reassuring on that point. The real question is not death or disability but inadequacy, not being at his best, being able to carry on the routine of the office but not to supply the kind of energetic leadership which the world situation is certain to demand.

This, it is quite plain, is the crucial point which the President is now wresting with.

There is another point, second only to this, which would become of critical importance if he resolved all the other questions in favor of running. It turns on the Vice Presidency. There can be no doubt at all that the President would have a very special personal obligation to consider without fear or favor, impersonally and objectively, the choice of the man who would succeed him in case of death or disability. He will be required, if he runs again, to give the country his personal guarantee that the vice presidential candidate does in fact believe in, does not merely support politically, the principles that he himself stands for.

He can give no such guarantee for Mr. NIXON. It is not a question of whether Mr. NIXON supports the Eisenhower legislative program or whether he speaks up in defense of the Eisenhower policy. Of course he does. The question is whether he represents the central thing which Eisenhower represents, the thing which has given Eisenhower such a hold on the American people.

This central thing is that Eisenhower unites the country and heals its divisions. This precisely is what NIXON does not do. Instead of being a national leader, he is a ruthless partisan. He is a politician who divides and embitters the people. The country has just had a spectacular demonstration of this characteristic in his speech at the Lincoln Day dinner in New York. "Speaking for a unanimous Supreme Court," said the Vice President, "a great Republican Chief Justice, Earl Warren, has ordered an end to racial segregation in the Nation's public schools." A man who will exploit for partisan purposes such a decision of the Supreme Court does not have within his conscience those scruples which the country has the right to expect in the President of the United States.

The question of who would run with Eisenhower is clearly bound up with, is for all practical purposes inseparable from, the question of whether he himself will run again.

Professor of Economic Geography Declares Upper Colorado Project Gigantic Highway Robbery

EXTENSION OF REMARKS

OF

HON. CRAIG HOSMER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 16, 1956

Mr. HOSMER. Mr. Speaker, J. Russell Smith, emeritus professor of economic geography, Columbia University, is one of the Nation's leading experts on the interrelation of economics and geography. As such, his opinions should carry great weight, even with Members of the Congress of the United States.

When such a man as Professor Smith is moved to characterize the upper Colorado project proposal as "that gigantic scheme of highway robbery," it is time for Congress to take a sober view of its responsibility to safeguard the people's money.

I have received the following communication from Professor Smith concerning the proposal:

SWARTHMORE, PA., *February 8, 1956.*

Hon. CRAIG HOSMER,
House of Representatives,
Washington, D. C.

DEAR MR. HOSMER: Thank you for your letter of the 6th concerning that gigantic scheme of highway robbery, the Glen Canyon Dam.

As an economic geographer it seems to me to be a shocking waste of national resources to use that water for irrigating plateau land, of which we have a lot, that will not grow anything that cannot be grown on 250,000 square miles of land further east. Whereas it could if it were allowed, go down into the subtropical climate where it could produce commodities that could not be produced in any similar quantity elsewhere in the country.

As to that money waster, the Reclamation Service: I have great faith in facts and while I follow these matters from a very long distance, it seems to me that a paralyzing case can be made if we get the facts of 15 or 20 enterprises that the Reclamation Service has recommended with the amount that they recommended for it and then the amount that they later did spend.

This would show them up as experts at baiting us on, like the classic case of the carrot in front of the ox.

Sincerely yours,

J. RUSSELL SMITH.

In accordance with Professor Smith's suggestion to reveal just how far wrong the Bureau of Reclamation has been in its cost estimates on projects authorized in the past, I submit the entire available record between 1903 and 1952 as compiled by the Second Hoover Commission. It is a sorry record, indeed:

Project	Date of authorization	Estimated total cost at time of authorization	Estimated total cost, June 30, 1952
Hondo, N. Mex.	1903	[1] $359,000	$371,788
Milk River, Mont.	1903	1,000,000	9,881,774
Newlands, Nev.	1903	1,250,000	7,899,479

Footnotes at end of table.

[1] Estimated in H. Doc. 1262, 61st Cong., 3d sess., Fund for Reclamation of Arid Lands, 1911.

[2] Combined cost of Williston and Buford-Trenton estimated in 1911 at $1,195,000.

[3] Included in estimate of Yuma project.

[4] Exclusive of contemplated allocation of $1,553,565 of cost of Imperial Dam herein included in All American Canal project.

[5] Exclusive of cost of storage works (Conchas Dam) constructed by Corps of Engineers.

[6] $100,000 per year.

[7] Except for total estimated cost, figures include $3,467,000 of the cost of Corps of Engineers Harlan County Dam allocated to irrigation.

[8] Except for total estimated cost, figures include $6 million of the cost of Corps of Engineers Red Willow Dam allocated to irrigation.

A Dam on the Feather River Is Long Overdue

EXTENSION OF REMARKS
OF

HON. HUBERT B. SCUDDER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 16, 1956

Mr. SCUDDER. Mr. Speaker, under leave to extend my own remarks, I desire to include an editorial entitled "Start the Oroville Dam This Year," which appeared in the February 9, 1956, edition of the San Francisco Examiner.

In 1950 I introduced legislation to authorize construction of a dam on the Feather River in the vicinity of Oroville, along with an irrigation canal system and hydroelectric facilities to generate 300,000 kilowatts of power, and to store over 3 million acre-feet of water.

Since then, reapportionment has taken this area out of my congressional district, and a move was started to have the dam built by the State rather than the Federal Government. Without a doubt, both State and Federal funds will be required to develop this project.

The Feather River is the major flood threat in northern California. It behooves State officials to get the ball rolling and, as the following editorial states, a start should be ordered during the March legislative session.

START THE OROVILLE DAM THIS YEAR

The Governor and the legislature should push aside California's welter of water quarrels long enough to order a start on the Oroville Dam during the March legislative session.

This winter's flood tragedies have crystallized the thinking of the public and the experts to the point where it is clear this dam on the Feather River deserves the highest priority of the many water storage projects the State must build.

It is 1 of the 2 basic units of the enormous Feather River project. Unfortunately it has come to be thought of as inseparable from that vast and controversial plan, though as a matter of fact it was first proposed by the people of the Marysville-Yuba City area as primarily a flood-control project.

It can and should be divorced from the Feather River project for the purposes of making a start.

Many necessary dam preliminaries—land acquisition, part of the engineering, highway rerouting, etc.—can be accomplished over the next 3 years.

These time-consuming preliminaries are necessary whether the dam ultimately is to be one of the world's largest, as proposed in the Feather River project, or simply another dam.

The Feather River project is at least a $1,500,000,000 scheme that will require 25 years to realize if it is to carry water to southern California. A firm decision to build all of it cannot be made until several basic controversies are settled.

These include the fight over creation of a single State water department, the intricate counties-of-origin water ownership dispute, the issue of State against Federal control of the San Luis holding reservoir, the financing method, and several lesser controversies.

Years will be required to hammer out agreements on these questions.

Meanwhile Yuba City and Marysville and rich farm areas along the Feather must live under the threat of engulfment by another great wall of floodwaters.

No man can say when nature will visit upon California another disaster like that of this winter. The 3 years of time that can be gained by starting the Oroville Dam this year may be the margin that will prevent a greater catastrophe.

In Memoriam, My Friend and Colleague, Chauncey W. Reed

SPEECH
OF

HON. HAROLD H. VELDE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, February 10, 1956

Mr. VELDE. Mr. Speaker, I was greatly shocked and highly grieved to learn of the passing of our colleague, CHAUNCEY W. REED. While we all had been advised during the last days of his illness that the black angel of death would soon come for him, nevertheless one is never quite prepared for the passing of a friend or loved one.

Having served in Congress with CHAUNCEY REED for more than 7 years, I can truthfully say that there is no other Member of this great body who was more respected by me. As a freshman Member of the House, I always considered CHAUNCEY REED as one of my finest tutors and friend. His legal ability, honesty, and integrity was always above question. His loyalty and patriotism to his country was exhibited through his fine work with the American Legion and other patriotic organizations. His deep religious feelings were exhibited by his work in Masonry and in the church. CHAUNCEY REED's death is a great loss to this body, to his country, to his friends, and to his family.

I wish to extend my heartfelt sympathy to his widow, his fine children, and all his close friends.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. The money derived from such sales shall be paid into the Treasury and accounted for in his annual report to Congress, and no sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at $1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Printing and binding for Congress, when recommended to be done by the Committee on Printing of either House, shall be so recommended in a report containing an approximate estimate of the cost thereof, together with a statement from the Public Printer of estimated approximate cost of work previously ordered by Congress within the fiscal year (U. S. Code, title 44, sec. 145, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on Printing, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

DISTRIBUTION OF THE CONGRESSIONAL RECORD

To the Vice President and each Senator 100 copies; to the Secretary and Sergeant at Arms of the Senate, each, 25 copies; to the Secretary, for official use, not to exceed 35 copies; to the Sergeant at Arms, for use on the floor of the Senate, not to exceed 50 copies; to each Representative, Delegate, and Resident Commissioner in Congress, 68 copies; to the Clerk, Sergeant at Arms, and Doorkeeper of the House of Representatives, each, 25 copies; to the Clerk, for official use, not to exceed 50 copies; and to the Doorkeeper, for use on the floor of the House of Representatives, not to exceed 75 copies; to the Vice President and each Senator, Representative, Delegate, and Resident Commissioner in Congress there shall also be furnished (and shall not be transferable), 3 copies of the daily RECORD, of which 1 shall be delivered at his residence, 1 at his office, and 1 at the Capitol.

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

OFFICERS OF THE SENATE

Secretary—Felton M. Johnston.
Chief Clerk—Emery L. Frazier.
Sergeant at Arms—Joseph C. Duke.
Secretary for the Majority—Robert G. Baker.
Secretary for the Minority—J. Mark Trice.
Chaplain—Rev. Frederick Brown Harris, D. D.

STANDING COMMITTEES OF THE SENATE

Committee on Agriculture and Forestry

Messrs. Ellender (chairman), Johnston of South Carolina, Holland, Anderson, Eastland, Clements, Humphrey, Scott, Aiken, Young, Thye, Hickenlooper, Mundt, Williams, and Schoeppel.

Committee on Appropriations

Messrs. Hayden (chairman), Russell, Chavez, Ellender, Hill, Kilgore, McClellan, Robertson, Magnuson, Holland, Stennis, Clements, Bridges, Saltonstall, Young, Knowland, Thye, McCarthy, Mundt, Mrs. Smith of Maine, Messrs. Dworshak, Dirksen, and Potter.

Committee on Armed Services

Messrs. Russell (chairman), Byrd, Johnson of Texas, Kefauver, Stennis, Symington, Jackson, Ervin, Saltonstall, Bridges, Flanders, Mrs. Smith of Maine, Messrs. Case of South Dakota, Duff, and Welker.

Committee on Banking and Currency

Messrs. Fulbright (chairman), Robertson, Sparkman, Frear, Douglas, Lehman, Monroney, Morse, Capehart, Bricker, Ives, Bennett, Bush, Beall, and Payne.

Committee on the District of Columbia

Messrs. Neely (chairman), Bible, McNamara, Morse, Frear, Beall, Hruska, Case of New Jersey, and Allott.

Committee on Finance

Messrs. Byrd (chairman), George, Kerr, Frear, Long, Smathers, Johnson of Texas, Barkley, Millikin, Martin of Pennsylvania, Williams, Flanders, Malone, Carlson, and Bennett.

Committee on Foreign Relations

Messrs. George (chairman), Green, Fulbright, Sparkman, Humphrey, Mansfield, Barkley, Morse, Wiley, Smith of New Jersey, Hickenlooper, Langer, Knowland, Aiken, and Capehart.

Committee on Government Operations

Messrs. McClellan (chairman), Jackson, Kennedy, Symington, Ervin, Humphrey, Thurmond, McCarthy, Mundt, Mrs. Smith of Maine, Messrs. Cotton, Bender, and Martin of Iowa.

Committee on Interior and Insular Affairs

Messrs. Murray (chairman), Anderson, Long, Jackson, O'Mahoney, Scott, Bible, Neuberger, Millikin, Malone, Watkins, Dworshak, Kuchel, Barrett, and Goldwater.

Committee on Interstate and Foreign Commerce

Messrs. Magnuson (chairman), Pastore, Monroney, Smathers, Daniel, Ervin, Bible, Thurmond, Bricker, Schoeppel, Butler, Potter, Duff, Purtell, and Payne.

Committee on the Judiciary

Messrs. Kilgore (chairman), Eastland, Kefauver, Johnston of South Carolina, Hennings, McClellan, Daniel, O'Mahoney, Wiley, Langer, Jenner, Watkins, Dirksen, Welker, and Butler.

Committee on Labor and Public Welfare

Messrs. Hill (chairman), Murray, Neely, Douglas, Lehman, Kennedy, McNamara, Smith of New Jersey, Ives, Purtell, Goldwater, Bender, and Allott.

Committee on Post Office and Civil Service

Messrs. Johnston of South Carolina (chairman), Neely, Pastore, Monroney, Hennings, Scott, Neuberger, Carlson, Jenner, Langer, Curtis, Martin of Iowa, and Case of New Jersey.

Committee on Public Works

Messrs. Chavez (chairman), Kerr, Gore, Symington, Thurmond, McNamara, Neuberger, Martin of Pennsylvania, Case of South Dakota, Bush, Kuchel, Cotton, and Hruska.

Committee on Rules and Administration

Messrs. Green (chairman), Hayden, Hennings, Gore, Mansfield, Jenner, Barrett, McCarthy, and Curtis.

UNITED STATES SUPREME COURT

Mr. Chief Justice Warren, of California, Hotel Sheraton-Park, Washington, D. C.
Mr. Justice Black, of Alabama, 619 S. Lee St., Alexandria, Va.
Mr. Justice Reed, of Kentucky, the Mayflower.
Mr. Justice Frankfurter, of Massachusetts, 3018 Dumbarton Ave.
Mr. Justice Douglas, of Washington, 3701 Connecticut Ave.
Mr. Justice Burton, of Ohio, the Dodge.
Mr. Justice Clark, of Texas, 2101 Connecticut Ave.
Mr. Justice Minton, of Indiana, the Methodist Building.
Mr. Justice Harlan, of New York, 1677 31st St.

OFFICERS OF THE SUPREME COURT

Clerk—Harold B. Willey, 3214 N. Wakefield St., Arlington, Va.
Deputy Clerk—Reginald C. Dilli, 1329 Hemlock St.
Deputy Clerk—Hugh W. Barr, 4701 Connecticut Ave.
Marshal—T. Perry Lippitt, 6004 Corbin Road.
Reporter—Walter Wyatt, 1702 Kalmia Rd.
Librarian—Helen Newman, 126 3d St. SE.

UNITED STATES JUDICIAL CIRCUITS

JUSTICES ASSIGNED
TERRITORY EMBRACED

District of Columbia: Mr. Chief Justice Warren. District of Columbia.

First judicial circuit: Mr. Justice Frankfurter. Maine, New Hampshire, Massachusetts, Rhode Island, Puerto Rico.

Second judicial circuit: Mr. Justice Harlan. Vermont, Connecticut, New York.

Third judicial circuit: Mr. Justice Burton. Pennsylvania, New Jersey, Delaware, Virgin Islands.

Fourth judicial circuit: Mr. Chief Justice Warren. Maryland, Virginia, West Virginia, North Carolina, South Carolina.

Fifth judicial circuit: Mr. Justice Black. Georgia, Florida, Alabama, Mississippi, Louisiana, Texas, Canal Zone.

Sixth judicial circuit: Mr. Justice Reed. Ohio, Michigan, Kentucky, Tennessee.

Seventh judicial circuit: Mr. Justice Minton. Indiana, Illinois, Wisconsin.

Eighth judicial circuit: Mr. Justice Clark. Minnesota, North Dakota, South Dakota, Iowa, Nebraska, Missouri, Arkansas.

Ninth judicial circuit: Mr. Justice Douglas. Washington, Oregon, Montana, Idaho, California, Nevada, Arizona, Alaska, Hawaii.

Tenth judicial circuit: Mr. Justice Clark. Colorado, Wyoming, Utah, Kansas, Oklahoma, New Mexico.

Appendix

Address by Hon. Herbert H. Lehman, of New York, Before the Decalogue Society of Chicago

EXTENSION OF REMARKS
OF
HON. HERBERT H. LEHMAN
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Monday, February 20, 1956

Mr. LEHMAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address I made before the Decalogue Society, in Chicago, on February 18, 1956.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I accept your award and thank you for it. It means a great deal to me to receive this evidence that the struggles some of us have been waging in Washington are approved and supported here in the heartland of America.

I have long known of this distinguished society, with its noble name enshrining in a word the basic rules of goodness and godliness.

I have the high privilege of knowing almost all the eminent persons who have received this award before me, and I am proud, indeed, to be included in that great company.

At least one of your Members is an old friend, or rather a young friend of mine. I am glad to greet him here in his hometown as a rising star in the public firmament, a man in whom brilliance of intellect is aptly joined with integrity of character—Congressman SIDNEY YATES. It has been a privilege to know and to cherish this dedicated young man. The Decalogue Society and the community should be proud of him.

Tonight I propose to discuss with you a subject in which many of you, I am sure, share a great interest with me—our immigration and citizenship laws.

I am going to assume that there are none present whom I need to convince that these laws require amendment and modification tonight. I want to give you my judgment as to the kind of modification that is needed and the effort it will take to secure that kind of modification.

It should be unnecessary for me to point out that this is not a partisan matter. The support for the McCarran-Walter Act was and is bipartisan. The opposition to it was and is bipartisan.

Any successful effort to modify the present law in a significant and meaningful manner can only be a bipartisan effort. Indeed, this issue is one of those which clearly cuts across party lines and disregards political affiliations.

But this is not to say that political considerations do not enter into the question at all. There are political considerations involved, in a very healthy and democratic way. Today, unlike the situation 4 years ago, there is an aroused and vigilant citizenry in some parts of the country, demanding changes in the law. So it becomes necessary for the President and Members of Congress to take cognizance of the question, and to take a position on it. It now becomes politically impossible to ignore the question. That is the way democracy functions—thank God for that.

I anticipate that reform of our immigration and citizensihp laws will be an important issue in the national elections of 1956, but not because all the members of one party are clearly for, and the others clearly against. No, nationally it will be a question of which party has contributed and can contribute most to the substantial revision of present law. It will also be a question, nationally, of what kind of revision will be pledged by each party.

In many districts of the country, there will be lively and intensive discussion of this issue by candidates for Congress, and even for local office. There will be some districts, of course, where this will not be an issue, where no candidate will espouse a change in the law, and where there will be little interest in the subject. But the number of such districts will be far fewer in 1956 than in 1952.

And by this we will be able to measure the great progress that has been made on this front in the past 4 years.

Yes, we have made great progress in stimulating public interest in this question compared to the situation exactly 4 years ago, when this act was before the Congress. At that time there was no general public interest whatever in this subject.

I remember the vain efforts some of us made in the Senate to engage in debate with the proponents of the McCarran-Walter bill. For days we spoke to a chamber empty of all Senators except the handful of us opposed to the bill. The sponsors of the bill gave us the silent treatment. The late Senator Pat McCarran made only 2 or 3 appearances on the floor in behalf of his bill. And on those occasions, he spent most of his time quoting excerpts from the pages of the Daily Worker to show that the Communist Party was opposed to the legislation, and to suggest that we who fought the McCarran-Walter Act were dupes of the Communist Party.

Today, that is still the main line of supporters of the McCarran-Walter Act—the same tired, threadbare arguments.

Well, those arguments do not attract as much support as they did a few years ago. It is no longer possible for any but the fanatic and the blind to charge that the chief inspiration for the reform of our immigration and citizenship laws comes from the Communist Party.

President Eisenhower has officially recommended to the Congress a series of amendments to the McCarran-Walter Act. Attorney General Brownell and the Justice Department drafted the President's recommendations. It will be interesting to see if the supporters of the McCarran-Walter Act now undertake to show that Mr. Brownell is a dupe of the Communist Party.

Let us get down to specifics. What do we mean by substantial revision of the McCarran-Walter Act? What is wrong with the act? Do the recommendations made by President Eisenhower cure those defects?

The worst thing about the present law is its spirit—the spirit of fear and suspicion directed against every alien and even against naturalized citizens. It is hard to dig this spirit out of the law by a few amendments. It is a spirit which shows through every title and chapter of the law.

Now, I don't want to leave the impression that I think there was nothing good in the McCarran-Walter Act. It had some good provisions, by which I mean that some few improvements over preexisting law were made in the 1952 act. But for every constructive change made in 1952, a score or more of new restrictions were added. The preexisting law was already cruel and vicious consisting of a long succession of antialien measures adopted by Congress from 1872 to 1952. Some of the worst of these provisions were added in 1950 as part of the blunderbuss McCarran Internal Security Act.

It is sometimes forgotten that the Internal Security Act was originally introduced in Congress as the Mundt-Nixon bill. In 1950 it was taken over by the late Senator McCarran who proceeded to use it as the vehicle for a comprehensive set of drastic antialien proposals, all of which became law in the summer of 1950, over President Truman's veto.

The bad provisions of present law are beyond listing in a single speech. They number in the hundreds. There are so many that they can only be covered by category.

There is the national origins quota system, and the invidious racial and national discrimination which it bespeaks.

There are the impossible and endless requirements for admission. There are over 700 separate grounds for refusing admission to an alien. Some requirements are literally impossible to fulfill. Some are purely mystical, depending on the clairvoyance of the Consular Officer or the Immigration Inspector.

Then there are the many cruel, heartless and unjust provisions for deportation, retroactive in most cases, post facto law in some. There are today 125 separate grounds for deportation.

There are scores of harsh and unreasonable punishments for relatively minor misdemeanors. The dread penalty of banishment for resident aliens is provided as casualty as a $5 fine.

There is no review or appeals procedure for aliens who are denied visas. A consul's decision is final and nonreviewable by any higher officer, board, or court.

These are just some of the categories of evils in the immigration provisions of the law.

There is also the nationality title of the act. That title, too, is a Pandora's Box.

There are the distinctions between naturalized and native-born citizens.

There are the encroachments on the status of citizenship acquired even by birth.

There are the provisions for revocation of citizenship by judgment, without even the requirement of personal service.

This listing is but a rough and almost random selection.

You who are lawyers know that it takes cases and court decisions to give life to the law. Well, I wonder if you know that large sections of the McCarran-Walter Act were drafted after a careful study of every court decision which the Immigration and Naturalization Service had lost over a 20-year period.

In every case in which a court had given life to the law, the McCarran-Walter Act applied an axe to remove every legal handrail to which an alien might possibly cling if the Immigration Service wanted to deport him; and to close every crack and crevice in the law through which an alien might possibly enter, if the Consular Service and the Immigration Service, for whatever reason, didn't want him to enter.

This is the kind of law we now have on our statute books, and have had for the past 4 years.

This law is one of the greatest talking points against America which the Communist International has. We are held up to ridicule because of this law—a powerful country like ours—sound, prosperous, and stable—but afraid to admit a Polish violinist because he once signed a peace petition, or an Italian shoemaker, because he once belonged to a Communist-dominated labor union.

We have lost more prestige abroad than we can compensate for with the Voice of America. This law, which the Daily Worker criticizes for its own purposes here, is priceless grist for the Communist propaganda mill abroad.

In this law we sacrifice our international dignity. We gain nothing. We lose much.

But what are we to do about it? What amendments do we seek?

I have had a bill pending in Congress for 3 years, proposing a wholesale revision of the law, eliminating the national origins quota system, wiping out the distinctions between native-born and naturalzed citizens, restoring citizenship status to what the Founding Fathers conceived it to be, and establishing standards of justice and equity for the treatment of all aliens, those seeking admission here, and those already resident here. I have 12 cosponsors on my bill in the Senate. The same bill has been introduced in the House by Congressman CELLER, and by 20 or 30 other Members of Congress.

I must tell you frankly that it may be very difficult to get my comprehensive bill enacted at this session of Congress. What about President Eisenhower's proposals?

I was greatly gratified by the President's recommendations. They came a long way in the direction I have been pointing for 4 years. They were better than I had expected.

But the President's proposals were expressed in general terms. They were fine words, as far as they went. The specific bills which have been introduced to carry out the President's general proposals, the Watkins-Keating bills, fall rather short of the mark set by the President's message.

The President sharply criticized the national origins quota system. But the Watkins-Keating bills retain the national origins quota system. The Watkins-Keating bills still discriminate against Asians, against Jamaicans, and against natives of Trinidad and other islands in the Caribbean. The administration proposals discriminate against Africans. This discrimination is on the basis of race and national origin.

I cannot, for the life of me, see why we should hold back, why the Watkins-Keating bills hold back, from repealing outright the national origins quota system.

Those who oppose the elimination of the national origins quota system will similarly oppose, with all their might, the limited pooling of unused quotas as provided in the Watkins-Keating bills. These bills will be characterized as an attack on the national origins quota system. If they are going to have the name, why not the game?

The Watkins-Keating bills make no change in the second-class status now forced on naturalized citizens. Except for a partial exemption from automatic denaturalization on accident of residence abroad, provided for certain veterans of war-time military service, the unjustifiable distinctions between naturalized and native-born citizens are left intact in the law. To this continued acceptance by President Eisenhower of the concept of second-class citizenship I cannot and will not agree.

The same type of limited advance characterizes other aspects of the Watkins-Keating proposals. They do not go far enough. They do not remedy some of the major evils in the present law. Some are of questionable merit.

But I shall not discuss them in detail tonight. I have just begun my own intensive study of them. I commend the President again, and the Attorney General, too, for the forward strides they do make in this field. It is a pity that the administration isn't yet ready to recognize, publicly, the chief evils in the law.

Speaking for myself, I will go along with the President as far as his recommendations go but at the same time press for further advance.

I will not cease to fight for the complete elimination of the racist and bigoted national origins quota system.

I will not cease to fight for the elimination of all distinctions between native and naturalized American citizens.

I will not cease my efforts to remove the unnecessary harshness and injustice from all sections of the McCarran-Walter Act.

Let us not deceive ourselves. The opposition is going to be overwhelmingly strong. The fight is not going to be over at the end of this session. It is just going to get under way. As a great President said of other legislation, "We have only just begun to fight."

But we can look forward to a joining of the issues. There will be public debate and discussion. I hope that we can get some action in Congress. We must try our hardest, but temporary failure must not discourage us.

Here in Illinois, the home State of Abraham Lincoln, with the echoes of Lincoln Day speeches still resounding, I would like to read an excerpt from a letter which Abraham Lincoln wrote to a friend of his, Joshua Speed more than a hundred years ago.

"As a Nation," wrote Abraham Lincoln, "we began by declaring that 'all men are created equal.'

"We now practically read it, 'all men are created equal except Negroes.' When the know-nothings get control, it will read 'all men are created equal except Negroes and foreigners and Catholics.' "

That was what Abraham Lincoln wrote, more than a century ago. The know-nothings were only a passing political threat in those days—a lunatic fringe. But their modern-day successors are more than a threat today. They have made their mark upon our statute books. They have written some of their philosophy into our laws. What Abraham Lincoln conceived as the worst that could happen has actually happened.

But today we are on the road back. We are moving forward. We are no longer on the defensive. We are the ones who are attacking, laying siege to the strongholds of fear and prejudice.

We face a long and hard struggle—a stubborn and entrenched enemy. They will not easily surrender. They are not the kind that compromise.

We must not rest nor relax until the McCarran-Walter Act is completely overhauled and until the hostile and suspicious spirit of that law is replaced with one consistent with the spirit of America. As I understand that spirit, it is the same as that described ages ago to the Prophet Moses by Him who gave Moses the Tablet. As written, in Leviticus, the Lord said:

"And if a stranger sojourn with thee in your land, ye shall not vex him. But the stranger that dwelleth with you shall be unto you as one born among you, and thou shalt love him as thyself."

Yes, to win the fight to humanize and liberalize our immigration and citizenship laws will be a victory to reward all efforts. It will be a victory in the cause of freedom, justice, and humanity. We will all be able to lift our heads higher, when once more we will be able to say:

"Here in America is the home of justice, of asylum for the oppressed, of refuge for the persecuted, of opportunity and challenge for the worthy seeking life and freedom in the new world. This is the America we know and love."

We lift up the lamp again beside the Golden Door.

Charles F. Kettering Receives Silver Quill Award of National Business Publications, Inc.

EXTENSION OF REMARKS
OF
HON. EDWARD H. REES
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 20, 1956

Mr. REES of Kansas. Mr. Speaker, under leave to extend my remarks in the RECORD, I include excerpts from the proceedings of the state of the Nation dinner of National Business Publications, Inc., at Hotel Statler in Washington, D. C., on February 10, at which L. L. "Tex" Colbert, president, Chrysler Corp., presented the 1955 silver quill award of NBP—highest tribute of the business press—to Charles K. Kettering, of General Motors Corp. for most distinguished services to business and industry through research. In keeping with silver quill tradition, former President Herbert Hoover, who was last year's recipient, served as chairman of the selection committee which unanimously named Mr. Kettering to receive the 1955 award. This annual Washington dinner features a question-and-answer period in which Cabinet officers, captains of industry and other Government leaders gage the state of the Nation, by pointing up prospects in their respective areas of the economy:

INTRODUCTORY REMARKS BY MASTER OF CEREMONIES RUFUS CHOATE, PRESIDENT, SCOTT-CHOATE PUBLICATIONS, AND CHAIRMAN OF THE BOARD, NATIONAL BUSINESS PUBLICATIONS, INC.

Permit me, please, just a few words about NBP and its purpose.

National Business Publications is an association of publishers of 170 technical, professional, industrial, scientific, merchandising, and marketing magazines.

Business publications perform a unique service to the economy. They facilitate the exchange of business education and industrial know-how. They stimulate our enterprise. They power the progress of our technology.

Business magazines are designed to serve the needs of the specialist who must keep abreast of the newest developments in his highly specialized field.

The history of business publishing parallels the growth of business and industry in America. The result is that there are today fields of vital activity never dreamed of only a few years ago that are served by technical

periodicals specializing in electronics, antibiotics, synthetics, atomics and the like, keeping technically trained men and women in touch with quick-changing know-how in such areas as virus vaccines, supersonic flight, merchandising and marketing, automation and nuclear propulsion. This they do almost exclusively through the Business Press.

Among NBP's principles of practice, which are found on the back cover of your program, there is one that pledges active allegiance to the American system of free competition, and therein lies our real reason for being here tonight.

Sound business decisions are essential to the continued prosperity of our enlightened economy. Business magazines are dedicated to the enduring service of providing the knowledge that is necessary for those sound decisions.

That is why we seek each year to present our Silver Quill Award to that person who has best demonstrated those things for which we stand and in which we serve. The Silver Quill of NBP, like the organization that awards it, is synonymous with consecrated service to business and industry and to the Government that guarantees our freedom of enterprise.

As in past years, it is our hope that this state of the Nation dinner may serve as a fair-weather forecast of things to come. These leaders from Government and industry have graciously consented to briefly answer one specific question that is related to our future welfare. Now, then, Mr. Secretary Folsom, will you please set the stage for us by answering the first question.

QUESTION-AND-ANSWER PORTION OF THE STATE OF THE NATION DINNER

MARION B. FOLSOM, SECRETARY OF HEALTH, EDUCATION AND WELFARE

Question. Mr. Secretary Folsom—You are, no doubt, gravely concerned over the health of the Nation. Business, of course, is concerned over health in relation to productivity and the efficient operation of all elements of the economy. Will you tell us something of your plans which are designed to institute improvement in this area?

Answer. Our first concern, of course, is the contribution good health makes to a better life for individuals. At the same time, good health is vital to the productive capacity of our Nation. The health and vitality of the American people have been essential in building our shining record of productivity and well-being as a country.

One of the best hopes for continued advancement of the health of the people lies in medical research. In recent years medical research has produced great benefits for mankind. But much remains to be done. And so we are seeking an increase of 28 percent in funds to expand and improve research in cancer, mental illness, heart disease, and other major killing and crippling diseases of our time.

In addition, we are asking Congress to authorize $250 million for a new, 5-year program of matching grants to medical colleges and other institutions. These grants would help build urgently needed facilities—facilities for carrying on research, and for training more of the scientists and doctors we need.

As business editors, you might be interested in an investment in which the rewards are far greater than the costs. Such an investment is vocational rehabilitation, our program of restoring disabled persons to useful and productive lives. For 3 years there had been a downtrend in the number of persons rehabilitated. But, under an improved program the number now is expected to increase from about 56,000 in 1954 to about 80,000 next year. Past studies show the rehabilitated person will return to the Government in taxes many times the cost of his rehabilitation. But the greatest satisfaction is the humanitarian reward as thousands more human beings learn to lead fuller lives.

One of our major healh problems, of course, is the cost of medical care. In meeting this burden, voluntary health insurance has made remarkable progress over recent years. I am convinced that even more rapid progress should and can be achieved in this same field—especially in protection for older people, for those in rural areas, for the handicapped and against catastrophic illness. We in the Federal Government are now working toward practicable and effective means of encouraging expansion and improvement of voluntary health insurance.

These are just a few examples of our programs and plans. As President Eisenhower said in his special message to Congress: "As a nation we must now take further steps to improve the health of the people. This further effort * * * should be a characteristic American partnership—a partnership in which private and Government enterprise are joined to advance the national welfare."

T. M. EVANS, PRESIDENT, H. K. PORTER CO., INC.

Question. Mr. Evans, the word "merger" is very much in the forefront these days. Congress is considering legislation which may have a great effect on future corporate mergers. As head of a concern which has grown at rapid paces during the past few years, what comments do you have concerning legislative action on mergers and the size of corporations?

Answer. It seems to me the problem of mergers and the size of corporations divides itself into two parts: First, as it affects the giant corporations, and by that I mean the very largest industrial concerns in this country; and second, as it affects the small or medium-sized concerns. For instance, I think everyone will agree that the merger of two small or medium-sized, relatively weak concerns into one stronger concern is a constructive step, particularly since such a combination would often reduce selling costs and make for more effective competition. However, it seems to me that the various bills now being considered by Congress do not get to the real source of the problem of mergers and size of industrial concerns.

We all know that banks and public utilities are already closely regulated and supervised by the Government, but to insure competition and avoid socialism something must be done to control or curb the concentration of economic power in our extremely large corporations.

To set an effective limit on the size of an industrial concern through a graduated corporate income tax would not only be practical but simple to carry out. Once a concern reaches the highest rate of a graduated corporate income tax, there would be no incentive for it to merge or become larger, thus automatically eliminating the major problem in the very large corporations. An individual's income is taxed on a graduated basis according to his earnings, presumably to control economic power. Why shouldn't a corporation have this very same principle applied to it, and for the very same reasons.

It is my feeling that it is both significant and dangerous to the economy of our country that of the 500 largest industrial corporations (as reported by Fortune magazine) 10 of the very largest represent nearly 30 percent of the sales and assets of the 500. In other words, 2 percent of the companies account for 30 percent of the sales and assets.

It takes an extremely powerful union to deal with such gigantic corporations, while smaller competing companies are bound to follow their lead in such matters as wages, union contracts, pricing policies, etc.

Any corporation that would fall into the high brackets of a graduated income tax could use the present spin-off provision of the tax law to protect its stockholders and thus avoid the tax. As we all know, the present spin-off provision of the law allows a corporation to divest itself of a part of its business without involving any income tax on its stockholders. If the present spin-off provision were to become effective in this way, it would give men in the very large corporations an opportunity to run their own companies rather than merely head up divisions.

To preserve the capitalistic system for our children's or grandchildren's time, it seems to me that one of the most important things Congress can do is to make it possible for more individuals to become capitalists. This cannot be done if the larger corporations are allowed to grow without restraint.

C. H. GREENEWALT, PRESIDENT, E. I. DU PONT DE NEMOURS & CO.

Question. It is claimed that the chemical and chemical processing industries expect to reach a sales volume of some $70 billion, coupled with enormous plant expansion and unprecedented research that promises to open up even greater economic frontiers than we now visualize. In the words of your own great slogan, shouldn't this mean much better living through chemistry and shouldn't it also provide fabulous opportunities for young people who have been technically trained?

Answer. The words "enormous," "unprecedented" and "fabulous" seem more appropriate to the moving picture industry than to the chemical industry. When our industry will have aggregate sales of 70 billion dollars, or some reasonable fraction thereof, I do not know. The chemical industry has traditionally been research-minded and has spent perhaps 3 percent of its annual sales in its research laboratories. Here, of course, is the lever that produces progress. If research on that large scale is even moderately successful, there can be no doubt at all that the industry will show progress, not only in its sales volume, but in its service to its sister industries throughout the Nation. As to opportunities for the young, there has never been a time when these did not exist. If we can assume that there will be adequate incentives to promote high performance, I see no reason why the future should not offer even greater opportunities to our youth than the past.

CHARLES S. THOMAS, SECRETARY OF THE NAVY

Question. Mr. Secretary Thomas, we are hearing and reading a great deal these days about our new Navy. Yould you tell us something about it, please?

Answer. The Navy is presently undergoing the greatest transformation it has ever known. All at the same time, it is passing from steam to nuclear power, from gun powder to nuclear weapons, from guns to missiles, and in the air from subsonic speeds to supersonic speeds. The advent of the atomic age has made the Navy even more important than it has ever been in the past.

The seas are still our cushions of defense; the seas are still our communication lines to our allies and friends; the seas are still our lifelines to overseas sources of raw materials; the seas are still the avenues of carrying the attack back into any aggressor's home territory. The day of the atom, therefore, has increased our dependence upon the sea.

The modern developments and weapons of our age are peculiarly adaptable to our fighting fleets. The Navy is making bold and imaginative efforts to adapt these new weapons and techniques for the further protection and security of our country.

This is the new Navy: New in the sense that it is progressive in its weapons and advanced in its thinking. In terms of fighting spirit, morale, and dedication, it is still the old Navy.

H. E. HUMPHREYS, JR., PRESIDENT, UNITED STATES RUBBER CO.

Question. Mr. Humphreys, we hear that 1956 is to be the greatest year yet in the history of rubber, with overall sales approaching $6 billion. It is said that the gain will be due largely to demand for replacement tires for cars, trucks, and off-the-road vehicles. But, we also hear disturbing comment about severe cutbacks in the automotive industry which could have direct bearing on your future market. Would you care to assure us in that regard, indicating how much of a stimulus you anticipate from the new highway program?

Answer. The rubber industry set a new sales record of $5¼ billion in 1955. We should beat that record in 1956. I think we may do a half-billion more. That would make a total of $5¾ billion.

In making this forecast, I am aware that car production is expected to be somewhat lower this year. And I well know that the automotive industry is of tremendous importance to the rubber industry. But increases in other lines should more than make up the difference.

There is a record number of automobiles on the road 2 years old or older, which will require new tires this year. The use of foam rubber in furniture and bedding is growing rapidly. We can also expect further increase in demand for casual footwear, for synthetic rubber, for plastics and many other products.

The general price level for rubber products increased slightly in 1955 due to higher raw material and labor costs. These higher prices, which will be reflected through all of 1956, will contribute to the expected dollar sales increase. Rubber consumption this year will remain at about the same figure of 1½ million tons.

Regarding the new highway program, I cannot see that it will provide any sales stimulus for the rubber industry this year. I doubt it could move that fast. But the program is much too important to think of in terms of one product, such as tires or one industry such as rubber.

Our 59 million motor vehicles—cars, trucks, and buses—sustain the life of our country. The roads and highways they travel are no less than America's arteries and veins. As we produce, distribute, and consume more and more goods, we need more highways, safer highways. I hope the program will move forward with the greatest possible speed.

DONALD A. QUARLES, SECRETARY OF THE AIR FORCE

Question. Mr. Secretary Quarles, in January, in Korea, you made a statement to the effect that Uncle Sam is determined to build up its own and allied air forces in the Far East by introducing modern weapons, including guided missiles. In your estimation of events to come, do you conceive of that action as carrying with it the possibility of pushing the Nation closer to the brink of war?

Answer. I do not. It is generally known that the Communists are building up their air power opposite our Far East positions at an impressive rate. They now have, and would be expected to continue to have, numerically superior air forces in the area.

Any buildup in the strength of United States or other free world air forces in the area could certainly not be considered provocative as long as it is faced by numerically superior Communist forces.

Moreover, it has been made abundantly clear to the Communists by President Eisenhower that we will not be aggressors and that our military forces are designed and deployed to discourage Communist aggression.

It seems clear to me, under these circumstances, that the proposed build-up of the free world air strength in the Far East would not have the effect of pushing the Nation closer to war, but would instead have the effect of emphasizing and reinforcing our deterrent position, and therefore the effect of improving the chances for peace.

L. RUSSELL KELCE, PRESIDENT, SINCLAIR COAL CO.

Question. Mr. Kelce, we are told that—according to best-informed authorities—the annual requirements for coal will increase during the next 10 years to approximately 800 million tons. What will be the nature of those requirements and, in your opinion, is the industry prepared to meet the annual requirement base with its present production facilities? If not, what must it do to meet such heavily increased demands?

Answer. It is not only my opinion but almost the unanimous opinion of all persons associated with the coal industry that we turned the corner in the summer of 1954, the year we produced less than 400 million tons. In 1955 we produced 465 million tons or an increase of approximately 17 percent.

There have been many estimates made as to our probable production 10 years from now, and it seems probable that our production would reach approximately 800 million tons. This is due to the tremendous increase in production of electric power, aluminum, steel and industrial growth, also the requirements of export coal from overseas.

If this demand is met by our industry it will require the expenditure of 5 or 6 billion dollars during this period for new mines, new techniques, new equipment and more efficient methods.

In this 10-year period 500 million or 600 millions tons of new production will be needed due to the depletion of older mines and the obsolescence of many. The industry must and will increase its average daily output per man day from the present less than 10 tons per man day to at least the figure used in our popular song "16 tons."

The coal industry has new life, with a great future ahead of it, and I can assure you that whatever demands are made upon us for increased production—we will be ready, whether it be for peaceful use or a case of emergency.

MAURICE H. STANS, DEPUTY POSTMASTER GENERAL

Question. Mr. Deputy Postmaster General, in President Eisenhower's recent state of the Union message, he said:

"Recommendations on postal facilities and on additional postal revenues will be submitted to the Congress."

What are the Department's proposals in these two interrelated matters?

Answer. In 1953 when we took over a postal system that was, by all standards, obsolete and antiquated, we set three goals:

1. To improve the mail service.
2. To reduce costs.
3. To make the postal system financially self-supporting.

The two recommendations for improved postal facilities and realistic postal rates are the last major steps we need to achieve these objectives.

We have improved the service. We have made many changes that are gradually coming to the attention of the public. We have added 7,000 new city delivery routes to serve 3½ million families. We have initiated later post office window hours and later pickup hours. We have provided new services such as combination mail and certified mail, and 75 other improvements for the benefit of the mailer. And we have been experimenting for some time with the carrying of regular mail by air, whereby millions of three-cent letters every day are reaching their destinations a day or more earlier than ever before.

We have reduced costs. Our gains can be proved with one statistical fact. In 1955, we delivered 8½ percent more mail than in 1953 and spent comparatively less money to do so. This was the result of a massive program of reorganization—the largest ever undertaken in any business—including thousands of projects to streamline, modernize and mechanize our handling of the mail.

Now for our present proposals. We have recommended a 5-year building and equipment program that will cost $780 million. We are proposing modest postage increases on first, second, and third-class mail, roughly 30 percent on each, to bring in about $400 million a year.

We occupy 25,000 postal buildings, some leased and some owned by the Government. Many of these are rundown, overcrowded, and poorly lighted, monumental structures that were built 50 or more years ago. No post office has been built with Government money since 1938, but since then our volume has doubled.

In several major cities, postal facilities are so inadequate that, rain or shine, mail must be handled on the sidewalk. Indoors the work of thousands of postal employees is hampered by inadequate space, poor ventilation, old-fashioned equipment, and obsolete lighting. These conditions slow service, breed inefficiency and impair employee morale. Most of these buildings badly need modernizing or enlargement. Some need replacement.

That is our facilities problem. Our deficit problem is equally serious. In 1952, the Department lost $727 million. In 1955, our program had reduced this to less than half. But then Congress voted increased wages and other benefits to our employees, so our deficit this year will be back up to nearly one-half billion dollars, despite everything we have done.

In the past 10 years the post office has lost $5 billion. That $5 billion would have purchased 5,000 new million-dollar schools, or a four-lane super highway from New York to Los Angeles and back to New Orleans.

The trouble is that we are still charging 1932 postage rates and paying 1956 costs. Our rate proposals would stop this financial irresponsibility. They would give us the money to fix up our buildings and buy automatic equipment—and enable us to do the rest of the job in providing the American people with the best possible mail service at the lowest possible cost.

Isn't it time that we have the courage, as citizens, to face up to this unpleasant task? Isn't it time that we stop passing on our unpaid postage bills to our children and grandchildren?

DR. CHARLES ALLEN THOMAS, PRESIDENT, MONSANTO CHEMICAL CO.

Question. Dr. Thomas, we are told that prospective developments in chemical agriculture place the agricultural frontiers of America in the chemical laboratories and experiment stations, promising a food supply adequate, for the first time, to feed the world's population, of which the vast majority is still engaged in food production by manual processes. What effect will new discoveries in agricultural chemistry have on future man-hour requirements and farm output?

Answer. Farm output has doubled in the United States since 1900 while the acreage in farmland has remained almost constant and the number of farm workers has declined almost by half.

Three major revolutions in agriculture have contributed to this progress: The biological, the mechanical, and now the chemical revolution.

The biological revolution, dating from 1850, brought control over nature through genetic selection, disease-resistant crop strains, and, later, selective animal breeding and hybrid corn.

Then, in 1910, came the mechanical revolution led by the farm tractor, 4¾ million of which are now in use on American farms,

along with a wide variety of other labor-saving machines. The 22.5 million man-hours of farm work in 1910 has been reduced to about 14 million man-hours today.

The chemical revolution dates from the early 1940's with the start of widespread chemical fertilization and the development of organic pest controls, notably DDT insecticide and 2,4–D weed killer. Two million tons of fertilizer were used in 1940, compared to 6 million tons in 1954.

Consider, too, the fact that more than 3,000 species of insects and twice that many diseases prey on our farm livestock and crops. The annual farm loss to insects, weeds, and diseases in the United States is estimated currently at $12 billion each year. That is roughly one-third the dollar value of our total farm output.

Since 1945, 25 major new organic pesticides have been developed by the chemical industry. Despite the fact that farmers are using at present rates more than 1 billion pounds of these pesticides years, Government statistics show that more than 80 percent of our Nation's cropland still goes untreated chemically each year.

If, through wider use of available farm chemicals, the farmers were to succeed in cutting their present losses to insects, weeds, and other pests in half, this would represent more than a 16-percent increase in farm output. In addition, it is estimated that the full use of fertilizers would increase corn production over present levels by 81 percent, wheat by 95 percent, soybeans by 58 percent, and cotton by 124 percent.

Meanwhile, chemical companies are investing heavily in research programs which should yield a variety of new chemical hired hands; systemic insecticides which render the hides of livestock and the tissues of plants toxic to their insect pests while harmless to humans; growth regulators which delay blossoming, prevent dropping of fruit, and speed ripening of crops; controls for the tiny, wormlike nematodes which feed on plant roots, highly selective weed killers, such as one we have now which kills grasstype weeds in grass crops without injury to the crops.

How incongruous all this seems, with today's problem of overproduction on our farms. But bear in mind that our population of 160 million is almost double the figure of 1900, and a 25-percent increase to 200 million is predicted by 1975; and it may be 250 million by the year 2006. After the turn of the century the world's population could conceivably double, so to disprove the Malthusian theory in the coming years there will have to be a decided emphasis throughout the world on the effort to make 2 blades of grass grow where 1 grew before.

CLARENCE DAVIS, UNDER SECRETARY OF THE INTERIOR

Question. Mr. Secretary Davis, some experts are predicting that, within 15 years, the Nation's fresh-water supply will be dangerously short for meeting the needs of our expanding population and greatly increased industrial and agricultural demands. Will you tell us, please, what plans are under way in your Department to avert the possibility of such a future economic and/or military disaster?

Answer. It is very true that we face a tremendous water problem in the United States. We must recognize that we cannot take our water supplies for granted. By 1975 our water needs for domestic and industrial use can be expected to increase 145 billion gallons. This is a lot of water. Just how much, you can visualize best, perhaps, by noting that it is equivalent to the flow of 11 Colorado Rivers. While it is certain that we face a water problem of extraordinary proportions, it is equally certain that there is an answer.

I am convinced that a large part of this answer is to implement the Water Resources Policy Report recently approved and sent to Congress by President Eisenhower. This report provides a blueprint for the necessary action to ease this country's existing water shortage and to meet the water needs for a population of 200 million people by 1975.

Your question asked what plans are under way in my Department to avert the possibility of future economic and/or military disaster caused by a shortage of water. The Department of the Interior has many important responsibilities for our water resources.

We are carrying forward a stepped-up program for the collection of the basic data on rainfall, streamflow, and so forth, which the Nation needs to plan our water-resource programs soundly. We are conducting a research program to develop an economic means of desalting saline water. We are working closely with the Department of Agriculture to give increased emphasis to the upstream-watershed program. We are continuing to build multipurpose water projects which contribute in so many ways to the advance of wide areas of our country. We intend to carry out these assigned responsibilities vigorously in keeping with the scope of the problem the Nation faces.

The main point which I want to emphasize in dealing with this water problem, however, is that it is not a job for the Department of Interior alone. Or for the Department of Agriculture, or the Corps of Engineers alone. The many necessary programs which are a part of a sound-water program must be carried out on a cooperative basis, with all Federal, State, and local agencies participating actively.

By working together on this vast problem we can best assure that our future needs for water will be met and that water shortages will not hinder the continued expansion of our economy.

LEWIS L. STRAUSS, CHAIRMAN, ATOMIC ENERGY COMMISSION

Question: Admiral Strauss, now that Russia has the necessary know-how for atomic and hydrogen warfare, is there any real reason left for withholding so-called secret information from industry and the public? If not, can we now look ahead to an earlier atomic energy future for heat, power, and other commercial uses?

Answer: Because of the manner in which your question is phrased, a really comprehensive answer would require considerably more than 3 minutes allotted. However, I shall try and respond to it, as best I can, within the time limitation.

First of all, the fact that the Soviets have learned how to build nuclear weapons does not mean that a static point or a point of equality in such weapons has been reached. Technology in the field of nuclear weapons, as indeed in all kinds of weapons, is constantly changing. Refinements and improvements occur in design, application, and effectiveness. We are always at work on new weapons, intended for specific tasks of the Armed Forces in particular situations; we are developing, manufacturing, testing, and stockpiling a variety of nuclear weapons to assist in defense against attack.

What your question refers to as "so-called secret information" is, in the main, data bearing upon the design or the components of nucelar weapons. The very survival of our Nation may well depend upon the effectiveness of the secrecy of such information.

I should also point out that the need for such security is not impeding the expansion of the peaceful uses of atomic energy. There is no information of use to the peaceful application of the atom which is not already freely circulated or readily available to responsible American industries and individuals under our system of access permits.

We now have the beginnings of a substantial atomic energy industry. It is making use of this access arrangement effectively.

The first full-scale atomic powerplant will be in operation in the United States next year, others are in negotiation and design. The limiting factor on the growth of this new industry will not be Government security regulations, but only the time required to improve technology to the point where atomic power is economically competitive with power produced by conventional means.

WALTER WILLIAMS, UNDER SECRETARY OF COMMERCE

Question. Mr. Secretary Williams, no one in this audience is more cognizant than you are of the basic values of advertising to the distributive processes of the economy and we know that you keep yourself fully informed concerning the functions of business publications as specialized spokesmen for business and industry. If 1956 is to be more competitive than 1955, do you visualize a greater need for adequate advertisting, as a positive market stimulus, and do you consider the business press a definite economic asset in that respect?

Answer. Your question is directed toward an evaluation of the need for more advertising in our economy, and the contribution of the business press to advertising. Since one can hardly speak of advertising apart from merchandising and selling—nor of the business press apart from the many other media used to keep our people informed about the increasing volume and variety of goods and services we produce, I would like to address my remarks within this larger framework.

Through merchandising and selling we move the products of our economy toward the people—through advertising we pull our people toward the products. By means of all of the activities in merchandising, selling and advertising, and the many other functions in distribution we utilize a market mechanism which is indispensable to our highly developed industrial economy in which we are so rapidly exploiting the fruits of scientific research, technology and automation.

We measure our gross national product in the volume of goods and services produced. But our standard of living is measured in terms of personal consumption. A sustained and expanding production and a rising standard of living are dependent on the expansion of markets and increased consumer expenditures irrespective of our capacity to produce. Production, distribution, and consumption are interdependent. Moreover, an increasingly high level of employment can be continued only by sustaining and increasing the level of both production and distribution.

Last year it took about $4 billion of consumer expenditures, along with $2 billion of investment and Government purchases, to provide employment to 1 million persons. While these proportions change from year to year, if personal consumption continues in the future to absorb about two-thirds of the gross national product, then in the long run we are going to have to sell $4 billion more to consumers for each rise of 1 million persons in the labor force.

In addition, our productivity is steadily rising with advancing technology, continuous improvement in the quantity and quality of our capital assets and constant advances in the education and skills of the working population. It requires additional sales of perhaps $5 billion a year to consumers, with proportional changes in other types of spending, merely to absorb the additional products which a constant labor force can turn out. And this amount will grow as our economy expands. Of course, some of this increase in productivity can be absorbed by reducing the average length of the workweek, and increasing leisure as we have done in the past.

But, however, we view the future with its improved technological development and population expansion—greater emphasis must be placed on sales and selling.

Every business in America has something to sell—and the security of its investment,

its opportunities for employment and its success and profitability, all are dependent on a successful sales job. Consequently, distribution is one of the most vital parts of our economic system, and advertising is a vital part of distribution.

This is my answer to the first part of your question.

Critics of advertising point to alleged waste in the promotion of competing products and brands; to excesses in advertising appeals; and to high-pressure sales methods. As in all other fields of human endeavor, there exists a minority whose methods or motives are subject to question. But I have found that the great majority of advertisers, and advertising media, conscientiously establish, accept and adhere to high standards of ethical practice.

The importance of the basic function of advertising is often overlooked by its critics. In a mass production economy characterized by variety, constant change and improvement, successful distribution demands adequate information on availability quality, and performance. It also requires a dynamic stimulation to consumers motivating them to buy new, better, and more products in order to live better—and to earn more in order to do so.

In addition, there are many byproduct values from which we benefit through the function of advertising. Not least among these are the trade, technical, industrial, and business press of our country which disseminate information on current developments in science, engineering and technology on new products and processes, methods of goods handling and other aspects of improved production or distribution. Without this exchange of information through the business press, the broad application of the fruits of discovery, invention and progress could never be fully realized. If it were not for the support of advertising our business press with its widespread exchange of scientific and technical information could not exist.

This is my answer to the second part of your question.

The Advertising Council's film and booklet Miracle of America dramatized the significance of production to our economy—Challenge to America, produced by the Joint ANA-AAAA Committee on Understanding of Our Economic System dramatizes in a similar manner the importance of marketing and distribution.

Advertising, selling, merchandising, and all of the other functions and institutions involved in distribution, constitute a major segment of our economy—one which is destined to assume increasing burdens and greater responsibilities.

As our economy and our population continue to grow and expand, and as the level of total consumer income and the proportion of disposable income continue to rise, we must redouble our efforts to improve, expand, and make more effective all of our techniques of advertising as well as all other activities directed toward the expansion of markets.

You of the business press have a major responsibility in this respect, not only for your own success, but also the continuing success of many others dependent upon your efforts. I am confident that you will meet this challenge as you have met many others in the past.

WILBER M. BRUCKER, SECRETARY OF THE ARMY

Question. Mr. Secretary Brucker, as the advent of long-range guided missiles as major weapons of future warfare rendered artillery and the foot soldier obsolete? If so, why do we continue the Army, per se, as a branch of the Defense Establishment?

Answer. I am most happy to have the opportunity to answer this question.

The advent of long-range guided missiles has not rendered either artillery or the foot soldier obsolete. If there has ever been any uncertainty about the mission of the Army in modern warfare, and how it fits into the overall defense picture—especially in relation to airpower and our nuclear capabilities—let any such doubt be now dispelled. As long as man lives on the land and depends upon the land for his sustenance we will always need an Army.

The strength of the Army is fundamentally the strength of men—of trained soldiers. The mission of the Army is to conduct prompt, sustained, and successful combat operations on land, to defeat enemy forces, to seize and hold ground and to dominate the enemy and his means of waging war. There is nothing that has occurred so far which has made the accomplishment of this mission less important than it has been in the past.

We need an Army—a strong Army today because of the threat facing the free world. That threat—the international Communist movement has many faces. It shows itself in the guise of political and economic warfare, propaganda, subversion, and armed force. The military part of the threat included not only atomic weapons, but also large and effective armies. It takes men on the ground—soldiers—to make aggression finally succeed. And the only way to deter aggression of this kind is to have enough land forces to make any would-be aggressor think twice.

The United States Army, and the armies of our free world Allies, and supported by strong Naval and Air Forces, is a major deterrent to aggression and war.

The Korean and Indochinese wars have indicated that an air-atomic capability alone cannot deter all forms of aggression. The Army is necessary to counter the conventional capabilities of our potential enemy as military parity in atomic weapons is approached.

We live in an era in which we may be headed toward atomic stalemate. A potential enemy, may well increase his attempts toward expansion in the vulnerable areas of the world, using the land armies of the Communist bloc. Our Army is needed to deter or defeat local aggression without necessarily broadening the local war into the atomic war we all seek to avoid, if mankind is to survive.

The Army is essential to the support of America's collective security policies—with its means that can be easily recognized on the ground. The American soldier stationed in an overseas area is there for a purpose the potential enemy understands.

The Army provide the Nation great military versatility. It can apply force with discrimination; it can apply force in the right amount at the right time, in all types of weather and in all types of terrain.

The Army is vitally interested in all weapons that will extend its capabilities. It is not welded to any existing weapons or any weapon now under consideration. It will not discard its traditional weapons in favor of any single "best" weapon, since no one can predict the precise weaponry that would be required in any future war nor can we forecast the exact nature of any future war.

What I have said, I believe answers the question. I repeat no weapon that has appeared on the military horizon has made artillery, the foot soldier, or the Army obsolete.

The Army is and will remain a decisive factor in warfare.

J. H. CARMINE, PRESIDENT, PHILCO CORP.

Question. Mr. Carmine, we note with interest the recent consent decree entered into between A. T. & T. and its subsidiary, Western Electric, through which over 8,000 patents will be released and licensed without charge. In your estimation, what economic effect will such action have on the future of the radio-electronics-television industry, which is presently forecasting a $500 million sales gain, $250 million of which is to come from purchases of color receivers?

Answer. I think this question is almost as loaded as "Will Eisenhower run?" and "How do we stand on atomic energy and guided missiles." To say the least, I certainly wouldn't want to hold myself up as the outstanding authority on patent situations and antitrust suits.

In the electronics industry, the A. T. & T. has been most liberal in working out cross-licensing and patent arrangements with those who requested them in the industry. And they have, of course, through the Bell Labs, contributed tremendously to the growth of our country and to great new patents and developments of patents from which great developments have benefited all of us in this Nation.

So they should be tremendously encouraged to carry on all of their great research work. The effect, however, should certainly be the lowering of prices in the electronics industry and the greater encouragement of other smaller electronics companies and laboratories to develop new and greater things from this magic electronics world. Many new patents or many developments come from the smallest laboratories in our country. And we certainly hope that this will be an encouragement to the electronics industry. I think that it will have that effect.

From the standpoint of color television, which is on the minds of everyone, it's pretty hard to predict whether this sales estimate, Mr. Chairman, will come true. There's been so many false starts and so many estimates as to when color television would get started it's pretty hard to predict. One thing I can tell you is that the industry has learned today, for the first time, how to build a good, stable, sound, workable television receiver. And they will get started this fall in fair quantity. In 1957 it should be one of our major industries and 1958 will blossom into one of the countries most gigantic and promising industries which will be most beneficial to all. Thank you.

ADDITIONAL REMARKS OF MASTER OF CEREMONIES RUFUS CHOATE

We come now to a proud moment for the business press—the presentation of its silver quill award. You may be sure that numerous candidates of high caliber were recommended to the selection committee. But, in the fabulous area of research, there was a name that stood out above all others and it belonged to a man whose deeds are even more fabulous than all the rest. As has been underscored by many messages of commendation to this dinner, it is we who are honored, beyond measure, in having the privilege of honoring so grat an American. In fact, ladies and gentlemen, we are doubly honored and twice privileged in having with us tonight to make the presentation of our silver quill the president of the Chrysler Corp., Mr. L. L. "Tex" Colbert, whose company was the first in the United States to design a working gas-turbine engine that could be installed in a passenger car of normal size and which could be driven in city streets. I ask you—where else but in America could you find such a situation as this—two highly competitive giants of industry, General Motors and Chrysler, sharing the same spotlight and saluting the economic freedom that guarantees their right to compete.

Mr. Colbert, the business press is honored to have you here to make the presentation of its silver quill award at this time.

REMARKS OF L. L. COLBERT, PRESIDENT, CHRYSLER CORP., IN PRESENTING THE 1955 SILVER QUILL AWARD TO CHARLES F. KETTERING, GENERAL MOTORS CORP.

Mr. Chairman, honored guests, ladies and gentlemen, my role this evening is one in which I find deep personal pleasure, particularly because it involves a well-earned presentation to a warm friend and a most respected competitor.

All of you who are members of this association which represents the business press of the country are to be congratulated for selecting Charles Kettering as the recipient of your silver quill award this year. He is a great man and a great American.

I am sure you were fully aware when you decided to honor him that you were also honoring one of our best-established and most popular national traditions. People like to honor Mr. Kettering, and they have been doing it for more than a third of a century. If my arithmetic is correct, this is the 87th time that he has had honors bestowed upon him. He has received 18 honorary degrees as doctor of science, and 5 as doctor of engineering. He has been made an honorary doctor of laws by five different institutions. And he has received 58 additional honors, including medals, special awards, citations, and honorary life memberships in professional societies. He has been honored by our greatest universities, by business associations, by foreign governments, by his friends in his own home town, and by groups representing American youth.

In a very literal sense Charles Kettering is one of the very most highly honored Americans. And we don't have to look very far to find the reason why he holds this place in the Nation's esteem.

In part it is because of the concrete contributions he has made to our comfort and pleasure and to our national wealth through his own inventions and those he has inspired in the minds and imaginations of others. In part, it is because of his own character and personality—his friendliness, his unswerving honesty, his idealism—qualities which we would all like to think are typically American.

But, in addition to these things, we honor him because by his example he has taught us to tackle the future as a great adventure. He has given momentum to the job of building a civilization and has taught us to look upon that job as one we have just begun. He has reminded us constantly that our automobiles, the factories that produce them, and all of the other technological wonders of the modern world are only a good start—and that we can do a lot better. He has never settled back and looked upon past accomplishments with complacency. He gets his fun and his satisfaction out of new problems. As he once said, "The minute you get satisfied with what you've got, the concrete has begun to set in your head."

It is this quality in Charles Kettering—this zest for the future, this appetite for change—that makes him a symbol of the American drive to improve an imperfect world. And it is this drive, after all, which underlies the productivity of American business and the strength of our economy and our national defense. It is also the unique contribution of our American civilization to the rest of the world.

Now, in presenting the fifth annual Silver Quill award of National Business Publications, may I read you the inscription on the plaque: "To Charles F. Kettering for most distinguished services to business and industry through research."

Boss Ket, it gives me great pleasure to hand to you the silver quill and please accept my heartiest congratulations.

REMARKS OF CHARLES F. KETTERING, GENERAL MOTORS CORP., IN RECEIVING THE 1955 SILVER QUILL AWARD OF NATIONAL BUSINESS PUBLICATIONS

Tex, Mr. Chairman, ladies and gentlemen, I haven't the words to express my appreciation for this, but I still have some doubt as to how I go classed as a businessman.

You see, there are two kinds of people. That's the reason I want this (the award) to face toward you, so that you can see this pen. There are two kinds of people in the world. Those who work at desks with pens and paper and those who work at benches with screwdrivers and pliers. I'm a screwdriver and plier man.

I'm in no wise evaluating the relative importances of the two things. This (the award) represents management, planning, and all that sort of thing—even advertising. And I'd like to point out that neither Tex nor myself is the kind of person that our advertising agents have led you to believe.

I've been an inventor all my life and inventors, as you know, are known as longhairs or screwballs. Well, nature has taken me out of one of these categories. But the reason why we're called screwballs is a very simple thing.

The Honorable Governor Brucker here (Secretary of the Army) comes from a State which advertises for tourists. And, in some of the fine cities, just at the outskirts, as you enter the city there'll be a big billboardd and a map of the city or the county, with a little arrow running down to a sign saying "You are here." But the difference between the inventor and people—and, remember, we're a disappearing race, for the reason I am going to give you. Now, the only difference between people and screwballs is that people are only interested in where they came from. Screwballs are inteterested in where they are going.

Now, whenever you get in doubt as to where you are going, you turn around and study where you have been. You won't find out anything there that will help you at all. But it is a nice subterfuge for facing up to the problem. You know, problems come to us by nature, I mean, in the business we are in. And we've been very clever to have programs and projects which are means of detouring the problem and making it possible to write nice reports to our bosses. The problem must sit back, then, and feel like this because you never touch it.

You know, thinking about this state of the Nation dinner, I think you might be interested in seeing how the state of the Nation looks through an inventor's eyes. You see, you're mostly worried about the seething of current effects. Now you can't do anything to fix anything today, today. You had to fix it 10 or 15 years ago. So all of this is just turbulence.

Now the great problem we have to see through is how far in the future do you have to know your business to have it safe today.

Most people are so afraid of going through the iron curtain of tomorrow that we come up and hit it and turn right around and go back the other way. We read a little more history. I have been trying to get a word for years that means the exact opposite of history, because I am interested in the future, very much interested, because, that's where I expect to spend all the rest of my life.

The only suggestion that I have had for that word yet has been hysterics. And I know that's not the right word. But, about looking forward, you know nature has been very good to me. I have always had very poor eyes. I have not been able to read too much.

Because I always thought that this was a wonderful country that we live in. We've done a lot of things. Charlie Thomas sitting over here spoke about the great surplus of agricultural products which I understand we have. He mentioned the farm tractor. But, one part of that farm tractor is very important, one of the great inventions of all times. And, as you know, you don't have to have a universal bunch of inventors, if you have just a few of them. And, so, that percentage of 5 percent of them doing 80 percent of the things—well, there's nothing new about that.

There's only 2 percent of the people who ever composed any music at all. And you daren't play some of that. The little tricycle tractor that lets you come up so that you can cultivate a row, then turn around, lock the wheel, go back the other way and cultivate another—that's what took the horses off the farm. And, in the last 25 years, we have taken 20 million horses off the American farms.

Now, that's important for this reason, because every time you don't feed a horse you can feed 4½ people. Now, it's a little hard on the horses, but nevertheless that's given us a tremendous surplus of food. A hundred million more people we can feed, without farming anymore land. When you took the horses off the farm, you lost your market.

Now, the great problem that I have found and, this is true, I think, every place, is that it's so difficult to do anything new. I don't care what it is. And the reason for that, and I think, I know the reason for it, is simply this—we can be residents in space, but you can't be a resident in time. You are going to transient. The only time that you'll ever become a resident in time is in the undertaker's office.

You are going to be a transient, tomorrow's going to be different. The next day is going to be different. But we want to arrive, whether it's that desire for security, I don't know, but you are never going to arrive any place, because the world won't stand still. The next thing is we know so little about anything that it's all yet to be done. So, it's important for these great business publications which you represent here to keep the thing going—pointing out where we're going. Let us remember we don't care where you came from. We'd like to know where you are going. Thank you so much for your applause and thanks to the business publications again for the award.

Nineteenth District Poll

EXTENSION OF REMARKS
OF

HON. JAMES M. QUIGLEY

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 20, 1956

Mr. QUIGLEY. Mr. Speaker, under leave to revise and extend my remarks, I include the tabulated results of a poll of opinion I have conducted in the congression district which I represent.

Late in December I mailed questionnaires to every 10th name appearing on the voting lists in the 3 counties of the 19th district. The response has been most excellent, running about 12 percent. I think it reflects well the intelligence and interest of the voters of this area. Those who responded had to furnish their own envelope and stamp. The comments which accompanied so many of the returns are indicative of the careful thinking with which the respondents approached their answers.

Members may read some significance in the results of this particular poll insofar as they reflect the thinking of President Eisenhower's new neighbors. The President and Mrs. Eisenhower recently became official, voting residents of the 19th district when they registered at the Adams County Court House in Gettysburg.

Questions	19th district		Adams		Cumberland		York	
	Percent yes	Percent no	Percent yes	Percent no	Percent yes	Percent no	Percent yes	Percent no
1. Do you favor, at this time, a reduction in Federal taxes?	58	42	54	46	55	45	60	40
If your answer was "yes" indicate which of the following methods would be fairest:								
(a) Increase in personal exemptions	72		58		80		81	
(b) Eliminate excise taxes	6				3		9	
(c) Curtail excise taxes	5		5		4		7	
(d) Decrease corporate tax rate only	2				3		2	
(e) Across-the-board rate reduction	24		5		24		30	
2. Does the present farm crisis require Federal action?	56	44	53	47	62	38	68	32
If your answer was "yes" indicate the proposals which appear to offer the best solution:								
(a) Fixed price supports	22		8		18		30	
1. 90 percent of parity	17		8		17		23	
2. 100 percent of parity	5				1		7	
(b) So-called soil fertility bank	17		15		25		15	
(c) Direct farm subsidies on all crops, similar to present program for wool	8				6		9	
(d) Increased market research	34		19		35		36	
(e) Use of present surpluses to feed world needy	71		53		68		75	
(f) Combination of all above	17		10		26		41	
If your answer was "no" indicate whether we should:								
(a) Abolish all farm aid programs	37		39		43		35	
(b) Continue with present flexible price support program	63		32		57		53	
3. Do you favor a program of Federal aid to education?	75	25	80	20	73	27	78	22
If your answer was "yes" indicate the programs you believe most justifiable:								
(a) Grants to States for school construction	35		42		29		45	
(b) Aid to teacher-training institutions	14		13		10		16	
(c) Grants to help defray teacher salary costs	24		25		32		22	
(d) Grants to help defray administrative costs	6		4		3		7	
(e) Federal guaranties of local school bonds	13		2		10		16	
(f) Combination of all above	48		33		31		54	
4. Should the Federal Government concern itself with the problem of rising costs of medical services and care?	64	36	57	43	54	46	67	33
If your answer was "yes" indicate your preference of the following suggested programs:								
(a) Health insurance modeled along lines of social security	58		42		45		63	
(b) Increase funds available for hospital construction	14		19		14		16	
(c) Provide grants to operate hospitals	13		14		16		14	
(d) Grants to medical and nursing schools	17		16		19		17	
(e) Medical and nursing scholarships	23		22		33		21	
(f) Federal guaranties against losses to private health insurance and hospitalization plans	11		12		11		11	
(g) Combination of all of the above	24		17		22		25	
5. Should we continue to have Federal housing programs?	65	35	67	33	70	30	64	36
If your answer was "yes" are you satisfied that present policy is providing an adequate program?	49	51	31	69	60	40	48	52
If not, indicate whether any of the following moves are necessary for improvement:								
(a) Permitting FHA to insure cooperative projects	21		42		16		21	
(b) Increasing direct loans to veterans	31		68		34		26	
(c) Expanding public housing programs	40		100		60		28	
(d) Combination of all above	59		20		55		65	
6. Are you satisfied with present foreign policy programs?	39	61	53	47	46	54	36	64
If your answer was "no" indicate whether you favor the following:								
(a) Continue to support United Nations	57		74		46		58	
(b) Withdraw from United Nations	7		15		5		6	
(c) Withdraw from all overseas commitments	11		15		11		12	
(d) Strive to strengthen United Nations	63		95		46		63	
(e) Continue foreign economic aid programs as is	10		27		9		8	
(f) Increase tempo of foreign economic aid	14		15		11		15	
(g) Further emphasize point 4 program of technical assistance to underdeveloped areas	44		73		34		43	
7. In the light of existing world tensions, should we:								
(a) Increase our military strength	44		42		54		43	
(b) Continue military establishment at present levels	50		54		45		50	
(c) Make further national defense cuts	6		4		1		7	
(d) If you checked (a) above, do you then believe we should adopt universal military training?	73	27	63	37	84	16	72	28
8. Do you feel that the Taft-Hartley Act provides the fairest basis for Federal supervision of labor-management relations?	49	51	58	42	52	48	47	53
If your answer was "no" indicate whether it should be:								
(a) Repealed with no replacement	8		7		10		8	
(b) Repealed and replaced with a perfected version of the Wagner Act	56		47		55		57	
(c) Amended to meet the objections of labor	36		32		24		40	
(d) Amended to meet the objections of management	22		20		20		23	
9. Both major political parties have recommended amendments to McCarran-Walter immigration law. Do you agree?	75	25	71	29	80	20	74	26
If you answered "yes" indicate whether:								
(a) Quota system should be abandoned	8		17		4		8	
(b) Unused quotas should be transferred to countries where they are oversubscribed	35		28		36		35	
(c) Temporary adjustments should be made by extension of and amendments to Refugee Relief Act	62		63		60		62	

Ridiculous Stand on Farm Proposals

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 16, 1956

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks, I am including a very timely editorial from the Racine (Wis.) Journal Times on the subject of pending agricultural legislation. I agree with the sentiments expressed in this editorial and prayerfully hope that the committee may have a Federal farm program based upon its merits and not upon political pressures:

RIDICULOUS STAND ON FARM PROPOSALS

The Senate Agriculture Committee, confronted with a choice of two measures to subsidize the American farmer, "happily" chose both of them. It didn't seem to bother a majority of Senators on the committee that the two plans submitted to them—the soil bank and high rigid price supports—are mutually contradictory.

The high price support plan, which Congress kicked in the slats last year when it had built farm surpluses to a point perilously close to a national scandal, is a repudiated policy and one of the major causes for the predicament the farmer is presently in. The Eisenhower-Benson soil bank program, while continuing present flexible price supports, would continue to hand the farmer cash for land he doesn't farm and work he doesn't do, but it would at least have the virtue of reducing surpluses.

The plans are certainly at odds. The high price support program would actually encourage more production on the part of the farmer by assuring him that he could continue to grow surplus crops and sell them to the Government. The aim of the soil bank program is to take land out of production and thus reduce surpluses.

Adopting both of them would be legislative insanity. Yet that is exactly what the Senate farm committee asks Congress to do.

Two Secretaries of Agriculture, one an incumbent Republican and the other a former Democratic Secretary, have been revolted at this frivolous, politically motivated action of the committee. Secretary Benson and former Secretary Anderson, now a Senator and a member of the committee, both blasted the committee action over the weekend, and said they hoped President Eisenhower would veto this strangely mismated plan if it clears Congress, Anderson called the bill "atrocious," and Benson said it was "a step backward."

The country is still waiting for someone to make sense on matters of Federal agricultural policy this year. The only plans and programs submitted so far have been warmed-over versions of past mistakes, gilded and embellished to make them look politically attractive. Congress is showing an apparent desire to pass any and all of them, in a hope that all the past mistakes will add up to some wonderful program that will buy the farm vote. The fact that all these past mistakes have played an important part in causing the very problem they are trying to solve has not occurred to the vote-buyers.

Third Anniversary of the Farmer's Betrayal

EXTENSION OF REMARKS
OF
HON. MORGAN M. MOULDER
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, February 20, 1956

Mr. MOULDER. Mr. Speaker, 3 years ago on January 20, 1953, the Eisenhower big-business-Benson administration was inaugurated. The ensuing 3 years have witnessed a steady downward drift of farm prices and purchasing power. The decline in net incomes of farmers have been even more severe because farmers' operating and living costs have not decreased; in fact, the cost of many items have increased.

The total net incomes of farmers in 1952, the year Mr. Eisenhower was elected President, was $15 billion. By the third quarter of 1955, the total annual net income was reduced to $10 billion. This represents a decrease of 33⅓ percent or a one-third cut in the net income of the farmers of America and their families since the year 1952, and during the past 6 months the farm income picture has grown much worse.

Although the total farm production for the year of 1955 was 12 percent greater than in 1947, gross farm income was 9.4 percent below 1947 and net farm income was down 38 percent. During the same period national income from nonagriculture sources increased about 68 percent and farm production expenses increased 11.4 percent. The parity ratio, which measures the relationship between prices received by the farmers and prices paid by farmers, dropped from 115 in 1947 to 80 in January of this year.

The farmers are the victims of a cost-price squeeze, and while the farmers' income has steadily declined, big business corporation profits have gone up higher and higher. Big business manufacturers, processors, commodity markets, packers, stock markets, transportation carriers, et cetera, have more than doubled and redoubled their net profits. General Motors Corp. reported a net income of more than a billion dollars for last year.

Mr. Speaker I say that the Republican publicized Eisenhower "prosperity and peace program" is a gross misrepresentation, and a grave danger to our national economy when it is revealed in the light of the fact that one of many big profiteering corporations—General Motors—reaped a profit last year equal to one-tenth of the total combined annual net income of 22 million loyal American farm people.

Another example of the Eisenhower "boom-prosperity and peace" program is the profits of Armour Packing Co. Profits of this company increased 600 percent in the year 1955. All other packing companies and processors report the greatest profits ever known in their operations.

Mr. Speaker, the farmers of America do not object to big business profits—we favor such profits if not unreasonable. The farmers do not wish to injure or prevent anyone's prosperity but they are entitled to their rightful share of the profits from our national resources and prosperity.

During this phony boom period, the Eisenhower administration has consistently followed a course of action designed to force farm prices down. On every occasion when the so-called flexible price support law permitted, the administration has reduced the support price when and it was above the free market level.

Mr. Speaker, I opposed and voted against the flexible or sliding scale farm price support bill when presented by the Republican leadership and passed here by the Eisenhower administration and Republican Congress 2 years ago. Instead I favored a 100-percent parity price for all farm products, and I supported and voted for a continuation of 90-percent parity price support program as was presented for a vote on the floor of the House at that time.

The Eisenhower administration of our agriculture programs has opposed and continues to oppose 100-percent parity protection for the farmers. The farmers are not willing to accept and must not be compelled to accept the controls of the soil-bank program without rigid 100-percent parity price support protection. The main opposition presented by opponents to parity price support protection for the farming industry is an exaggerated complaint against accumulated farm surpluses.

Mr. Speaker, for all of the 8 years from 1947—the first year after demobilization—through 1954 the average annual surplus of this type, for all farm products dumped together, has been only 1.6 percent of annual production, with an excess production in 5 years and a deficiency in the other 3.

According to the official figures from the Commodity Credit Corporation, December 31, 1955, we have a surplus supply of corn which would last 3 months and 19 days; present supply of wheat would last 13 months and 10 days; butter, 1 month and 14 days; milk, 1 month and 27 days; barley, 4 months and 14 days; oats, 24 days; and soybeans, 29 days.

Quite aside from the fact that accumulated farm surpluses could be used advantageously both at home and abroad, they are not in the aggregate excessively large as an emergency reserve. If war should break out or a national catastrophe occur, a total accumulation of farm products amounting to less than one-third of 1 year's normal production would be a minimum safeguard. Indeed, we would be more safe if we had more surplus farm products in reserve storage. We now have an inventory of over $100 billion worth of military equipment and supplies. How large, in comparison, is the $8 billion our Government has invested in surplus stores of food and fiber, and which could at any time be liquidated for sale at world markets outside the United States?

Mr. Speaker, there would be no farm surpluses if home consumption was expanded and exports of farm products enlarged. But unfortunately for the farmers of America, the Republican administration now in power protects foreign agriculture from American farm exports in order to increase the exports of the manufacturing industries.

Big business and big industry are protected by the Eisenhower administration by Government subsidies and special tax privileges to enable them to maintain certain price charges and limit output. Farmers are compelled to buy in a protected administered price market asking, "What is your price I am compelled to pay?" Farmers must sell in competition with millions of other farmer sellers to a monopolistic-type market, taking what they are offered as set by the monopolistic market price.

Mr. Speaker, big business corporation profits, after taxes, have increased by more than 36 percent since 1952. During this same period farmers' net income has decreased by more than 30 percent. The consumers of food and farm products are not deriving any benefits from falling farm prices. The average prices received by farmers for all products are now 26 percent lower than in 1951, but the food prices paid by consumers are about the same as in the year 1951. For example, prices received by producers of beef cattle in mid-December 1955 were equivalent to only 67.1 percent of the 1947–49 average, but the cost of beef to the consumer has not decreased.

Mr. Speaker, it is a sad state of affairs when farmers are becoming worse off while others are prospering. It shocks human instincts and commonsense to see cutbacks in production and hear talks of surpluses while millions of American families lack adequate diets and hundreds of millions of people elsewhere in the world fear starvation. We all know enough of our economic history to be worried when agriculture is rolling downhill, because all general depressions have started on the farms, and conditions on the farms today threaten the lasting prosperity of all.

Mr. Speaker, the farm situation demands immediate adjustment and emergency action by the Eisenhower administration in order to prevent a complete collapse and bankruptcy of the farmers of America. Laws now in effect permit and authorize such action by the executive branch of the Government to protect and improve farm income, and the failure and refusal of the Eisenhower administration to effectively administer the farm laws now in effect makes it even more necessary for the Congress of the United States to enact

mandatory farm income protection legislation. The practices of monopolistic market manipulations which are circumventing the operations of free markets and enriching the few to the end of destroying the producer must be stopped. An immediate investigation should be conducted along the line provided for in my resolution, House Resolution 371, which I introduced January 12 of this year.

What agriculture needs at this time is a blood transfusion, such as a production payment plan, as advocated by Fred Heinkel, president of Missouri Farmers Association. A production payment plan could be put into effect in a very short time, and would not disrupt normal channels of trade. Such a plan should be made retroactive through and for the year of 1955 as well as for 1956 and subsequent years or until the farm surplus problem is worked out.

Mr. Speaker, I favor and will vigorously support and vote for farm legislation as outlined and proposed by the national farmers' organization. The Department of Agriculture should immediately establish a price floor of not less than $20 per hundredweight on butcher hogs and approximately $30 per hundredweight on Good to Choice cattle. He has existing authority by law to do so; however, if we need more specific mandatory legislation, then we must enact such legislation, and also provide mandatory income protection for family production of all commodities at 100 percent of fair parity, by means of production payments in workable combinations with price support loans, purchase agreements and purchases. We must revitalize and expand Federal crop insurance, expand use and demand for farm commodities, through domestic consumption expansion, such as milk for school lunch programs, and we must vigorously increase export of farm products.

Mr. Speaker, the only action that will solve the problem is legislation that will stop the fall in farm family income and raise it to a level commensurate with a fair opportunity for farmers in an otherwise expanding and prosperous national economy. Existing law permits and authorizes in general, but does not compel the executive branch to take the necessary actions required to protect and improve farm income. However, the executive branch has not used this authority. On the record, there is no reason to believe or hope that the Eisenhower-Benson executive branch of our Government will extend or administer adequate farm income protection programs as now authorized by laws in effect. Passage of mandatory farm income protection legislation will make the intent of Congress crystal clear; the absence of such mandatory legislation may give the executive branch some further excuse for its timidity and failure to act.

Mr. Speaker, our great United States has survived the tests of time, economic depressions and wars. From obscurity and small beginnings four centuries ago, America has emerged into history as the most powerful and resourceful free nation in the world. A nation only 400 years old, against the 5,000 years of India; 400 years against the days of Egypt that dates back centuries before the birth of Christ; 400 years against the life of China known by records to date back as far as 2205 B. C. The 400 most enlightened and liberty-laden years of mankind, which we have achieved by and through a philosophy of government that the welfare of all the people is paramount to that of a privileged few.

Mr. Speaker, the farmers of America were the founders and pioneers of our great Nation. It was indeed their lives and epochs that laid the convenient stepping stones which led to the industrial development, and the high standard of living and security the people of America enjoy. And the farmers of America are not only entitled to share in our national prosperity, their income, standard of living and opportunities must be equalized with other segments of our economy or a national economic depression with bankruptcy and bread lines will surely be upon us again.

You Can't Face Both Ways

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 8, 1956

Mr. SMITH of Wisconsin. Mr. Speaker, Henry Hazlitt in Newsweek for February 13 in his column Business Tides points out that the President in his economic report says that lasting prosperity of the Nation depends far more on what individuals do for themselves than on what the Federal Government does or can do for them.

Mr. Hazlitt then points out that in the next breath, the President says:

But we have also come to believe that progress need not proceed as irregularly as in the past, and that the Federal Government has the capacity to moderate economic fluctuations without becoming a dominant factor in our economy.

Truly, this is facing both ways. What do we want? The article follows:

FACING BOTH WAYS

Like his budget message, President Eisenhower's economic report seems to preach two mutually contradictory philosophies at the same time. It pays lipservice to Government economy and free enterprise, and ends with scores of recommendations for increased spending and more governmental controls.

It is perhaps forgivable, especially in an election year, that the administration should congratulate itself on the astonishing economic record of 1955, and imply that the result came about because, as Franklin Roosevelt once boasted, "we planned it that way." "Full employment, rising incomes, and a stable dollar have been cherished goals of our society. The practical attainment of these ideals during 1955 was the year's great economic achievement."

But what caused this result? The report begins, modestly enough, by admitting that "lasting prosperity of the Nation depends far more on what individuals do for themselves than on what the Federal Government does or can do for them." It adds: "Today, we believe as strongly in economic progress through free and competitive enterprise as our fathers did, and we resent as they did any unnecessary intrusion of Government into private affairs." Then a qualification is added which, as it turns out, practically nullifies this statement. "But we have also come to believe that progress need not proceed as irregularly as in the past, and that the Federal Government has the capacity to moderate economic fluctuations without becoming a dominant factor in our economy."

Under the multitude of measures the report proposes, however, the Federal Government would obviously become the dominant factor in our economy. For the President and his economic advisers are now apparently convinced that wise and timely actions by the Government and soundly conceived and well-timed governmental policies can smooth everything out, give us exactly the right rate of growth, and prevent a minor contraction from turning into a spiraling depression. In order to do this, it seems that some 53 new laws or policies on the part of the Federal Government would be required. Most of these would greatly increase Federal powers. They imply interventions in the private economy at a thousand points and a constant stream of Government subsidies and handouts.

Moreover, even the specific governmental policies proposed contradict each other. This is most clearly brought out in the recommendations for credit controls. The Federal Government should be empowered to set minimum downpayments and maximum maturities on installment credit because installment credit sometimes accentuates swings in the buying of automobiles, furniture, televisions sets, and other consumer durables, thereby exposing the rest of the economy to the hazards of widened fluctuations.

But the same Government that fears the too-rapid growth of installment credit, even when financed by private lenders at their own risk, has promoted an enormous housing boom by itself guaranteeing mortgages on shoestring margins that make the installment-credit terms on automobiles or television sets look like the acme of conservatism. It has forced Americans who want to invest in American corporations to pay down 70 percent of the purchase price, while it uses the taxpayers' resources to encourage other Americans to buy houses for 7, 5, 2, or 0 percent of the purchase price.

The Federal Reserve authorities, bluntly, have not had the courage to exercise a sufficiently firm control over the total volume of bank credit. They have kept down interest rates below the levels to which they would otherwise have gone. It is this that has encouraged and made possible the huge growth in consumer credit. It is futile economically, and dangerous politically to give governmental authorities the right to increase the total supply of credit to make it cheaper and easier, and then to ration the oversupply by stepping in to say who shall and shall not have credit and on what terms. This substitutes bureaucratic judgment and favoritism for the judgment of the market place.

Annual Awards by Sports Lodge of B'nai B'rith

EXTENSION OF REMARKS
OF
HON. HERBERT H. LEHMAN
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Monday, February 20, 1956

Mr. LEHMAN. Mr. President, the Washington Post and Times Herald of January 26 carried a most interesting article, written by Mr. Bob Addie, con-

cerning the annual awards which are made by the sports lodge of B'nai B'rith. The story of the recipients of these awards is truly the story of America. I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BOB ADDIE'S COLUMN

Just a few days ago the Sports Lodge of B'nai B'rith gave out its annual awards. The list of honorees was impressive. Included were George Monaghan, New York State harness racing boss; Babe Zaharias, probably the greatest woman athlete of all time; Jesse Owens, hero of the 1936 Olympics; Terry Brennan, Notre Dame football coach; Jackie Robinson, of the Brooklyn Dodgers; teammate, Johnny Podres, hero of the 1955 world series, and Washington's Shelley Mann, the lovely swimming champion.

One glance at the award winners for 1956 (based on 1955 performances) reveals how widespread is the influence of sports. We have two Negroes, a Catholic, and assorted other typical Americans being honored by a Jewish organization.

It's been that way since the start, too. The previous award winners could make up a Who's Who of sports with such fields as boxing, swimming, racing, baseball, and football represented. Last year, the militant priest from Chicago, the Most Reverend Bernard J. Sheil, was honored for his tremendous work in founding and fostering the Catholic Young Organization.

Every man and woman honored is a standout in his particular field and again it is to the credit of sports that only performance counted.

Each winner honored at this latest banquet had a typically American story to tell. Podres, for instance, is the grandson of a Lithuanian immigrant who worked in the mines. Johnny's father worked in the mines, too. Now, to the new generation comes the pot of gold.

In every story there is a moral, deep and abiding, of unshaken faith which makes a champion. For instance, when Podres signed with the class D Hazard, Ky., club in the Mountain States League, the beginning looked like the end. The young lefthander let in seven runs in the opening inning. He pleaded with his manager, Max Macon, ex-Dodger, to be allowed to continue. Class D clubs aren't blessed with too many reserves and, besides, Macon had faith in Podres. Johnny bore down and shut out the opposition for the rest of the game as his team won, 10-7.

Then in 1954 Podres was sidelined by an attack of appendicitis. When he came back he had a sore arm and looked ready for the scrap heap. It must be remembered that when Podres beat the Yanks in the first game he faced them, he hadn't completed a game since June 6, 1955. He completed that game for an 8-3 victory over the Yanks and then crowned his performance with the dramatic, 2-0 shutout in the final game of the World Series.

Appropriately, Johnny was given his B'nai B'rith award by Gwen Verdon, star of the baseball musical, "Damn Yankees." Perhaps you remember the hit song of the show: "You Gotta Have Heart." That was the theme for Podres and appropriate it was, too.

Take the case of Babe Zaharias. She couldn't make the banquet so her husband George accepted the award for her. The theme for Babe was "Par for Courage." Certainly, no other famous athlete has had more heartbreaking reversals than the once indestructible Babe, who even now is fighting cancer.

Nobody has made any secret of it. But Babe's spirit is as indomitable as ever. Her courage has been an inspiration to millions and as ill as she herself was, she was among the first to send an encouraging note to a fellow golfer, President Eisenhower, last summer.

And how about Jesse Owens? When he went to Berlin with the American Olympic team in 1936, vicious stories greeted him about the "black American auxiliaries." This, of course, was Adolph Hitler's Germany. Der Fuehrer virtually snubbed Owens in presenting the laurel wreath of victory and, of course, Owens won three events.

It was in the broad jump championship that Hitler was taught a lesson he never learned. The favored was a typical Aryan, Lutz Long, so ruddy-faced and blond that he could have been the poster boy for Hitler's progadanda campaign. Owens twice was penalized for fouling in the broad jump before he barely qualified. Then he set a new world record of 26 feet, 5 5/16 inches.

Reminiscing about that magnificent jump the New York Times' gifted columnist, Arthur Daley, told of how Long was the first to hug Owens and then walked off the field with his arm draped around the copper-colored shoulders of the American while Der Fuehrer was kept waiting.

As Daley recalled the incident: "Lutz Long was giving his Fuehrer a lesson in elementary sportsmanship, a lesson that never was learned. On the athletic field, man is never measured by race, creed, or color. He stands on his own."

Jackie Robinson's story, of course, is well known. Almost singlehanded, he obliterated the color line in baseball and opened a new field in our national pastime.

Shelley Mann was an ugly duckling at 10—a little girl who could do nothing well. Today, she has grown into a lovely swan.

There is a thread connecting all these winners. They have overcome tremendous obstacles to reach the top. They have been sharecroppers, cobblers, dockworkers, newsboys, and miners. Most of the family backgrounds were humble. But here they are, kings and queens, no less. To rub again the well-worn cliché, it could only happen here.

Thirty-eighth Anniversary of Lithuanian Independence

EXTENSION OF REMARKS
OF
HON. ROMAN L. HRUSKA
OF NEBRASKA
IN THE SENATE OF THE UNITED STATES
Monday, February 20, 1956

Mr. HRUSKA. Mr. President, the 38th anniversary of Lithuanian independence was celebrated and observed on February 16. I ask unanimous consent to have printed in the Appendix of the RECORD a statement which I have prepared in that respect.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT OF SENATOR HRUSKA

Mr. President, it is again an honor to salute the gallant nation of Lithuania and Lithuanian people everywhere on the 38th anniversary of Lithuanian independence.

Although it was short-lived, snuffed out in the clash of totalitarian giants in the Baltic, Lithuania's freedom has been a particular inspiration to freedom-loving peoples everywhere. That Lithuania still fights against heavy odds for her freedom is a monument to the courage and determination of her people and to the eternal attraction of the torch of liberty.

Since the 16th century, Lithuanians have worked tirelessly for their freedom. But located in a strategic corner of turbulent Europe, Lithuania became a prize for the aggressive drives of land-hungry governments.

Hard-won independence, declared on February 16, 1918, ended in the now-familiar treachery of Communist dictators who casually added more peace treaties and nonaggression pacts to the waste pile as they forced another 3 million people under their yoke.

Perhaps most significant to the people of my State of Nebraska are the well-documented reports of the ordeal of enslaved Lithuanians, are those dealing with the collectivization of a once prosperous agricultural economy. The drive for collectivization of Lithuania's traditional family farms began in 1947. It was ruthless oppression culminating in collectivization of 99 percent of the farms into the kolkhozes—the Soviet collective farm.

Testimony before the House Select Committee on Communist Aggression in the 83d Congress painted a tragic picture of the deterioration of Lithuanian agriculture in the kolkhoze system.

The efficiency of the collectivized farmer dropped sharply. Production per hectare of Lithuanias basic crops fell off—in wheat from 24 bushels per hectare to 10, and in rye from 25 bushels to 11. Lithuania's livestock population has declined—from 1,200,000 head of sheep to only 260,000 and from more than 1 million head of hogs to 315,000.

The achievements of our free enterprise farmer stand in stark contrast.

The select committee concluded in its report to the House, "The expropriation of private property destroyed the very foundation of the Lithuanian economy and turned her prosperous population into paupers."

The iron control of Lithuania by the Kremlin appears complete. But, as free men everywhere know, it is not. The determination of once independent nations and peoples to regain their freedom can never be stamped out.

As long as we continue to remind these enslaved people that they are not forgotten and as long as we continue to reassert in ourselves our determination to protect our own freedom, we can confidently look forword to the day when these indomitable Lithuanians will again achieve the right of self-determination.

Upper Colorado Project's Terrific Costs Would Be Borne by Nation's Taxpayers

EXTENSION OF REMARKS
OF
HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 20, 1956

Mr. McDONOUGH. Mr. Speaker, 98 percent of the upper Colorado River project's cost would be borne by the taxpayers of the 44 States in which the project is not located. This hidden subsidy for the four States benefited is unconscionable. Total direct and hidden costs run to $5 billion. It cannot and would never be repaid from project reve-

nues and would have to be borne by the Nation's taxpayers. The percent of the Federal tax burden by States as computed by the Tax Foundation shows that less than 2 percent of this required Federal subsidy would be borne by the taxpayers of the States of Colorado, New Mexico, Utah, and Wyoming, the chief beneficiaries of the projects. For example, the State of New York would pay over 12 percent, Ohio about 6 percent, Illinois and Pennsylvania about 7 percent each, and so forth. It will be a burden on all of the taxpayers for generations to come.

Based on repayment schedules presented to the House and Senate Interior Committees by the United States Bureau of Reclamation, and the percentage of Federal taxes paid by each State, as computed by the Tax Foundation of New York City and Washington, D. C., here in tabular form are the costs, State by State:

Cost to the States of the Colorado River storage project

	Percent of Federal taxes borne by the States	Actually authorized		Authorized and contemplated	
		Cost of project construction	Cost of interest on construction allocated to irrigation	Cost of project construction	Cost of interest on construction allocated to irrigation
Alabama	0.93	$10,164,900	$13,280,400	$15,354,300	$31,889,700
Arizona	.41	4,481,300	5,854,800	6,769,100	14,058,900
Arkansas	.48	5,246,400	6,854,400	7,924,800	16,459,200
California	9.22	100,774,600	131,661,600	152,222,200	316,153,800
Colorado	1.01	11,039,300	14,422,800	16,675,100	34,632,900
Connecticut	1.88	20,548,400	26,846,400	31,038,800	64,465,200
Delaware	.50	5,465,000	7,140,000	8,255,000	17,145,000
Florida	1.47	16,067,100	20,991,600	24,269,700	50,406,300
Georgia	1.30	14,209,000	18,564,000	21,463,000	44,577,000
Idaho	.26	2,841,800	3,712,800	4,292,600	8,915,400
Illinois	7.64	83,505,200	109,099,200	126,136,400	261,975,600
Indiana	2.55	27,871,500	36,414,000	42,100,500	87,439,500
Iowa	1.21	13,225,300	17,278,800	19,977,100	41,490,900
Kansas	.97	10,602,100	13,851,600	16,014,700	33,261,300
Kentucky	1.01	11,039,300	14,422,800	16,675,100	34,632,900
Louisiana	1.09	11,913,700	15,565,200	17,995,900	37,376,100
Maine	.38	4,153,400	5,426,400	6,273,800	13,030,200
Maryland	1.95	21,313,500	27,846,000	32,194,500	66,865,500
Massachusetts	3.23	35,303,900	46,124,400	53,327,300	110,756,700
Michigan	5.78	63,175,400	82,538,400	95,427,800	198,196,200
Minnesota	1.68	18,362,400	23,990,400	27,736,800	57,607,200
Mississippi	.46	5,027,800	6,568,800	7,594,600	15,773,400
Missouri	2.48	27,106,400	35,414,400	40,944,800	85,039,200
Montana	.31	3,388,300	4,426,800	5,118,100	10,629,900
Nebraska	.73	7,978,900	10,424,400	12,052,300	25,031,700
Nevada	.16	1,748,800	2,284,800	2,611,600	5,486,400
New Hampshire	.27	2,951,100	3,855,600	4,457,700	9,258,300
New Jersey	3.62	39,566,600	51,693,600	59,766,200	124,129,800
New Mexico	.31	3,388,300	4,426,800	5,118,100	10,629,900
New York	14.75	161,217,500	210,630,000	243,522,500	505,777,500
North Carolina	1.38	15,083,400	19,706,400	22,783,800	47,320,200
North Dakota	.22	2,404,600	3,141,600	3,632,200	7,543,800
Ohio	6.39	69,842,700	91,249,200	105,498,900	219,113,100
Oklahoma	.99	10,820,700	14,137,200	16,344,900	33,947,100
Oregon	.95	10,383,500	13,566,000	15,684,500	32,575,500
Pennsylvania	7.53	82,302,900	107,528,400	124,320,300	258,203,700
Rhode Island	.52	5,683,600	7,425,600	8,585,200	17,830,800
South Carolina	.65	7,104,500	9,282,000	10,731,500	22,288,500
South Dakota	.24	2,623,200	3,427,200	3,962,400	8,229,600
Tennessee	1.17	12,788,100	16,707,600	19,316,700	40,119,300
Texas	4.05	44,266,500	57,834,000	66,865,500	138,874,500
Utah	.34	3,716,200	4,855,200	5,613,400	11,658,600
Vermont	.16	1,748,800	2,284,800	2,641,600	5,486,400
Virginia	1.48	16,176,400	21,134,400	24,434,800	50,749,200
Washington	1.57	17,160,100	22,419,600	25,920,700	53,835,300
West Virginia	.71	7,760,300	10,138,800	11,722,100	24,345,900
Wisconsin	2.65	22,406,500	29,274,000	33,845,500	70,294,500
Wyoming	.15	1,639,500	2,142,000	2,476,500	5,143,500
District of Columbia, Hawaii, Alaska, etc	1.41	15,411,300	20,134,800	23,279,100	48,348,900
Total	100.00	1,093,000,000	1,428,000,000	1,651,000,000	3,429,000,000

Total direct construction costs of the overall project of $1,651,000,000 when added to the interest on irrigation phases of $3,429,000,000 totals $5,080,000,000.

This, of course, dictates the defeat of the proposal.

Farm Problems

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Monday, February 20, 1956

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter which I received from Mr. William Kuehn, of New Rockford, N. Dak.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

NEW ROCKFORD, N. DAK.,
February 2, 1956.

DEAR BILL: Am returning checked bulletin list. Also noticed that the 1955 yearbook entitled "Water" is available, free of charge, while the supply lasts, by writing to you. Would certainly appreciate the book.

I will also take the liberty of expressing some of my views. Shall say at the start of this letter that I am not censuring you. On the contrary, I think you've done a wonderful job, considering the obstacles you have before you. But for heavens sake, wise up your Republican colleagues before it is too late. We farmers are not really the country hicks, rubes, and other things we're supposed to be. We are well aware, that according to the wishes of big business, the farmers are supposed to hate labor and labor is supposed to hate the farmer, and fight each other, using up their energy fighting each other, thereby keeping their attention away from big business, letting them pull their dirty, crooked, slimy shyster deals, which has in the last 4 years, become synonymous with big business. Another thing, we are of the impression that members of Cabinets are supposed to labor for the good of recipients under their department. Therefore, we farmers think we have a right to have a man at the head of the Agricultural Department who will fight for them—not against them. A man whose eyes do not shine with hatred, when he speaks about the farmer before the TV cameras. We are well aware that the farmers' share of the consumers' dollar is now down to 39 cents. A drop of 3 cents this year while the middleman's profits are up 10 cents this year. We know also that big corporations' rise in profits have ranged for 4 successive years to a profit of from 33 percent to 62 percent increase each year over the preceding year.

In closing I remain, a former Republican turned Democrat, in self defense, and you'll do the same if you are wise..

Yours,

WILLIAM KUEHN,
New Rockford, N. Dak.

Excerpts From Address by Hon. Clifford P. Case, of New Jersey, at the Lincoln Day Dinner of the Alexander Hamilton Club and the Republican City Committee of Baltimore, Md.

EXTENSION OF REMARKS
OF
HON. J. GLENN BEALL
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Monday, February 20, 1956

Mr. BEALL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD excerpts from an address delivered by the Senator from New Jersey [Mr. CASE] at the Lincoln Day Dinner of the Alexander Hamilton Club and the Republican City Committee of Baltimore, Md.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

On April 14, 1865, an assasin's bullet cut down a man who through 4 years of bitter and heart-rending internal strife had emerged as the symbol of union and democracy. Abraham Lincoln was a great and compassionate man whose respect for the sanctity and the innate dignity of the human being, the child of God, gave us some of the most beautiful and enduring passages we have in the English tongue.

Coming at a time when there was never more need of compassion and understanding to heal the wounds inflicted by fratricidal strife, his death was a tragic loss to the whole Nation. It is ironic and saddening indeed that nearly 91 years later we are confronted by happenings which in their ugly implications threaten to return us to the bitterness and rancor he had hoped to avoid and which we thought was now long since behind us.

I refer in particular to recent events at the University of Alabama at Tuscaloosa.

A week ago on Friday, a young woman eager to improve her education and make

herself a better citizen, began attending classes at the university. Within hours, this young woman became the target of rowdyism, wild tempers and mob action, newspapers in this area have reported. The president of the university pleaded for calmness and humane consideration, but the lawless mobs—apparently in large part composed of persons from outside the campus—took over and the university's board of trustees felt obliged to suspend the young woman for her own protection.

Now, why this threat to her security of person, why this virulence and utter contempt for lawful and orderly processes? The answer, as you readily recognize, is that she was the first Negro person to be admitted to this institution of higher learning.

Like Lincoln and others in our history who were willing to make great personal sacrifices to gain learning, she has reiterated her desire to return to the university. Let me read you part of her statement:

"I want to be an acceptable librarian and I have no other interest in this than that I want to get a good education. I don't think I'm asking for anything I am not entitled to. I am proud of the university and I will be proud to be a student there."

It would be difficult for any American to quarrel with this frank statement. It is in the spirit of reasonableness which should prevail on a university campus.

Now since this is a Republican meeting, it probably would not be amiss to point out that this unhappy situation has developed in a State which has a Democratic administration from top to bottom. It is sometimes useful to remind some of my northern Democratic colleagues about such failures of State responsibility.

There are other denials of basic rights to Negroes in the South which are deeply troubling. The right to vote is a cornerstone of the whole practice of democracy, yet year after year reports come out of such States as Mississippi about various strategems aimed at denying this right.

This State, too, has a Democratic administration from top to bottom.

I do not mean to imply that the problems involved in assuring equality of educational opportunity, equality before the law, equality of economic opportunity are easy and can be solved overnight by the right stroke of the pen. Extremism, dogmatic overbearance on any side will not right the wrongs or achieve the results we seek. But I do suggest that there must be a real will to make progress and to do so, steadily step by step, in orderly ways that will avoid violent disruption and unnecessary affront. This is what the Eisenhower administration has been trying to do. And under the President's leadership we have been making steady progress, the more impressive and lasting because it has been largely accomplished without incitement to racial passion and demagoguery.

Let us frankly recognize that the ending of segregation in all our public schools does mean a real break with the long traditional pattern in many States. The adjustments that it requires, however right and needed, are nonetheless difficult for some to make. Those States and communities now striving to bring their school systems into conformity with the Supreme Court decision need and should have the understanding and sympathetic support of all of us.

But let us not forget either that the basis of our whole system of government is the assumption that all citizens will abide by the will of the majority arrived at and by lawfully constituted process. We are used to taking it for granted that, once an issue has been resolved, we will all "go along" with it and whatever our view refrain from attempts to subvert or frustrate the majority will.

That is what is so deeply troubling about the outbreak of violence at the University of Alabama. That is what, in more subtle form, is so disturbing about the attempts of some States to nullify a judicial decision by our highest court. They are using means that may stop short of violence but that nonetheless clearly indicate a determination not to accept that decision for even a moment on any terms.

Let me illustrate by what might be called A Tale of Two States.

One is your own great Free State headed by Gov. Theodore Roosevelt McKeldin, and the one on the other side of our Nation's Capital, the State of Virginia, the Mother of Presidents. This State is headed by a Democrat, Gov. Thomas B. Stanley.

On May 17, 1954, the Supreme Court declared segregation in the public schools unconstitutional—more than 20 months ago. In Maryland, Governor McKeldin met the announcement of the decision with these simple words, "Maryland has always been a law-abiding State." He said the State would "proceed in an orderly manner to bring an end to racial segregation." And it has done so. The law of the land is being carried out in Maryland. This is a tribute to the Governor's great leadership and the intelligence and patience of his constitutents. A wholehearted supporter of the Eisenhower approach, he has been taking a step at a time, knowing this is the only true way to success.

Meanwhile, on the other side of the Potomac River, in this land of the great giants of American history—George Washington, Thomas Jefferson, Patrick Henry, and James Madison, leaders of the State have been working steadily to find ways of nullifying the Supreme Court decision. At first, the Virginia attorney general and officials of other Southern States appeared before the Supreme Court pleading for time for a gradual adjustment to the ruling and asked that the cases be remanded to the Federal district courts. The Supreme Court's decree of May 31, 1955, was substantially in accordance with this request.

Then what happened—did Virginia begin integration of public schools? No; it did not. Instead, the strategy of interposition was developed—an attempt to enact an amendment to the Constitution directing integration of public schools. This is an ironic goal for those opposed to integration and obviously they are not sincere in putting forward the proposal. They believe that three-fourths of the States would not ratify the amendments. This to them would be proof that, no matter what the Supreme Court says, segregation is constitutional.

There was one immediate obstacle on this road to disregard of the law of the land—this was the action by the Arlington County School Board to begin gradual integration of the schools. When this was decided, what did the Virginia leaders and professed champions of local rights do? Did they acknowledge the right of Arlington County to take action in accord with the Supreme Court decision?

The answer again is "No." Instead, several State leaders introduced a bill aimed at ending the elected school board and replacing it by an appointed body. This, mind you, would not only mean a probable change in the school-integration program, but would also spell the end of a unit which has won national recognition for the quality of its educational program.

When next you hear the Democrats shouting their devotion to civil rights, public-school education, and the welfare of the Negroes of our Nation, remind them of this Tale of the Two States. We in Washington have an excellent vantage point to see how a Republican governor and a Democratic governor go about carrying out the law of the land.

Address by Under Secretary of the Interior Clarence A. Davis Before National-Western Mining Conference

EXTENSION OF REMARKS
OF
HON. GORDON ALLOTT
OF COLORADO
IN THE SENATE OF THE UNITED STATES
Monday, February 20, 1956

Mr. ALLOTT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very thoughtful address delivered by Hon. Clarence A. Davis, Under Secretary of the Interior, before the National-Western Mining Conference, at Denver, Colo., on February 3, 1956.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I am glad to be here. It is wonderful to have an excuse to come back to Colorado, where I have spent so much of my time and where the scenes are so familiar.

I am sure you all know that I was born and much of my life was spent just over the line in southwestern Nebraska, and that I feel perfectly at home in Colorado. We in Nebraska, especially in our occasional hot, dry summers, have always been a little envious of you in Colorado. We have envied your great irrigation developments, and we have envied the great role that mining has played in the development of your State.

Now I am addressing you in a different role and one which, for the first time, embraces the mining industry.

No one can live very long in Nebraska without becoming conscious of the important role that the great State of Colorado plays in both mining and agriculture. Nor can one be Under Secretary of the Department of the Interior very long without realizing how heavy are the responsibilities within the minerals field falling on that Department. Not only are we concerned with programs to foster the orderly development of the country's mineral resources, but we are concerned also that the Nation shall be assured of an adequate supply of mineral raw materials for defense and for an expanding economy.

I am especially glad to be appearing before you at this time when the policy of the Eisenhower administration of allowing the free energies of the people to go untrammeled, relieved of the threat of the imposition of Government control, is beginning to bear fruit. The industrial progress we have made in the last 2 years in this country is without parallel in history. Never before have so many people had so many economic opportunities and such a high standard of living. Judging by the plans of industry for expansion to meet the future needs of the citizens, the end is not in sight.

The mining industry of the country has had a substantial share of this prosperity. According to a preliminary review of 1955 by the Bureau of Mines, the year just closed was the best ever for the mining industry as a whole. The Nation's mineral output during the year reached a new high of 15.8 billions of dollars.

The fuels, the metals, the nonmetallics, almost all had good years—good production and good prices. The record output of steel was accompanied by an upward surge in demand for ferroalloying metals. Bituminous coal and ignite reversed a 2-year downward trend. Domestic mine output of lead and zinc continued to rise, as world demand for these materials remained strong, with

prices moving upward. Consumption of refined copper was excellent and prices, shall we say, in the stratosphere.

Colorado has obviously shared in this and rare and precious metals continued to grow in importance and significance. Petroleum, fertilizers, and materials for the building trades—all enjoyed record years. With few exceptions, all segments of the mining industry, showed vigor and strength.

Colorado has obviously shared in this prosperity. The resources of the State add greatly to the mineral wealth of the Nation. In 1954, the last year for which a complete record is available, Colorado produced some $340 million worth of minerals—a handsome addition to our commerce—including petroleum, coal, iron, copper, lead, zinc, gold, silver, and last but not least, uranium.

The saga of Colorado's uranium production is fabulous. The State has become one of the world's leading sources of indispensable uranium.

A few months ago the Geological Survey issued a report entitled "Search for Uranium in the United States." The author of this report says that the number of geologists employed by the Government and industry in the search for uranium is comparable to or larger than the total number of geologists engaged in the study of all other minerals put together, with the exception of oil.

This widespread interest has led to important discoveries of large deposits capable of being mined immediately, and of extensive resources in lower grade deposits that insure our future supply.

This is a brilliant record of geological and technical research at work to find and utilize a mineral formerly of little interest. It is also a good example of the fact that there are still treasures to be found in our country, particularly of newer metals and minerals, some with jawbreaking names, that are only now finding application in industry.

As a counterpart to the domestic program the Eisenhower administration has pursued a policy of encouraging expansion of world trade. These efforts have resulted in greatly increased production in every part of the free world with resultant increased world demands for mineral raw materials and a rising standard of living.

The mounting foreign demands for energy are providing export markets for American coal miners. So great is the foreign demand for United States coal that shortages of coal cars and port facilities are making it difficult to fill all orders. Shipments are now at a rate of 45 million tons a year, a half a billion dollars added to our commerce.

Growing demand abroad for lead and zinc has taken an increasing portion of foreign production. United States commercial stocks of both the commodities are now at such low levels the Government is being offered virtually none for the strategic stockpile.

This spectacular growth in industrial production abroad, particularly in the countries of Western Europe, but not confined to them, is a testimonial to our own way of doing business. Some of these older cultures are coming at last to recognize that industry, once free of government intervention, relieved of the constant threat of government control, and out of the hands of cartels, makes an amazing response.

In my opinion this miracle of industrial technology, democracy, and capitalism in the United States is the greatest single influence in the world today. There isn't a country in the world that isn't challenged and inspired by what has happened in America. Nor is there a country which is not in one way or another attempting to find out how we have done it and trying, at least in part, to duplicate it.

We are misreading the signs of our times if we assume that it is only the ideology of the Communists that is responsible for unrest in colonial areas or revolutions in other areas. On the contrary, it is the achievement of America, our property, our standard of living, as much as anything else, that has kindled in the minds of peoples everywhere the hope that they too may, for the first time in the history of their countries, translate their natural and human resources into a higher living standard—enough to eat, more adequate housing and clothing, a little leisure.

The men of the Kremlin can only promise that if you follow the Moscow line you can have even more than they have in America, and you can have it more quickly and more efficiently.

The Moscow tune is, of course, sweet music to the ears of those who put no faith in freedom, no trust in men. So it is that nation after nation, wanting most of all to achieve the miracle results of American capitalism, try to do it directly by government decree, and by government financing. They do not realize—and we do not point out to them clearly enough—that the miracle of American capitalism is a byproduct of freedom and democracy. It could never have been accomplished by direct planning.

Can you imagine central economic planning creating, for instance, a petroleum industry such as we have in the United States? There are 200,000 different businesses making up what we call the petroleum industry. Some are big integrated companies; some are medium-sized producers or refiners; thousands are small independent filling stations.

No Government bureaucracy planning an economy, would consider such diversity within an industry as a sign of strength. By Government monopoly it could be done more quickly, they would allege, more efficiently, and what's more the profits would go to the people—not to the "capitalistic imperialists" would built and operate the industry.

Well, wha is the record? With faith in the ingenuity and initiative of ordinary men—thousands of them—we have been able to produce over the years as much oil as the rest of the world put together. We have carried American investment, technology and know-how in the oil business to every part of the world to which we have been invited. In every year during the past decade we have discovered more oil than we have taken from the ground. We have explored and drilled 50 miles out into the Gulf of Mexico. We have developed huge aviation and automotive industries whose outputs are coordinated with petroleum output.

While we have been doing this, many other governments have sought to follow a different program. They have locked up their petroleum reserves and bar the door to private development. They have established government monopolies and are trying desperately to meet their countries' need for oil.

The results have not been very happy in most places. The lack of finances, the lack of technical know-how, the unwillingness of responsible government leaders to risk public funds in drilling for new structures, all have served to restrict such developments to less than subsistence enterprises in most places.

But the lesson of the American way is getting across. Turkey, Guatemala, Bolivia, Peru, and others have recently joined the ranks of Venezuela, the Middle East, and some of the European countries in revising their petroleum laws to open the way for private investment. One of the great missions of the United States as a member of the family of nations is constantly to point out that there is only one path to the full and complete development of resources to provide the abundance which we seek, and that in the path of freedom—not the path of regimentation, of forced labor, and planned production.

Although the American people have thoroughly discredited the doctrine of a planned and regulated economy to the point that few people will endorse the doctrine itself, many of the ideas underlying that doctrine are still abroad in the land, disguised by other names, and unfortunately, many of them are not recognized for what they are.

It is so simple and so attractive policically to argue that the Government may simply step in to various business enterprises and by so doing make the profits and keep them "for the people", without paying the slightest regard to the economic factors and the human equations that necessarily accompany that philosophy.

The operation of a business involves planning for the future. It involves taking risks. It involves backing your judgment with capital investments, and none of these things fit into the pattern of Government thinking, where risk is to be avoided and "play it safe" is necessarily the watchword. It is not in the nature of ours or any other government to take the chances, to risk the capital, that is necessary for the development and the expansion of our economy. Business plans whether made by Government or private enterprise may go wrong, but when Government plans miscarry, the effect may be disastrous for all; when those of the private citizen go sour only he or his company is hurt.

In the field of mining and the mineral industries I know we shall continue to rely upon the enegies and skill of the people to develop our natural resources. We have had too great success to think of abandoning this approach.

As a matter of fact, the inspiration of our people for well over a hundred years has been the establishment of homes and the development of the land and mineral resources of the West.

The trappers and the Indian traders ploughed their way through the wilderness, and behind them came the settlers. The trapper made his livelihood, such as it was, from the furs and the goods that he collected largely from the public domain. I suspect that was one of the first "give aways". We should never have let him do it. "A Government sponsored agent could have done it better." He was taking "a resource that belonged to all the people."

As the settler progressed to the West and the pressure of our population began to increase, the far seeing man of that day recognized that the stability of a nation depends upon the anchoring of its people to lands and homes and means of livelihood, and so they opened up the development of the West by the passage of the Homestead Laws, incidentally during the presidency of Abraham Lincoln, no less. We said to the American citizen, that if he could locate 160 acres of land in the Middlewest and Western States, that if he would go upon it, live upon it and establish a home, it might become his by the payment of a very nominal sum. We settled the West under the Homestead Acts, and we "gave away" millions of acres of the most fertile soil of the United States.

Meantime, here in Colorado and elsewhere throughout this great mountain region came the miner and his burro, poking into unexplored gulches, camping along undiscovered rivers in his search for that allusive thing called gold, and the discovery of gold and silver and the other metals of this region brought with it a great influx of population, great wealth to a few, moderate wealth to many, and homes and a living for all.

We provided in those mining laws in 1872, and we haven't changed them substantially since, that if this miner could locate minerals in paying quantities upon the public domain,

the claim might be his if he developed his minerals, that he might receive a patent or a deed from the Government of the United States, and so again, in the parlance of these modern critics, we "gave away" most of the richest of the mineral resources of the United States.

As the homesteads became exhausted, we passed the Desert Land Acts and the Timber Claim Acts, and we brought still thousands of others into this western region to settle upon land, to develop it from the desert, to market its products, and to establish still further the economy of the Western States. Out of the courage and the labor of these settlers upon the lands, in the timber and in the mines of the West we have developed great cities, great States, including Colorado, and a prosperous and a happy people.

I say that is the traditional American way, and I say that I do not think God and the American people have done such a bad job.

Neither our resources nor our opportunities are as yet exhausted. Our future holds promise almost as great as the past has proven.

For instance, I am told that what is probably the world's greatest deposit of rare earth, cerium, lanthanum, scandium, and others was discovered only a few years ago a stone's throw from the main highway between Los Angeles and Salt Lake City. Any one of you could have done it. Who knows what other treasures await the enterprising prospector in the future? The world is going to need larger and larger amounts of metals and minerals as the standard of living rises everywhere.

There is, of course, important work for the Government to do in the field of mineral resources as in every other field of natural resources. The constant search for ways to find hidden ore bodies, and they are getting harder to find, the continued study of improvement in recovery from low-grade ores, and the perennial task of getting abundant materials like titanium and magnesium into the stream of industrial use to substitute for the scarcer materials—these are among the important functions which Government can perform in order to multiply the economic opportunities for the mining industries and lift the living standards of the people.

The Government also continues to own important mineral bearing lands. The wise and orderly development of these resources calls for close cooperation between the Government and industry. A good illustration is the tidelands legislation designed to bring into production the petroleum resources presumed to lie beneath the shores off the Gulf of Mexico and the coast of California. This has been termed a "giveaway" by some unkind critics. But look at the record. Already the Federal Government has obtained over $275 million in bonuses from oil companies merely for the privilege of drilling and finding the hidden wealth. In addition, the Government will obtain a royalty of one-sixth of the oil found as well as a goodly part of the income of those who are successful. And its bears no losses.

In our insistence upon keeping the field of mining free from Government intervention, we are conscious of the dilemma of agriculture as a result of the Government's well-intended intervention.

Here we have our most important industry confronted with problems of surpluses and resulting falling prices constituting a national problem of great concern to all of us.

The surplus agricultural problem even has its repercusions in the field of minerals. The authorization by the Congress of barter transactions by which agricultural commodities may be exchange for mineral commodities can have its effect, either helpful or harmful, upon the markets of many minerals. Thus does the effect of a Government-controlled economy in one field tend to affect other economic fields.

The President's Advisory Committee on Minerals has recommended that preference shall be given to the domestic producer in the acquisition of minerals and metals for stockpiling which should constitute substantial protection of the domestic mining industry.

That same committee has emphasized that we must maintain a strong, vigorous, and efficient domestic minerals industry in the United States, and that such an industry is vital to our long-term economic development.

We shall continue to work for the maintenance of the kind of governmental and economic climate in which the energies of free people shall be given every opportunity to develop the mineral resources of the country and dedicate them to an even higher standard of living.

A Billion Invested by United States in United Nations With Questionable Results

---

EXTENSION OF REMARKS
OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 8, 1956

Mr. SMITH of Wisconsin. Mr. Speaker, Mr. William Fulton, writing in the Chicago Tribune, states that Uncle Sam has sunk more than a billion dollars so far in the United Nations and its mushrooming activities. American people are beginning to wonder as to how much longer we can continue to spend on an international agency which has shown so little tangible results.

The Korean war was fought in the name of the United Nations and yet there is no peace in that area as the Communists violate every truce provision by building a greater war potential every day.

It was the United Nations that declared the partition of Palestine and today the United Nations cannot bring peace in that trobuled area.

It is time to give our earnest attention to this expanding international failure.

Mr. Speaker, under leave to extend my remarks, I am including the article by Mr. William Fulton, referred to above:

BILLION SUNK BY UNITED STATES INTO U. N. IN FIRST DECADE

(By William Fulton)

NEW YORK., February 11.—Uncle Sam has sunk more than a billion dollars so far in the United Nations and its multitudinous mushrooming activities around the earth. The rate of the global spending spree is accelerating.

This was disclosed today upon a toting up of fiscal records at the Park Avenue office of the United States mission to here.

The spending covers the U. N. decade from 1946 through 1955.

United States taxpayers dig in their pockets anually to support various U. N. activities in varying percentages, according to the organization in question.

The largest American contribution has been 95 percent toward the U. N. emergency relief program for Korea.

PAYS THIRD OF SALARIES

Here at U. N. headquarters, with its secretariat bureaucracy of 3,000, half of whom are foreign nationals, the United States picks up the tab for one-third of the budget, which, incidentally, has skyrocketed to an all-time high.

A big spender itself, the U. N. has spawned numerous offshoots that bid fair to outstrip the parent organization.

These are known as "permanent organizations" and "special programs."

A table showing the official figures for United States contributions in this country's 10-year venture into internationalism follows:

Permanent organizations

United Nations in New York and field offices abroad	$130,831,104
Food and agricultural organization	13,156,174
International civil aviation organization	5,463,024
International labor organization	10,812,214
International telecommunication union	1,233,401
Universal postal union	118,912
World health organization	5,993,400
World meteorological organization	133,614
United Nations educational, scientific, and cultural organization	24,037,797
Subototal	191,779,640

The above figures do not reflect the crushing military costs of the Korean war on the United States.

COMMUNISTS PAY NOTHING

The U. N. Children's Fund, probably the most sympathetically regarded subordinate activity of the world organization, draws 68 percent of its financial support from the United States. Although the Soviet Union and its satellites, Byelorussia, and Czechoslovakia, have been members of the children's fund executive board, they are not contributing toward this activity.

Thus, the Communists have been voting how and where the funds may be spent, as well as reaping any gratitude from health or educational betterment, but have made no financial sacrifice toward the project.

Four Soviet satellites, Czechoslovakia, Poland, Hungary, and Bulgaria, gave a total of $2,115,617 to the children's fund but this was before they were swallowed up in the Kremlin's orbit. Russia, Romania, and the Ukraine have given nothing.

TWENTY-FIVE PERCENT OF ILO COSTS

The U. N. International Labor Organization embraces 70 member nations. At its outset in 1945, the United States kicked in 25 percent toward the ILO.

The United States contribution toward the International Civil Aviation Organization has jumped from 11 to 32 percent. In the Food and Agriculture Organization, it has increased from 25 to 30 percent.

Toward the subsistence of the Palestine refugees, the United States puts up 65 percent. The refugee agency is building many resettlement projects, with the United States paying 75 percent of the costs.

In the fertile minds of the U. N. diplomats there is no end to projects in which the United States would supply the major share. The latest idea hereabouts is SUNFED—special United Nations Fund for Economic Development—hitched to the lofty idea of raising the standard of living of underdeveloped peoples all over the world.

Under SUNFED, the United States would pay at least one-third of the estimated $14 billion required for heisting peoples up by their bootstraps. So far the United States Government hasn't given its approval to SUNFED, but some of the dedicated American votaries of U. N. are all for it.

Commemorative Stamp for Amelia Earhart

EXTENSION OF REMARKS
OF
HON. FRANK CARLSON
OF KANSAS
IN THE SENATE OF THE UNITED STATES
Monday, February 20, 1956

Mr. CARLSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an open letter written by Al Bennett, editor of the Atchison Globe, in regard to a commemorative stamp for Amelia Earhart.

Last year I introduced a joint resolution, which was cosponsored by the senior Senator from Massachusetts [Mr. SALTONSTALL], providing for the issuance of such a commemorative stamp.

I think the editor of the Atchison Globe expressed it well when he stated:

It was her courage that broke the barrier for women pilots everywhere. It was her contagious smile that won friends for aviation, and for America, on the airstrips of Europe and Asia. Amelia Earhart was the Nation's Lady Lindy.

Mr. President, I am again urging the Post Office Department to give early consideration to the issuance of this stamp. I know it would be gratefully received by millions of our people, and while it would be a great honor to the name of Amelia Earhart, it would also be appreciated by millions of women and our people generally. It is a stamp that should be issued.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

(By Al Bennett)

Here is an open letter to Senator FRANK CARLSON, Washington:

"DEAR SENATOR CARLSON: We saw you for a few moments during Kansas Day festivities in Topeka last weekend but didn't have an opportunity to talk with you about an Amelia Earhart postage stamp.

"We recognize that such a commemorative stamp is not of earthshattering importance. No serious damage will result if an Amelia Earhart stamp is never issued. And we know you are very busy with 1,001 other things that are important, and we ask you to forgive us for imposing upon your time.

"Yet we also know you have always boosted your State and worked hard for its citizens. We know you have been interested in getting authorization for such a stamp, honoring the world's first lady of aviation. And we know that the entire matter is within the jurisdiction of the Postmaster General.

"But we should like to ask that you redouble your efforts in working toward an Amelia Earhart commemorative stamp at this time. Of course we realize that it will publicize Atchison, where she was born and reared. We realize it will publicize the State—your State and ours. But more than all this, it will pay tribute to a wonderful pioneer girl who was known and loved throughout the world and to whom aviation owes an eternal debt.

"It was her courage, Senator, that broke the barrier for women pilots everywhere. It was her contagious smile that won friends for aviation, and for America, on the airstrips of Europe and Asia.

"Amelia Earhart was the Nation's Lady Lindy.

"A commemorative stamp issued in her honor seems a fitting and proper way to indicate her country's appreciation and gratitude.

"Thanks a lot. We know you will do all you can, and better than that, that you'll get the job done. If we can help at this end, feel free to call on us.

"Yours,

"THE GLOBE."

GTA Daily Roundup

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Monday, February 20, 1956

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the text of the GTA Daily Roundup dated January 13, 1956.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

FRIDAY, *January 13, 1956*

Let's talk about prices for a minute. They're matters of vital concern to farmers and to industry. But, there's a world of difference between the way they're made in agriculture and business. As everybody knows, General Motors is a giant among giants in industry. Not long ago, a Senate subcommittee, headed by Senator O'MAHONEY of Wyoming, summoned a group of GM officials before it to inquire into the huge corporation's policies towards dealers. And, one of the matters the GM executives were closely questioned about was this matter of car prices. What were the company's pricing methods How did it decide what kind of price tag was to be put on those automobiles rolling off the assembly lines?

What the Senators heard was a nice, neat formula used to make the price on that new Chevrolet, Buick, Oldsmobile, Pontiac, or Cadillac. The steps—and they're only four—go like this:

1. Cost of making cars are recorded by GM factories. Average breakdown runs: Materials, 60 percent; wages and salaries, 30 percent; office overhead, 1 percent; then depreciation, local taxes, etc., come to around 9 percent.

2. Profit to GM—that's added to the costs and GM has a goal. It strives to get an average return on net capital investment of 15 to 20 percent over the years, or 10 percent of the value of sales.

3. Dealer's mark-up is figured next. It's figured at 25 percent, and that gives the list price. Then as competition rises, dealers can cut this mark-up and try to make an over-all profit by increased sales.

4. Other charges are added in next. They cover freight, Federal excise, local taxes, dealer's handling.

Then the items in the four steps are added together, and you have the final price that a buyer pays for a new car. It's all set forth in a recent issue of the U. S. News magazine. If demand slackens will GM slash prices? No. They'll hold prices and cut production, aiming to protect profit margins. That's the way prices are made for GM. Quite a contrast to the making of prices for the farmer. He oftens hears that he's supposed to take his chances on the free market, that supply and demand will determine his price. He's got no chance to name a price to cover his costs—depreciation—a wage for himself and his family—return on his investment and so on.

So, the farmer must look to Washington, for the helping hand of Government to intervene, to give him some protection from the hazards of free markets. And his costs, set by formulas like the one at GM have been rising, while his prices for what he produces have been tumbling. He's got to turn to Government for farm laws to protect him in this economy of legislated and administered prices. Congress now has the job to consider the agricultural troubles of the Nation and develop a program to get the farmer back on the road of prosperity like the rest of the economy. He simply can't do it by himself. He's got to have legislation.

This is GTA, the co-op way.

Financing the Postal Service

EXTENSION OF REMARKS
OF
HON. CARL T. CURTIS
OF NEBRASKA
IN THE SENATE OF THE UNITED STATES
Monday, February 20, 1956

Mr. CURTIS. Mr. President, the deficit in the Post Office Department is so large that it is one of the major factors to be considered in balancing the Federal budget. Millions of thoughtful Americans are convinced that something ought to be done about it. Certainly the recommendations of the Postmaster General merit a hearing. The Senate Committee on Post Office and Civil Service cannot fulfill its duty without giving this matter attention.

Mr. President, I ask to have printed in the Appendix of the RECORD an article from the most recent issue of Time magazine and also an editorial from the State, published at Columbia, S. C., on February 9, 1956.

There being no objection, the article and editorial were ordered to be printed in the RECORD, as follows:

[From Time of February 20, 1956]

THE POST OFFICE—THE CASE FOR A RAISE

Despite the ire that it regularly arouses in its 166 million clients, the United States Post Office Department in recent years has been a surprisingly well-run organization. Harry Truman's last Postmaster General, careerman Jesse Donaldson, did his best to cut the Department's traditional deficits by adopting the most drastic possible economy measure—abolition of twice-a-day mail delivery in residential districts. Under Eisenhower's Postmaster General, Michigan Chevrolet dealer Arthur Summerfield, the volume of mail handled by the Department has jumped from 52 billion to 56 billion pieces a year, while the annual deficit has been chopped from a record $727 million in fiscal 1952 to an estimated $467 million for fiscal 1957.

In their efforts to make the Post Office Department pay its own way (the books have balanced only 13 times in the last 100 years), both Donaldson and Summerfield came up against one insurmountable obstacle. Postal rates today are substantially the same as they were in 1932. Meantime, the cost of everything else, including Post Office operations, has more than doubled. Result: a built-in Post Office Department deficit that, given present rates, promises to run at least $500 million a year, and could well reach a billion dollars

if volume and population continue to expand.

To rid the Post Office of this incubus, Summerfield last week asked Congress for a raise in postal rates calculated to add more than $400 million to Post Office income next year. He was backed four-square by President Eisenhower, who told his press conference that "self-respect demands a raise in postal rates."

OVERHAULED BOOKS

Summerfield was in a strong position to make the request. Soon after he was sworn in as Postmaster General in January 1953, Summerfield discovered that the Post Office Department's 509,000 employees did not include a single certified public accountant and that the most up-to-date financial report on departmental operations month by month was a year and a half old. To remedy this state of affairs, he called in topflight Chicago Accountant Maurice Stans, who overhauled post-office accounting procedures from top to bottom.

Along with an improved accounting system, Summerfield adopted a variety of moneysaving devices ranging from elimination of 3,000 small post offices to use of production-line delivery trucks instead of expensive, specially built models. (Some noteworthy Summerfield innovations: abolition of the silly regulation that prohibited enclosures of letters in packages; installation of "snorkel" mailboxes that can be reached from automobiles; distribution of bright, new ballpoints to replace that traditional bane of United States life, the scratchy, ink-spitting post-office pen.)

CLEAR CHOICE

Most impressive of all, Summerfield managed to combine a sharp cut in Post Office Department costs with a long-overdue salary raise for postal employees and improved service to the public.

Summerfield's specific proposals for new rates—first-class mail to 4 cents an ounce, air mail to 7 cents, and a 30 percent increase in second- and third-class mail—were open to argument on detail. But there could be no doubt that some increase was necessary in all 3 classes of mail. Congress—which last year denied a similar Summerfield request—was faced with a clear choice: higher postal rates or indefinite continuance of the built-in Post Office deficit.

[From the Columbia (S. C.) State of February 9, 1956]

POST OFFICE IN EXTREMIS

The Post Office Department points out that it is operating on a prewar price level and a postwar cost level, with the result that it is going in the red at the rate of at least a million dollars every working day. That is to say the Department would be losing its shirt if the shirt didn't have tails that reached into the pockets of every taxpayer.

Although economies and efficiencies have reduced the postal deficit approximately 40 percent in the past 2 years the Department still faces a deficit of nearly half a billion dollars during fiscal 1956, $200 million of which is the yearly cost of the new pay increase.

The Department says it has gone about as far as possible in reducing costs without impairing efficiency of service, and that new postal revenue is needed immediately to meet the increased costs of operation and to handle the mounting volume of mail.

The Department declares that it is not true, as often declared, that it has never operated at a profit. Originally, it was a moneymaker and in 1936 Postmaster General Kendall stated his policy as "Everything shall pay its own way. The yearly average loss from 1789 to 1940 was less than $10 million. During the war years from 1941 to 1945 the Department operated at an accumulated surplus of $163 million, largely due to stabilized costs with greatly increased volume of business, plus the fact that the armed services took over a large part of the cost of overseas mail transportation.

But during the period of unprecedented national prosperity the last 10 years the postal deficit has zoomed to $4.6 billion. While per capita disposable income has gone up 314 percent, the wholesale price index 162 percent, and the postal cost (to the Department) 107 percent, and 6 wage increases to employees have been given, third-class rates, since 1932 have been raised only 38 percent and second-class 3 percent.

Third-class mail is largely advertising. Second-class customers are largely newspapers and magazines. With individual large daily customers a small percentage of increase could and does make a tremendous annual increase in company costs. So, percentagewise increases are sometimes far from indicative of the added load to the user. And increases should consider the situation.

However, the fact remains that Americans believe in self-support and pay as you go, and passing the buck to the taxpayer is not according to the great American custom, and steps should be taken to relieve the situation.

Russia and the Soviet Threat to the United States of America

EXTENSION OF REMARKS

OF

HON. PRESCOTT BUSH

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Monday, February 20, 1956

Mr. BUSH. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter I have received from an 81-year-old constituent of mine, a very fine gentleman, who has written a very interesting letter concerning some of the events of today, particularly respecting Russia and the Soviet threat to our country.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

NORWALK, CONN., *February 6, 1956.*

Senator PRESCOTT BUSH,
Senate Office Building,
Washington, D. C.

DEAR SENATOR BUSH: We all live from day to day. The good Lord has blessed me for 81 years thus far and before it is too late, may I please contribute my viewpoint in the interest of world peace so vital to all of us everywhere.

Prime Minister Bulganin's letter and his draft, a treaty of friendship and cooperation between the Union of Soviet Socialist Republics and the United States of America, addressed to our President Eisenhower, and the text of Eisenhower's reply, all of which appears on page 26 in the New York Herald Tribune, Sunday, January 29, 1956 paper, which I have read very thoughtfully, prompts me to remark upon it for your attention.

The Russian treaty of friendship offer to the United States rejected by President Eisenhower, is a pretty clear propaganda try at turning the tables, especially so, after refusing to go along with some of President Eisenhower's proposals at the Big Four Summit Conference in July 1955, in Geneva.

The entire Russian regime no doubt is based on concealment, while we always are willing and want an honorable pact, the Russians surely have proven to be men without any honor.

We read that the late President Roosevelt renewed diplomatic relations with Russia back in 1933. We all know the sad state of world conditions today because of the Russian communistic infiltration everywhere including the several discovered in our own State Department.

According to 2 articles which I have read, they inform me that since 1933 the Russians and the United States of America have held 3,400 meetings to discuss better relations, resulting in 52 major written agreements of which the Russians have honored and lived up to only 2, to enter the war against Japan and to permit air corridors into Berlin. The other 50 they have broken.

The Communists are raising a great cry for peaceful coexistence. What they are after is simply the opportunity to continue without interference their ideological warfare and conquests from within. What they want is for the United States to relax its opposition.

They have no compassion which helps us share the pain of others. Abraham Lincoln had a compassion for everything alive. A compassionate man whatever his race or creed is a man after Christ's own heart.

I thank God daily for our President Eisenhower, a real man of God of the highest integrity, considerate of all humans everywhere, asking, I believe, God's guidance in every decision he has to make.

In his reply to Bulganin's letter he said in part, "This Nation holds out the hand of friendship to all who would grasp it in sincerity, I have often said, and I now repeat that there is nothing I would not do to promote peace with justice for the world. But we know that it is deeds and not words alone which count." He stated also, "If the Russians really want peace, they can prove it by deeds, such as the unification of Germany and freeing of the satellites.

Charles Sumner said, "Give me the money that has been spent in the war and I will clothe every man, woman, and child in an attire of which kings and queens would be proud, I will build a schoolhouse in every valley over the whole earth, I will crown every hillside with a place of worship consecrated to the gospel of peace."

Thomas Jefferson said, "The whole of government consists in the art of being honest."

World peace begins in the hearts of individuals. Pain makes man think, thinking makes man wise, wisdom makes life endurable.

Now, then, to come to the real issue, I think, and I hope, you can agree that in view of our actual experience with the Russian officials as stated above, since 1933, when the late President Roosevelt renewed diplomatic relations with Russia until Prime Minister Bulganin's recent letter to President Eisenhower, together with another false treaty to sign, since it already is included and signed for in the United Nations organization, that the time has arrived to call a halt to the Russians' continuous false propaganda and dishonorable dealings and make them face the real issue.

I leave it to your good judgment as to the best and proper procedure. I personally feel that the best results would be obtained at a United Nations meeting by our representative being empowered to at the first opportune time to present all the facts as above stated and finally asking the Russian representative why they agreed to and signed 52 major agreements and then broke them all but 2, that will make them realize their dishonesty and put them on the spot, in the presence of the other nations' representatives. "By their fruit ye shall know them."

Russia is the real cause of the cold war, our heavy budget and our high taxes for many years now. It is high time they be so informed and corrective measures applied.

Here is hoping that somehow all Members of Congress and the Senate, yes, and also the President can see and read my letter.

With every good wish to you all,

Respectfully yours,

FREDERICK BRACK.

Address of Hon. Percy Priest, Member of Congress From the Fifth Congressional District of Tennessee, at the Launching of the U. S. S. "John Willis," at Camden, N. J., February 4, 1956

EXTENSION OF REMARKS
OF

HON. CHARLES A. WOLVERTON

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, February 20, 1956

Mr. WOLVERTON. Mr. Speaker, on February 4, 1956, our colleague, the Honorable PERCY PRIEST, made an outstanding and memorable address at the launching of the U. S. S. *John Willis*, at the yard of the New York Shipbuilding Corp., located at Camden, N. J.

There have been many naval vessels constructed at the New York Shipbuilding Corp. that carry the names of distinguished naval heroes. There has been no one with a more commendable record of heroism than Pharmacist Mate (1c.) John Harlan Willis, who was a platoon corpsman serving with the Third Battalion, 27th Marines, Fifth Marine Division. The State of Tennessee is proud of the illustrious service of John Harlan Willis that was so vividly and forcibly set forth in an address by our distinguished colleague, Hon. PERCY PRIEST, a Representative from the Fifth Congressional District of Tennessee.

Under a unanimous consent request that was granted, I herewith submit a copy of the address of Congressman PRIEST as part of these remarks. It reads as follows:

Mr. Chairman, Congressman Wolverton, Rear Admiral Von Heinberg, General Hansen, Mr. Teale, and distinguished guests, I am deeply grateful for the honor you have done by inviting me to say a few words on this very significant occasion.

I am happy that it was possible for my friend and colleague, the Honorable CHARLES WOLVERTON to be here today. He has represented this district with ability and distinction for many years during which time he has demonstrated a devotion to the public good.

I am aware, as you are, that words are weak and only deeds and acts are great.

As we assemble here today to launch this new destroyer escort we are aware that above the sound of the surf and the whine of the winds we can hear some overtones of history; the thrilling undertones of gallantry and heroism; some muted notes of sorrow and sadness; and the challenging call to duty in the service of our country.

On the tough, steel-ribbed sides of this new unit of the greatest Navy in the world is the name U. S. S. *John Willis*. He was a sturdy and stalwart son of the Volunteer State. And in giving his name to this new destroyer escort, the Navy and the Nation do fitting honor to a young man who, in going far beyond the call of duty, exemplified and reemphasized the treasured traditions of the United States Navy and of the inland State of Tennessee where his gallantry and sacrifice shall, through the years, be cherished by the people of that State as hallowed memories.

John Willis was born in the same county in which I was born and attended the same high school, although several years later. Maury County, his birthplace, was named for Matthew Fontaine Maury, known to every seaman, to every navigator of the oceans, as the pathfinder of the seas. And from his native Tennessee came David Farragut the first person ever to be commissioned as an admiral of the United States Navy. These are some of the historical overtones we hear today.

John Willis grew to manhood near the banks of Duck River, a small, nonnavigable stream. I was informed by Congressman Ross Bass, who represents that district, that a new bridge over Duck River, near Columbia, has been named the "John Harlan Willis Bridge." But when time came for him to answer his country's call, he came to my hometown of Nashville and volunteered for service in the Navy. You of the seaboard and others will find all the proud annals of the United States Navy crowded with records of valor made by men from all our States who never saw the ocean until they enlisted in the Navy.

That is as it should be. The Navy is not limited to seaboard States alone. It is the Navy of all the States and has carried the flag of our country to honor and glory around the world.

I have had an opportunity to read within recent days the citation which conferred upon John Willis the greatest military honor the Nation can bestow, the Congressional Medal of Honor.

And on this occasion I deem it to be only fitting and proper that we look back to February just 11 years ago when a raging battle took place on the Island of Iwo Jima.

Pharmacist's Mate First Class John Harlan Willis was a platoon corpsman serving with the 3d Battalion, 27th Marines, 5th Marine Division. Pillboxes and caves covered hill 362 in the cross-island defense of the Japanese forces. Marines were falling, wounded and dying on all sides, in fierce close-in fighting.

Willis administered first aid to the many wounded until he was hit by shrapnel and was ordered back to battle aid station. There, where he might have received treatment for his own wounds, he refused to tarry and hurried back to his company.

During savage hand-to-hand enemy counterattacks, he advanced to the extreme front lines under mortar and sniper fire to aid a badly wounded marine lying in a shellhole.

The fury and frenzy of the enemy attack was intensified until it became a dread barrage of unleashed lightning. Under that withering fire Willis calmly continued to administer blood plasma to his patient. Then an enemy grenade landed in the shellhole. Willis threw it back. They continued to land in the hole and he continued, even while attending the wounded marine, to throw them back. Finally after tossing eight of them back into the teeth of the enemy who threw them, the ninth one exploded in his hand, killing him instantly.

He had made the greatest sacrifice a man can make, and by his personal valor in sacrificing himself to save others, and by his example of fortitude and courage, he inspired his companions to launch a determined counterattack and repulse the enemy force.

Even with this brief recital of those events, I am sure you will agree with me when I said in the beginning that words are weak and only deeds and acts are great.

This occasion today is significant also because it underscores the continuing progress that is making the United States Navy stronger and better able anywhere in the world and under any circumstances to defend this country.

The U. S. S. *John Willis* is the first of four destroyer escorts to be launched here. Others will follow at intervals. And in other shipyards around our coastline naval craft of other classifications are being constructed, launched, given shakedown cruises, and taking their places in a magnificent fleet in near and remote areas of the world.

It is essential that we continue to build, because the great battle in which John Willis and thousands of others have died has not been won. Fervently we hope and pray that the free world can win that battle without another shot being fired. Ardently we plan, confer, and study in a zealous quest for a stabilized peace built on law and order and decency and justice.

We must continue that search for a peaceful solution of the problems that are rooted so deeply in the blood-soaked soil of a fearful and frustrated world. We must press with unabated ardor toward the goal of a world in which the dignity of man once more is a sacred thing, and in which all men may look up to God rather than bow down to the dictators of a totalitarian state.

But until such time as the light of real brotherhood and mutual respect breaks through the overcast of suspicion, hatred, and deceit, we must see to it that our aims, ideals, and aspirations for peace are backed by strength on the sea, the land, and in the air.

So let us launch this fleet and sturdy vessel. As she slides into the sea let us cherish the hope that always her officers and crew shall be inspired and upheld by the challenge that comes like a clarion call from a shellhole on Iwo Jima.

To you, Mr. and Mrs. Duke, as you share in the future the privilege and responsibility and training and educating John Willis Duke, may I remind you that his is a great heritage and may God richly bless you.

Thirty-fifth Anniversary of Armenian Independence

EXTENSION OF REMARKS
OF

HON. JOSEPH R. McCARTHY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Monday, February 20, 1956

Mr. McCARTHY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement I have prepared on the anniversary of Armenian independence.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR McCARTHY

On February 18, 1921, 35 years ago, the people of Armenia waged the only successful revolution in history against an established Soviet Government.

In the years just prior to this revolt, and following the Second World War, the Communists took over Armenia and subjected that country to a vicious reign of terror, killing, jailing, and exiling thousands of people. Finally, on February 18, 1921 the people of Armenia rose, as a man, and drove out the Communist tyrants. To be sure, Armenian independence was short-lived. Before long, Red Army hordes once again invaded this little country, and put the Armenian people back in chains. But February 18, 1921, will live in history as a stirring example of man's devotion to freedom, and of his willingness to fight for that freedom against insuperable odds. The Armenian people still, to this day, live under the heel of the most brutal tyranny ever known; but they live and hope and pray for the day when they will regain their freedom.

I think it is fitting that we in the United States today, on the anniversary of the

heroic Armenian uprising, pay tribute to the Armenian people. It is fitting that we once again dedicate ourselves to the reestablishment of freedom in this oppressed land.

On August 12, 1941, the President of the United States and the Prime Minister of Great Britain met together aboard an American warship in the Middle Atlantic, and signed a document that was later to be known as the Atlantic Charter. In the Atlantic Charter, the United States proclaimed to the world that: "[We] respect the right of all peoples to choose the form of government under which they will live; and . . . [We] wish to see soverign rights and self-government restored to those who have been forcibly deprived of them."

After the war, at Yalta and Teheran, the Roosevelt administration callously forsook the high principles on behalf of which millions of young men died. It is a matter of national honor that we reestablish these principles today as the objectives of American foreign policy. We dare not rest until the blight of communism has been erased from the face of the earth; until freedom and independence is restored to all of those people who are now in slavery.

Slogans by Great Americans

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Monday, February 20, 1956

Mr. MARTIN of Pennsylvania. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD two articles by Bruce Catton, one entitled "Give Me Liberty or Give Me Death" and the other "Our Country, Right or Wrong."

Mr. Catton is editor of American Heritage, a magazine which should be read by every American.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

"GIVE ME LIBERTY OR GIVE ME DEATH"

(By Bruce Catton)

Patrick Henry was one of the happy men who lived by an ideal and had the courage to speak out for it. He said what it was in him to say, and his words have had a bell-like ring in American history ever since.

It happened in the memorable spring of 1775, when the second Revolutionary Convention of Virginia was meeting to determine whether to make armed resistance to the British crown.

Henry had spent years arguing for a wider charter of freedom for Americans. Now he supported with hot passion the bill to arm the Virginia militia. After summing up the arguments, and predicting—accurately—that the next news from the North would be tidings of open conflict, he demanded: "Is life so dear, or peace so sweet, as to be purchased at the price of chains and slavery?" And he gave his own answer:

"I know not what course others may take, but as for me—give me liberty or give me death."

It became a battlecry—words to die for. Men did die for them on many battlefields; and liberty was won.

In some ways Henry himself was an ordinary sort of man. Born in Hanover County, Va., in 1736, he had a hard time finding himself. He had been an indifferent student; when he set out to make a living he failed twice as a storekeeper and once as a farmer. Then he became a lawyer, got into politics, served in the Virginia legislature—and was a brilliant spokesman for freedom. He is remembered today chiefly because he uttered that one sentence.

But that alone is very much. This is a sentence that deserves to live. It is a timeless challenge to all Americans. In every generation, each American sooner or later has to search his heart to see whether the freedom he enjoys here is worth more than life—for liberty must always be bought anew. When that time of searching comes, what better guide is there than Patrick Henry's defiant outcry?

"I know not what course others may take" (that is, I am not going to play it safe and see what the crowd does) "but as for me" (seeing that everything I have is based on my freedom as an American, which is worth all else combined) "give me liberty or give me death."

We will be in a bad way if we ever stop cherishing these words.

"OUR COUNTRY, RIGHT OR WRONG"

(By Bruce Catton)

Stephen Decatur lived in the days of the tough sea dog, when the naval officer was expected to be a good seaman and a stout-hearted fighter.

He was born in Sinnepuxent, Md., on January 5, 1779, entered the Navy as a midshipman in 1798—and made a lot of naval history. He commanded the *Enterprise* against the Tripoli corsairs in 1803, captured the British frigate *Macedonian* in 1812, had to surrender the *President* to a British squadron in 1815, and altogether was as courageous a fighter as the Navy ever had.

In those pre-radio days a naval officer was pretty much on his own, operating a long way from home without detailed instructions and with no time to ask for advice in a crisis. Like other officers, Decatur had nothing to go on except the knowledge that he must defend his country's interest at all costs and at all times and places. Near the end of his life (he died in 1820), at a state banquet, Decatur summed up his simple creed. Offering a toast, he raised his glass and said:

"Our country. In her intercourse with foreign nations may she always be in the right; but our country, right or wrong."

For generations this was one of the most popular of all American slogans. Schoolchildren memorized it; adult Americans kept it handy as a good rule of thumb for a national crisis. Then, sometime after the First World War, the famous remark began to be criticized.

Patriotism, it was urged, ought not to be unthinking. Suppose, just once, our country, happened to be wrong? Shouldn't the citizen form his own judgments? Wasn't Decatur being narrow, old-fashioned, unintellectual?

The answers to such questions seemed obvious back in the carefee twenties when it looked as if the good times would go on forever, with no effort or sacrifice needed from any of us. Since then we have learned a lot, and the hard way. Among other things, we know that America, which gives so much, may on occasion ask the ultimate of us. When it does, everything depends on our unhesitating response. The Nation has been built on an infinite number of sacrifices, and those sacrifices were not made by folk who stopped to quibble and ask, "Is this really worth it?" They were just made. Period.

We have learned, in other words, that patriotism is not out of date. Like any other kind of love, it must at times act on a no-questions-asked basis. Decatur may have been a simple sailorman, but he expressed in his creed a sturdy quality that we lose only at our dire peril. We could do worse than think about it now and then—

"Our country. In her intercourse with foreign nations may she always be in the right; but our country, right or wrong."

Winter Olympics

EXTENSION OF REMARKS
OF
HON. FRANK T. BOW
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 12, 1956

Mr. BOW. Mr. Speaker, under leave to extend my remarks, I wish to include an article on the winter Olympics written for the Canton (Ohio) Economist by my good friends, Mrs. Agnes Frank. I think that Mrs. Frank has presented an idea that many Americans will indorse.

The article follows:

EVERYDAY LIVING—YANKEES NEED ATHLETIC STARS AS DIPLOMATS FOR OLYMPICS AND SYMBOLS OF UNITED STATES VALOR

(By Ada)

Being about as sporty a character as, say Little Orphan Annie or Old Mother Hubbard, I rarely venture into the sports pages of the news

In the first place, if you haven't kept up, locally and nationally, with who is doing what to whom in the latest sports classics, it is a bit like trying to read in a foreign language about personalities from Mars.

Maybe, in reverse, it is the very distance and foreignness of the winter Olympic games, which puts news coverage of them into normally intelligible tongue.

Anyway, it has gotten through to this athletically uninitiated character that we Americanos are taking a shellacking at everything from the giant slalom to the bobsledding, on the snow-covered slopes of the Italian Alps.

Straight sad headlines such as "United States Has Darkest Olympic Hour" and "Americans Fail To Win One Event" need no translation even for me.

What hurts especially is that not only are we not winning, but our No. 1 rival for the world's attention, Russia, is making us look like a bunch of sissy softies. The rugged Soviets, in this their first appearance at the winter Olympics, have racked up a stunning 60 points to our puny 6½ points. They are first, way out in front, and we are tied with little Switzerland for seventh place.

Apparently our last hope for averting an avalanche of ignominy rests upon the pretty shoulders of a couple of girl figure skaters, and a few fellows, due to perform next Sunday. This, I submit, is a far from pretty pass.

Why, in all our beautiful, vast, fat, rich, privileged, and protected Nation haven't we produced some champion athletes to carry the Stars and Stripes to the peak of the 1956 Olympic winter games?

Actually, there may well be dozens of star sled and slalom performers lurking like the groundhog, in our native mountain passes. But so far, we have not had sufficient yen, either variety, to lure them out of their lairs.

This, in my opinion, seriously, is a national disgrace * * * and a tragic error in top diplomatic policy.

Winning friends and influencing people is an accepted legitimate aim of all parties and most persons in this postwar, peaceless world.

So far, old Uncle Sam has been a winner of wars and a dispenser of aid, alms, and ammunition, without ever having won the "best-loved" title in his life. Even our allies

sometimes wonder if we, from our more geographically isolated vantage point of enormous military might and industrial strength, don't go in too much for the saber-rattling bit.

It seems to me that by failing to find and finance the exportation of our top winter sports competitors to the Olympics, we have missed a big bet. If our foreign friends view us as military-minded, our flop on the frozen fields of sport marks us as a nation of centrally heated, pampered weaklings, without natural spine or muscle to compete successfully with athletes from far smaller countries. Their respect for our physical prowess dwindles to nil, and they are thereby tempted to underestimate us on other fields and try to start trouble for us elsewhere.

By putting into the Olympic lists a bang-up batch of contenders we would illustrate our natural strength as well as our concern with unmechanized peaceful pursuits. And in the wholesome man to man, or individual to individual, sports contests of the Olympic events we would show the world that we Americans can export more than one brand of tough guy * * * and that even when automobiles, guns, and gelt are not part of our equipment, we can be good.

Granted that always winning gains us no more friends than does our perpetually picking up the tab, still the richest boy in the crowd has to learn to compete successfully on the playing field before he is accepted as really one of the boys and respected as such. * * *

There is more to being a good sport than being just a good loser.

A Bill To Make Labor Organizations Subject to the Antimonopoly Laws

EXTENSION OF REMARKS
OF
HON. EDGAR W. HIESTAND
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 20, 1956

Mr. HIESTAND. Mr. Speaker, for some years the Federal Government has been unable to prosecute labor organizations for violations of the antimonopoly laws. Labor organizations can merge or combine, or their leaders can conspire without restrictions, whether or not they conspire in restraint of trade or against the freedom of the worker.

The document most important to the worker and the individual citizen is the Constitution of the United States—and the Bill of Rights. That is the last protection of his freedom. If our Federal laws specifically exempt the worker from that protection, they deny it to him. He is being discriminated against, and I don't think it is fair to him—or right.

Why should the labor racketeers, without the support of the workers, be above the law? Why should they make rules and regulations and issue mandates to the workers without the workers' knowledge and consent?

That is not our free America as our forefathers founded it. It is not the much praised freedom of the individual which made our country great. It is a tyranny over the individual and that tyranny is now condoned by law.

I am now introducing a bill to free millions of workers of the United States from that tyranny. I propose to make labor organizations subject to the antimonopoly laws protecting the individual citizen against any other form of monopoly.

The great prosperity we have built has provided 3 million more jobs and the highest wages in history. We have checked the inflation and held the cost of living level for these 3 years. The American workingman and his family are now better off then ever, financially. We must protect this standard by all means.

My bill would restore to the individual worker the protection of the Federal courts.

I am for the American workingman. But he has been tricked, swindled and coerced into doing things in which he does not believe, simply to get or hold his job and provide for his family.

Specifically, my bill repeals two sections of the Clayton Anti-Monopoly Act, section 17, which at present exempts labor organizations from compliance with the act by stating that nothing in the act shall be construed as making labor organizations illegal combinations or conspiracies in restraint of trade.

The other one is section 52 which provides that Federal courts at present cannot restrain either side in a labor dispute unless there is imminent danger or irreparable injury for which there is no adequate remedy at law and which lists a number of activities which may not be considered in violation of any Federal law. In effect, it restores the protection of the courts in such cases.

Repealing the exemption of labor organizations from Federal antimonopoly laws would make them obey the laws that other organizations have to obey. Any labor organization which is sincerely opposed to monopolies, and which is truly representing the best interests of the American workers, I believe surely should welcome this legislation.

I am sure the adoption of this monopoly measure will be for the best interests of America and its vast groups of workers and citizens.

Armenia

EXTENSION OF REMARKS
OF
HON. GERALD R. FORD, JR.
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, February 20, 1956

Mr. FORD. Mr. Speaker, on February 18 each year nationality groups over large portions of the globe should pause to thank the Almighty that their lands offer a present and ever available opportunity for free individual expression. The inhabitants of many nations do not share these same opportunities as we in America and other members of the free world. The brave Armenian people represent one such group whose geographical boundaries have been swallowed into the Soviet orbit of domination.

February 18 is a day to remind us of Armenia. For it was just 31 years ago that the Armenian people staged the only successful full-scale uprising against established Soviet Government. This hard-won freedom was soon blotted out, for it did not take Red terrorists long to again flow into this small country, absorbing it into an unnatural state of totalitarian domination where it has remained.

Although the small Armenian country later lost her independence as a self-governing political state, she represents more than a match against the godless materially minded rulers in the Kremlin. Animal and selfish ambitions continue to guide the Soviet rulers in their domination of Armenia.

But Armenia offers more than an equal match against the Soviet imperialists if other qualities are taken into account. For within the hearts of these brave people rest qualities which the Soviets unwisely disclaim, but qualities freedom-loving nations know to be indispensable to their lasting and ultimate peace, progress, and freedom. These are the mighty spiritual and moral forces provided by faith in God and proved by a look into history. The lesson of history shows quite vividly that whenever a nation uses sheer material force as a weapon of conquest, that nation does not long endure.

And history illustrates, as it will again, that the power of right and spiritual wisdom turns the tide against an alleged sense of godless materiality. The tide will turn again in favor of the Armenians and other Soviet-dominated countries when vigilant hopes and dreams of the vanquished take actual form in a return to their rightful national identity of freedom and independence.

In Salute to the Future Farmers of America

EXTENSION OF REMARKS
OF
HON. WILLIAM H. NATCHER
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Monday, February 20, 1956

Mr. NATCHER. Mr. Speaker, I would like to take this means of saluting the Future Farmers of America.

I am in accord with the sentiment expressed in the creed of the FFA, "I believe in the future of farming," and since being elected a Representative in Congress, have exerted every effort to see that those in our district and State who are engaged in agricultural pursuits are afforded a standard of living commensurate with the contributions they make to the national economy. It is an undeniable fact that this great country of ours cannot be sound economically unless we have prosperous and expanding agriculture. Therefore, it is to the Future Farmers of America that we look for our successful farmers of tomorrow. By virtue of their study of vocational agriculture, their practice of farming programs, their various activities and their good citizenship, I am certain they can meet this challenge.

Since the number of people working on farms has declined almost steadily since 1910, I was particularly pleased to

note that the membership of the Future Farmers of America is 380,000. Through their training and practice, it will be up to them to adjust themselves to marked changes in the demand for specific commodities, and thereby be able to develop more outlets at home and abroad. Sound foreign commerce is essential to the well-being of this country, and especially so in agriculture.

It seems to me most appropriate that National Future Farmers of America Week should be observed during the week of the anniversary of George Washington's birth. Our first President was not only a great general, an outstanding engineer, but a farmer as well. On the farm he called Mount Vernon, he practiced crop rotation and soil conservation methods. Some of the methods he advocated found practice many years after his death. Had George Washington been a youth of today I have no doubt that the FFA could number him among its membership. Like the Father of our Country, many of our great leaders have been farmers, or have been interested in some form of agriculture. Thomas Jefferson retired to his beautiful Monticello, and, to come down to more modern times, President Franklin Delano Roosevelt, in some degree, used his estate at Hyde Park to experiment in agricultural projects.

Even if none of the members of the FFA should become President of the United States—though there is a chance that one of their number might be so chosen—still each individual in that organization who conscientiously carries out the aims and purposes of the Future Farmers of America, as set forth in their creed, will indeed have done his full share toward making this country a better place in which to live, as well as to insure future happiness and prosperity for generations to come.

Had I been a Member of Congress on August 30, 1950, the vote of my congressional district would have been cast for the passage of Public Law 740, which granted a Federal Charter to the Future Farmers of America organization. The rapid, but healthy, expansion of this organization has been a source of gratification to many people, and to me personally. I cannot say too much in praise of the young people of which the FFA is comprised. Their achievements have been outstanding. They are developing a trained leadership and a farm citizenry which exerts an influence for good in our communities. I am proud of them individually and collectively.

Again I salute the Future Farmers of America. May they always enjoy good fellowship of one another.

J. Edgar Hoover

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 20, 1956

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following well-deserved editorial from the Boston Post, Saturday, February 18, 1956:

A REALIST WITH COURAGE

J. Edgar Hoover is a realist with courage. He knows more of the truth about communism than any other American, and he has never ceased to speak out bluntly, even in those periods when it was impolitic to do so.

No other official voice has been raised so often and so honestly as his. He has embarrassed politicians and others by refusing to walk softly and to talk the same way.

As head of the Federal Bureau of Investigation he has done an extraordinary job of keeping in touch with the Communist conspiracy in this country.

Time and again his information, produced in court, has set the commies scurrying to cover. The revelations of Bostonian Herbert L. Philbrick alone caused a frantic burrowing below the surface by the whole Red party. Mr. Philbrick was reporting from the heart of the Red movement in Boston to the agents of Mr. Hoover here.

Each time an agent had been "surfaced" because this was necessary for legal reasons, the FBI has been deprived of his services. At the same time, the Reds have conducted another drastic survey of their membership in order to prevent further infiltration.

Despite all the handicaps, Mr. Hoover's agents have continued to penetrate into the central secrets of the conspiracy. In so doing they have become our first and most vital line of defense against the greatest menace in American history.

J. Edgar Hoover is a modest man. He is no petty dictator, but a great public servant. His pronouncements prove this. When he speaks, it is necessary, and he should be heard.

His latest statement, made to an interviewer of the Pilot, is worth heeding.

The Communist Party in this country has dwindled noticeably in size during the past few years, he says. The total number of card-carrying members is down now to 20,000. But this shrinkage, and this comparatively small number, cannot be taken as indication that the party is finished.

On the contrary, says J. Edgar Hoover, the party is even more dangerous now than it was with greater numbers. For the 20,000 now at work have been screened and rescreened. They are the real fanatics, the hard core of the underground, dedicated in conviction to carry out the dictates of the Kremlin with blind subservience.

They are "more subtle in their propaganda" than ever before, more given to smiles, less addicted to tough talk.

But if we let them fool us into thinking they are any less dangerous, says Mr. Hoover, we will be dangerously unwise.

Mr. Hoover is a man to heed.

No Cause for Pride

EXTENSION OF REMARKS
OF
HON. WILLIAM E. HESS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, February 20, 1956

Mr. HESS. Mr. Speaker, Gen. Thomas D. White, Vice Chief of Staff of the United States Air Force, spoke at the General Electric dinner in my home city of Cincinnati on Thursday, February 9. General White was a logical choice of speaker for this dinner and the dinner was a proper place for General White to warn that Russia has almost closed the airpower gap by beating the United States at the game in which we think we excel—production. The total research and development effort of the United States Armed Forces is not sufficient to insure our survival. We need the help of private industry added to Government sponsored efforts to keep us ahead technologically. General Electric is one American industry using private funds for research designed to keep the United States ahead. If we are to survive, more industries must follow the lead of General Electric.

I have observed that General White has for some time been alarmed by the fact that in Russia the technical training for young men and women long ago outdistanced our own efforts, numerically speaking. In his speech at Cincinnati, General White warned that this intensive training effort is bringing results. As General White said, the Communist leaders resent the limitation that American airpower imposes upon their freedom of action. They have set about to neutralize our superiority. "They have not attained this goal, yet, but I say that with little pride and less comfort."

We believe that we have a better Air Force, but our superiority no longer rests on the superiority of American production. It rests today almost entirely upon our better system of world-wide bases and upon our better, more experienced crews. The Soviets are presently beating us at production. They have halved our lead-time on the heavy jet bomber and in developing and producing all other aircraft, their lead-time is considerably less than ours. Soviet achievements derive in large part from the fact that they can put not one but several projects on a crash basis. They can exert the iron rule of dictatorship. They can direct bright young Communists into scientific and technical careers by no choice of their own. They can determine to build the weapons of war rather than the luxuries of peace. They can keep the standard of living down and the standard of mililtary power high.

Since ours is not a totalitarian form of government, we must face the fact that the defense of this Nation is not just the concern of our own Government. Defense is everybody's business. That is both the price and privilege of democracy.

Private industries must devote ever increasing attention to research. The taxpayer and the legislator quite understandably prefer to see our national income spent on success, not failure. In our democracy, it is all but impossible to devote enough of the budget to research and development to insure our survival. Furthermore, if our Government paid for and therefore controlled all the research necessary to keep us ahead, there would be little difference between our Government and that of the Soviet Union. As General White said, "Private initiative would become stifled as it is in Russia." Mr. Speaker, if we are to keep the United States ahead in the air and be able to prevent war by being able to win one, our industries must roll up their sleeves and pitch in even harder to add to the effort of the Armed Forces to

assure the technological superiority of our weapons of combat.

General Electric has a moto quoted by General White which might well become the motto for the Nation in this arms race which has been forced upon us. That motto is, "Progress is our most important product." The private citizen, private industry, and the Armed Forces must work together to insure this progress.

Mr. Speaker, I am proud that General White recognized the contribution of General Electric and of the citizens of Cincinnati to the defense effort. I am proud to ask the consent of my colleagues to extend my remarks and insert in the RECORD his important speech, which follows:

ADDRESS BY GEN. THOMAS D. WHITE, VICE CHIEF OF STAFF, UNITED STATES AIR FORCE, AT THE GENERAL ELECTRIC DINNER, CINCINNATI, OHIO, FEBRUARY 9, 1956

A little over a month ago, General Hansell dropped in on General Twining in Washington. He told him of this affair and asked if he could come out to see it. General Twining said yes.

Then General Hansell very casually asked if General Twining would mind saying a few words to a small group at an informal gathering. Without thinking, General Twining said yes again.

A few days later came the joker. Jack Parker wrote enclosing a schedule of events. On that schedule General Twining found himself listed as guest speaker at the dinner. I do not know whether that scared him, or whether it was the fact that he had unexpected demands for his presence in Washington.

All I can say is, here I am.

Actually, General Twining was extremely disappointed when he found he could not be here. He was really looking forward to this event.

In this case his misfortune is my gain. I am extremely pleased to be here and to be able to talk with you.

This has been a very interesting day. I am sure that those who saw today's displays and demonstrations are much heartened by this evidence of scientific ingenuity and progress. We are going to need a lot more of this same kind of effort to maintain for the United States its present position in the world. The position I speak of is not only one of world leadership, with the great partnership of free nations, but also one of relative safety and security.

From this position we have been able to play a paramount role in opposing the spread of militant communism.

To insure our safety and security, and to discourage Communist aggression, the United States has used its outstanding strength—our technological leadership.

We are dealing with potential aggressors who care little for public opinion, neither are they bound by any moral or ethical codes. They have lied, cheated, and stolen their way through history. Past performances also show that the Communists are likely to start a fight only when they are sure they can win.

We have translated our technology into instruments of such power that we have been able so far to convince the Soviets of the futility of aggression. I refer primarily to American airpower.

There is no question about it. The ready-to-go pressures of the United States Air Force has discouraged the Communists from attempting to achieve their goals by war.

We must depend on our airpower to continue exerting this beneficial influence. Certainly military forces on land or water are little threat to the rulers of the vast Eurasian land mass. It is the ability of our Air Force to retaliate—to stab directly at the Communist heart and brain that has convinced the Soviets that it is better to use words instead of weapons. Furthermore, the increasing continuity of this airpower pressure remains our best hope that the Soviets will always find peace more prudent than brutal aggression.

Obviously, the Communist leaders resent the limitation that American airpower imposes upon their freedom of action. They have set about to neutralize our superiority. During the past several years, they have expended great effort to make Soviet airpower equal or superior to our own.

They have not attained this goal, yet, but I say that with little pride and less comfort.

Consider these four factors: The Soviet war-ravaged economy right after World War II, their production base, their technology, and the resources readily available to them.

The distance they have come in 10 years is remarkable. When one compares these four factors to like factors in the United States, the fact that the Soviets have almost closed the airpower gap is more than remarkable.

Were the Communist leaders truly peaceful and friendly, we could take pleasure in their progress—and we would be happy to help them progress even more. Certainly it is to our own advantage when technology advances and living standards go up in any friendly nation.

But the Communists have not demonstrated their friendliness or peaceful intentions. Therefore, we must view the airpower products of their technology as weapons designed for possible use against us.

You are familiar with the latest weapons in the Soviet arsenal. They now have a swept-wing heavy jet bomber, the Bison. In many respects it equals our new B–52 which is the best that American technology has yet been able to produce.

They have a long-range turboprop bomber, the Bear. The Bear is their longest range airplane, comparable to our B–36. The B–36 is gradually moving into retirement.

The Soviets also have a medium jet bomber very similar to our B–47. We still have a big lead on them in medium jet bombers.

They have several thousand fighters which are better than our F–86's and F–84's. They also are producing newer fighters which compare to our F–100.

I could go on and on. In airplane after airplane they are approaching us in quality and surpassing us in quantity.

We believe we have a better Air Force—but that superiority now rests almost entirely upon our better system of worldwide bases and upon our better, more experienced crews.

Let us now examine the implications of the Soviet achievements in airpower.

Facing high performance airpower is not a new problem to us.

The United States has never held a monopoly in quality of equipment. During World War II, for instance, both our allies and our opponents brought forth top-notch aircraft. So although the apparent technological progress in Soviet aircraft and engines may startle us, it does not present us with a problem that we have not met and overcome before.

During the last few decades, we Americans have had a talent in which we reigned supreme. I refer to our talent for production—mass production. When challenged by aggressors, we have always depended upon our mass production methods to bail us out.

Here, gentlemen, is the area of deep concern—the Soviets are presently beating us at our own grame—production. They have halved our lead-time on the heavy jet bomber, and in developing and producing all other aircraft, their lead-time is considerably less than ours.

Furthermore, it is useless to debate whether or not their production engineering is as sophisticated as ours. The fact is that they have been and are outproducing us in all categories but medium jet bombers.

No strategist or planner has ever advocated that we must match a potential enemy fighter for fighter, bomber for bomber, and bomb for bomb. What the Soviets think they need may be different from what we think we need. For instance, they have far greater area and a longer border. They are vulnerable to retaliatory attack from all directions. Therefore, the Communist defensive problem is bigger thon ours. In their defense-offense equation—they would need far more fighter interceptors than we.

Of course we can outproduce the Communists. There is no question about that. Our production potential is not the reason we are falling behind.

One of the reasons that we are dropping behind is that the Communists are making scientific and technological advances at a faster rate than we.

The fact that the Communists can put not one, but several projects on a crash basis indicates a tremendous capacity for research and development. I add that this also indicates a disregard for cost and for safety factors, and a willingness to gamble.

There are other reasons for Communist success. They achieved their gains in weapons by exerting the iron rule of a ruthless dictatorship. Bright young Soviets are directed into scientific and technical careers—by no choice of their own. They build trucks instead of automobiles, submarines instead of commercial vessels, bombers at the cost of refrigerators and radar instead of television sets. The Soviet standard of living is forced down and kept low so that their standard of military power may be kept high.

Most significantly, every action and decision affecting research, development, or production of anything is made by the dictatorship. By quotas, schedules, norms, and plans, the Soviet government controls everything right down to the last nut and bolt.

This is the Soviet brand of communism in action. It is a system of life in competition with our own, and a system which threatens our own. It is up to us to win this competition. It is important to our own safety that we keep strong enough to discourage aggression. If we fail to prevent aggression, it is important that we have enough strength to defeat the aggressor.

But it seems to me that there is something even more important in the long run. Whether our way of life be thought of as capitalism, democracy, or simply freedom, we must be abe to save it against a way of life we know is bad. If our system were to allow itself to run second in strength to communism, or any other degrading political and economic system, how strong then would be the argument for free enterprise?

We must realize that the defense of this Nation is everybody's business, not just our own Government's. That is both the price and privilege of democracy. The products of American capitalism, our great corporations, must accept, along with their comparative freedom of action, their share of our national responsibility to provide our own defense.

Since force levels, numbers of aircraft and weapons are necessarily decided by our political and military leaders, no one could expect our private industries to seize the initiative in production. Our great corporations can best volunteer increased efforts to the area of research and development.

I am speaking specifically of the research and development efforts necessary to keep our weapons superior to weapons in the hands of potential enemies.

The United States Government does not have to pay for all the research and development necessary to insure our survival. Furthermore, research is characterized by success only after many failures. It is a business in which failure is routine and

success extraordinary. The taxpayer and the legislator quite understandably prefer to see our national income spent on success, not failure. This makes the research and development dollar hard to get.

This is one reason that our private industries must devote ever increasing efforts to research.

There is another reason. Research, especially basic research, is best accomplished by unfettered initiative working in an environment of complete freedom. Governmental projects are accountable to too many people to be able to operate in a completely free environment.

There is a third reason that we should depend, in part, upon private efforts. If our Government paid for, and therefore controlled, all the research necessary to keep us ahead—there would be little difference between our Government and that of the Soviet Union. Private initiative would become stifled, as it is in Russia.

This presents large corporations with three alternatives:

One, they can sit back and wait for Government research and development money to come their way. This would eventually allow the Communists to get so far ahead of us that our Nation would lose its freedom of action.

Two, our Government, in desperation and emergency, could step in and control the research and development and all the other activities of our industries. This, of course, would be similar to the very way of life we are trying to defend against.

Third, our industries can roll up their sleeves and pitch in even harder to add to governmental sponsored efforts to keep us ahead technologically. Only in this way can we keep the United States ahead in the air and able to prevent war by being able to win one.

Actually, this leaves little choice, and the third alternative is being accepted by our leading industries. In my opinion, privately sponsored research and development is far from sufficient yet. However, several companies are making encouraging moves in the right direction.

General Electric is one of these companies using private funds for research designed to keep the United States ahead. The facility that is going to be here in Cincinnati will be a valuable addition to the Nation's research effort. Other companies are building up their research potential.

These actions are the results of patriotism and good business. Our military forces must stay ahead. Therefore, if any manufacturer comes up with a significantly better piece of equipment, we have no choice but to buy it.

It is good business to survive—and I am convinced that our survival depends on our technological progress.

From what I have said, you can see why I was so glad to see today's evidence of technological progress. All I can say to General Electric, and to all our other great companies is—keep it up.

If you do not mind I will borrow General Electric's motto. In achieving security for the United States, "Progress is our most important product."

Smear Attacks

EXTENSION OF REMARKS
OF
HON. ROBERT S. KERR
OF OKLAHOMA
IN THE SENATE OF THE UNITED STATES
Monday, February 20, 1956

Mr. KERR. Mr. President, on February 5, 1956, there was published in the Examiner-Enterprise of Bartlesville, Okla., a very pertinent editorial, which I ask unanimous consent to have printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SMEAR ATTACKS

Drew Pearson, Washington columnist, made a personal attack in his column published last Wednesday upon Senator ROBERT S. KERR of Oklahoma, Senators RUSSELL LONG and ALLEN ELLENDER, of LOUISIANA, and Senators LYNDON JOHNSON and PRICE DANIELS, of Texas, with which we completely disagree.

The reason for his attack was their support of the bill to end Federal price-fixing on natural gas sold at the well by independent producers. This bill was introduced in the Senate by Senator J. W. FULBRIGHT of Arkansas and is practically identical with the bill by Representative OREN HARRIS, of Arkansas, which was passed by the House in 1955. It will probably come to a vote early this week, after 3 weeks of debate.

Pearson attacked these five Senators by name and other supporters by implication, charging "flagrant abuse of rule 12" which he said "disqualifies any Senator with a pecuniary or pocketbook interest in any legislation."

He added that "the rule does not force a Senator to refrain from voting but, according to the Senate parliamentarian, it has been the practice to abide strictly by that rule."

Pearson would disqualify the five Senators because, he said, Senators KERR, LONG, and ELLENDER own interests in oil and gas companies, and Senators JOHNSON and DANIEL received campaign contributions from people in the oil and gas industry.

Let's take a look at his idea of Senate ethics. It is unique and utterly absurd.

If every Senator were barred from voting on any matter in which he had a pecuniary interest, the work of the Senate would come to a dead stop.

Every Senator is a taxpayer and votes on tax and appropriation bills.

Probably half of the Senators own farms and vote on farm legislation.

It's likely all of them either borrow or lend money and pay interest, and they vote on bills which affect the money supply and interest rates.

Every citizen of the United States, including Senators, has a peecuniary interest in everything the Senate does or refuses to do.

If Pearson's interpretation of rule 12 were correct, no Senator could ethically vote on anything unless he could establish that he owns nothing, owes nothing, has no personal interest in the Nation's economy and has no friends engaged in any enterprise for profit. It is impossible to believe that "it has been the practice to abide strictly by that rule," as he interprets it.

The reason for Pearson's attack is his violently partisan opposition to the natural gas bill, which has been evident in his column for weeks. He has accepted as final truth his own version of the matter, including the fantastic claims of its opponents, and has ignored the arguments of its supporters.

He has, for example, accepted and stated as fact that passage of the bill would increase consumers' gas bills by $600 million a year and create fantastic profit windfalls for the gas producers. He and other opponents have ignored the obvious fact that Federal controls of gas prices at the well never existed until the Supreme Court on June 7, 1954, ordered controls and no such runaway prices for gas developed in all those years of free competition in the sale of gas in the field.

The distorted view of rule 12 is not factual reporting but twisted propaganda designed to influence the gullible—to the great delight of those people who believe private enterprise is disgraceful and everything should be put under Federal controls.

With a Senate vote scheduled for this week, Pearson attacked the personal integrity and ethical conduct of these Senators who are, in our opinion, fighting to restore freedom of contract in a highly competitive and hazardous enterprise and to preserve a necessary incentive to discover and make available to gas users everywhere continuing abundant supplies.

The people of the Southwest who have elected these Senators over and over to high political office have confidence in them—confidence that will not be disturbed by smear attacks to influence votes on a question of national importance.

Action Needed To Solve the Farm Problem

EXTENSION OF REMARKS
OF
HON. LEO E. ALLEN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 20, 1956

Mr. ALLEN of Illinois. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD I include the salient features of "Action Needed To Solve the Farm Problem" brochure produced by the Agriculture-Business Relations Committee of the Illinois State Chamber of Commerce. The committee recognizes that the farmers problem merits serious consideration and careful attention by the Congress, the executive agencies of the Federal Government and all our people:

ACTION NEEDED TO SOLVE THE FARM PROBLEM

(By the Agriculture-Business Relations Committee of the Illinois State Chamber of Commerce)

The Illinois State Chamber of Commerce supports a program for agriculture which will strengthen farmer purchasing power, reward efficiency in producing and marketing of farm products, assure adequate supplies for consumers now and in the foreseeable future, work toward elimination of Government-held surpluses, protect our Nation's soil and water resources, be consistent with general economic development, permit a more effective use of Federal funds, preserve the independence of farmers, encourage the American ideal of free enterprise.

The Illinois State chamber's 8-point action program for a sound farm economy:

RECOMMENDATIONS

1. Reduce the inflow, and eventually eliminate, Government-held surpluses by lowering support prices so that the Government ceases to be a market for farm commodities.

High, rigid price supports have encouraged overproduction and priced some commodities so high that markets at home and abroad have been lost. As a result of its price-support activity at such a high level, the Commodity Credit Corporation has accumulated more than $8 billion of deteriorating farm commodities. Supports at the 90-percent level were initiated as a wartime expedient, and while the Agricultural Acts of 1948 and 1949 provided for flexible supports, they were not allowed to go into effect. The Agricultural Act of 1954, which also introduced some flexibility into support prices, was a step in the right direction. The degree of flexibility was negligible, however, and considerable rigidity still exists in current price-support operations.

The rigidity is evidenced by these facts:

The range of support prices is high and narrow.

In 1955, support levels of 5 basic commodities, wheat, corn, rice, cotton, and peanuts ranged between 82½ to 90 percent of parity, and the sixth, tobacco, was supported at 90 percent when marketing quotas were approved. Actually, wheat was the only basic commodity supported at the 82½-percent level. Current levels of support on basic commodities range between 75 and 90 percent and are still too high in relation to production. Flexible price supports should be given greater opportunity to be effective by lowering the lower limit of support below the present 75-percent minimum on basic commodities so that supports are only a protection against extremely low prices.

Minimum support schedules are too high.

The present act uses a rigid schedule to set the minimum support prices of basic commodities. This schedule is such that if supplies are reduced measurably, the support price can rise to the 90-percent level and the buildup will begin again. For example, if by some chance the Commodity Credit Corporation were able to dispose of its entire stock of wheat, the support price would immediately rise to 90 percent of parity and experience has shown that growers would again expand production. This difficulty could be alleviated by lowering the yearly supply percentage necessary to establish price support at a specific level. (Supply percentage is the percentage that the total existing supply on hand at the beginning of the crop year is of the normal supply.) It is imperative that there be a lowered level of support to prevent the Government from continuing to be a major market for farm commodities.

2. Apply the modernized parity formula to all price-supported commodities as soon as practicable.

Parity is not a measure of income; it relates the price received for a commodity to the prices the farmer pays for commodities and services purchased.

Under the Agricultural Act of 1949, a new parity formula was devised which recognized gradually changing relationships between production costs of individual farm commodities and consequent shifts in their relative market prices. This provision was made for adjustment of parity prices of individual commodities so as to reflect the relative prices in the most recent preceding 10-year period.

To prevent a sharp drop from the old to new formula prices, a formula known as transitional parity was put into effect. Under this, through 1955, parity prices on basic commodities were not to be less than what they would have been if computed prior to 1950. In 1956, they will drop to 95 percent of the old formula and continue to drop 5 percent per year until all basic commodities have shifted to the new formula.

Since the new parity formula is more realistic, it should be introduced faster than existing law now provides.

3. Enact legislation for a soil-bank plan which will take sufficient land out of production to reduce surpluses and store fertility in the soil. The plan should be voluntary, require participation to establish eligibility for price supports, and not result in transferring difficulties of one farm product to another.

Because prevention of further accumulation and elimination of existing stocks of Government-held surpluses is of utmost importance to the well-being of American agriculture, a sound soil-bank plan should be put into operation as soon as possible.

An effective soil-bank plan will reduce considerably the acreage planted to crops and pasture and the resulting unneeded production. At the same time, it will provide an opportunity for farmers to practice good conservation of their land and store fertility in the soil. It can serve as a step toward the eventual permanent retirement of many acres of low-grade land which, ideally, should not be under cultivation. Thus, it can be a long-range as well as a short-range solution to some of our most serious farm problems.

While the objectives of a soil-bank plan are desirable, they will not be attained unless all of the conditions set forth in the State chamber's recommendation are met in their entirety. A plan without these provisions would not be in the best interests of agriculture or the American people.

4. Increase public and private efforts to expand marketing of farm products at home and abroad. This should include liberalizing restrictions on sales of farm commodities to Iron Curtain countries.

It is apparent that there are no ready markets at home or in other countries for our surplus farm commodities. However, it is desirable that efforts be made to find and develop even the smallest markets wherever and whenever they exist.

Everything possible should be done to encourage an increase in sales made through private channels.

While it is not desirable to dump our surpluses on the world markets, it is still highly important that strong competitive selling be continued. Domestically, care should be taken not to disturb private sales by unusually high marketings of Government-held surplus commodities during or immediately following harvest periods. Trade with Iron Curtain countries should be encouraged so long as it is advantageous to the United States.

5. Repeal the agricultural products provisions of the Cargo Preference Act and ease any other restrictions which may retard the movement of surplus farm commodities into foreign trade channels.

The Cargo Preference Act requires that 50 percent of all exported products carried in ships and which are financed by Government loan, sold for foreign currency, or given away under foreign-aid programs, be shipped in United States-flag vessels. This, of course, also applies to surplus farm commodities.

Since some of our best foreign customers for agricultural products are also maritime nations, this is a real impediment to the rapid disposal of surplus farm commodities. This requirement, as it applies to surplus agricultural products, has proved to be a deciding factor in several instances of failures to effect sales.

While it is important that a strong merchant marine be maintained, its subsidization should be considered a separate matter and should not be done at the risk of impairing to any extent the disposal of surplus agricultural commodities.

Other restrictions impeding the flow of farm products to foreign countries should be carefully examined with a view toward making disposal efforts more effective and should be eased whenever they will aid the movement of surplus farm commodities into foreign-trade channels.

6. Adopt a policy to coordinate the interrelated functions of Federal agencies responsible for management of Government-owned land, price-support activities, soil-conservation work, and land reclamation and development projects. Development of future irrigation portions of Federal multipurpose power projects should be discouraged until additional acreage is needed.

Many inconsistencies have become apparent in the program of several Government agencies responsible for activities having a direct bearing on the problems of agriculture. Some Government agencies have been found working to reach goals which are at cross-purposes with those of other agencies. Inconsistencies have also existed too often within the same agency.

For example, even though there is almost universal recognition of the fact that there is overproduction of several farm products in relation to markets to absorb them, several Government agencies have been engaging in activities which unduly stimulate agricultural production.

High price supports have encouraged the growing of crops on soils not adapted to their production while technical and financial assistance has been given to farmers in an effort to improve conservation on their farms.

Consideration is now being given to a soil-bank plan which would have as its main objective the taking of millions of acres of land out of production. At the same time, federally sponsored projects are going forward and other projects are being planned to reclaim new lands and expand irrigation. (The Bureau of Reclamation estimates that further irrigation in the West is possible on 17 million acres.)

These and many similar paradoxes should be avoided by the adoption of a coordinated policy for all agencies dealing with these matters of such vital concern.

7. Expand and encourage public and private agricultural research and educational programs to reduce production and marketing costs, develop new uses and new markets, and to assist in other ways in the long-range improvement of agriculture.

Research can help to provide long-range solutions to many of the problems of agriculture. Through it are found answers to some basic farm problems, making it possible for individual farmers to solve their own problems. The major benefits of agricultural research, however, inure to consumers, not to farmers, since competition causes prices to follow production costs. Therefore, research that reduces costs also benefits consumers by providing commodities at lower prices than otherwise would prevail. Research has been responsible for the vast improvement in the efficiency of farm production and marketing and has raised the quality and quantity of farm products.

Individual farmers are unable to bear the cost of expensive research programs. It, therefore, is appropriate that the Federal Government continue to assist in financing this research and bringing its results to the farmer in the most efficient manner possible.

8. Encourage farmers with limited opportunities to move into more rewarding pursuits so as to better their standard of living.

The problems of the more than 1 million rural families existing on pitifully meager incomes merit serious consideration. These marginal farmers are generally located on farms which are too small to be efficient, or are on hilly, infertile land. They have inadequate capital or lack training in modern farming methods.

Many of these marginal farmers should be encouraged to supplement their income with off-farm work or to make full shifts to industrial work. This is a natural and desirable result of progress in agriculture and should be fostered by all means possible.

In order to hasten this desirable shift from marginal farming to industry and to other fields offering more opportunity, appropriate Federal agencies should be oriented to offer aid and guidance. Such agencies as the Farmers Home Administration, the Extension Service and others in the Departments of Labor, Agriculture, and Health, Education, and Welfare, can assist in encouraging and counseling in the best ways to make this shift.

FACTORS CONTRIBUTING TO THE FARM PROBLEM

Farm legislation proposals should be carefully reviewed against the background of the actual, and not imagined, problems of agriculture. It is important, therefore, that the difficulties in which farmers now find themselves be carefully defined.

Following is an analysis of the major current problems of agriculture which are a matter of concern to all citizens. A constructive farm program should recognize these problems and their causes and offer some short- and long-range possibilities for their solution.

Production greater than consumption

With the advent of mechanized farming, improved technology, and the vastly increased knowledge of better farming practices available to farmers, production per farmworker has increased tremendously. This increase in productivity has enabled fewer farmers to increase overall production at a faster rate than the population has grown. The vast increases in production during the past 25 years have been accomplished on a relatively stable acreage of farmland.

At the same time that this increase in production was taking place, the continuing trend toward mechanization on farms has released large quantities of feed crops for other purposes.

While the effects of this overproduction in relation to consumption caused some difficulties prior to World War II, it became an asset during the war. High price supports encouraged greater and greater production on existing cropland and some additional marginal land was brought into production.

Overproduction on the farm was not a problem immediately following the war because hungry nations throughout the world provided a ready market for our excess production. As the farm production of foreign countries was restored, however, our shipments to foreign markets declined. During the years 1946–51 our exports averaged 13 percent of our total crop acreage; in 1953 they amounted to only 9½ percent. Part of this drop was due to the fact that higher price support on some of our farm commodities priced them out of the reach of foreign consumers. Competition with synthetic products caused considerable losses of markets for such farm products as cotton. As a result of the interaction of these factors, American farms are presently producing about 5 percent more than we are consuming and selling. The amount of imbalance has been greater in some recent years.

Surplus accumulation

This overproduction in relation to consumption has resulted in vast stocks of farm commodities being accumulated by the Federal Government. On November 30, 1955, the Commodity Credit Corporation had $8,206,826,000 tied up in farm surplus commodities. This represented an increase of more than $1 billion over the same date in 1954. It is expected that the total investment will rise to $10 billion during 1956.

The bulk of this investment is in corn, cotton, and wheat; the inventory of these 3 commodities alone amounted to over $6 billion on November 30, 1955.

The various price support activities have resulted in tremendous losses. During the fiscal year ended June 30, 1955, the realized losses in handling these surpluses were $799 million. Realized losses for the 5 months ending November 30, 1955, were almost $470 million. Storage expenses alone on these huge stocks of Government-held commodities amount to over $1 million per day.

The existence of these surpluses naturally depresses farm commodity prices.

Farm income

With surpluses depressing farm commodity prices, the problem of the farmers' falling income is created. Total net income from farm operations fell 38 percent from its all-time high of $17.2 billion in 1947 to an estimated $10.6 billion in 1955. Some observers expect it to fall another 5 percent in 1956. This situation is not so serious as it might appear on the surface, however, because of a reduction in the number engaged in farming and increased nonfarm income earned by farmers. The number of farmers declined 10 percent between 1951 and 1954. In 1954 farm persons received about $1 in nonfarm income (mostly wages) for every $2 of net farm income.

During the war years, incomes of farmers rose more rapidly than did the incomes of nonfarm people. In recent years, however, per capita income for persons on farms has declined slightly while income of nonfarm people has generally increased.

Other factors besides prices should be considered in an appraisal of farm income. Costs of production and the total quantity produced are also important in the determination of net profit. Many farmers on efficient, well-run farms of reasonable size are showing a good profit even at the lower prices in today's markets.

With the price of farmland remaining high and the relatively high ratio of net worth to net liabilities of agriculture, it is clear that there is definite strength in the farm economy as a whole and disaster measures by the Federal Government are not called for at this time.

Underemployment in agriculture

A great number of farmers in the United States, particularly in the South, are working on small, inefficient farms or on land unsuited for farming. According to the 1954 census of agriculture, 2.1 million farms (44 percent of the total) are producing about 85 percent of our marketable farm products. The other 2.7 million farms produced only 15 percent. Disregarding the noncommercial or residential farms and those of retired or semi-retired persons in this latter figure, there are still more than 1 million farmers eking out a bare existence. Their relatively lower income reduces the average income figures for all farmers and distorts the overall farm income picture. This group of low production farms is often used to justify the need for high support to all farmers, however. Government price-support programs have not, and will not, be of any material assistance in solving the problems of these people.

The so-called "cost-price squeeze" is cutting the income of all farmers but is squeezing most those less efficient producers who have the least opportunity for success in farming.

Inability to control total production

Difficulties faced by the farmer are magnified by the fact that he is unable to exert any significant control over total farm production. Even though he may stop all production on his farm, he will have little effect on the total supply. Thus, individual farmers tend to operate close to capacity at all times. But they intensify their operations when prices are high relative to their costs. This is one of the weaknesses of high price supports and explains why acreage controls have not been highly successful in controlling output.

Hon. Chauncey W. Reed

EXTENSION OF REMARKS

OF

HON. JOSEPH W. MARTIN, JR.

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 20, 1956

Mr. MARTIN. Mr. Speaker, I was out of the city on the day that the House received the sorrowful news of the death of our beloved colleague and friend, Chauncey W. Reed. Consequently I could not join with our colleagues who paid tribute to the service and to the character of this distinguished legislator at that time. And so I avail myself of this opportunity to express my deep regret at the death of one of our ablest colleagues and one of my dearest friends.

I had known for some time that Chauncey Reed was seriously afflicted and that his days among us were numbered. But this knowledge did not soften the sadness with which we received the news of his passing from this world.

He possessed a keen, intelligent mind. His judgments were sound and reliable. It was a pleasure to work with him because one knew he had given most careful study and thought to any problem to which he addressed himself. The solution was bound to have had the benefit of his great wisdom and experience. A lawyer of fine attainments, he was a tower of strength in the deliberations of the great Judiciary Committe, of which he had been chairman and which he served with great distinction.

The Congress and our country have lost one of the ablest legislators of our times. Those who, like myself, were privileged to enjoy his friendship have lost a real and valued friend. His death is a real personal loss to me.

To Mrs. Reed and his children, I extend my deepest sympathy in their great bereavement.

Farmers Have Right To Gripe

EXTENSION OF REMARKS

OF

HON. CHARLES S. GUBSER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 20, 1956

Mr. GUBSER. Mr. Speaker, one of the great problems of California agriculture is the competitive disadvantage in which our farmers are placed because of the great distance between our farms and eastern markets.

We are extremely concerned over the possibility of a raise in freght rates which would increase the gravity of our problem. I submit an editorial from the San Jose News which describes our problem in clear cut terms:

FARMERS HAVE RIGHT TO GRIPE

Seldom, if ever, do California farmers raise their voice in the matter of farm subsidies or any specific type grants from the Government.

They are not looking for handouts. They are willing to compete on the open market with all producers, all things being equal.

At the same time, they are not ones to sit back silently and allow the economic cards to be stacked against them.

As of today, the farmers are howling. They are receiving strong support from influential sources, but it is still a question whether or not it came soon enough or in sufficient volume.

In Washington, the Interstate Commerce Commission has before it a request to increase railroad freight rates 7 percent. If favorably received following hearings, which opened Monday, the new overall rates will go in effect February 25.

The 7-percent rate hike is particularly disturbing to our California farmers. It's an

across-the-board increase applicable to all commodities and disregards previous long-haul rate provisions zealously guarded by the California grower.

Opposition to the rate, coming from several weight-laden fronts, is based on economically sound principles.

Farmers have been carrying the brunt of freight-rate hikes for many years, facing up to them despite decreasing farm incomes.

Secretary of Agriculture Ezra Taft Benson, a controversial figure at best among the Nation's farm interests, has made a detailed study of this freight-rate situation, the results of which have been outlined in his report to the ICC asking the proposed 7 percent rate increase be denied the railroads.

Benson points out the unfairness of jumping rates, specifically on raw and processed farm products, farm supplies, and fish, and backs up his objections with rather startling figures, some to jolt the thinking of many of the opinion the farmer's harvest is one of solid gold.

The Secretary reviewed the history of rail-freight rates. He reported a total of 11 general freight rate increases had been effected since 1946 amounting to a 63 percent increase in the 9-year period for shipments of agricultural products.

While freight rates soared 63 percent, farm prices actually fell 8 percent during the same period; farm costs went up 32 percent, and net farm income fell off 29 percent.

Revealing figures.

And there are more and just as startling facts going before the ICC hearing.

In a report prepared for presentation at the hearing by the California Public Utilities Commission, C. Ray Bryant, the PUC's transportation rate expert, charges railroads have made no case showing increases warranted; the rate asked is unreasonable, and the decision should be deferred until ample time is allowed for investigations and hearings on this vital matter.

Organized opposition has been brought, too, by the California Farm Research and Legislative Committee in a protest taking into consideration the welfare of Californians as a whole as well as that of the farm producer.

The cost of all imported and exported commodities in California will be raised, penalizing all Californians.

Freight-rate increase now will work a definite hardship on all industry, business, and labor—all of which participate in and share to some degree the State's gross $2½ billion annual farm income.

Representative CHARLES GUBSER and Senator THOMAS H. KUCHEL have been solicited and have assured support in blocking the rate increase proposal.

The ICC must step cautiously, it being quite obvious the type rate hike requested at this time is not in keeping with a general economic picture.

A United Nations Police Force

EXTENSION OF REMARKS
OF
HON. PETER W. RODINO, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, February 20, 1956

Mr. RODINO. Mr. Speaker, the lack of a United Nations police force for carrying out United Nations decisions in cases of aggression has long been a serious cause of criticism of the United Nations.

Collective measures to maintain peace and security and to suppress acts of aggression are envisaged in the first article of the United Nations Charter. However, due mainly to Soviet obstruction, a permanent United Nations force which would give effect to this article has never been established.

Impetus to the idea of a United Nations force was given by the General Assembly in 1950 when it passed the uniting-for-peace resolution, which aimed at promoting reliable collective protection against aggression and thereby contributing to the achievement of international peace. This resolution recommended that the United Nations members earmark trained, organized, and equipped forces that could be called promptly, in accordance with each nation's constitutional provisions, to meet aggression immediately anywhere in the world. The earmarked units would constitute the United Nations police force. Unfortunately, the resolution has never been implemented to any great extent.

The experience of the Korean war has underscored the necessity for the United Nations to have immediately available forces from many countries in order that no one nation may be burdened with excessive responsibility in countering aggression. The United States carried by far the major burden in the fight against Communist aggression in Korea, despite the fact that all members have an equal responsibility under the charter in maintaining collective security.

Various blueprints have been suggested for the type of international contingent that would be most effective. Some have recommended a force made up of individual volunteers trained and armed by a special United Nations Command and always ready for duty. Others have proposed a plan by which the United Nations members would "earmark" certain units of their individual armed forces for on-call duty, if requested by the Security Council or the General Assembly of the United Nations. Still others feel that a legion made up of volunteers already serving in national armed forces, that is, servicemen who indicate their willingness to serve under the United Nations in any case of aggression, would be the most effective force.

Any plan for a United Nations police force, however, should seek the greatest possible contribution from each member so that the combined effort against aggression could be brought to a maximum as equitably as possible.

Perhaps the solution to the establishment of a United Nations police force would be to make the provisions of the "Uniting for Peace" resolution more authoritative by incorporating it in the United Nations Charter by an amendment. The General Assembly, as well as the Security Council, would then have permanent authority, solidly grounded in the charter, to recommend the use of armed forces to meet aggression anywhere in the world. The ability of the Assembly to act immediately would counteract Soviet Russia's flagrant abuse of the veto which has prevented the Security Council from effectively discharging its responsibilities under the charter.

However, the type of police force is perhaps not as important as the recognition by members of the United Nations that the continuance of international tensions makes the organization of an international police force a matter of urgency, and that they should make a determined effort, immediately, to take the necessary steps to establish a ready-for-combat international contingent under the auspices of the United Nations, a contingent which could make a prompt contribution to halt aggression wherever it should erupt. For only through advance preparations can we be assured that the burden in any future conflict will be shared equitably and effectively by the greatest number of member states.

An Award

EXTENSION OF REMARKS
OF
HON. JACKSON E. BETTS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, February 20, 1956

Mr. BETTS. Mr. Speaker, I am informed that the Republican-Courier, a newspaper published in Findlay, Ohio, has been recognized by the United States Treasury Department for promoting the sale of United States savings bonds. According to the citation, the paper led all other daily newspapers in the State of Ohio in supporting this vitally important program.

This recognition is all the more significant because Findlay is a relatively small city—between 25,000 and 30,000 population. Newspaper competition is keen and lively throughout the State. To have been selected from this wide field is ample reason for calling attention to this outstanding achievement.

I am sure that this work of the Findlay newspaper is symbolic of that done by other publications throughout the Nation, as well as every patriotic American who wishes to promote the welfare of the country.

In addition to my remarks, I am including an editorial from the February 18, 1956, issue of the Republican-Courier commenting on this honor:

AN AWARD

The Republican-Courier acknowledges, with appreciation, the honor which came to it this week in the award of a Treasury Department citation as the daily newspaper which led all others in the State of Ohio in support of the savings bond program of the Federal Government.

The honor is especially appreciated because an integral part of the award consists of framed copy of the famous Eisenhower prayer at the time of his inaugural in January 1952, with the frame made from wood from the platform on which President Eisenhower spoke when he uttered the now well-known entreaty to God.

Both the citation and the framed prayer are awards for which the Republican-Courier is deeply grateful. The newspaper is proud to be enrolled in the service of the Treasury Department in the advancement of the United States savings bond program which, as the citation says, is "dedicated to

the economic strength of the Nation and the financial independence of its citizens."

The savings bond program, which has been in effect for some time now, dating back nearly a score of years, is a sound one, with strong appeal to investors and all who wish to not only make a good investment, but also contribute to the economic stability of the country and its general welfare.

Tribute to Frederick Douglass

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, February 20, 1956

Mr. KEATING. Mr. Speaker, today marks the anniversary of the death of one of the great figures in American history, Frederick Douglass. Although more than six decades have elapsed since his death, his influence is still a powerful factor in the promotion of an improved status for his race and for enlightened government. We would do well today to pause and reflect on the example of courage and tenacity this man showed in his struggle to gain freedom for his people in the dark days prior to the Emancipation Proclamation.

I feel especially honored to salute him today because Frederick Douglass made Rochester his home for many years. He was born a slave in Maryland in 1817. From this obscure and humble origin, he rose to become the greatest Negro abolitionist, a brilliant orator, a successful journalist, and one of the greatest advocates of liberty in this Nation's history. He preached the gospel of liberty with a fervor given only to those who have known the absence of liberty.

Because he was born in Maryland, Douglass never experienced the worst brutalities of slavery as practiced in the deep South. But in the 21 years he lived as a slave he learned fully the degrading effect of the slave system both on slave and on master.

After an unsuccessful attempt, he escaped to the North in 1838. He learned to read while a slave and he continued his education when he reached freedom. As a slave his search for knowledge had led him into constant trouble but when he gained his freedom, his intelligence and quest for betterment enabled him to become a great force for good. As soon as he reached the North, he became interested in the abolitionist cause and addressed some of the numerous conventions that the abolitionist societies promoted. At one of these meetings in 1841, William Lloyd Garrison, the great abolitionist leader, heard him speak. Garrison was greatly impressed and the two men became fast friends. On Garrison's recommendation, the Massachusetts Anti-Slavery Society asked Douglass to become a paid lecturer in the cause and Douglass accepted—although with great hesitation because he doubted his own adequacy.

That decision marked the second great turning point in Douglass' life. In 1838 he had escaped from slavery and freedom. In 1841 he decided that his freedom must be dedicated to the liberation of the other members of his race. Douglass worked hard at his lecturing and soon became an accomplished orator and creative thinker in the abolitionist ranks.

One of his great contributions to the cause was a newspaper he published to support the rights of the Negro. He chose to publish this paper in Rochester because it was, as he said:

> The center of a virtuous, intelligent, enterprising, liberal, and growing population. Its people were industrious and in comfortable circumstances—not so rich as to be indifferent to the claims of humanity, and not so poor as to be unable to help any good cause which commanded the approval of their judgment.

He published his paper, the North Star, later called Frederick Douglass' Weekly, for 17 years. During that period it was a great factor in the fight for Negro rights.

His house in Rochester became an important terminal station in the Underground Railway that smuggled fugitive slaves into Canada. One of his greatest victories over discrimination in the North occurred in Rochester. He had sent his daughter to a private school there, but because of the opposition of a single parent she was excluded. Douglass refused to send her to the segregated Negro school that was at the far end of town from where he lived. After a long campaign of agitation led by Douglass, segregation was abolished in the Rochester schools.

Frederick Douglass, I am proud to state, was a staunch member of my party and he performed many services in the cause of the Republican Party. He was given many official appointments, including that of United States Minister to Haiti.

He died on February 20, 1895. On this, the 61st anniversary of his death, we are again in the throes of a struggle to insure the rights of various segments of our population. It is indeed a good time for all of us to look back to the example and work of Frederick Douglass for proof of what is possible for any man, regardless of his humble beginnings, to accomplish with the aid of determination and grit. It is fitting to honor this son of Rochester this month—along with those other great emancipators, George Washington, Abraham Lincoln, and Susan B. Anthony.

Demands Without Qualifications

EXTENSION OF REMARKS
OF
HON. L. MENDEL RIVERS
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 20, 1956

Mr. RIVERS. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include herewith an editorial from one of America's oldest newspapers, the Charleston (S. C.) News and Courier.

The editor of this distinguished newspaper, Mr. Thomas Warring, is one of the Nation's most distinguished journalists.

The editorial follows:

[From the Charleston (S. C.) News and Courier of February 15, 1956]

DEMANDS WITHOUT QUALIFICATIONS

Opposing Adlai Stevenson's counsel of moderation, a spokesman for the National Association for the Advancement of Colored People says that the Negro is the only American who "is being advised to take his citizenship rights on the installment plan."

While rights of citizenship long ago were extended to all Negroes, and have been enjoyed by them within their qualifications in the South as well as the North, this spokesman has put his finger on one of the keys to race tension at this moment of American history. He is Roy Wilkins, executive secretary of the NAACP. The NAACP and its allies are not demanding "rights"—the Negroes already have their rights; they are demanding that whites be forced to associate with Negroes. Association is a privilege, not a right. And a privilege is something to be earned, not something to be demand, at the point of a political gun.

The behavior of hordes of Negroes who have migrated from the segregated South into the unsegregated North does not indicate success in racial mingling. In several of the biggest northern cities these Negroes have created new and frightening problems. Removal of racial barriers that have kept peace in the South would be disastrous for both races.

In the past, the News and Courier has tried to point out racial differences on many levels, including marital, health and moral. An example that has come to our attention is 1 of the 2 Negro women ordered by a court to be admitted to the University of Alabama. Autherine Lucy was admitted and the admission caused a riot. The other woman was Pollie Anner Myers. She was rejected by the university because her "conduct and marital record" did not meet admission standards. She tried to have university officials cited for contempt of court.

South magazine, with commendable enterprise, went to official records and printed the following:

"Pollie Anner Myers, unmarried and pregnant, applied for admission the third week in September 1952. To months later, November 14, 1952, she married Edward Hudson, whose 3-year sentence for burglary had been revoked in Jefferson County in 1948. Six months and 4 days after the marriage Pollie Anner Myers gave birth on May 18, 1953, to a male child. It was a normal birth, length of pregnancy was 40 weeks. Henry Myers, the woman's father, was sentenced from Elmore County on September 26, 1938, for 1 year and a day for possession of still and manufacture of whisky. Edward Hudson, from whom the Associated Press reported she was separated and seeking a divorce, was sentenced to 3 years in the penitentiary February 14, 1947, for daytime burglary of an uninhabited dwelling in Jefferson County. Probation was revoked October 8, 1948, and sentence was imposed. He was sentenced for a year and a day on August 28, 1948, on another charge of burglary of an uninhabited dwelling."

Not all Negro applicants would have such a record. But Pollie Anner Myers' record is not nearly as extraordinary as some may think who demand that white schools open their doors. Illegitimacy and jail are not the stigmas in many colored circles that they are in white society.

Is the NAACP offering to raise the moral and other levels of the Negros on the installment plan? Respect and acceptance must be earned, not demanded. Until this elementary fact is understood throughout the country, the South will be fighting a lone battle to preserve decency, integrity and life itself.

J. Edgar Hoover's Report on Communism

EXTENSION OF REMARKS
OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 20, 1956

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following very interesting article that appeared in the Pilot, of Boston, Mass., in reference to an exclusive interview by J. Edgar Hoover, Director of the Federal Bureau of Investigation:

UNITED STATES REDS ARE STILL DANGEROUS, FBI CHIEF TELLS PILOT WRITER—J. EDGAR HOOVER CITES ARCHBISHOP AS FORTHRIGHT LEADER FOR YOUTH

(EDITOR'S NOTE.—J. Edgar Hoover, frequently publicized but rarely interviewed, has granted an exclusive interview for the Pilot this week. Readers will recall that Mr. Hoover gave the Pilot the same honor when he was visiting Boston in October 1952.)

(By Rev. Finan Lancaster, O. F. M.)

"Today communism is a more dangerous threat to the Nation than ever before," said J. Edgar Hoover, famed Director of the Federal Bureau of Investigation in an exclusive interview given the Pilot in his Washington, D. C., office.

Asked whether he found communism less of a menace to the Nation than in 1952 when he was last interviewed by the Pilot, the law enforcer replied emphatically in the negative.

"Today Communists are far more dangerous because they are far less crude in their methods than in former years. Today they are more subtle in their propaganda, particularly since the Geneva Conference. And unhappily, many citizens hoping desperately for peace are putting too much credence in the Kremlin smiles. Our Christian nation should remember and remember well, that communism and Christianity can no more mix than oil and water."

"And if," said Mr. Hoover, wagging his finger in emphasis, "If these smiles of the Communists are so sincere, tell me, why do they use every opportunity they can to collect information on every phase of life in the United States?"

TWENTY THOUSAND DANGEROUS FEW

To those who decry the menace of communism in this country because their number has been drastically reduced the Director has a ready answer.

"It is true," he said, "that at one time there were upward of 80,000 card-carrying Communists in this country and now there are approximately 20,000. But these 20,000," warned Mr. Hoover, "are the hard core Communists, men and women who devote themselves unselfishly to the cause and who are dedicated to the proposition that the United States Government must be overthrown by force and violence."

History, cautioned Mr. Hoover, shows that every revolution was inspired and initiated by a small group. Hence the 20,000 Communists are not to be lightly regarded. "They are," he said, "a powerful conspiracy whose avowed intention is the destruction of the United States Government."

The inherent danger that communism presents along intellectual levels was underscored by the FBI head. For that reason he deplored the harm done by teachers and men in position to shape the malleable minds of youth. Men who present communism in attractive and/or conciliatory terms.

To buttress his statement, Mr. Hoover pointed out that a Communist leader in the United States once said that for every card carrying Communist there are ten fellow travelers who have infiltrated their way into education, business and most tragically of all, religious faith. The latter the FBI Director found the hardest to take.

"To think that some ministers find Christianity and communism compatible," he said, shaking his head, "is incredible."

"In this latter area, the intellectual plane," continued Mr. Hoover, "is where the party makes its greatest inroads. They have the ability to hoodwink non-Communists into doing its work. Here is where critical judgment is needed by all patriotic citizens, to see that they don't become sympathizers, fellow travelers or dupes of the Communists."

A reason for college students giving in to the wiles of communism, said Mr. Hoover, was the lack of home training where love and attention had been deficient and the boy winds up nursing an outsized inferiority complex.

In college this inferiority complex is aggravated by the multitudinous activities going on around him of which he is no part. Recognition and companionship which he craves do not come easily. Communists, aware of this, form young people's groups which carefully cater to the boy. And the boy, starved and grateful for their attention, eagerly accepts their companionship and communism along with it.

In his experience, Mr. Hoover related, he has come across a few Catholics who have succumbed to communism. These Catholics, however, he found to be nominal, almost in every instance lacking any substantial Catholic upbringing, and in most cases coming back to the faith before death. Mr. Hoover pointed out that when life comes to a slow crawl and these people feel the frost of death, then all the deep things in them that demand a God cry out in protest against communism and they capitulate. One of the more famous persons who has come back along such a path and has shaken off the fetters of communism, said Mr. Hoover, is Louis Budenz "* * * who is doing an outstanding job exposing communism."

In the 1952 Pilot interview Mr. Hoover stated, "I believe that crime and communism are almost parallel in constituting a threat to the security of this Nation. Each could be characterized as a corroding acid."

Now the question was put to him—

"Humanly speaking at least, the false attraction and lure of crime are apparent. But communism with its unbending severity, its unreasonableness in the denial of a God, its record time and again of rewarding loyalty with the basest kind of treachery has no such pull. What then, in your opinion, makes a man throw in his lot with communism?"

Mr. Hoover replied, "Communism is a many-faced monster endeavoring to gain the allegiance of our citizens. The Communist operates under a cloak of doubletalk and hypocrisy, always concealing his true intentions. He falsely appeals to the noblest of men's thoughts—proclaiming that he works in the interest of 'peace,' 'justice,' and 'mercy.' He promises all things to all men.

"All too often the uncritical citizen accepts these exterior cries of communism, being unable or unwilling to see through the outer veneer of hypocrisy into the inner core of deceit and terror. Communism is a way of life, embodying many types of appeals—economic, social, political, philosophical. The citizen must always be alert."

It was pointed out to the Director that since the solution of the Brink's case once again the eyes of the country were riveted on the FBI and once again another remarkable phenomenon was underscored: of all the Government agencies, the Supreme Court not excepted, the Bureau is the only one which has never been publicly flayed. Now it seems too much to lay this esteem entirely upon the appeal that the Bureau has a kind of David against the Goliath of crime. What then is the full answer?

In reply Mr. Hoover said that it is not correct as very many assume that the FBI is immune from such attacks. "For," he said, "the Bureau has naturally stepped on a number of toes and earned the animosity of selfish interests over the years. The FBI has been and still is subject to attack by the Communist press and the leftwing newspapers."

FIDELITY—BRAVERY—INTEGRITY

"The fact still remains, however," he said, "that the FBI has been most fortunate in holding a position of respect in the eyes of the general public. The confidence which the FBI has won can be traced directly to its personnel, dedicated public servants who conscientiously strive to uphold the FBI's motto of 'Fidelity, Bravery, Integrity' in both official and private life."

How does he get such personnel?

"First," said Mr. Hoover, "by diligent effort on our part to seek them out. People who will, we feel, become dedicated to their jobs."

"Second, by making sure they get the proper training. Obviously no one knows all the answers," said Mr. Hoover, "hence every agent, no matter how long he has been in the field frequently has to go back to the FBI Academy in Quantico, Va., for refresher courses."

"Third, by insisting on the maintenance of standards. Hence this calls for periodic inspection, that is, scheduled inspections of field offices to see how they are getting along and to determine how and in what manner they can be improved. No Government agency," he said, "can avoid scandal unless it constantly takes measures to be on the alert, that is, to subject itself to periods of inspection. Not inspection," he added, "for the sake of inspection or to find fault, but as a helpful and precautionary measure, like a person who gets a physical examination once a year. Not to be morbid or find fault but rather to check and halt any defect that might be found there."

When the Director finished speaking he studied the gavel which lay in front of him for a moment and then in an offhand manner he quoted the prophet Micheas, recalling how the sacred writer reminded man that "* * * he should carry himself humbly in the presence of his God."

This basic humility, Mr. Hoover found wanting a great deal in public life where important men, seeing themselves as the sole agency of their greatness, fail to realize a commonplace obvious to any child; all greatness comes from God.

One thing to help such men, the Director stated, would be to set some time apart for meditation, where and when they could take stock to refurnish and nourish their spiritual life. Some quiet place aside where their own smallness and God's munificence would come into proper focus, and where consequently "man is bound to become more humble," he said.

For this purpose, Mr. Hoover likes the quiet of the sea and also the heights of the Sierra Nevada Mountains in California where he finds it easy to meditate and get a stronger grip on the truer values of life.

JUVENILE DELINQUENCY

The questioning then swung on to juvenile delinquency and the Director was asked: As a practical measure to help parents, do you believe that a trip to the woodshed is in order when a child, aged 7 to 12, or thereabouts, commits some deliberate and grave misdemeanor? Or should punishment be left on more adult lines, for example, the deprivation of some privilege or right?

"I am sure," said Mr. Hoover, "that the old axiom, 'spare the rod and spoil the child' is still a timely and worthwhile guide. However," he continued, "there are certain modi-

fications to this guide. Certain it is that punishment should not be inflicted upon the child when the parent is angry. Too often under such circumstances brutal and unreasonable punishment may follow."

On the other hand, Mr. Hoover looked dimly at those parents who say, "If you do that again I'll * * *" and then do nothing. Children, he said, can sense these vacillations and wishy-washiness of parents and exploit them to the full.

PARENTAL LOVE RUNS DEEP

"This is not true parental love," said Mr. Hoover, "when children are neglected like this. For there are times when physical punishment is desirable. And I am sure that while any parent who takes his erring youngsters to the woodshed is hurt more than the child, yet I am also sure that this parent's love also runs deeper than the one who overlooks the fundamental necessity of insuring proper discipline."

Parents, thought the law enforcer, should not talk down to youth. Even as youngsters they should be given a responsibility fitting their capacity. They ought to be given a reason for things and not be handled as so many spiritless things. They should not be told merely, "do this or that" in the fashion of one turning on a mechanical switch. The reason for things should be explained. Then if the child persists in his ways, concluded Mr. Hoover, no other reasonable recourse is left but punishment.

The FBI head then went on to relate how he appeared before the House Appropriations Committee on February 1, 1956, to report that during the first 6 months of 1955 a major crime was committed every 13.9 seconds, reaching a total of 1,128,350 major crimes. Broken down into more concrete terms that meant that every 41.8 minutes there was a murder, every 5.7 minutes a dangerous assault, every 28 minutes a rape, every three-tenths of a minutes a larceny and every 2.4 minutes an auto theft. The cost of these crimes set the Nation back $20 billion or roughly $122 per person.

For these crimes, Mr. Hoover recommended three deterrents:

1. Swift apprehension.
2. Prompt trials.
3. Adequate punishment.

Mr. Hoover scored the pardoning or paroling of criminals who are not ready to enter society. "No man," emphasized Mr. Hoover, "should be released until he has adequately and justly earned his freedom. Such false sympathy extended to hardened criminals has resulted in disaster."

"Almost every special agent of the Bureau," he said, "who has been killed in the line of duty has been killed by a person who has been paroled or received some form of clemency. This would not have happened if false sympathy and hasty decisions had been eliminated. The protection of society comes first, and only then, the rehabilitation of the individual," said the FBI head.

What about those, he was asked, who poo-poo juvenile delinquency and claim that the few bad are headlined and blown out of true proportion to fact? In your experience has juvenile delinquency shown a definite increase in the past decade or has it merely kept pace with the increasing population?

JUVENILE CRIME RATE

In answer Mr. Hoover ticked off these figures: In 1954 out of a total of 1,389 cities of over 2,500 population juveniles represent 57.6 percent of all arrests for auto theft, 49 percent burglary; and 43.6 percent larceny. Of all the major crimes committed in 1954, 9.7 percent were perpetrated by those under 18, 16 percent by those under 21, 25.8 percent by those under 25.

"It is significant to note," said Mr. Hoover, "that while the vast majority of our youth are good citizens, in answer to the question proposed and in answer to those who underestimate the juvenile problem it should be noted that in these cities reported there has been an increase of 2.3 percent in arrests of those under 18 years of age while those over 18 decreased 1.9 percent in comparison."

Mr. Hoover further showed that "* * * since the end of the war the number of serious crimes has increased 62.7 percent, while our population increased only 21.3 percent. More specifically we have had a population increase of 7 percent since 1950 yet have had a crime increase of 26.7 percent. In this increase, juveniles have had too much of a share."

"While it is true," continued Mr. Hoover, "that over 95 percent of our youth are good, it is also true that the remaining bad percentage stigmatizes the whole and the bad percentage while small balloons up tragically when counted in concrete persons."

"Often over the years," said Mr. Hoover, pursuing the subject further, "I have observed that the juvenile delinquent is morally confused—he doesn't know the rules of good citizenship. He is confused with temptation and he possesses no moral standards to give him guidance."

How then, was direction to be given such youngsters?

"I would urge," said Mr. Hoover, "first, regular attendance at church and the re-establishment of religious exercises in the homes, which, of course, would include reading the Bible and grace before and after every meal. I would also make attendance at Sunday school compulsory for every child."

"Secondly," he said, "the church must realize how dependent they are upon the next generation. Consequently good, down-to-earth sermons to youth are badly needed. Too much preaching today is obscured behind clouds of abstract, dogmatic terms that have no real flesh or blood for young people." As happy exceptions to this he cited Bishop Fulton Sheen, the late Rabbi Liebman, of Boston, and Norman Vincent Peale.

"Thirdly," he said, "in religions of today youth finds serious shortages of leaders—two-fisted, forthright men who are not afraid to trample on toes when the honor of God or country is at stake. Immediately there comes to mind," he continued, "your great Archbishop of Boston, Richard J. Cushing. He is a forthright, courageous man—a truly great American."

The interview took place in the private office of Mr. Hoover on the fifth floor of the Justice Building in Washington, D. C. He speaks with almost a military precision, softened somewhat by a wisp of a drawl, with a fluidity and command one ordinarily doesn't expect to come from behind a badge.

Massive chested and trim, he looks fit enough right now to go bowling down dark alleys or up creaky stairs wherever duty would demand.

After finishing talking with him, somehow one has the feeling akin to the little boy who peered out of his bedroom window one night and suddenly lost the terror and hidden menace of the darting shadows. Because just below him, under the lamppost light, he had just seen the broad back of a patrolman disappear into the night.

More Political Than Practical

EXTENSION OF REMARKS
OF
HON. CHARLES S. GUBSER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 20, 1956

Mr. GUBSER. Mr. Speaker, I submit herewith an editorial from the San Jose Mercury, which I heartily agree with and commend to the attention of my colleagues:

MORE POLITICAL THAN PRACTICAL

There are indications that, should the Senate pass the democratic farm bill, President Eisenhower will veto it and there is considerable opinion Congress will not be able to override the veto.

The reason is the bill as now presented is far more political than it is practical. It is self-defeating. As the Eisenhower administration intended it, it should reduce surpluses and start agriculture on the road of at least a semblance of sound economics.

Those surpluses, now amounting to more than $7 billion, are not only depressing farm prices but they are increasing taxes on farmers as well as the rest of the people. They are a threat to domestic and foreign markets.

The soil bank section of the President's bill, although far from a perfect instrument, is designed to take millions of acres of farmland out of production and thus prevent more surpluses and the possible reduction of those on hand now.

But, by inserting the high rigid price support, the Democratic version will tend to increase production on the acres that are left and thus continue or increase surplus stocks held at taxpayers' and farmers' expense.

The politicis created by the Democrats seems quite plain and should be to the farmers whose votes the gimmick seeks to win.

Should President Eisenhower sign the bill, he will be endorsing principles which he has consistently held to be wrong, and which a great many farmers, including members of the powerful Farm Bureau Federation, know to be wrong. If he vetoes it, then he lays himself open to the political charge sure to be made of refusing to help the farmers.

The measure passed the House of Representatives last year by a narrow margin, but will have to go back there for further action because of inclusion in the present bill of the soil bank provision. Last week the omnibus bill containing both the soil bank and return to 90 percent price support passed the Senate Agriculture Committee 12 to 3. But a vote on the high rigid support passed by only 1 vote, 8 to 7.

The bill will come before the Senate for debate probably starting February 20. A hard fight is anticipated. Meanwhile it is entirely probable a lot of Senators and Representatives will be hearing from a lot of farmers who don't want their industry used as a political football.

Thirty-eighth Anniversary of Lithuanian Independence

EXTENSION OF REMARKS
OF
HON. HERBERT ZELENKO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, February 20, 1956

Mr. ZELENKO. Mr. Speaker, on the occasion of the 38th anniversary of Lithuanian independence, I call the attention of our colleagues to the following letter which I have sent to the American Lithuanian American Information Center:

FEBRUARY 15, 1956.
LITHUANIAN AMERICAN INFORMATION CENTER,
New York, N. Y.
(Attention Mary M. Kizis, director.)

DEAR MISS KIZIS: I wish to take this opportunity to salute the freedom loving Lithuanian people on the occasion of the 38th anniversary of the Independence of Lithuania. The Lithuanian American Information

Center is to be commended for its diligent and perservering effort to alert the peoples of the world of the sad condition of your former homeland.

You may be assured of my sincere and complete support of all efforts and movements directed toward the eventual and final liberation of Lithuania from the yoke of the oppressor. I look forward to the day when Lithuania will again take its place among the great nations of the world.

Sincerely yours,

HERBERT ZELENKO,
Member of Congress.

Status of Forces

EXTENSION OF REMARKS
OF
HON. HOWARD H. BAKER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, February 20, 1956

Mr. BAKER. Mr. Speaker, Under leave to extend my remarks in the Appendix of the RECORD, I include therein an article from the Daughters of the American Revolution magazine:

STATUS OF FORCES

Congressman FRANK J. BECKER, New York, visited American servicemen imprisoned in foreign jails. He concluded that the protection of the United States Constitution has been taken away from these citizens serving us overseas by the Status of Forces Treaty. These are the GI's who have been tried and convicted in foreign courts and are now serving sentences in foreign prisons.

Those imprisoned in France and England were visited. All the GI's in England said that they would have preferred to be tried by Army or Air Force court martial. They felt that they would have had a much fairer trial and would have preferred to have an American officer defend them, even if they would have received more severe penalties from United States authorities. This was the rule before the Status of Forces Treaty.

In France, a man is guilty until proven innocent; under our Constitution a man is presumed innocent and must be proven guilty. All but one GI would have preferred the court martial to prosecution in the French courts. Their trials were conducted in French; in two cases the French lawyers could not speak English.

The resolutions to revise the Status of Forces Treaty will probably be reported out of the committees in both the Senate and the House of Representatives soon after Congress reconvenes in January.

Let your Congressmen know that you urge them to vote for these resolutions that will return their constitutional rights to our servicemen abroad.

FIRST LAW WAS THE LOYALTY OATH

A little thin calf-bound volume of 185 pages containing the first acts of Congress, and bearing the signature of "G. Washington" is one of the rare possessions of the Library of Congress. On its title page, it states, "Acts passed at a Congress of the United States of America, begun and held in the city of New York the 4th day of March in the year 1789 and of the independence of the United States the 11th." The book was published in 1789.

The first law ever passed under the Constitution of these United States and which our first President signed on June 1, 1789, and printed in this volume of 185 pages, lays down the form and also the method of administrating the oath of allegiance to the Constitution of the United States, to be required of every officer of the Government, elected or appointed, high or low.

Thus stands the first recorded law of our country. It originated in the House of Representatives and was proposed by Representative Daniel Carroll, of Maryland. With very little debate, the Senate concurred and it was signed by the President of the United States.

THE LAWS OF THE UNITED STATES

(Acts of the First Congress of the United States, passed at the first session, which was begun and held at the city of New York on Wednesday, March 4, 1789, and continued to September 29, 1789)

(George Washington, President, John Adams, Vice President of the United States, and President of the Senate, Frederick Augustus Muhlenberg, Speaker of the House of Representatives)

STATUTE I

Chapter I.—An act to regulate the time and manner of administering certain oaths

SECTION 1. *Be it enacted by the Senate and [House of] Representatives of the United States of America in Congress assembled,* That the oath or affirmation required by the sixth article of the Constitution of the United States, shall be administered in the form following, to wit: "I, A. B. do solemnly swear or affirm (as the case may be) that I will support the Constitution of the United States." The said oath or affirmation shall be administered within 3 days after the passing of this act, by any one Member of the Senate, to the President of the Senate, and by him to all the members and to the secretary; and by the Speaker of the House of Representatives, to all the Members who have not taken a similar oath, by virtue of a particular resolution of the said House, and to the clerk: and in case of the absence of any Member from the service of either House, at the time prescribed for taking the said oath or affirmation, the same shall be administered to such Member, when he shall appear to take his seat.

Interposition or Nullification

EXTENSION OF REMARKS
OF
HON. JOHN BELL WILLIAMS
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 14, 1956

Mr. WILLIAMS of Mississippi. Mr. Speaker, under leave to extend my remarks, I am pleased to include herewith a series of questions and answers dealing with the subject of interposition, prepared by a distinguished jurist of the State of Mississippi, the Honorable M. M. McGowan. I feel sure that this may answer many questions which Members may have regarding this legal and historic doctrine, and I am pleased to submit this for the information of the Congress:

INTERPOSITION OR NULLIFICATION

Question. What is the meaning of interposition or nullification?

Answer. It means interposing or placing the sovereignty of the State against that of the Federal Government; a matter of contested sovereignty; and a refusal to follow the Federal directive, whether it be an act of the Congress, judgment of the Supreme Court, or order of the Chief Executive until the question of who is right is settled by constitutional processes.

An example of interposition or nullification is found in a sentence like this: "I (the State) deny that you (the Federal Government) have the right to do this, because the right to do so was never conferred on you by the Constitution, but was retained as one of the sovereign rights of the States when the Union was formed, and I (the State) will not follow the directive or order until the question is settled by constitutional processes as to who is right."

Question. There has been some confusion about the words "interposition" and "nullification." Do they mean the same things?

Answer. Yes. It would be an empty gesture to say "we never gave you this authority," without following up with "we will not follow your directive or order until it is settled by constitutional processes who is right." Just to lamely say, "We never gave you this authority, it belongs to us," would be meaningless, or a mere petition or memorial to Congress. The words are considered as one and the same thing, and in fact are one and the same thing.

Question. What is a memorial or petition to Congress?

Answer. A petition or memorial to Congress is a mere petition asking Congress to do or not to do a thing. The mail bags going to Washington are full of them. They are usually disregarded. A memorial or petition to Congress has no relation whatsoever to interposition or nullification.

Question. Is it necessary to use the word "nullification" to void an act of the general or Federal Government by this means?

Answer. It certainly is not. Sincere and responsible men should never quibble over words, when other words may be used that have exactly the same meaning. Such words as "illegal and of no force and effect," or "unconstitutional and not to be obeyed," would have the same effect. In fact even the word "interposition" was not too much used in the early days. The words "State veto" were used by John C. Calhoun and others in South Carolina in the early 1830's. Frankly, the word "Interposition," as a proper noun, seems to have come into use as a designation of the entire process late in 1955, some 2 or 3 months ago. True, Calhoun and Jefferson used the noun "interposition" but merely as a common noun.

Question. What relation does the fifth article of the Constitution have to interposition or nullification?

Answer. None, except as a vehicle to settle the question raised when an interposition is made, that is to settle the question as to who is right about the matter. The fifth article of the Constitution simply provides means of amending the Constitution, and this is sometimes (but not always) necessary to settle the question as to who is right. For instance when, in 1859, the State of Wisconsin nullified the Fugitive Slave Act and also the Dred Scott decision of the Supreme Court, nothing was done; the Federal Government just called it quits, and let it go at that. On the other hand, when, in 1792, the State of Georgia nullified a decree of the Federal courts granting a judgment against Georgia at the suit of an individual suitor the Congress got busy and enacted the 11th amendment to the constitution saying no individual could sue a State.

The fifth article of the Constitution provides two methods of amending the Constitution: (1) By two-thirds of the Senate and House of Representatives proposing an amendment which will become effective when ratified by three-fourths of the States, or (2) by two-thirds of the States petitioning Congress to submit amendments upon which event Congress shall cause to be assembled in the States conventions to submit the amendments and these shall become effective when ratified by three-fourths of the States.

Question. What is meant by State sovereignty?

Answer. It means that in the beginning the several States were free, independent, and sovereign States. This can best be demonstrated by examining the first sentence of the treaty of peace signed by Great Britain and the Colonies after the Revolutionary War, which reads as follows: "His Britannic Majesty acknowledges the said United States, viz., New Hampshire, Massachusetts Bay, Rhode Island and Providence Plantations, Connecticut, New York, New Jersey, Pennsylvania, Delaware, Virginia, North Carolina, South Carolina, and Georgia to be free, sovereign, and independent States." So the fact that we started as free, independent, and sovereign States cannot be denied.

Question. What happened to the sovereignty of the States, and how can the Federal Government by sovereign and the States composing it at the same time be sovereign?

Answer. The States granted sufficient of their sovereignty to found a "more perfect Union" (the articles of Confederation of 1781 being imperfect) and retained certain others to themselves. The 10th amendment settles this question. It is as follows: "The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people." Not one of the Colonies would have adopted the Constitution unless the 10th amendment had been incorporated therein. It was a part of the Bill of Rights when the Constitution was adopted. It was a peculiar work of genius wrought by the great statesmen of the time.

Question. What is meant by settling the question as to who is right by constitutional processes?

Answer. It was thought by Jefferson and Madison that dignity and right would require that when a State felt its sovereignty had been invaded by the Federal Government, the State itself should not be the sole judge of the matter, but that an appeal should be made to Congress to "arrest the progress of the evil" and that the several sister States be invited to join in said appeal. Thus the appeal is to the Congress with the sister States invited to join therein, and the appeal is that the "question of contested sovereignty" be settled by processes set in motion by Congress under the Constitution.

Question. Is interposition or nullification illegal?

Answer. No. No one can reach the conclusion that it is illegal without at first admitting that the States have surrendered their total sovereignty to the Federal Government. By the plainest sense and logic, if they have not surrendered their total sovereignty to the Federal Government, they have the right to raise the question for settlement. Only to those who claim such a surrender has been made is it or can it be illegal.

It would be a foolish thing indeed to say that the States had sovereign rights, but could not assert them. It would be a monstrous thing to say the Supreme Court could order a person hanged for criticizing the President or other Federal officer. (The alien and sedition laws merely provided one could be sent to prison for a long term for just that—and the Constitution was only 9 years old then.)

Of course there are those who make this contention. Many of them are honest people who have never stopped to think. And of course we have the left-wing Socialist groups who will of necessity have to have it declared illegal or go out of business. Until State sovereignty and local government are destroyed, they can never accomplish their purpose.

Question. Under what circumstances should interposition or nullification be invoked?

Answer. Certainly under none other than the most grave and solemn circumstances. It should be only upon the last resort to save the life and sovereignty of the State. There should be danger to the State that is not only imminent and perilous, but as Jefferson and Madison put it, "palpable and dangerous." To invoke it under capricious or even ordinary serious circumstances would only bring upon a State the well deserved rebuke of the sister States.

Question. Would interposition or nullification bring violence or disorder within the State?

Answer. Certainly not. It would in the matter now threatening us insure peace and good order.

Question. Would it result in Federal troops being sent into our State?

Answer. Certainly not. Sending troops into a quiet and tranquil community would be no more than a farce or comic opera.

Question. What does the Army have to do with enforcing court orders?

Answer. Not a thing in the world.

Question. Just how will interposition or nullification work?

Answer. It will work perfectly by the people standing solidly together and placing their cause upon their own sovereignty and that of their States. It is to be remembered that the sovereignty not delegated to the Federal Government was retained "to the States respectively or to the people."

No law can be enforced that is repugnant to all of the people and shocking to their inherent sensibilities.

Sir Edmund Burke, debating in Parliament the revolt of the American Colonies, threw up his hands and said in despair: "I would not know how to write an indictment against an entire people." If we had not stood together in 1776, we would still be an English colony.

Question. It has been said that when a State interposes its sovereignty against that of the Federal Government, it calls for a settlement of the controversy by constitutional processes," and invites the sister States to join in the petition. Now, pursue that further and tell just exactly how the matter has been or may be carried to a conclusion?

Answer. In the light of actual experience and history, a wide variety of courses may be taken, with different conclusions reached.

When Georgia interposed in 1792 (the Constitution then being only 3 or 4 years old, over an individual suing the State of Georgia in a Federal court, the Congress rather hastily submitted an amendment to the Constitution (the 11th) which was approved by three-fourths of the States, vindicating Georgia's position.

When South Carolina interposed in 1832, on the question of the tariff laws, Congress promptly passed an act relieving the State of the oppressive burden of the tariff complained of. In case of the other acts of interposition, you might say that nothing was done; the States merely had their way about the matter.

However, if Congress refused to grant the relief by legislative act, and the Federal Government refused to give up and persisted in enforcing the act or court decision, then it must be admitted that the truly classical concept of interposition as conceived by Jefferson and Madison might come into play, which was that Congress at the address of the complaining States and such of the sister States as elected to join, would submit an amendment under article V of the Constitution, and submit it to the people, the amendment embracing the disputed question, and let the result abide the action of three-fourths of the States, either by affirmative or negative action.

Question. If three-fourths of the States in this instance should ratify an amendment which affirmatively granted to the Federal Government the right to take over the education and nurture of our children and mix members of the white and Negro races in the schools, would the States be bound thereby?

Answer. According to the theoretical concept of the principle, they would be.

Question. Would Mississippi accept it upon such a result?

Answer. The State officials would attempt to, but the entire people would have to be reckoned with. That crisis would have to be handled if and when it arose.

Question. Is there any legal means, other than interposition to avoid the effect of the school decisions of the Supreme Court on May 17, 1954?

Answer. It is quite apparent that there is not. Unless it exceeds the powers granted the Federal Government to make such decision, then it is legal. There is no other avenue of attack that can be made upon it except upon this ground. All that would be left is open defiance or resistance.

Question. What if the Congress refused to submit an amendment which would settle the controversy?

Answer. They could not be compelled to do it unless at the petition of 32 of the States. This is the alternative method provided for in article V of the Constitution. The first method is, as said before, two-thirds of the Members of Congress may submit an amendment upon their own initiative, which will be ratified when approved by three-fourths of the States; or two-thirds of the States may petition Congress to submit amendments, and if it does so, these will likewise become valid when ratified by three-fourths of the States.

Question. What if Congress refused to submit the amendment and also two-thirds of the States never petitioned them to do so? How would that effect the interposition?

Answer. It is quite clear that the interposition would stand. It should be readily conceded that the States of this Union, none of them, would interpose upon only the gravest and most solemn circumstances.

Question. But this is dealing here with a judgment of the Supreme Court. Can interposition be restored to against that?

Answer. Certainly. It is true that people are much more reluctant to challenge the courts than the Congress or Chief Executive. Reverence for courts of law and justice is perhaps the finest of all our traits. However, tyranny must be resisted from whatever source it might come.

The Supreme Court is a creature of the Constitution; the Constitution in turn is a creature of the States. It is Thomas Jefferson who is credited with saying that the germ of the dissolution of the Republic lies in the judiciary or Supreme Court.

Question. Now who, in the very last analysis, is to be the judge in a case of contested sovereignty between the Federal Government and a State or group of States?

Answer. That is a vital question indeed, and actually goes to the very heart of the matter. It became a very heated question less than 10 years after the Constitution was adopted.

Jefferson and Madison, always clearly logical, reasoned thus: The sovereign States entered into a Compact as they called it; that was the Constitution itself; the States granted a part of their sovereignty to the general government and retained a part; that was the dual sovereignty system, truly a work of genius, and as they believe, and rightly so, the only and sole guaranty of liberty and freedom. Now, when a dispute came up as to who should exercise that phase of sovereignty, who was to be the judge? Jefferson, who wrote the first Kentucky Resolution of Interposition, expressed it in these words:

"That the Government created by this compact was not made the exclusive or final judge of the extent of the powers delegated to itself, since that would have made its discretion, and not the Constitution, the measure of its powers; but that as in all other cases of compact among parties having no

common judge, each party has an equal right to judge for itself, as well of infractions as of the mode and measure of redress.

So these great statesmen argued that the Constitution or Compact by its plain meaning prohibited Congress from passing the objectionable portions of the alien and sedition laws, but if there was any doubt about its meaning, then the sovereign States who formed the compact would be the ones to decide, not the Congress or the Supreme Court. There was no common judge provided for in specific words, so reason and principle, aided by the purest of logic, would dictate that the creature could not dictate to the creator. Hence the appeal to the States.

Question. It has been said that interposition is the only truly legal means by which segregation may be preserved. Elaborate on this.

Answer. Always turning first to commonsense and plain logic, we are confronted with this proposition: The Supreme Court decision of May 17, 1954, is legal unless the Court did not have the right to render it; that is, in lawyers' terms, it did not have jurisdiction of the subject matter. By logical processes and in regular sequence, this brings us to the question of whether or not the States, in forming the Union, ever granted to the Federal Government the right to take over the education and nurture of their youth. All of the southern and many of the northern States say that they did not. The Federal Government seems to assert that they did. This brings up the essential question involved in interposition—a case of contested sovereignty. Whose sovereign right is it to control the education and nature of the youth of the land—the States or the Federal Government?

Question. Several of the States have passed legislative acts, and constitutional amendments, seeking to provide means of preserving segregation. Comment on the efficiency of these.

Answer. Several of the States have proposed and passed legislative acts, the intent and purpose of which is to avoid the consequences of the school decisions. Several of the States have enacted constitutional amendments providing varying powers, such as the power to abolish public schools, the power to subsidize pupils in private schools, or public schools rented out to private individuals.

The defect in all of these maneuvers is that they, tacitly at least, admit the validity of the school decisions, and seek means and methods to evade or avoid them. We should keep in mind that the same Supreme Court that enacted the school decisions will almost surely decree that Negroes be admitted to private schools.

Question. What about the situation at Hoxie, Ark.?

Answer. At Hoxie, Ark., a Federal court has already issued a temporary injunction against the residents of the community, enjoining them from "boycotting" the integrated school there. This means that if they failed or refused to send their children to the integrated school set up there, or attempted to set up a private school, they would be subject to fine and imprisonment. However, this court injunction has not been read by the writer, and comment upon its contents is with reservations, but the information comes direct from the attorney handling the case for the citizens of the Hoxie community.

Question. Upon whom will the burden of enforcing the school decisions in this State fall, if they are accepted as legal?

Answer. Just as much on the officers and courts of this State as on the Federal authorities. There is nothing peculiarly Federal about the jurisdiction. The duty would fall just as much on our court as the Federal.

Question. In the event no interposition or nullification resolution is passed, in what position will this leave the executive and judicial officers of this State?

Answer. It would leave them in a very bad position indeed. They should know exactly upon what legal ground they stand.

Question. Is there any higher ground upon which they could stand than the asserted sovereignty of their State?

Answer. No. They would be in company of people like Jefferson and Madison, and that is concededly good company.

Question. Reverting to the historical side of the question once again, what instance of interposition or nullification was based upon the least right, so far as the State making the complaint was concerned?

Answer. Undoubtedly, the Nullification of the Tariff Act by South Carolina in 1832. This nullification stood upon practically no right because the right to control interstate and foreign commerce had been specifically granted to the Federal or general government. Paragraph 3 of article I, section VIII, of the Constitution, the article which specifically names the powers conferred upon the Federal Government, states: "To regulate commerce with foreign nations, and among the several States, and with the Indian Tribes." So the nullification was actually without right, except it might be said that the second paragraph of the same section said that tariffs and imposts should be "uniform." However, it should be admitted that this factual deviation would not justify nullification. Still it worked. The Congress promptly passed a bill alleviating South Carolina of the unfair and onerous tariff.

Question. What effect has the South Carolina episode had upon the public understanding of the subject of Interposition and Nullification?

Answer. It has caused great misunderstanding and disapprobations for the simple reason that for the many generations since that time, the history books used and taught in school never mentioned any other type or form of interposition, and the true principle as taught by Jefferson and Madison and other great statesmen of early times was completely lost and forgotten. For example, the Encyclopedia Brittanica, under the title, "Nullification" mentions no other instance of such procedure in our history, and that is mentioned with disapproval. Brittanica does not mention the word "interposition" at all.

Few people know it but in 1833 the South Carolina incident had gained such unpopularity that Mississippi completely under the domination of Andrew Jackson, passed a strong resolution condemning nullification. Jackson practically ruled Mississippi at that time so far as political affairs were concerned. However, Old Hickory was temperamental about the matter. When, in 1838, Georgia nullified the Supreme Court order halting the removal of the Cherokee Indians, Jackson made his famed remark: "Marshall has made his decision; now let him enforce it."

Question. From what has been said there is but one side to this controversy. Is there another side, or if not, to what do the proponents of Federal control of education and nurture of our children hold?

Answer. What comfort they have only come from the 14th amendment, a rather vague and indefinite pronouncement itself, enacted as a punitive measure after the Civil War when the South was prostrate. It is sometimes called the "shotgun amendment" for the reason that the validity of same must rely upon the ratification of at least some of the Southern States, all of which were helpless and under Federal military control. Governor Coleman of Mississippi contends that it was never legally and validly adopted. He is undoubtedly backed up by historical data or he would not have made the assertion. No doubt the "due process of law" clause of the amendment, and "equal protection of the law" clause of the amendment are relied upon to sustain the proponents of Federal control of education and nurture of our children.

But the fact remains that the 14th amendment was enacted more than 80 years ago; the very Congress that enacted it set up separate schools in the District of Columbia for Negroes and whites; a consistent course of action has ensued whereby for more than 80 years all parties to the compact have understood and treated the amendment as not having anything whatsoever to do with the Federal Government taking over the education and nurture of the youth of the land; innumerable Court decisions of the Court itself have plainly adhered to this interpretation. In fact the education and nurture of the youth of the land was understood to be the prerogative of the States since the founding of the Republic some 165 years ago. After all, the States founded and created the Federal Government; they founded and adopted the Constitution itself, as well as all of the amendments thereto. What the States over a long course of action construe them to be, verily they are.

Question. Enumerate the instances of interposition or nullification in our history, with the results in each case?

Answer—

1. In 1792, an individual sued the State of Georgia and against its vigorous protest, took judgment. Georgia nullified the Federal court judgment against it, and passed an act through the House of Representatives that if the marshal tried to collect same, he would be hanged. The Congress rather hastily proposed the 11th amendment which prohibited suits against the States at the instance of individual suitors.

2. Next came the nullification resolutions against the alien and sedition laws, which in the teeth of the constitutional prohibition against abridgment of free speech and a free press, levied heavy criminal penalties against anyone who dared criticize the Government or any officer thereof. A delegation from Kentucky came to Jefferson and implored him to prepare a nullification resolution for Kentucky. Jefferson complied with the first Kentucky resolution of November 1798, the first classical exposition of the doctrine of interposition and nullification in this country. In December Madison followed suit with a similar resolution for Virginia. The alien and sedition laws expired in 1801 without any prosecution thereunder.

3. In 1814, smarting under the restrictions imposed by the War of 1812, tremendously unpopular in New England, all of the New England States met in the Hartford Convention which enacted: a nullification of the draft act of Congress to provide soldiers for the war; drew up resolutions of actual secession which were never put into effect.

4. In 1828 the Creek Indians procured from the Federal Courts a judgment which would have prevented the State of Georgia from removing them from the State. Georgia promptly nullified the judgments and removed the Indians by force.

5. In 1829, the State of Alabama, under similar circumstances, nullified the Federal Courts, and removed from its territory the Creek Indians therein.

6. In 1832, the State of South Carolina nullified an act of Congress levying an unfair and onerous tariff upon the products of the State. The nature and result of this act has been commented upon.

7. In 1838, the Cherokee Indians violated a treaty whereby they would be removed from Georgia, and appealed to the Federal Courts. The Courts sustained them. Georgia nullified the act of the Courts and removed them by force. President Andrew Jackson sustained them this time and this is when he made his famous remark: "Marshall has rendered his judgment; now let him enforce it."

8. In 1859, Wisconsin nullified the Fugitive Slave Act of the Congress and the Dred Scott decision of the Supreme Court. Nothing was done.

9. Some 13 other Northern States joined Wisconsin in the nullification of these acts and decisions. Nothing was done.

10. The Supreme Court of Iowa nullified and disregarded a Supreme Court decision relative to the disposition of public lands appropriated to the railroads for building lines across the State. Nothing was done.

11. On January 20, 1956, the Legislature of the State of Alabama nullified the Supreme Court decisions of May 17, 1954, the import of which was to forcibly mix in schools of that State members of the white and Negro race. Result: dependent only upon courage and unified action of the people of Alabama.

Question. Has there ever been any other occasion of interposition or nullification comparable in importance to the nullification of the school decisions of May 17, 1954?

Answer. No. It is the last-ditch stand to preserve constitutional government in this country, and turn back the forces of the tyranny of centralized government and the minions of socialism and communism.

Question. It has been declared that even if the Congress did set in motion what is called "constitutional processes" to settle the question of who is right about the matter, and pursuant thereto three-fourths of the States did ratify an amendment which granted to the Federal Government the exclusive right to manage and control the education and nurture of our youth, the people of Mississippi would not accept it. That poses a grave question. Discuss it further.

Answer. It does indeed pose a very grave question. You note it was said the "people" of Mississippi. As Senator EASTLAND has pointed out, this school decision is impossible of performance. It shocks the sensibilities of all of the people. The revulsion is too great to be overcome. It runs counter to universal laws of nature that man-made laws cannot control.

In the next place, while unbridled and salacious attacks upon the Supreme Court have no place in a dignified discussion among responsible men, still there is a deep-seated conviction among the people that this decision, coupled with other and numerous acts and predilections, shows a studied intention to change the form of this Government. It should be conceded that the fifth article of the Constitution was never intended as a vehicle for accomplishing this purpose.

Question. Why would the constitutional amendments abolishing public schools, with pupil subsidizing funds, accomplish nothing? Comment further.

Answer. The Supreme Court will strike it down. Few people realize that the civil-rights mania has spread so far that three States have already passed laws providing that even private schools will have to admit Negroes, that is, except certain religious and denominational schools.

Question. What does interposition or nullification have to do with secession?

Answer. Nothing. The two principles are actually diametrically opposed. Secession talk would be pure madness at any time, and especially now when our existence is threatened and a division would spell certain ruin.

Question. If the general or Federal Government has absolute power through construction of the Constitution by Court decree, as many seem to think it has, what is the need for having the amending machinery of the Constitution, that is, article V?

Answer. None at all. Calhoun sensed this when he said: "Without it (interposition), the amending power must become obsolete, and the Constitution, through the power of construction, in the end utterly subverted."

CONCLUSION

Since the coming of the present crisis, the very word "interposition" has precipitated somewhat of a furore in the land. A southern governor has said it will become a household word throughout the country. To its advocates, it has become a symbol of liberty and freedom from oppression. To its opponents, it is anethama, of near treasonable import.

The public opinion is the ungovernable master of all human disputation. How has it been received? What do those who solemnly aver that the Federal power is absolute and supreme have to say about it?

It can be truthfully said that it has been received in the main with the same solemn dignity with which it has been offered.

It appears that the arguments presently being waged and to be continued perhaps for a long time will follow the same line, with the same contentions being made as prevailed in the early days of the Republic. The advocates of absolute Federal sovereignty say the power and efficiency of the general government will be enfeebled by constant and capricious challenges of the States. The advocates of the dual sovereignty system as originally set up in the Constitution solemnly answer that interposition cannot and will not ever be raised except upon the most grave and serious circumstances, such as would threaten the very life of the state and freedom of people. The entire proposition is fraught with grave and onerous difficulties. They adopt as their answer what Calhoun said in his Reports of 1828:

"So powerful, in fact, are its difficulties, that nothing but truth and a deep sense of oppression on the part of the people of the state, will ever sustain the exercise of the power;—and if it should be attempted under other circumstances, it must speedily terminate in the expulsion of those in power, to be replaced by others who would make a merit of closing the controversy, by yielding the point in dispute."

Hon. Hulan E. Jack, President of the Borough of Manhattan, Honored

EXTENSION OF REMARKS
OF
HON. HERBERT ZELENKO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, February 20, 1956

Mr. ZELENKO. Mr. Speaker, on February 7, 1956, the Honorable Hulan E. Jack, president of the Borough of Manhattan, was presented a scroll for his "untiring efforts to further better understanding among Americans of all races and creeds," by the Albert Einstein College of Medicine of Yeshiva University. I am pleased to insert into the RECORD the remarks of President Jack on that occasion:

There are moments in the life of a man when the friendship expressed by his fellow citizens fill his heart with a sense of gratitude which cannot be evaluated with mere words. Tonight I find myself in this position for your presence here will always remain a cherished treasure, an evening filled with memories never to be forgotten.

For many years I have labored in the vineyards of brotherhood where the seed of understanding among all men was planted long ago. I have seen the bright dawn of fellowship obscured by the gray clouds of bigotry. I have witnessed the gradual crumbling of the walls of prejudice. I have walked in the dark caves of discrimination. And yet, despite all these dying embers of intolerance, in one form or another, I am thankfully aware that mankind is moving forward along the road to universal understanding where neighbors can one day break bread together within the kingdom of sincere friendship.

Progress in human relationship is often like a continuous drop of water spending its strength upon a seemingly immovable rock. But the day comes when the obstruction gives way and a torrent of fresh water unleashes its mighty force, to remove for all time, the barriers which held back the greater abundance of the restless energy found in the handiwork of God and nature.

Our own country is like that restless torrent of water. From the first day when the Declaration of Independence was signed by men dedicated to the philosophy of the equality of freedom, liberty, and justice, we have expanded our endeavors in the field of human relationship. We have become a symbol of hope and faith to new and unborn nations whose people are concerned with the realization that they, too, may be counted as belonging to the family of a free world.

But we cannot remain forever an example of true democracy if our own house contains elements of mentality where the evil of segregation still lingers. The honors you have given to me here tonight are indeed proof that true democracy can be a living and workable demonstration of our American society.

Further evidence of true democracy can be found only a few miles from here where the Albert Einstein College of Medicine of Yeshiva University is located. Founded under Jewish auspices it has opened its doors to both faculty and students regardless of their race, creed, color, or national origin. Such an ideal in medical education is worthy of your cooperation and support.

There is no room whatsoever for the ugly scars of discrimination and segregation in any field of education for we are all children of God whose minds are born free from the curse of hate and prejudice.

I could not be your guest of honor tonight except for the friendship and efforts of men and women from every walk of life and from every section of our community. I wish I could reach out and clasp your hand in thankfulness for the spiritual warmth of your hearts. If I could do so, it would not be Hulan E. Jack, president of the Borough of Manhattan speaking, but an immigrant boy of 16 who came to a glorious land and was given the opportunity of sharing the priceless relationship with so many, many unforgettable friends.

From the deepest corners of our hearts, my wife, Mira and I, reach out and embrace every one of you with a prayer of thankfulness.

The National Forest Recreation Use Bill

EXTENSION OF REMARKS
OF
HON. PHIL M. LANDRUM
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 20, 1956

Mr. LANDRUM. Mr. Speaker, one of the most important conservation measures before this Congress is the national forest recreation use bill.

Its principal sponsor in the 84th Congress is the gentleman from Montana [Mr. METCALF]. I have joined as a cosponsor and similar, or identical, bills have been introduced by the gentleman from Arizona [Mr. UDALL], the gentlewoman from Oregon [Mrs. GREEN], the gentleman from Tennessee [Mr. BAKER], the gentleman from California [Mr. ENGLE], the gentleman from Illinois [Mr. PRICE], the gentleman from Florida [Mr. MATTHEWS], and the gentleman from California [Mr. HAGEN].

Here is a press release on Mr. METCALF's H. R. 1823 from the International Association of Game, Fish, and Conservation Commissioners: Carl D. Shoemaker, general counsel, 232 Carroll Street NW., Washington, D. C.:

WASHINGTON, D. C.—The bill (H. R. 1823) introduced by Congressman LEE METCALF, of Montana, is one of the most important conservation measures to be considered by the 2d session of the 84th Congress which convened last Tuesday, according to Carl D. Shoemaker, general counsel of the International Association of Game, Fish, and Conservation Commissioners.

This bill establishes as a policy the public use of all of the national forests and authorizes the necessary funds to carry out an extensive program for the development and operation of these areas for recreational use. Other features of the bill provide for adequate safety and sanitation in these areas and the improvement and maintenance of wildlife habitat. All of these features are of far-reaching importance to the forty-odd millions of people who annually spend a part or all of their leisure time in these forest areas.

To insure the needed funds the bill authorizes the setting aside of not to exceed $5,500,000 from the annual forest receipts derived from timber sales, grazing fees, and other forest revenues.

Where a recreational area has been developed with special sanitary facilities and improvement such as outdoor camp stoves, necessary fire wood, and cleanup services, the bill authorizes the Forest Service to charge a small fee for them. No charge or fee for hunting or fishing in the forests is authorized nor contemplated.

Congressman METCALF has shown a real interest in conservation problems. This bill was introduced by him in response to a widespread need for better development of the forests in the interest of those Americans who use them for recreational purposes. Nothing in the bill interferes with or limits the other uses of the forests for watershed protection, grazing, and timber production.

Mr. Speaker, I wish to point out to my colleagues that the Forest Service now has the authority to charge fees for recreation use anywhere in the national forest system. It is doing so in almost 50 places. The national forest recreation use bill limits this authority to those substantially improved areas where special services or facilities are provided.

The American Indian

EXTENSION OF REMARKS
OF
HON. WALT HORAN
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Monday, February 20, 1956

Mr. HORAN. Mr. Speaker, under leave to extend my own remarks in the Appendix of the CONGRESSIONAL RECORD, I am pleased to include an interesting paper on the American Indian.

My distinguished constituent who wrote this is himself a member of the Chickasaw Tribe. I feel that my colleagues will thoroughly enjoy this fine treatise on our neighbors, the American Indians.

Incidentally "the Westerners" is a fine group of outstanding citizens very much interested in the continued constructive progress of the West and the fair and sound solutions of its problems:

THE NORTH AMERICAN INDIAN IN FACT AND FICTION

(Paper prepared for the Spokane Chapter of the Westerners by Frank Lilly, October 20, 1955)

Since the time, 463 years and 12 days ago, when Christopher Columbus first set foot on San Salvador and dubbed its inhabitants "Indios" in the belief that he had reached an outlying island of India, popular ideas regarding the "Indian" of the Western Continent have been in too many important respects as far out of line with facts as was Columbus in the matter of the land he had reached.

The purpose of this paper, therefore, is to present and discuss facts in connection with some of the more important fictions about the North American Indians—fictions commonly and generally accepted as facts. Of course some generalization and oversimplification must be taken for granted because of the limitation of a paper. Omissions and exceptions must also be taken for granted.

One of the first facts to learn about the American Indians is that there are many different groups of them; as many, perhaps more, than is the case in connection with Europeans or Asiatics. The Scot is one thing, the Welshman another, and the Irishman, although he may have a Spanish surname, is still another—not just in customs alone but also in physique and to some extent in complexion.

It should surprise no one that while the Iroquoise is one thing, the Sioux is quite another and the Chinook still another. Nor should it be surprising that they should differ so much from one another in customs, physique and complexion. It seems reasonable to assume that, as in the case of the people of the British Isles, these differences in customs, physiques and complexion have been due to infiltrations of blood from various parts of the Eastern Hemisphere; Norse, Teuton, Roman, Spanish, Phoenician and others.

There is, in my opinion, unmistakable evidence of the infiltration of Norse blood among the Indians of the North and Central Atlantic States, semitic blood in some of the tribes of the North Central States, and Mongolian blood among some of the tribes along the Pacific coastline.

The chances are that the human mind is basically the same everywhere. However, it is a fact that due to "time, place and circumstances," foods, climate and topography, people do not all think alike about what they see and feel. Nonetheless, it is a fact that certain basic concepts and feelings prevail among Europeans, Asiatics and Africans as integral groups of people, and the same is true of the American Indian.

Exceptions being the rule, there will be exceptions in connection with some American Indian social units to the facts that I shall comment upon, but these facts will still remain true for American Indians as a whole. Some tribes, for example—only a very few—were polygamous and/or polyandrous but monogamy was the rule.

The picture of the North American Indian held by most people is that of a half-naked, war-bonneted, bloodthirsty warrior with a tomahawk in one hand and a scalping knife in the other; or, if not that, blanketed, lazy lout blissfully smoking his pipe while his squaw toiled incessantly; an ignorant heathen, whose speech was limited to an occasional "Ugh" and whose main desire was for the white man's "firewater."

That the Indian was basically bloodthirsty is fiction. Never was he so bloodthirsty as the white man who in Europe has warred almost continuously since recorded history. Indians did not wage war with others of their race over religious concepts; Indians did not conceive and develop means and methods for killing defenseless noncombatant men and women and children by the tens of thousands. The facts speak for themselves.

It is true that from time to time pre-Columbian Indians had disputes over hunting grounds, but these were usually settled without the shedding of much blood. It was the reluctance of the Indian to kill a fellow man—even the invading white man—that made it possible for European emigrants to secure a firm foothold in North America. How easy it would have been for the Indian to have completely destroyed those early settlers. Instead the Indians nurtured them and taught them how to survive in the new environment.

But what did the early settlers do in return? After failing to eliminate the Indian by enslavement, they resorted to outright killing; then incited the Indians to warfare, not only with the settlers, but among themselves. This, by the way, was achieved in large measure through the use of "firewater," made by Christianized white men and sold to the Indians with full knowledge of its evil effects. These early Indian wars, it has been agreed, were the basis for the fiction that arose as to the Indian's bloodthirstiness.

It is fiction that the American Indians were primarily nomadic hunters. All Indians were agriculturists to some extent and most of them were primarily so, living in houses and settlements. The tepee is in effect an Indian tent; the log house, where logs were available, was typically Indian.

At this point, it should be brought out that over half of this country's agricultural products, and a substantial and increasing part of the world's farm produce, comes from plants domesticated and developed by the pre-Columbian Indians, corn (maize), "Irish" potato, sweetpotato, tomato, pumpkin, squash, beans, popcorn, peanuts, etc. They also developed the pineapple, avocado and cotton and knew how to extract and use chocolate, quinine and rubber.

It is fiction that the Indian was addicted to tobacco, although he developed and cultivated the plant. The fact is that tobacco was only one of several aromatic leaves that he smoked, not habitually, but occasionally, as a token of friendship or in connection with the formal sealing of an agreement. The white man shakes hands on such occasions; the Indian smoked what is now generally called the "peace pipe."

The facts about the Indian's idea of the ownership of land have never been understood by the white man. In the thinking of the Indian as best expressed by Tecumseh, the Great Spirit gave the land, as he did air and water, to all in common and none of each could be sold by any individual or family; theirs was simply the right to the use of the land.

Thomas Yallup, Yakima Indian, in a speech made at Walla Walla on June 9, 1955, explained the Indian's attitude about the land in the following words:

"Our people did not see the land as the white people see it. The earth was the very life of the Indian. Long before there was record of time, the Indian looked upon the earth as a child looks upon its mother. His mother earth provided him with water to drink, food to eat, and clothing for his family and himself. These things born of the earth he cherished and when compelled to do so he fought for the earth."

In reply to the Government's offer to buy Nez Perce lands, Chief Joseph said:

"We have no right to sell this land for we do not own it. This land belongs to our forefathers and their forefathers whose bodies have become a part of it, and it belongs to our children and our children's children. We cannot sell it."

The Indian could occupy any tribal land not in use just so long as he used it. There

were no absentee landlords among the Indians and the soil was not abused. In this connection, I read you the prize-winning essay of a Cherokee youth as reported by the United Press. The boy, after being shown a picture of a delapidated house and a washed-out field wrote.

"Both pictures show white man crazy. Make big tepee. Plow much ground. Water wash. Wind blow. Soil, grass all gone. House rot down; no corn; no potatoes; no hay; no pony; no hog; no chickens. Squaw gone with papoose."

Indian no plow much ground. Keep grass. Cattle eat grass. Indian eat steer. Hide make tepee, moccasins too. Indian no make terrace; no make dam; no hunt job not hitch-hike. Great Spirit make water, also sunshine. Indian no waste anything. Indian no go on relief. White man heap crazy."

The American Indian was by nature a conservationist of the first order. He caught no more fish than he could use. He killed only for food and not as a sport, and even, in a little prayer, asked the pardon of the animal he killed. He believed that every form of life had been designed by the Great Spirit to play its own integral part in the overall scheme of things.

One of the most prevalent and unjust fictions about the Indian is the one that says he was a godless heathen. Charles Russell, one of the very few white men who really knew the soul of the Indian, wrote as follows:

"Nature taught her child
To read and write and spell;
And with her books before him
He reads his lesson well.

"He loves his mother earth
Where all her creatures trod;
Yet he is called a heathen
Who always lived with God."

The white man's attempt to force the Indian, willy-nilly, to accept the Christian religion puzzled him and his confusion is well expressed in the following excerpt from a speech by Red Jacket (Sa-go-ye-wat-ha), made in 1805 at a council of the chiefs of the Six Nations after a white missionary had addressed them. Directing his remarks to the missionary, he said:

"Brother, you say that you are sent to instruct us how to worship the Great Spirit and that if we do not take hold of the religion you white people teach we shall be unhappy hereafter. You say you are right and we are wrong. How do you know this to be true? Your religion is written in a book. We only know what you tell us about it. How shall we know when to believe, being so often deceived by the white people?

"Brother, you say there is but one way to worship and serve the Great Spirit. If there is but one religion, why do you white people differ so much about it? Why not all agree, as you can all read the book?

"Brother, we do not understand these things. We are told that your religion was given to your forefathers and has been handed down from father to son. We also have a religion which was given to our forefathers and has been handed down to us. We worship and serve in that way. It teaches us to be thankful for all the favors we receive, to love each other and to be united. We never quarrel about religion.

"Brother, we do not wish to destroy your religion or take it from you; we only want to enjoy our own."

The Indian had no concept of a hell or future punishment. He could not conceive of a Great Spirit who would, as the Creator of everything, create a devil god and permit this devil to punish him either here on in the after life. He believed that in committing a wrong against another person, one did not so much wrong that person as he wronged himself.

In connection with this matter of a hell, you will recall that one of the great divines of early Colonial days gave thanks to his God, following the massacre of the Pequots by his people, that "no less than 600 were brought down to hell that day" (Cotton Mather).

There was something, either in the very nature of the Indian or in his religion, possibly both, that, although he had no laws or penal institutions, operated in such a way that there was very little crime. On this fact, I quote Thomas Jefferson as follows:

"Crimes are very rare among the Indians, so much so that it is a question of whether no law, as among the Indians, or too much law as among civilized Europeans, submits man to the greatest evil. One who has seen both conditions of existence would pronounce it to be the latter."

Standards of conduct among the Indians were based upon nature's laws, which are moral laws. Force was seldom used to enforce conduct. Each person was his own judge. Misconduct hurt the wrongdoer and that hurt was his punishment. Deceit of any kind was the highest form of offense. Interesting evidence of this fact is that among the white children in this country to give one's word "honest Injun" is the most binding of oaths.

It is fiction that Thomas Paine or Jean Jacques Rousseau originated the basic concepts of our form of government. The fact is that the distinctive political ideals of American life were provided by the American Indian who, long before Columbus landed, had developed a social organization in which the community recognized the equality of men and respected their right to a diversity of opinion.

The North American Indian was a free man enjoying the rights and privileges of a true democracy during hundreds of years when Europeans lived abject lives in semistarvation, accepting crusts of bread and royal circuses in exchange for the surrender of their freedom.

Noting the confusion in Colonial governments, Conestago, Onondago chief, called the attention of the Colonial governors meeting at Lancaster, Pa., in 1744, to the fact that "our wise forefathers established unity and amity (by a confederation of tribes) and by your observing the same methods you will secure unity and strength."

Commenting on this matter, Benjamin Franklin, in addressing the Albany Congress, said:

"It would be a strange thing that these Indians should have been able to form a union that has existed for ages and yet that a like union should be impracticable for ten or a dozen English Colonies."

In connection with the foregoing, I quote in part from a recent address by Hon. Christian Herter, Governor of Massachusetts:

"In the realm of the science of government, the Indians are only today winning long overdue credit for establishing some advanced forms of union and compact. These they developed before contact was made with the great traditions of European civilization. It is significant that in 1954 we are observing the 200th anniversary of the adoption of Benjamin Franklin's plan of union by the Congress of Commissioners, which was attended by 7 of the 13 Colonies at Albany in 1754.

"None of the Colonies, indeed, ratified the plan, but this foundation stone was implemented 35 years later when, in 1787, Franklin had the satisfaction of helping to draft the Constitution of the United States of America. Significantly, Franklin drew the inspiration for the Albany Plan of Union from the Iroquoise Confederacy of the Five Nations, which included our own Mohawks.

"This confederacy, formed as far back as the middle of the 16th century, gave women the right to vote centuries before such enfranchisement was accepted by the American Republic, and it carried on functions which demonstrated the high state of intelligent living and understanding that the Indians possessed as a people. It would be well for all of us to examine more carefully the life, mores, and government of the red men who inhabited our Nation before our own ancestors came.

"The student of Indian life and lore is acutely aware of and impressed with the variety of his talents, the dignity of his life and attainments within the sphere of his wants and needs, and the propriety and equity of the laws by which he lived. The Indian's mark is, indeed, on our land, and indelibly so; and the significance of his pioneer contribution to the American way should not be lost upon us."

It is fiction that the Indians had kings or dictators. Their chiefs were servants of the members of the tribe, exercising only such powers as were delegated to them. A chief, by the way, owed his nomination to the women of the tribe and was chosen by the votes of both the men and women.

It is fiction that the family life of the American Indian was dominated by the man. The fact is that the ownership of property and the descent of name was vested in woman. She bore the children and they were hers in name and at her command, and not the father's, so long as she lived. It was the mother, and not the father, who could permit or forbid, as she chose, her son's going to war.

In connection with this comment, I quote from bulletin 30 of the Bureau of American Ethnology:

"The matrons had only to interpose their influence and authority to bring to naught the best conceived designs and enterprises leading to war."

Oh that the mothers of sons throughout what we call the civilized (?) world had such influence today.

Children of the American Indians were well behaved and obedient, although they were never touched by a punishing hand. Their fathers and mothers considered the white people brutal in treating their children like enemies that must be threatened and/or punished, or weak when they coddled them with gifts and/or promises. They believed that children so treated would grow up belligerent and subject to fits of uncontrolled anger or immature and dependent.

The increasing lawlessness and violence of non-Indian young people, often against their own fathers and mothers, unheard of among the American Indians, gives weight to the Indians belief in a discipline developed by setting an example rather than by the use of corporal punishment or gifts.

The American Indian way of life was praised and recommended to our people by Theodore Roosevelt after he had lived with the Indians for several years and attained the measure of health that made him one of our country's most vigorous and progressive Presidents. He called the Indian way of life the "simple life," and it is simple in the best sense of the word, because it is sensible.

In this way of life, no attempt was made to improve upon nature by refining and adulterating foods or damaging them by overcooking. The American Indian believed that the Great Spirit had created everything in its proper season, so he ate vegetables, fruits, grains and meats in their proper season, and he ate all of each that was edible. He dressed for the season and not for fashion. Me did not poison his loungs with habitual smoking nor convert either grain or fruit into deadly alcohol to dull his senses.

He lived always close to Mother Nature and recognized her laws, those impersonal, basic principles in which there is justice for all and hatred for none. He blamed no deity, no one but himself, when he made mistakes. He depended upon himself for his

livelihood and was quick to share food, clothing and shelter with others in their need.

He loved peace but would fight when necessary, just as he has voluntarily done for the country that has violated almost every treaty it ever made with him. He hated no one on account of race, creed, color or political ideas, and never killed or mistreated any man on any of these counts.

These are some of the facts that made the American Indian way of life a simple and sensible way of life. This country might have been a better and happier land if the white man had become American-Indianized instead of the Indian becoming partially Europeanized. Be that as it may, however, there is no disputing the fact that without the Indian's gifts to American agriculture and his contribution of the unique democratic tradition he had developed, we might not have become today the world's greatest and most prosperous nation.

Hail and honor the American Indian.

Upper Colorado River Storage Project

EXTENSION OF REMARKS
OF
HON. JOHN P. SAYLOR
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 20, 1956

Mr. SAYLOR. Mr. Speaker, the proponents of the upper Colorado River storage project are attempting to create in the minds of the public the conception that, since they have withdrawn the controversial features dealing with the invasion of our national parks and monuments, all opposition to this bill has now ceased.

The public has not been lulled into any false sense of security by this action. They still realize that this project will only directly benefit the 4 States involved, and the burden to pay for the cost of the project will fall on the remaining 44 States.

This awareness of the public is very well expressed in an editorial of the Sentinel, a newspaper published in Carlisle, Pa.

The editorial follows:

[From the Carlisle (Pa.) Sentinel of January 10, 1956]

COLORADO PROJECT A NIGHTMARE

One of the matters before Congress for consideration is the gigantic upper Colorado River project. As Representative CRAIG HOSMER, Republican, of California, puts it, this irrigation project which the Bureau of Reclamation under the Eisenhower administration is asking Congress to approve is the most expensive and unsound scheme yet devised. Although it would be a windfall to private power interests, the project would bring into production only half a million acres in high, remote areas of Wyoming, Colorado, Utah, and New Mexico, while a survey soon to be submitted to Congress shows that 21 million acres of fine farm lands are now lying idle in 19 eastern, southern, and midwestern States.

Yet despite the fact that there are at least 21 million acres awaiting the plow in areas where rainfall is heavy and the growing season long, the Bureau would force the burden of the upper Colorado project on the American taxpayers.

In addition to the best acreage now lying idle, there are millions of acres in lower soil classes and in other States that are idle in the humid area of the Nation. Much of this lower class land could be improved with little cost and developed into pasture.

These idle acres lie close to markets, population centers, transportation, schools, and established municipal governments. The upper Colorado project has none of these advantages and it would cost extra billions to provide them.

The Reclamation Bureau has been attempting to sell the idea that projects such as the upper Colorado must be developed, at tremendous cost, to provide food and fiber for our growing population. That is a false claim if there ever was one. Even on the present producing farm lands such huge amount of food and fiber are grown that the demand is not great enough and adequate storage space is unavailable. Despite the plans of the Eisenhower administration for reducing this output and increasing the farmers' income and purchasing dollar we have, this year, and will have again next year in all probability, enormous new surpluses and record yields. Still the Reclamation Bureau would have Congress appropriate billions of dollars on unnecessary and wasteful projects as the upper Colorado Basin. The Colorado project would cost $4 billion alone. The 4 States which would benefit would pay less than 2 percent of the cost. The cost of bringing the millions of acres of good land into full production would run from $15 to $150. Building the upper Colorado project would cost the taxpayers $5,000 an acre. As Representative HOSMER says, the project would be economic idiocy.

Too, it must not be forgotten that the project would be an invasion of what is now a great national park, that much of the national beauty in the area set aside years ago for a park would be desecrated for the sake of private interests and votes. In the face of the so-called farm program the President has submitted to Congress, which program proves that we have more production than demand, that the situation is extremely serious even with the lesser number of acres of farm lands under cultivation today, and that more acreage, according to the program, should be taken out of production, to be paid for in surpluses or cash—whichever the farmers desire—even mention of cultivation of the upper Colorado area borders on fantasy.

Freedom of the Seas

EXTENSION OF REMARKS
OF
HON. JAMES B. UTT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 20, 1956

Mr. UTT. Mr. Speaker, the Inter-American Council of Jurists is a technical agency of the Organization of American States which meets every 2 years to study the technical aspects of international law as they affect the relations among the republics of this hemisphere.

On the agenda of its meeting concluded earlier this month at Mexico City, the Council of Jurists had the item "System of Territorial Waters and Related Questions: Preparatory Study for the Specialized Inter-American Conference Provided for in Resolution LXXXIV of the Caracas Conference."

The Council did not make such a study. Instead a resolution on the subject had been drafted in secrecy by a number of delegates which covered not only legal, but economic, political, and scientific subjects with which the delegates at this technical conference were not competent to deal. This resolution was drafted in such a manner as to appeal to the narrow, nationalistic feelings of the delegates. It was then railroaded through without study or debate over the opposition of the United States without giving the delegate from this country opportunity to have his points of opposition discussed.

Among the provisions of the resolution which was thus adopted were these:

1. The distance of 3 miles as the limit of territorial waters is insufficient, and does not constitute a rule of general international law. Therefore, the enlargement of the zone of the sea traditionally called territorial waters is justifiable.

2. Each State is competent to establish its territorial waters within reasonable limits, taking into account geographical, geological, and biological factors, as well as the economic needs of its population, and its security and defense.

Among the nations who sponsored this resolution are three who have already made individual claims to a minimum distance of sovereignty extending 200 marine miles from their coasts. Another has already made claim to sovereignty over a belt of sea which at some points extends as much as 500 miles from its coast. This is what they mean by the word "reasonable."

Such extensions of sovereignty into the high seas by individual countries simply cannot be accepted by the community of nations. The high seas are not free for common use by mankind because of the selfish aspirations of the big maritime nations. They are free for such use because this is a requirement of our civilization. These seas and the air spaces above them carry the commerce of the world. Raw material comes to manufacturers along these highways, manufactured goods radiate out of these avenues from factories to users; and food travels them from the harvester to the consumer.

Many of these highways of the sea, which are so vital to this world's ability to feed, clothe, and house its thronging billions, come close to land either where island and mainlands concentrate them or where lee shores give protection to seafarers from local storm areas. For instance all avenues of normal approach to the Pacific Ocean from the Indian and Atlantic Oceans skirt near to some point of land.

It is not compatible with the needs of nations that individual countries can, at their will, extend their sovereign territory out over these lanes of free passage. It does not matter what protestations are made by such sovereign country that free passage through this territory will be guaranteed by it to all other countries, because whatever rights a sovereign can grant for passage through its territory it can later modify or withdraw. This is a far different matter than existing international law which permits every sovereign to use these vital traffic lanes of its own free right without asking or being granted that right by another.

The objectives of security, defense, and conservation of resources which these

countries seek are sought equally avidly by the United States and the other maritime countries. They can be attained by international cooperation through means now under study in the United Nations without possible disruption of the world's commerce and, in fact, its defenses.

The United States, which has had thrust upon it such a heavy burden of responsibility for defending and aiding the smaller nations of the free world, cannot adequately fulfill those responsibilities if its ability to do so is restricted by great broadenings of the territorial area of nations into the high seas.

These overwhelming aspects of the problem obviously were not given consideration by the delegates at Mexico City who were technically trained juridical personages. As the United States delegate said in recording the contrary vote of this country:

In addition, the United States delegation wishes to record the fact that when the resolution, in the drafting of which the United States had no part, was submitted to committee I, despite fundamental considerations raised by the United States and other delegations against the resolution, there was no discussion of those considerations at the one and only session of the committee held to debate the document.

Mr. Speaker, the Organization of American States serves a most useful function in providing a forum where the republics of this hemisphere can study, debate, and work out problems of common concern. But when technical bodies of that organization pass resolutions on such fundamental and basic subjects without study and in such a glib, lighthearted matter it shakes faith in the whole organization. We sincerely hope that the parent Organization of American States will take much more serious consideration of this matter before it proceeds to further action on it.

France's Government

EXTENSION OF REMARKS
OF
HON. WILLIAM H. NATCHER
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES

Monday, February 20, 1956

Mr. NATCHER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial entitled "France's Government," which appeared in the February 13, 1956, issue of the Park City Daily News of Bowling Green, Ky.

The editorial is as follows:

FRANCE'S GOVERNMENT

The perennial French pessimists, whose gloom has been well nourished by postwar events, predict an early demise for the new government of France. They may be right. Perhaps only great exercise of skill by the new Socialist Premier, Guy Mollet, can prolong this regime beyond a few months.

It rests on a very shaky base. Though Mollet was invested as Premier by a 420 to 71 vote of the French Assembly, the actual strength of his left-of-center governing coalition comes to just about 170 votes.

This means that every time a major domestic or foreign issue comes before the Assembly, Mollet will have to fabricate a new majority for that specific purpose. If in any given instance he cannot do it, his regime will fall.

Mollet won the premiership so handily because he was able to corral the support of 140 Communists and many center-right moderates who actively oppose much of his specific program for France. He managed to achieve this without bringing representatives of either group into the government, and without making any commitments to them.

Why did they back him at this stage?

Logically, the center-right group, including many who formed the previous government of Edgar Faure, should fit into a powerful coalition of moderates. But Mollet and his close associate, Pierre Mendes-France, outraged this wing by refusing coalition on any but their own terms.

The center-right group is cool to the Mollet program of domestic reform. But many members feared failure to support Mollet would force him to deal directly with the Communists, leading possibly to a popular front regime having Red representatives. They saw support of Mollet now as a lesser evil.

As for the Communists, they envision their backing of the Socialist leaders as the first step toward a new popular front on the model which governed France in the late 1930's. The Reds think divisions in the moderate ranks are sufficiently deep so that soon one or the other of the center groups will have to draw the Communists into the government in order to rule at all.

The Communists helped put Mollet in but they will not vote for much of his program—except perhaps some domestic reform measures. The center-rightists also helped, yet they are likely to stand with him only on his NATO-oriented foreign policy.

The curious manner in which Mollet gained support for his premiership only underlines the basic tragedy of France. Together the left and right moderates are the country's most powerful political force. But they will not get together. In their separation, they stand in peril. And the Communists prepare to benefit.

Address by James G. Patton, President of the National Farmers Union at the Annual Convention of the National Rural Electric Cooperative Association—Part I

EXTENSION OF REMARKS
OF
HON. LEE METCALF
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 16, 1956

Mr. METCALF. Mr. Speaker, one of the speakers at the annual convention of the National Rural Electric Cooperative Association at St. Louis last month was James G. Patton, president of the National Farmers Union.

I know my colleagues will be interested in the remarks made by this distinguished leader of a great American farm organization, an organization that has been in the vanguard of those sponsoring multipurpose development of our water resources.

Mr. Patton's speech follows:

REMARKS OF JAMES G. PATTON, PRESIDENT, NATIONAL FARMERS UNION, TO THE ANNUAL CONVENTION, NATIONAL RURAL ELECTRIC COOPERATIVE ASSOCIATION, AT ST. LOUIS, MO., JANUARY 25, 1956

I am both honored and pleased to be invited to speak before this great convention of the rural electric cooperatives of America.

Your organization is performing a tremendously valuable and necessary service for rural people. It is perfectly logical, perfectly natural, perfectly commonsense, for the Farmers Union to support your efforts to protect and advance the progress of rural electrification. The Farmers Union is a farmers' farm organization. We are unalterably committed, both by the convictions of our leaders and the mandate of more than 300,000 farm families in our membership, to fight for the interests of farm people. Rural electric cooperatives are very close to the top of what we consider most important to the welfare of farmers. I pledge you, here and now, that the Farmers Union will never fail to back you up to the full extent of our power in your fight to advance the cause of rural electrification.

I would not dwell upon this except for the amazing fact—which many of us have come unhappily to recognize in recent years—that you cannot take it for granted that all who purport to speak for organized farmers will support you in your fight for the welfare of rural people. I don't want to leave any question in your minds about where I stand—and where the Farmers Union stands. We are behind you all the way.

I am particularly pleased to be here with my good friend, Clyde Ellis. Clyde and I have been friends since he came to Congress from Arkansas a good many years ago. He has done, and is doing, a tremendously valuable and important job in Washington for the REA co-ops of this country. The National Farmers Union recognized the contribution Clyde Ellis was making by giving him our award for outstanding service to agriculture a few years ago. That was during the period shortly after World War II when, in the space of a few years, the rural electric cooperatives accomplished the prodigious task of bringing electricity to about half of this Nation's farmers. Never before nor since has anything of comparable scale been done in so short a time to advance the material well-being of farmers.

The rural electrification movement is faced with even greater difficulties today. At the same time, the tasks that remain to be done in the field of rural electrification and farm electrification are of even greater scale than the impossible job of connecting America's farms to powerlines that you accomplished yesterday.

The present difficulties of rural electrification are compounded by the tragic and unnecessary collapse of farm income that has taken place in the last few years. This, in fact, is the overriding problem of agriculture at this time.

The most pressing immediate concern of National Farmers Union is to reverse the disastrous depression that has been inflicted upon farm people. It is the most basic problem facing rural electrification too. Farmers simply can't pay their power bills if they don't have incomes. Nor can they invest in the marvelous new electrically powered farm equipment that is already coming into the showrooms—and which every farmer will need in order to compete and to earn an American standard of living as soon as tomorrow.

The depression in agriculture is shattering the very foundations of our rural communities. It is liquidating farm homes by the hundreds of thousands. It is undermining the economic foundations of rural churches, rural schools, rural business. If it is permitted to proceed on this rapid course to its inevitable end, rural life in America will be

drastically altered. The implications are drastic and dangerous for all rural enterprise, REA co-ops among them.

The Farmers Union is fighting back against this planned and deliberate depression in agriculture. To be perfectly plain and blunt, we don't agree that farmers ought to be singled out from all other groups in our economy for the depression treatment.

There is a remarkable uniformity in the pattern of the attacks that are being made these days against the welfare of farmers.

Your enemies don't argue against the merits of your efforts to obtain low-cost electricity for rural people. They don't say that a private utility monopoly will give you and the public more service and more satisfaction for your money—because it is easy to prove that is not true. Instead, they try to make you ashamed of being in business for yourselves. They call it "creeping socialism."

The people who are fighting against the principle of public responsibility to help farmers get a fair share of the national income don't argue the merits of that question either. They don't come right out and say that farmers ought to be satisfied with a few cents an hour for their labor, and little or no return on their investment. That's exactly what their agricultural policies have led to. But they know that, if they base their argument on the facts in the case, they simply won't make headway.

Instead, the opponents of Government farm programs try to make farmers ashamed of using their own Government to help themselves get their fair share out of the Nation's productivity and prosperity. They call our farm programs, also, "creeping socialism." They say that farm programs, the kind that can and will do the job of getting a fair share for the farmers, will destroy character.

This is not legitimate public debate. This is nothing more or less than brainwashing. This is an attempt to make the farmers ashamed of standing up and fighting for their rights.

I can tell you right now that the Farmers Union is made up of farmers who aren't going to sit back and relax and let a bunch of slick hucksters brainwash them into turning their pockets inside out.

I am not in the least ashamed of admitting I believe farmers are entitled to 100 percent of a fair parity price for the product of their labor and their capital.

I am not ashamed either that I have learned the plain and clear lesson of history, that farmers will never get a fair parity return out of the so-called free market.

I am not at all bashful about telling you, and the rest of the world, that I think farmers are entitled to whatever help they need from their own Government to civilize this so-called free market, to make it work justice for all the people including farmers, instead of inflicting chronic depressions upon the farmers between wars and national emergencies.

I have not noticed any of the so-called business-managed electric utilities hurrying into the United States Treasury to hand back the billions of dollars in tax subsidies that have been granted to them in the last few years. Since the Korean war, the private utilities have received tax subsidy benefits worth $4 billion—which the Federal Power Commission says they don't have to pass on to their customers, nor return in any way to the public.

That's $4 billion worth of subsidy benefits received in just 5 years, mind you. This makes the $2½ billion or so that has been loaned at interest to the REA co-ops of this country in 21 years look like a piker. This makes the $2½ billion invested in Federal power projects during the past 50 years look puny indeed.

No, there is a completely different standard applied to subsidies, outright grants, tax favors, and other forms of help from the United States Government, when it is passed out to a few big corporations, than when it is invested in projects and programs that help ordinary people directly.

It is high time we country people come to our senses. It is high time we start looking at the facts, and quit letting a bunch of hired hucksters browbeat us with a few well-chosen slanders.

We paid with the lives of more than 250 American citizens in 1955 alone for the wanton luxury of satisfying the profit utility lobby's crusade against "creeping socialism." We paid about $1 billion in property destroyed by the deadly floods of New England last summer and the Pacific coast this winter, to boot. Practically all of this flood damage would have been prevented if projects that are already planned had been built, instead of shoved into Washington, D. C. pigeonholes.

We know that we can build dams that will prevent floods, at a fraction of the cost of replacing the property that will be destroyed by the floods which we can predict with certainty to come sooner or later. We know that those dams can produce cheap and abundant electricity, which can be sold at low rates to light our farms and homes, to energize new factories that create new jobs and make whole regions flower in a new level of prosperity. We know we can do these things—and make them pay for themselves. We know also that if wo don't do them, we will sooner or later pay for our neglect with our lives and our property.

If it is "creeping socialism" to protect the lives and the property of our people who live and work in the valleys, then I say it is to our everlasting shame we didn't lay on the lash and make it gallop.

Not a single new multipurpose dam has been started since the Eisenhower administration took office in 1953. Projects which had been recommended for immediate starts, and which could have been completed in time to save some of the people who drowned in the floods last year, were withdrawn from consideration when the Eisenhower administration was inaugurated.

That action was not taken without full consciousness that it would cost lives. Floods are predictable. They have been predicted. The only unknown is the time nature will choose to send them. All sensible men know that, sooner or later, floods will come—just as they have come in the past. The responsible officials in the Eisenhower administration knew the floods would come.

Yet the Eisenhower administration chose the more costly and more wasteful course of leaving the rivers uncontrolled.

Let's consider some of the other fruits of this choice by the Eisenhower administration.

We are not to get the full benefits from our great rivers. The administration is giving up our remaining dam sites to private utilities for fractional development of their potentialities.

Instead of Hells Canyon, if the administration's pro-utility power officials get their way, we will get 1, or 2, or 3, little run-of-the-river dams with just one-quarter as much flood control and storage capacity. We will get power costing twice as much, and much less of it. Farmers of the West will get no opportunity to develop the low-cost phosphate fertilizer that is indispensable to the future prosperity and productivity of our agriculture.

And on top of this, the taxpayers will pay the bill. Idaho Power Co. is asking for a tax subsidy for two of its little "spite dams." This is described by the Federal Power Commission as an interest-free loan from the taxpayers. The benefits of this tax subsidy to Idaho Power Co. will amount to more than it would cost the Government to build the whole high dam project in Hells Canyon. This is the perfect example of the "partnership" policy in which the taxpayers and consumers pay the costs and take the risks, and the Wall Street-owned utility interests pocket the benefits.

The public will pay heavy subsidies to the private utilities for inadequate utilization of our waterpower resources, with too little and too late protection against devastating floods. We will get less power, and we will have to pay higher rates on top of the cost of our subsidies to the utilities.

When measured against what we ought to do, the joint proposals of the private utility lobby and the Eisenhower administration are nothing less than a tragic sellout of our national future.

Our future needs for electricity in this country are simply staggering. Our power supply must be doubled every 10 years. By 1960, we will need to add half again as much as all the generating capacity now installed. By 1965, we will need to add as much new power generating capacity as the total we have presently installed.

These estimates are made by the Federal Power Commission. They are responsible, conservative figures. They are the basis on which our Government grants billions of dollars in tax subsidies to private utility companies. That ought to make them perfectly respectable estimates.

Think of it. In the next 10 years, we have got to build as much new electric generating capacity as everything we have in this country right now.

I can tell you we'll have to hustle to keep up with this demand for new powerplants. We are not doing it now. Our economy is being retarded by failure to do it. Most of you REA co-op people know the stupendous requirements you face to keep abreast of your members' demands for electricity.

Now I hope you will forgive me for a moment if I digress to talk about a matter of particular concern to me as a citizen of Colorado. There has been a great deal of talk recently about a shotgun wedding that took place out in western Colorado. I don't think the full truth about the Colorado–Ute power project has been made known to many of you, nor that we have heard the last of it yet by any means.

It is a very serious thing—serious to the whole national REA movement—that we have an Administration in power which has forced a lease-operation deal with a big private electric company onto the Colorado–Ute REA co-op—when the essential facts about what it will cost the cooperative and its farmer-members was withheld from the board of directors. The essential facts in the whole economics of this deal are contained in REA's official power study on the project. This official REA power study reveals that the lease-operation deal will cost $111,500 more in the next 8 years than it would cost for the co-op to operate independently. This is the information that REA withheld from the cooperative. In my opinion, this Colorado–Ute experience has grave implications far beyond western Colorado. It seems to me that the pattern that is demonstrated here has very grave implications for the future of our whole cooperative generation and transmission program—and you know better than I do that if we hadn't had our own cooperative wholesale power yardstick we never would have gotten electricity out to the farms in many, many parts of the country.

Now, let's get back to the overall picture of our nation-wide needs for electricity in our immediate future.

We've already learned that the private utilities won't do the job on their own—and we've had to hand out subsidies at a staggering rate to induce them to stay in the picture at all.

It's high time the people of this country began to exercise some of their proprietary responsibilities to see to it that the needs

of this country are met—in full, in time, and in an effcient, orderly, and economical way.

We have some of the best engineering minds in the world here in the United States. There is no reason why we, of all nations, should lag behind in any field of development—yet that is exactly what is happening in the field of peaceful uses of atomic energy.

The big utility companies, which are linked directly through their common origins in Wall Street to the big manufacturing companies that have been permitted and subsidized in the process to get a monopoly on atomic know-how, are holding back the use of atomic power for generating electricity.

Contrast what the atomic energy monopolists are doing for the people of this country with what other countries are doing for their people in the field of atom-electric generation. The Soviet Union has announced it plans to install, in the next 5 years, atom-electric plants with capacity equal to half of all the Bureau of Reclamation hydro now existing in our Pacific Northwest. Great Britain is already building atom-electric powerplants to supply a big chunk of its future power requirements. Even the smaller countries of Europe are moving ahead right now to put atom-electric power into a major place in their new powerplant construction.

Why should the United States, which pioneered atomic energy in the first place, be content to sit back and fall behind in developing useful harnesses for this revolutionary new source of power? I'll tell you why we are falling behind. Simply because we are letting the age-old policy of the private electric monopoly—scarcity and high prices—dictate this Nation's power policy. We are back to the same old situation that existed 21 years ago—when the farmers of this country were far behind those of every other civilized nation in rural electrification, when our farmers still were sitting in the dark while most of the farms in Europe, and even in the Canadian province of Ontario, already had electricity.

Leland Olds, former chairman of the Federal Power Commission, has revealed that most of the REA co-ops in the country could save money on their wholesale power if they could get atom-electric power.

Address by James G. Patton, President of the National Farmers Union, at the Annual Convention of the National Rural Electric Cooperative Association—Part II

EXTENSION OF REMARKS
OF
HON. LEE METCALF
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 16, 1956

Mr. METCALF. Mr. Speaker, there follows part II of an address by James G. Patton, president of the National Farmers Union, delivered at the annual convention of the National Rural Electric Cooperative Association at St. Louis last month:

American companies, ironically, are taking a leading part in building atom-electric plants for other countries. General Electric Corp. just a few weeks ago announced it is building an atom-electric powerplant for Japan which will make electricity at low rates.

The American atom power monopoly—whose know-how was bought and paid for at the cost of billions of United States taxpayers' dollars—has put the label, "For export only," on the immediate peaceful benefits of the atom.

If we let private monopoly make the decision for us, American manufacturers will peddle our atomic know-how all over the world, while we sit here in the United States just like farmers sat in the dark up to 20 years ago, victimized by the scarcity and high price policy of the unreformed, unashamed, unreconstructed private electric utility monopoly.

We in the nonprofit power movement have been on the defensive too long. We have fought to save each dam, and each transmission line, and each REA generation and transmission project. But at best we only stay where we were a few years ago. And every time we lose a fight, we get pushed that far backwards. Now we have an administration that denounces the public power laws on the statute books, and calls them creeping socialism—despite the fact that they have raised their right hands and sworn to uphold those laws.

I am convinced we have got to start fighting to advance what we believe in. If we don't, not only will we fail to go ahead—we will see our nonprofit power programs squeezed into impotence and uselessness.

Let's take a look at the resources we have under our feet here in this great section of the country westward of the Mississippi River. Let's try to visualize what we could build here in the West, if we took advantage of every opportunity to develop fully every resource that we have, and to do it in the most orderly and efficient manner possible, to get the greatest possible benefits for the people, at the lowest possible cost to the people.

A splendid beginning on this kind of inventory of the people's resources has already been made. The Bureau of Reclamation published a prospectus of a Giant Power Plan for the West 3 years ago. It has been gathering dust ever since. We need to dust it off and take a fresh look at it. This far-seeing study should give everyone of us a new inspiration about what we are fighting for, and a renewed vision of where we can go from here—if we will only remember that the people are the boss in this country and decide to do it.

First of all, the hydro power potentialities of the 22 States west of the Mississippi River have barely been touched. We have put a harness on only one-fifth of the total stream runoff in this region. It is possible to develop that much more—and to do it on a paying, economical, self-liquidating basis.

We should not lose another month without starting to hitch up these remaining water power resources whose energy is now wasting itself into the sea, without benefit to anyone.

Even this great remaining hydroelectric resource would only scratch the surface as far as meeting our real needs for electricity.

We need to hitch atomic energy onto the tremendous load that needs to be pulled to do the work of this region—and other regions of the country too. I am just as sure as I am of anything, that the private utility monopoly is just as wrong today in saying that atom-electric power "can't be done" as they were 20 years ago in saying that the farms of this country could not be electrified.

Even with low-cost atomic energy, we can and we must hitch up our great fuel resources in our power team too. There are three giant coal and lignite fields in the West. One is in the Colorado-Utah-Wyoming Rocky Mountain area. Another is in the Dakotas and Montana. The third is in the Iowa-Missouri-Arkansas area. These tremendous energy sources should be harnessed to work in a team with hydro and atomic power to work for the people of the West and the Nation. They can, and they should without delay, be harnessed to generate low-cost electricity.

Hydro power and fuel-generated power fit together like cogs in the precision gears of high-powered machines. When hydro and steam-generated power are worked together as a team, the result is more useable power, at lower average cost, than if they are hitched up separately.

Hydro power and steam-generated power resources of the entire West should be harnessed together with high-voltage, long-distance transmission lines, to pull the greatest possible load for the lowest possible cost for the people. That would give your REA co-ops a chance to tie your systems to a new, vast source of low-cost wholesale power that you must have to meet the future needs of farmers.

There is another reason for high-voltage, long-distance transmission. The giant coal fields of the West are located great distances from the big industrial and population centers of the West. These big industrial and population centers, where vast quantities of low-cost electricity are needed, are located in the Twin Cities area, the Pacific Northwest, on the California coast, and on the gulf coast of Texas.

These big population centers lie on the fringers of a vast, 22-State western empire, with both giant hydroelectric sites and giant coal energy sites within the big circle that they form.

The "giant power plan" calls for using high-voltage, long-distance transmission lines for hauling enormous quantities of energy out of the center of the Western Empire to the industries on its edges. That is a mammoth undertaking. It would be tremendously more costly, however, to attempt to haul the needed energy in the form of coal over a vastly-expanded railway system. Our engineering experts tell us that the energy from a ton of coal can be hauled from North Dakota to Minneapolis much more cheaply in the form of electricity, over high-voltage transmission lines, than on the most efficient railroad ever built.

Transmission lines adequate for doing this job, for harnessing together the steam-generated energy of these three midcontinental coal fields with the big hydroplants of the river systems and atom-electric powerplants located in the most feasible sites, would have to be much longer than any in use today anywhere in the world. Power would have to be transmitted for distances of up to 700 miles. The giant basic powerplants in the coal fields, and the biggest hydroelectric dams, would all have to be tied together.

This giant power plan would require voltages much higher than anything in use today in this country—at least half a million volts, twice as high as the highest voltage in use by utilities in this country today.

The longest distance transmission in use in the country today is only 300 miles, less than half as far as the 700 miles that would be needed for a giant power project for the West.

But the Swedes right now have a transmission line in use that is 600 miles long, from their big hydroelectric plants north of the Arctic Circle to the centers of Swedish industry and population in the south. They are transmitting electricity at voltages approximating the half-million volts needed for a giant power system to serve the west. We can do what Sweden has already done to make the giant power plan a reality.

You may wonder why a farm leader should be telling a group of farmers about a plan for hauling fabulous blocks of energy out of the mountains and prairies of the West to the big cities on the coasts. This giant

power plan means two great things for the future of agriculture in this region.

If almost undreamed-of quantities of electric energy were made available to western industrial and population centers, at rock-bottom prices such as would be possible under the giant power plan, it would start a tremendous boom of economic expansion.

It would open up literally millions of new jobs in the space of a few years. It would result in great population growth not only in existing industrial centers, but throughout the West. There are huge stores of rich mineral and chemical resources in our mountains and prairies, waiting only for low-cost electricity to unfold into new and flourishing industrial developments.

That means new markets for the farmers of the West. It means market for farm products that we don't even bother to produce in quantity now, for dairy products, fresh fruits and vegetables, poultry and eggs.

In short, it will give western farmers profitable local markets for their products for the first time in history.

This giant power plan has real meaning for our own farming operations, too.

We have all heard time and time again that the surface of rural electrification has barely been scratched. I don't think that any of us really grasps what the potentialities of the use of electricity in agriculture might be.

But scientists talk about using electricity to warm up the soil of entire farms, so that crops can be started earlier to take advantage of spring rainfall and sunshine.

They talk about using electricity for killing weed seeds electronically, field by field, before the crops are planted.

They talk about electric-powered tractors. You'll back them into the shed at night to get their storage batteries charged off the high line, and run them all the next day at a small fraction of the cost of petroleum-fueled tractors.

They even talk about some day being able to transmit electricity in tremendous surges of power directly to the moving tractor in the field—not over wires, but by wireless. You'd just tune in your radio on the power-plant, and take off. The United States Navy is engaged in research on wireless transmission of power right now.

This sounds fantastic, I know. But up to only 10 years ago, probably not a single one of us would have believed that it would be possible to propel a huge submarine under the Atlantic ocean on a few pounds of fuel. With atomic energy, that is a reality today.

I do not believe we are in any danger of overestimating our possibilities. On the contrary, I think we will find that our imaginations are falling far short of what the real potentials for the future are. We have got to look far, far beyond the narrow limitations of the present in order to visualize the opportunities that lie ahead. Our real danger is not that we will dream too much, but that we will cheat the generations ahead of us because we did not dream enough.

When you count the potentialities of atomic energy, and the new, even more terrible and more wonderful potentialities of thermo nuclear fusion, the process that we know as the hydrogen bomb, the strain on our abilities to dream enough is beyond the capacity of most human minds.

It is thought not inconceivable that some day we will learn how to transmit electrical energy directly out of atomic energy, instead of using the present roundabout method of having the atomic reactor boil water to create stem to turn a regular turbine.

If ever that day should come, and I believe we should be prepared to see it, or to have our children see it, then energy will become as free as the water in a modern city. Consumers simply will pay an assessment to cover the cost of installing and maintaining the electrical facilities needed to serve them, and will be able to use all the electrical energy they want without further charge.

Mankind already has learned how to create energy on that scale. The hydrogen bomb that was exploded in the middle of the Pacific a few years ago completely burned up a fairly good-sized island, sand and rock and all, so that the sea closed over it and it is gone. Possibly man can never harness such terrible fury as thermonuclear fusion, to make it do our work, but that is the challenge laid on our doorstep in this atomic age.

I have talked about the West, because I am from the West, and I know it better. Also, other sections of the country have not had the benefit of resource planning on the scale that has been done for the 22 States of the Bureau of Reclamation area.

But there is no doubt in the least that equally great achievements can be planned for the South, and for the Northeast, and for the Midwest. We can put an end to death-dealing floods in New England. We can give that great region, with its marvelous resources of skilled people, the cheap electric power that it needs to halt and reverse the economic decline that now afflicts it. We can revitalize the South, creating new employment opportunities at a high standard of living for its populations, utilizing its many natural resources that now lie fallow. We can further enrich the agriculture and industry of the Midwest by introducing the cheap and abundant energy our technical skill can provide for us tomorrow if only we have the vision and the imagination to raise our hands to the task.

To whom shall we entrust the grave decisions that will determine the shape of our future? Will we leave those decisions to the short-sighted private utility monopoly, which always has demonstrated a policy of scarcity, restricted use, and high prices? Or shall the basic decisions on electric power policy, the basic decisions as to whether this Nation can grow to its full potentialities—be made by the people of this country?

For my part, I have only to recall recent history to find the answer. The private electric companies of this country decided, up to 20 years ago, that farmers could not have electricity. They did not change their minds 20 years ago. The decision was taken out of their hands, and the people of this country decided that farmers would get electricity whether the utilities wanted them to have it or not.

That exercise of their sovereignty by the people has not resulted in socialism. It has not even hurt the utilities. On the contrary, the private power companies are far, far better off today than they ever were before. They prospered more during the height of the "creeping socialism" of a few years ago than ever before in their history.

In the same way, the people must exercise again their sovereign right to decide whether this Nation will grow to its full dimensions of productivity and prosperity.

That decision must mean more Federal and cooperative power, not less. It must mean bigger public power, not smaller. It must mean more effective public influence on rates and expansion policies, not the destruction of the yardsticks that have been constructed in the past generation.

There is plenty of room within a giant power plan in the West, and in other regions, for the private utilities, so long as they fit their policies and their practices to the needs of the people.

But the big decisions must be made, the broad outlines must be drawn, by the people, and for the people.

No one less than the people, no one smaller than all the citizens of this country, should be left with such enormous power over the lives and the futures of our children.

Lithuania's Fortitude

EXTENSION OF REMARKS
OF
HON. IVOR D. FENTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 20, 1956

Mr. FENTON. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include the following editorial from the Evening Herald, Shenandoah, Pa., published on February 16:

LITHUANIA'S FORTITUDE

In the hearts and minds of many thousands of area residents, February 16 is a date regarded with special significance.

It marks the 38th anniversary of the Republic of Lithuania as a free and independent country. Unfortunately, what should be an occasion of joyous celebration, comparable to our own Fourth of July, in reality is one of painful and sorrowing recollection. This unhappy condition has existed for almost 16 years.

Because of the ruthless bondage into which it was forced by the armed might of Soviet Russia June 14, 1941, an evil violation of treaty, Lithuania dare not publicly refer to those golden years when liberty and democracy flourished throughout this Baltic country. Her enslaved people, however, secretly commemorate the day. They nurture their hopes for eventual release from the Communist shackles.

History has shown repeatedly that tyrants cannot vanquish the will and spirit of a courageous people who treasure their former liberties, endure long years of misery, and hope and pray for release. This is the situation in Lithuania; her brave sons and daughters continue to display remarkable fortitude in the face of incredible oppression.

Under a puppet government which executes orders from Moscow exactly to the letter, the country is known in Communist circles as the Lithuanian Soviet Socialistic Republic. Latvia and Estonia suffered a similar fate. The United States Government and many of its allies have never officially recognized Lithuania's changed status. The Soviet's wanton aggression has been condemned in many of our state papers and by our last three Presidents.

To relate a bit of history, Lithuania's territories stretched from the Baltic to the Black Sea as early as the 15th century. But in 1795 she became a victim of Russian aggression. Time and again, the people waged futile struggles to regain independence until, finally, in 1918, it was reborn as a democratic and independent power.

In 1939 another dark period of national history came to pass in the form of Russo-German aggression. The Red invasion in 1940 was followed a year later by a program of mass annihilation. A brief revolt in June 1941, restored independence for a few days, but the invading Nazi war machine was impossible to resist. The tide turned against Hitler during the summer offensive of 1944, and Communist forces reoccupied Lithuania.

The ensuing program of cruelty and terror, which the Reds label "Soviet social engineering," is difficult to imagine. Firing squads have accounted for a vast segment of Lithuania's population. Men, women, and children have been thrown into Red slave-labor camps in the frozen wastes of Siberia. Since the Red wave of terror, it is estimated that the country's population has been reduced from over 3 million to almost half that number. These victims have been replaced to a large extent by Russian "imports," many of whom undoubtedly were loathe to leave

their own land, others hoping to profit by the change.

Have the Reds ever attempted to justify this rape of an innocent country? Indeed, they have the audacity to affirm that the Lithuanian people "voted" to join the Soviet Union. The rest of the world, though, recognizes the fate of Lithuania and its neighbors as sheer barbarity. The tragic record of these atrocities is impossible to ignore. This crime against humanity represents an abomination.

Meanwhile, the anti-Soviet underground in Lithuania strikes whenever it can. Major handicap is lack of arms and supplies, yet the resistance has never ceased. Nightly forays are carried on in country districts. Now and then some of the patriots are captured and summarily executed.

Americans of Lithuanian descent—and they number in the millions—along with a host of friends and well-wishers voice deep sympathy today for the enslaved people of Lithuania. Hope and encouragement are extended to bear up under the sufferings until the Communist yoke is thrown off and precious independence finally restored.

Statement by Hon. Abraham J. Multer, of New York, to the House Committee on the Judiciary

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 7, 1956

Mr. MULTER. Mr. Speaker, I wish to call the attention of our colleagues to the following statement which I presented on Febraury 6, 1956, to the House Committee on the Judiciary during its hearings on bills relating to the payment of annuities to widows and dependent children of United States justices and judges:

Mr. Chairman and members of the committee, I am appreciative of the opportunity to present my views concerning the bills before you, which would amend Chapter 17 of Title 28 of the United States to provide for the payment of annuities to widows and dependent children of United States justices and judges.

It is a matter of public record that in recent years experienced judges have resigned, and at the same time able candidates have debarred themselves from judicial ranks, only because they could envision no security for their families by accepting appointment to the Federal judiciary.

I have been advocating annuities or pensions for members of our judiciary for some years past. I am unable to dismiss from my mind the remarks made a few years ago by one of our judges during the course of giving testimony before another subcommittee of this committee. In describing the sad plight of judges' widows, he remarked that in order to earn a bare livelihood the widow of a former United States judge had been working in the clerk's office. She was then close to 90 years of age.

It is my recollection that in past years the objection to proposed legislation of a similar nature was on the ground that judges should contribute to the cost of an annuity program for their families. It is my information that there is no objection among the judiciary to contributing to the cost of an annuity system.

It is an acknowledged truism that one cannot expect the fullest professional enthusiasm or zeal from a man who can have no hope of security for his family after his death. I am not talking about the conscientious performance of duties, but I refer to that zest by which the brilliancy of man can spark if free from economic worries for the future.

How sad but true is the implication that results by metaphorically applying to this situation the legal maxim: the law provides for the future and the judge for the past, lex de futuro, judex de praeterito—judges are not able to plan for their future because they are already too worried about how to resolve the economic obligations of their unprosperous judicial past.

I urge the enactment of a bill that will set up a fair annuity system for our judges' dependents.

The New Aid Client

EXTENSION OF REMARKS
OF
HON. H. R. GROSS
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 20, 1956

Mr. GROSS. Mr. Speaker, how utterly silly the foreign policy—if it can be called that—of the United States must appear to what is left of the Asiatic world that has not fallen behind the Iron Curtain.

An editorial in the Omaha Evening World-Herald of the date of February 14, 1956, tells the story. Read the following and weep:

Five years ago, in the midst of the Korean war, the Government of Ceylon announced that it would ignore the Anglo-American embargo on war goods to Red China.

Ceylon did just that. She deliberately arranged to send rubber, which was Red China's crucial need at the time. No one knows how many Red Chinese trucks and bomber planes went to war against the United States equipped with Ceylonese rubber.

Three years ago Columnist David Lawrence wrote a bitter piece saying that no diplomats from Ceylon should be allowed in Washington so long as that country aided Red China. And the then-new Dulles regime in the State Department made it clear that Ceylon would never, never receive aid or other American favors so long as she continued her rubber trade with China.

Ceylon has never given an inch in this dispute. In 1954, when Washington offered her foreign aid, conditioned on stopping the rubber shipments, Ceylon said "no." In 1955, when the China Reds actually were trying to wriggle out of their high-priced deal, Ceylon still said "no."

But now, after Sir Anthony Eden's recent visit, the United States has decided to forget its stern principles of three years ago and put Ceylon on the giveaway list. According to Secretary Dulles, the little Asiatic country is to get $5 million a year, plus an atomic energy plant, plus the cordial hand of United States friendship.

Behind the scenes it is explained that this booty is really a payoff for Ceylon's anti-Communist stand at the Bandung Conference last year. And, besides, Eden wants it that way. And furthermore, what an inspiration it will be to other Asian nations to learn that Ceylon is on the United States gravy train.

The truth is that this action makes a joke of the embargo against Red China. If Ceylon is to be rewarded for breaching the embargo, why should any other country pay attention to trade restrictions on Red China?

The "lesson" to be drawn by other nations would seem to be something like this: "Kick Uncle Sam in the teeth and he'll come crawling to you with a handout."

Kin of Don Juan Who Saved New Orleans From the British Observes Her 95th Birthday

EXTENSION OF REMARKS
OF
HON. EDWIN E. WILLIS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 20, 1956

Mr. WILLIS. Mr. Speaker, a recent news item from Bay Saint Louis, Miss., reports the birthday celebration of Mrs. Gabrielle Cuevas Hale who is 95 years of age. Reaching of this venerable milestone is in itself worthy of special attention, but in Mrs. Hale's case there is particular significance since she is the last surviving grandchild of the Spanish don whose action resulted in New Orleans being saved from capture by the British in 1812.

Of added interest is the fact that Mrs. Hale is the grandmother of our colleague, Representative HALE BOGGS, of Louisiana.

The Hancock County Eagle of Bay Saint Louis, in its issue of Thursday, February 9, 1956, has a photograph of Mrs. Hale and the following account:

WOMAN, 95 SUNDAY, KIN OF FAMOUS DON

(By Caroline Kiefer)

Ninety-five-year-old Mrs. Gabrielle Cuevas Hale celebrated her birthday Sunday at her North Second Street home.

Born February 5, 1861, Mrs. Hale is the last surviving grandchild of Don Juan Cuevas, Spanish grandee who changed the course of history of the United States.

Don Juan, who in 1812 was in New Orleans on official business for Spain, was a great sportsman and desired a hunting trip. The city of New Orleans provided him equipment, slaves, etc., and Cat Island in the Mississippi Sound was selected for the shooting, as it abounded in game and the surrounding waters in fish.

While the hunting party was on the island seeking game, the British Fleet was seeking the city of New Orleans. They stopped at the island and inquired of Don Cuevas the route to reach the city.

He refused to tell them, saying he was a guest of the city and would not betray it. For this gallantry he was put in chains by the British.

But the delay proved fatal to the British. While they lost time with Don Cuevas on Cat Island, American troops arrived in New Orleans, and when the British fleet reached the city it was prepared for defense and saved from the British at the Battle of Chalmette.

As a reward for his loyalty to the city in which he had been a guest, the United States Government made a gift of Cat Island, free of taxation, to the noble don.

Don Juan Cuevas later settled on the Mississippi Coast in Bay St. Louis and built for his bride the home on North Beach now owned by the Swoop family. Many of the household treasures which he brought from his native Spain are still in the home.

Don Cuevas was the paternal grandfather of Mrs. Hale. Her maternal grandfather, Judge Jules Monet, of France, was the first judge and lawyer on the Mississippi coast. He built for his family the home next to that of Don Cuevas on North Beach in Bay St. Louis, which is now owned by the deBen family.

It was in this house that Gabrielle Cuevas Hale was born 95 years ago.

Granddaughter of two of Mississippi's most distinguished men, she spent her entire life in Bay St. Louis with the exception of 18 years which were lived in Gulfport where her husband, the late Thomas P. Hale, was one of the pioneer railroad builders of South Mississippi.

From 1894 until 1912 he was vice president and general manager of the Gulf and Ship Island Railroad, now the Illinois Central.

Mrs. Hale is the mother of 6 children, four of whom are surviving. One son, Thomas Hale of Huntsville, Ala., and 3 daughters, Mrs. W. R. Boggs of Long Beach and Misses Irma and Mary Hale of Bay St. Louis.

Mrs. Hale has 6 grandchildren, among whom is HALE BOGGS, distinguished Congressman from Louisiana. There are also 13 great-grandchildren.

Last Sunday this venerable gentlewoman, who has lived through almost a century of radical change in the world, received members of the immediate family at her home on North Second Street. During this week open house is being held for her by her two daughters, Miss Irma and Miss Mary Hale, and each afternoon, relatives and friends call to pay their respects.

The American Indian

EXTENSION OF REMARKS
OF
HON. RAY J. MADDEN
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 20, 1956

Mr. MADDEN. Mr. Speaker, the United Steelworkers of America, District 31, Local Union No. 1014, of Gary, Ind., unanimously adopted a resolution urging the Congress and our Government to do everything possible to aid the critical situation now existing concerning most of our Indian population throughout the United States.

The Anselm Forum, Inc., an outstanding civic organization of Gary, Ind., has been conducting an educational campaign for several years for the purpose of bringing to the attention of the American people the unfortunate economic situation involving our American Indian.

The resolution follows:

Whereas the United Steelworkers of America has always been interested in the problem of minority groups; and

Whereas the American Indian is the oldest minority group in the United States; and

Whereas the United Steelworkers of America has always been interested in the health of living standards of all of the people in the United States; and

Whereas the health and living standards of the American Indian are far below the standards enjoyed by other citizens of the United States; and

Whereas it has become the policy of the United States Government, since the passage of House Resolution 108 in 1953, to bring to an end as rapidly as possible all Federal considerations enjoyed by the American Indians because of their status as Indians, despite treaties, statutes, and long standing customs; and

Whereas his inexperience in business matters and self-government makes such legislation undesirable at this time; Therefore be it

Resolved, That the United Steelworkers of America, Local Union No. 1014, go on record requesting the United States Government cooperate with, and assist the American Indians to improve their health and living standards; and that the United Steelworkers of America, Local No. 1014 go on record opposing all future legislation on behalf of the American Indians without prior consultation and agreement with the tribes involved.

Refugee Resettlement

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 31, 1956

Mr. MULTER. Mr. Speaker, we are all aware of the many and varied proposals that have been advanced to resolve the Arab refugee problem. A practical solution to the refugee-settlement question appears in the following article describing the resettlement of 100,000 refugees in Southwestern Free Vietnam. The article appears in the January 21, 1956, issue of the Times of Vietnam:

REFUGEE RESETTLEMENT IN THE WEST

Three weeks ago, on December 30, President Ngo dinh Diem announced that 100,000 refugees will soon be permanently resettled on abandoned riceland in Southwestern Free Vietnam. On the eve of the new year, that announcement opened a new phase in the history of the refugee movement by in augurating a bold positive policy of refugee resettlement, which will benefit the refugees from the north as well as their countrymen from the south. In fact, many of the rice farmers and their families are refugees from Communist-invaded North Vietnam. The remainder are residents of South Vietnam who were displaced from their homes and possession by former Communist activities in the south. The area they will occupy and restore to useful rice production, consists of 77,000 hectares of formerly productive land between Long Xuyen and Rach Gia.

The mass settlement project has been termed the "Cai San project," a derivation from the Vietnamese-French name "Cai-san" which the locale had in the old days before the Communists drove the people off the land and it became abandoned. In those prosperous days the area was heavily cultivated and full of farms with straight boundaries and square corners, which is why the French called it "land in the form of a chessboard," which translates into idiomatic English as "Cai-san checkerboard."

The resettlement, said President Diem, will be the largest movement of people since Operation Exodus ended last spring after 860,206 people chose freedom rather than remain in the North under control of the Viet Cong and the Communist Chinese.

The movement will be coordinated activity by several agencies of the Vietnamese Government, under the overall direction of Huynh Van Diem, newly designated Director of Plan and Reconstruction, and will be supported by American aid funds from the United States Operations Mission to Vietnam.

In the Cai San project, practically all government agencies are involved. The Ministry of Public Works, which is responsible for communications for the new project, is already at work surveying canals and roads which the settlers will need for irrigation and to move their products to market.

The Ministry of Agriculture will furnish production credit in the form of seed, tools, and work animals.

The Ministry of Agrarian Reform will be responsible for the difficult problem of resettling the farmers.

The commissariat general for refugees will select and transport volunteer refugees, including entire villages. It will administer allotments and provide materials for construction of housing and essential community building.

The Army will furnish security forces from the Bassac branch of the Mekong River to the sea at Rach Gia.

United States contribution to the project will consist of tractors and other mechanical equipment for preparation of the land, and beyond that, the type of economic aid being made to other villages, such as agricultural credit, schools, medical assistance, village industry, plus some subsistence in the early stages.

The mechanical equipment supplied by American economic aid will consist of one 12-inch and two 8-inch dredges, plus 100 tractors, of either wheeled or tracked type, or both, depending upon which can be delivered in Vietnam first, and plows, harrows, cultivators, disk harrows, and weed cutters in sufficient quantities to keep each unit in cultivating activities until the 77,000-hectare tract is ready for planting. The tractors and other equipment will cost approximately $975,000 (U. S.) and will be purchased in the United States from bidders who can guarantee the earliest delivery.

While no arrival dates have been received at the operations mission, it is believed that some of the equipment may be on hand by the end of this month and more by the end of February.

The tractors, it was announced by Mr. Leland Barrows, Director of the United States Operations Mission to Vietnam, will be used to break the land, estimated at 77,000 hectares, and then will be incorporated into a Vietnamese Government corporation called "Mechanical Agricultural Service," which will break other abandoned and unused tracts as a preliminary to additional resettlement.

However, Mr. Barrows added, of the projects will be permanently mechanized. Once the land is broken, cultivation will be in the traditional manner, involving hand labor and work animals.

"Thus," Mr. Barrows declared, "over the years, the equipment will be used again and again for clearing abandoned or unused land. It will be able to earn some revenue for the Vietnamese Government while increasing the productivity of the nation. It will assist Viet Nam in world trade while the cost of the equipment is amortized over a period of years. It is, therefore, an excellent investment in freedom."

According to initial plans, a contingent of some 2,500 volunteer settlers was to be transported into the area during the first week. They would be employed, along with 2,500 local residents, in preparing the land and building temporary housing for the others. Most of the first settlers will be working on land which they will occupy. Whenever feasible, entire villages of refugees will be permitted to volunteer.

But in less than a week, announced Mr. Bui van Luong, Commissioner General for Refugees, 42,850 refugees from North Viet-

nam volunteered to be resettled on abandoned ricelands of the Cai San project in the southwest.

"Not all of them have volunteered personally," the Commissioner General explained, "because they don't have the money to pay their fare to Saigon. But, when they learned the Cai San area is going to be rehabilitated and opened for permanent resettlement by the government, they appointed representatives to come to my office and make known their desire to live on the new land.

"The largest single group so far is from the Ho Nai camp in Bien Hoa province, where 20,000 people want to go to Cai San. In Gia Dinh province, 12,000 have so far registered their desire to live in the rice country where there is plenty of water and fish, as well as good land for raising rice.

"In Long Xuyen province, close to the new project, there are 2,350 refugees all of whom want to be part of the Cai San development. In Ba Beo refugee district of My Tho province, 3,000 refugees have sent representatives to my office" said Mr. Luong, "to register for Cai San. In Saigon, 100 heads of families, representing 500 people, signed up individually during the first few days. In Cholon, 5,000 have registered with my office through their village leaders."

While land, equipment and settlers have been readily found, two major problems remain to be solved. The first one concerns the size of tract to be allocated to a refugee family. According to a survey made by Mr. Wolf Ladejinsky, the world-famous specialist in agrarian reform, opinions in Saigon varied, suggesting a minimum of 3 hectares to a maximum of 10. Most of the farmers in the Cai San region stated that they cultivate from 3 to 5 hectares per family. Most of them have no livestock, but they are capable of cultivating by hand approximately 3 hectares, or even 5 of floating rice. Though mechanization at this point may not be the solution, the majority of farmers welcome use of tractors. On the basis of that information, the Government has decided to allocate about 4 hectares to a refugee farmer family cultivating floating rice, while land that produces a more diversified crop would be allotted in smaller quantities.

The second problem to be faced in the Cai San project is that of security. Though not critical at this point, the question of maintaining security in the West while the 100,000 refugees move in to resettle is a sine qua non condition for the success of the Cai San project. In fact, if the number of volunteer resettlers to this date has been high, it is largely due to the faith the people have in the strength of the national armed forces. In a country where for years people who have not dared to live in the country have flocked to the urban centers, the affluence of refugees to settle in the recently pacified West is something to be credited to the Army of Vietnam.

Mr. Tran Trung Dung, Assistant Secretary for Defense, stated that "the Vietnamese Army will furnish complete protection to the 100,000 settlers moving into the Long Xuyen-Rach Gia area under the sponsorship of the Cai San Project." The Department of Defense will also employ units of the Civilian Guard (Bao-an doan) and the newly formed self-defense units (Dan-ve-Doan). The Army is prepared to furnish special security forces from the Bassac Branch of the Mekong River to the sea at Rach Gai. Army and other paramilitary units will be assigned each convoy of settlers as they approach the 77,000-hectare strip of land occupied by the Cai San project and will accompany them to their lands. They will also remain on constant duty at the settlement to assure adequate protection for the new project.

Mr. Dung has appointed the Chief of Province and Provincial Military Commander, Major Nguyen Huynh of Long Xuyen, to coordinate the security forces in this area and supervise the settlement of the new farmers. Mobile security forces are already patrolling the area and controlling the movement of civilians and military personnel.

"There is no martial law in the area, and the civilian population can move freely throughout the two provinces day and night," the Secretary declared. "Our units are controlling the movement of strangers and Communist agents to prevent sabotage, isolated raids, and incidents. At the present time the area is well patrolled and quiet."

Secretary Dung explained that his department is working in close liaison with the Commissioner General of Refugees and the Office of the President concerning the Cai San project. He noted that, as the civilian guard units finish training and the self-defense corps acquires additional trained cadres, the Vietnamese Army will turn over the control of the long Xuyen-Rach Gia area to them. They will be operated under civilian control. Secretary Dung did not believe that special funds or personnel from other parts of Vietnam would have to be used in this operation. He expected that sufficient forces were in the area to give the Cai San project more than adequate protection.

Though just begun 2 weeks ago, the Cai San project seems to offer very bright prospects for success. Most important of all, the response of the refugees has been good. Confident in their Government, they have once more begun to pack up their belongings and move from the camps and towns where they have been living to the western plains where a new life awaits them. Months and years from now, settled on that prosperous land which is now theirs, side by side with their compatriots from the south, in communion with refugees from other settlement areas, moved by a stanch faith in the future and in democracy, the refugees of Cai San will be proud to know that they no longer are refugees, but a part of free Vietnam, where they have chosen to build their homes.

Then they will be able to contribute to the wealth of their country. Cai San has opened new horizons to 100,000 out of the 860,206 people who fled communism. May many others be able to follow in their steps.

Lithuanian Independence Day

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 20, 1956

Mr. FULTON. Mr. Speaker, again we friends of Lithuania commemorate February 16, 1956, as the 38th anniversary of Lithuania's independence. We in the United States have not forgotten our friends and relatives in Lithuania and the countries of Eastern Europe and look ahead to that wonderful day when freedom and independence will be restored.

We continue to celebrate this independence anniversary on February 16, 1956, with renewed hope. We are encouraged because of President Eisenhower taking the firm stand that our United States foreign policy will be aimed toward obtaining the liberty and freedom of all the citizens of Lithuania and the satellite countries now behind the Iron Curtain.

The fine spirit of new hope is shown by the determined resolve of the many United States citizens of Lithuanian descent as well as their friends, who met on Sunday, February 12, 1956, to celebrate this independence anniversary at the Lithuanian Hall on the South Side in Pittsburgh, Pa. We all renewed our pledge of devotion to the citizens of Lithuania, and it was inspiring to me as a member of the House Foreign Affairs Committee to have this outpouring of citizens and clergy still strong in their resolution for liberty and freedom.

The citizens of Lithuania and the Eastern European countries will again be free and independent and peaceful nations dedicated to friendly progress and cooperation with the citizens of the free world.

Address of Maximilian Moss, Surrogate of Kings County, Brooklyn, N. Y., Delivered at a Testimonial Dinner Tendered Hon. Albert M. Leavitt, Chief Clerk of the Surrogate's Court, on January 22, 1956, at the Hotel St. George, Brooklyn, N. Y.

EXTENSION OF REMARKS
OF
HON. EDNA F. KELLY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, February 20, 1956

Mrs. KELLY of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the address given by the Kings County surrogate, the Honorable Maximilian Moss, at the recent testimonial dinner tendered the Honorable Albert M. Leavitt, chief clerk of the surrogate's court of Brooklyn, N. Y. Surrogate Moss expresses the sentiments of all of us in Brooklyn who know and admire Mr. Leavitt.

The address follows:

Once again this evening, we are participants in an event which has become an essential aspect of our American way of life.

Although we live in the greatest community in the world, and there are many material factors which make it great—testimonial dinners of this kind demonstrate that America has become the force it is, by reason of its people; that basically the thing that gives our Nation breath, and vision, and spirit, and heart, is the sacrificing efforts of public-spirited citizens; and that people such as you are always proud to be present in large numbers to do honor "even unto but one humble citizen," who by stint of his own good works, has enriched the community.

That humble citizen is Albert M. Leavitt.

As I look around this room and see so many of Al's friends—the thought comes to me, that you who have been his close friends over so many years, can tell me far more than I can tell you of the love, admiration, and acclaim in which our guest of honor is held.

Therefore, I am sure that the deep unspoken words, which are in your hearts, are far more eloquent than anything that I can express.

I can merely tell you that I have had the good fortune of having Al Leavitt associated

with me as clerk of the surrogate's court. I say good fortune, because it is not always easy to obtain the right man for the right job. Usually it is a process of trial and error, which fortunately I did not have to go through.

The surrogate's court is the successor to the ecclesiastic courts. It is the widow's and orphan's court. As we conceive it, our business is to settle family quarrels so that families may remain together; to try to prevent differences and disruptions; and where wills are left, to untangle ambiguities with fairness to the living and reverential respect for those loved ones who have gone to their heavenly rest.

Our administration of the law—in such a widow's and orphan's court—has become more of a healing process; and we daily strive to do what Judge Cardozo referred to when he said that a way must be found to have law catch up with justice.

Now, I have just given you an indication of the work of our court so that you might know the type of person whom I was seeking for clerk of the surrogate's court.

Consistent with the philosophy expressed, I was anxious to get one who would subordinate himself to his fellow men for the enduring benefit of the community.

And it is to the credit of the person who recommended him, that I found Al Leavitt, one who possessed all the qualifications needed for this sensitive position.

When the honor of the office of chief clerk and clerk of the court was given to Mr. Leavitt, he accepted it with full realization that with that honor went deep responsibility and hard work.

If the public thinks that when a political leader takes a public office, he kisses work goodby, retires from toil and labor, and enters upon a life of rest and relaxtion, the public is mistaken.

Al Leavitt is at his desk generally from 8 o'clock to 8:30 every morning. We compete with each other as to who comes in earlier.

He opens the court at 9 a. m. He calls the calendar in open court at 9:30 a. m. He seldom leaves before 6 p. m.

I found Mr. Leavitt to be a warmhearted human being of great ability, who works intelligently, with energy unbounded, but with the pride and satisfaction of a job well done. He has committed all his talents to his work in the court; and in the short time of his incumbency, he has already proven his worth.

He is patient, courteous, and kind, and has my deep affection and admiration. He has a fine sense of humor and often practices his wit on you before you realize it.

He is an ardent worker for all charitable and communal endeavors, and has demonstrated an abiding devotion to his community, as illustrated by the many projects which have now become well-established. He is a man of deep faith and his thinking is consistent with the highest conception of citizen responsibility.

That Mr. Leavitt has won the high regard, goodwill, and cooperation of as able a court staff as ever existed—is best evidenced by the voluntary presence here tonight of a great number of the administrative staff of the surrogate's court.

From all the foregoing, you must readily grasp the fact, that the clerk of the court and the surrogate team up very well. As a result, the morale of the staff is at a peak. We intend to keep it that way.

In that respect, I am glad to see so many public officials present, and particularly the Budget Director.

Both Mr. Leavitt and I are in budget time, and I serve public notice that progressively together we shall endeavor to bring the payroll standards of the Kings County Surrogate's Court to those of Manhattan, until the rumor of Brooklyn being a stepchild shall have disappeared.

There is one other person here whom I wish to pay tribute to, and that is Mrs. Albert M. Leavitt.

She is a person of great charm who in a current charity drive has substantially aided the community with dignity but without fanfare. She and Al make a good team.

In closing, I cannot help but remember that Al was a public school teacher; and at one time I, too, was privileged to take a small part in the work of the board of education.

If as a result thereof the board asked me to write up an on-the-job report of Al Leavitt (consisting of not more than two sentences) I would say:

"Mr. Albert M. Leavitt combines the staid view of the professional schoolteacher with the fresh view of the non-professional, to which has been added the skill and dexterity of a practical politician.

"Like the work of an alchemist, an amalthe fresh view of the nonprofessional, to posite and dissimilar variables might well produce a new pattern on our horizon."

Forced Repatriation

EXTENSION OF REMARKS

OF

HON. ALBERT H. BOSCH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, February 20, 1956

Mr. BOSCH. Mr. Speaker, for the information of my colleagues, I insert a recent letter to the New York Herald Tribune published by that paper on February 16, 1956, dealing with the subject of forced repatriation in conneciton with which I have introduced House Resolution 137:

FORCED REPATRIATION

To the New York Herald Tribune:

The undersigned wish to call the American public's attention to the importance of House Resolution 137, which was introduced by Congressman ALBERT H. BOSCH, of New York, on February 8, 1955. This resolution calls for the creation of a select committee authorized and directed to conduct an investigation of the forced repatriation of millions of anti-Communist prisoners of war and liberated civilians, as carried out by our military and civilian authorities in the years 1945–47 in Germany and other countries. As the preamble to the resolution points out, the forced repatriation of millions of anti-Communists to Soviet controlled countries brought death and misery to untold thousands who were shot, hanged, or died in the Siberian slave labor camps.

However, we urge such an investigation not only in order to establish the cause and fix the responsibility for a tragic mistake, but primarily in order to strengthen the right of asylum, which is still under constant threat from totalitarian powers. The recently increased Soviet pressure on the Austrian Government to refuse asylum to anti-Communist refugees, and the new threats to refugees in this country and elsewhere, warning them to return or face reprisals against their families behind the Iron Curtain, calls for an inquiry into both the past and present phases of the repatriation question, either by a special committee or an existing committee of the Congress.

It goes without saying that to fulfill its purpose such an inquiry must be conducted in a nonpartisan spirit. We would also like to point out that while the post-World War II record of forced repatriation is a blot on the honor of the Western democracies, the United States and its U. N. allies honorably upheld the right of asylum for prisoners of war in Korea. During the last year of that war the only aim for which the U. N. fought was to prevent the forced repatriation of anti-Communist prisoners, which was probably the first time in history that a group of nations continued a war solely on an issue of individual human rights. So, however frustrating the results of that war may have been in other respects, this is an achievement of which the free world can be proud.

We would also suggest that the best way to uphold the right of asylum in time of peace is by a more generous immigration policy toward refugees from Communist tyranny.

NEW YORK, *February 14, 1956.*

The Middle East Picture Confused Still Further

EXTENSION OF REMARKS

OF

HON. SAMUEL N. FRIEDEL

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Monday, February 20, 1956

Mr. FRIEDEL. Mr. Speaker, under leave to extend my remarks, I wish to include a timely and exacting editorial from today's Baltimore Sun which clearly defines the confusion regarding the United States foreign policy—or lack of foreign policy—in the Middle East.

For many months the Israeli Government has been asking assistance from the United States in the form of defensive weapons. To date the United States has taken no action on the request, stating time and again that this country did not want to contribute to an arms race in the Middle East.

Yet, after all these declarations on the part of our State Department, we learned on Thursday—perhaps through sheer luck, thanks to some alert people in New York—that the United States Government was shipping 18 modern tanks to Saudi Arabia. These M–41 Walker Bulldog tanks can travel 40 miles an hour. They carry a 76-millimeter gun, a .50-caliber machinegun and a .30-caliber machinegun, and are manned by 4 men. The cost to our Government was $135,000 apiece. I wonder what Saudi Arabia paid for them.

Remember, these are not old tanks. They were developed after World War II and were delivered to our Armed Forces at the end of 1952 and early 1953. Now, mind you, all of this is being done now, while only a few weeks ago, following a conference in Washington between the Prime Minister of Great Britain, the President of the United States, the Foreign Minister of Great Britain, and the Secretary of State of the United States, a statement was released that indicated that the United States, Great Britain, and France would seek to promote peace in the Middle East.

Just a few weeks ago we were loudly and strongly condemning Czechoslovakia for the sale of arms to Egypt. Members of Congress voiced in strong protests, their disapproval of the sale of arms to Egypt by the Communist satellite state. The President indicated to the world that the United States is opposed to an arms race in the Middle East. Yet, here we are, not through a broker, not through some back-door means, but through the Government of the United States, selling 18 modern tanks to Saudi Arabia. These tanks are some of the best tanks we have in the United States and we are selling them to a country that has declared the State of Israel shall be destroyed. We are selling them to a country whose King has declared he would be willing to give 10 million lives for the extinction of the State of Israel.

At the very time when the diplomatic and military situation is at its most grave point in the Middle East, as indicated last week by Under Secretary of State George Allen, we seem to play into the hands of the Reds. We have lost any argument we may have had in rebuking the Soviets and Communists for supplying arms to Egypt.

The shipping of arms, instead of reducing tensions in the Middle East, which the Secretary of State professes to be our aim, has vastly increased the tensions which exist. The indecision of our Government, with its on again, off again embargo has caused the United States embarrassment throughout the world.

As the following editorial advises, in such an explosive situation an effort should be made, at the least, not to add to the existing confusion. I, for one, strongly urge that the State Department approve the request of the State of Israel for defensive weapons, promptly and without delay.

The editorial follows:

THE MIDDLE EAST PICTURE CONFUSED STILL FURTHER

No region of the globe is so difficult to understand right now as is the Middle East. It is impossible to assess with any certainty the many interacting trends there. It is impossible to read clearly the foreign policies, and even impossible to measure the comparative military strengths of the Middle Eastern nations.

About all the ordinary Western citizen can be sure of is that the Middle East is explosive. It may be that the world's diplomats, even with their greater detailed knowledge, can themselves be sure of little more.

In such a situation an effort should be made, at the least, not to add to the existing confusion. Sufficient effort does not seem to have been made in the matter of the tanks for Saudi Arabia.

The story of the tanks broke with a news dispatch reporting that 18 light American tanks were ready for loading in New York, to be shipped to Saudi Arabia (whose ruler, incidentally, is considered one of the leaders committed neither to East nor West). A State Department spokesman next day confirmed the story, and said that the shipment was routine under this country's mutual defense agreement with Saudi Arabia.

This was bound to bring complaints from Israel, which claims that it has been unable to get arms needed for defense. It did bring complaints. That night, by Presidential order, the State Department embargoed arms shipments to the Middle East. This was bound to bring complaints from Saudi Arabia. It did bring complaints.

Forty-three hours after its imposition, the embargo was lifted. It had been imposed, the State Department explained, "pending an examination to assure that (arms exports to the Middle East) were being made in compliance with pertinent laws and regulations and were in conformity with the policies of the United States with respect to the maintenance of peace and stability in the area."

The ordinary citizen would think that such assurance might be obtained before tanks or other equipment reached the docks, ready for immediate shipment. He would think, too, that the branches of Government concerned would try a bit harder to avoid a sequence of decisions certain to raise tempers on all sides in the Middle East.

The Brand Bill

EXTENSION OF REMARKS
OF
HON. A. L. MILLER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 20, 1956

Mr. MILLER of Nebraska. Mr. Speaker, I have today introduced a bill to amend section 317 (a) of the Packers and Stockyards Act of 1921.

The purpose of this bill is to close up loopholes that have existed for many years. With the growth of the industry, and the increased interstate movement of cattle and other livestock, it has become more and more apparent that a somewhat uniform method of identifying and establishing ownership of livestock is necessary to protect buyers and marketing agencies against spurious transactions.

Through brand registration and inspection laws and regulations, many States or livestock associations have established a means for determining the title to livestock. In Nebraska, a "brand State," the law requires that livestock brands must be inspected and ownership established before the animals are moved into areas where such formalities are not prescribed. Purchasers are hereby protected. If the animals are not branded or marked, or if they bear a brand that is not registered to the shipper, he must produce a bill of sale or other document establishing his right to them. Marketing agencies are authorized to impound sale receipts until title has been perfected.

Unfortunately, these regulations have not been adopted in several large livestock producing States and, as a result, there has been no satisfactory way by which interstate livestock sales may be safely expedited or innocent purchasers protected.

This bill amends the existing law and removes some of its deficiencies. It provides for inspection of livestock shipped into a "brand" State and consequent determination of title or right of possession as a prerequisite of sale. The inspection must be made prior to the time the livestock are removed from the market, when required by State law or regulation, or when requested by the purchaser. Fees for the inspection service will be established by the Secretary of Agriculture, and he will designate the agency or agencies authorized to make the examination.

This bill will help to remove the hazard and the uncertainty that has many times imposed undue burdens upon the interstate movement of livestock. It has the support of the American National Cattleman's Association, the Nebraska Stockgrower's Association and similar groups from South Dakota, Montana, and other livestock-producing States.

A Real Farm Problem

EXTENSION OF REMARKS
OF
HON. WALTER ROGERS
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 20, 1956

Mr. ROGERS of Texas. Mr. Speaker, in any discussion of the farm problem we are usually confronted with a lot of statistics in an attempt to prove that the farmer is either in a good position or that his problems are his own doing. What the Department of Agriculture seems to ignore is the fact that the farmer is not a statistic, he is a human being, an important producer in our great economy, a husband, a father who is dedicating his life to seeing that his children are well fed, well clothed, well housed, well educated in the best American tradition.

Under present conditions this human farmer cannot make it, in spite of any figures prepared by the statisticians in the Department of Agriculture and by the city bed and reared theorists who are, unfortunately, in charge of too many aspects of the farm program.

We can best learn about farmers from the farmers themselves. We can get a real picture of the farm problem from the family-sized farmer who, under present policies, is being liquidated, forced off the farm and thrown into the urban labor market in competition with workers in factories and mills.

This week I received a letter from a farmer in my district in Texas. No figures, no fancy theories, no masterful oratory can tell the true story of what is happening to America's farmers better than this simple explanation of the facts by a farmer who is faced with the worst aspects of the problem. I hope every Member of the House will give strict attention and thought to what my constituent says. He may be sounding a last warning for American agriculture and our democratic system as we know it, for we cannot sacrifice him and his fellow farmers without bringing ruin to all of us.

The letter follows:

WELLINGTON, TEX., *February 9, 1956.*

DEAR SIR: This letter is written to ask you to help a small farmer who is at the end of the road. I have been helped by the Farmers' Home Administration for 7 years trying to make a living for a family of 6 on 120 acres, and this year FHA told me they couldn't help me any more. They said I

worked hard and paid good, but just didn't have enough cotton acreage. I have made 2 good crops up to date, paid my expenses back, and a substantial amount on my debt (41 acres year before last and 38 acres last year).

The FHA supervisor figures it would take me 7 years to pay it all back (barring crop failure), paying as much as I did this past year which wasn't as good as the year before. My father bought this land from the Government for $1 an acre. I bought 120 acres from my dad 18 years ago for $6,000 and have paid all of it back but $750 and cared for my family. I'm 40 years old, wife 33, oldest child a boy age 14, 3 girls, ages 13, 10, and 6. All children in school. My family and I gathered all our cotton but a couple of bales, turned it in except enough to pay other crop expenses, living and keeping children in school.

I paid to the bone, figuring on a reloan. He asked me to put it off to see if I could rent some more land. It is against their rules to work land more than 2 or 3 miles from home. I can't find any less than 12 miles away. Have been informed that we must have at least 90 acres of cotton before we can get a loan. If I had that much I could get rich. It is dead winter, snow spell, I'm broke, nothing to live on, and children going to school without lunch. Will have to take them out later, lack of clothes. I just made two good crops and then cut off. I couldn't leave if I wanted to, lack of money. So many small farmers have had to leave. Industry is filled up in 200 miles of here.

Why couldn't we be given a chance to pay for our tractor and a milk cow on terms so we could start over and save the Government that much?

Our stores have offered to carry me an open account if I can get my tractor back. Since the Republican administration has had control, the FHA insists we put in electricity, butane, etc., which has put us badly in the hole to them. Then they have the people we sell to to make the checks to FHA and don't release any to us for anything. They cut us clear off. The way it is run is cuting more farmers' throats than it is helping. Then the big farmers are taking over and we (the small farmers) be their slaves.

I'm sending a copy of this letter to each of the following:

Ezra Benson, Secretary of Agriculture.
Senator LYNDON JOHNSON.
Senator PRICE DANIEL.
Congressman WALTER ROGERS.
R. B. McLeaish, Administrator, FHA.

Sincerely,

MILBERN GIBBS.

I have sent this letter to the Department of Agriculture with request that the matter be thoroughly investigated to see if something cannot be done to correct this type of situation. It is my sincere hope that the problem can be worked out before many others, who are presently standing on the brink of ruin, find themselves in the same area of frustration faced by Mr. Gibbs.

Ventura River Reclamation Project

EXTENSION OF REMARKS
OF
HON. LEROY JOHNSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 20, 1956

Mr. JOHNSON of California. Mr. Speaker, I heartily support S. 926—also an identical bill by Mr. TEAGUE of California, H. R. 3488—which would authorize the Secretary of the Interior to construct, operate, and maintain the Ventura reclamation project, California.

When the bill was considered in the House on Thursday, February 16, 1956, I was in California meeting with numerous persons who had been injured by the great flood which did so much damage in our State. I learned firsthand of their difficulties. I visited the flooded areas in my district and am and will continue to do everything possible to help the victims of these floods.

Before leaving I handed the pair clerk my proxy to vote for the bill. He was unable to use the proxy as a rollcall was not demanded and consequently there was no specific record of my attitude on this bill. Had I been present I would have voted for the bill and will do all I can to help bring the project to completion.

Federal-Aid Roads

EXTENSION OF REMARKS
OF
HON. DONALD W. NICHOLSON
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 20, 1956

Mr. NICHOLSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution adopted by the Board of Water Commissioners of the Town of West Bridgewater, Mass.:

TOWN OF WEST BRIDGEWATER, MASS.,
OFFICE OF WATER COMMISSIONERS.

"Whereas the 2d session of the 83d Congress enacted Public Law 350, amending the Federal-Aid Road Act, and section 11 of said Public Law 350 provided for a study by the Secretary of Commerce of the problems posed by necessary relocation and reconstruction of public utilities services resulting from highway improvements authorized under said act; and

"Whereas the Congress of the United States will soon consider the possibility of making revisions in the Federal-Aid Road Act, and specifically will take action on H. R. 8836, commonly called the Fallon bill; and

"Whereas the water commissioners of the town of West Bridgewater, Mass., through actual experience with a Federal-aid highway project within their town, are aware of the extreme expense to said town occasioned by such a project, and feel it is only just that such expenses should be reimbursed: Now, therefore, be it

"*Resolved*, That the Congress of the United States be hereby requested to give favorable consideration to legislation that would ease the burden on public utilities required to relocate facilities because of the construction of Federal-aid roads; and be it further

"*Resolved*, That the water commissioners of the town of West Bridgewater, Mass., regard any such unreimbursed costs as a form of unfair taxation on the local residents, since it is manifestly highly inequitable to impose on the users of utility services the added costs of relocaton which are justified by nothng more substantial than an accident of geography; and be it further

"*Resolved*, That since the use of Federal funds for Federal-aid road purposes derives from the power and responsibility of the Congress to provide for the common defense and general welfare, and since the benefits of the highway construction flow to the public at large, it is only just and fair that the costs of relocation of utility facilities should also be financed from funds derived from taxes levied on the general public; and be it further

"*Resolved*, That the water commissioners of the town of West Bridgewater, Mass., who have already been forced to secure from their customers increased funds from which to pay the cost of relocation of their facilities occasioned by a Federal-aid road project within the town of West Bridgewater, request the Congress of the United States to make reimbursment aid retroactive to the start of the Federal-aid road program so that said town and other towns similarly affected may recover the costs of relocation of facilities which they have already been forced to pay."

Adopted by the Board of Water Commissioner of the Town of West Bridgewater, Mass., by unanimous vote on the 13th day of February 1956.

A true copy, attest:

GORDON A. MCDONALD,
Secretary.

Latin America, the Best Political and Economic Support for the United States

EXTENSION OF REMARKS
OF
HON. DANTE B. FASCELL
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 20, 1956

Mr. FASCELL. Mr. Speaker, I would like to call to the attention of the Members a significant editorial taken from the February 10, 1956, issue of the Americas Daily, which points out the need for continued understanding, appreciation, and assistance on our part toward the friendly Latin American Republics to the south of us:

LATIN AMERICA, THE BEST POLITICAL AND ECONOMIC SUPPORT FOR THE UNITED STATES

The solidarity of the 170 million inhabitants of Latin America with the United States represents, beyond the slightest doubt, the largest sector of political support that this country can count upon in its international problems, as well as representing the best opportunity for the people of the United States in world trade.

The 20 Latin American Republics, situated in an enviable geographic position, with vast territorial expansions, with tremendous natural resources, with a population of 170 million at the present time, and with immense possibilities of increase, are, before the entire world, a bastion of extraordinary importance. In this era there is no other region of the world that, composed of so many countries, offers better prospects for the present and the future.

Because of that undeniable fact the sincere and unabashed friendship of the Latin American nations towards the United States constitutes, we repeat, the greatest support upon which this country can count in its international dealings, both politically and economically.

Fortunately, the high officials who help to formulate American policy, fully aware of the importance of Latin America, are advocating greater cooperation with those 20 sister countries of the hemisphere, in order to strengthen and fortify the ties of hemispheric solidarity.

In this same edition we are publishing a résumé of a most important speech, dealing

with Panamericanism, clearly conceived, that has just been made in the House of Representatives by ROBERT L. F. SIKES, in which he points out the importance and need for closer relations with the nations of Latin America. The aid that the United States has given to Latin America—SIKES says—is infinitesimal compared to what we have poured into Europe and Asia.

In this forthright statement we see the idea of the distinguished Congressman of recognizing the extraordinary importance that should be given by the United States to Latin America in its international relations.

Russia is so conscious of the great deal that American solidarity means to the United States that she loses no opportunity to undermine the foundations of friendship between the Latin American countries and the United States. Fortunately, both here as well as in all other countries of the hemisphere, there is open resistance to any attempt to destroy the ties of friendshp and reciprocal cooperation among the 21 republics of the Americas.

Address by John B. Fisher, Administrative Assistant to Senator Leverett Saltonstall, of Massachusetts, at the Lincoln Day Dinner, Boston, Mass., February 13, 1956

EXTENSION OF REMARKS
OF
HON. LAURENCE CURTIS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Monday, February 20, 1956

Mr. CURTIS of Massachusetts. Mr. Speaker, on Monday, February 13, I was privileged to attend the Lincoln Day dinner of the Middlesex Club of Massachusetts, the oldest Republican club in the country.

Although the entire program was an excellent one, perhaps the outstanding feature was the Lincoln oration presented by John B. Fisher, administrative assistant to the senior Senator from Massachusetts, Hon. LEVERETT SALTONSTALL.

Unfortunately, the printed page cannot recapture the warmth and power of Mr. Fisher's speech, but because I would like to share it with others who regard Abraham Lincoln as one of our greatest Americans, I include it under leave to extend my remarks, as follows:

A EULOGY OF LINCOLN

(Address delivered by John B. Fisher, administrative assistant to United States Senator LEVERETT SALTONSTALL, at the annual Lincoln Night dinner of the Middlesex Club, Boston, Mass., February 13, 1956)

Gen. George Pickett, a fighting Confederate commander, was to remember all the days of his life that third afternoon at Gettysburg when he led his long, gray lines against the Union barricades on Cemetery Ridge in the bloodiest assault of the war. And Mrs. George Pickett was to remember always that afternoon at the war's end when, in answering a knock at the door of her Richmond home, she opened it to find a tall stranger standing there in the shadows of the porch, asking her if George were at home, m'am?

She replied that George wasn't and wouldn't be for some time but might she ask in turn who the visitor was. The tall man in the frock coat, stove-pipe hat in hand, said simply, "Just an old friend of George's, m'am; just an old friend from before the war." With that he turned and stepped out into the sunlight and walked slowly down that Richmond street, leaving Mrs. Pickett to the startled realization that the President of the United States had come to call.

The President of the United States. Abraham Lincoln was that, of course he was, but really a great deal more, too. For this was a man of many parts, all of them human and most of them great.

This was the politician who in 30 long years of devoted service in his party's ranks came to realize that politics, like life, is the art of achieving the possible and who learned, with the decay of the Whig Party, the turbulence of the Mexican War period, and the onset of the Missouri Compromise that he had nothing whatever in common with political platforms whose planks were platitudes and with men of no discernible principle.

This, too, was the husband and father whose home life was torn by strife and dissension and the tragic death of children. Yet it is not for us, tonight or ever, to judge Mary Todd Lincoln. The heart of a wife and the heart of a husband can best be known only to themselves and what a woman says to a man or what a man says to a woman should often, as the ancients knew, be written on the wind. It will become us better to remember that Mary Todd and Abraham Lincoln sat fondly holding hands in a darkened box in Ford's Theater on the night of Good Friday, 1865.

But this, too, was the President—the President and Commander-in-Chief—devoted above all else to preserving the Union "with the dignity, equality and rights of the several States unimpaired". So he said; so he did.

And in so doing, he brought freedom to the enslaved. As he wrote in his annual message, following the Emancipation Proclamation: "In giving freedom to the slave, we assure freedom for the free, honorable alike in what we give and in what we preserve."

Supported in this objective by the Abolitionists, yes, but fought by them every step of the way, for moderation was a word they never knew. He counseled with them patiently when he could; he blocked them ruthlessly when he must, fondly hoping that in time they'd learn, fervently praying that they'd learn in time.

Meanwhile, the war went on, with Jackson and Lee defeating the Union forces at almost every turn, crushing the Northern armies between them like a steel-hard finger and thumb, until at last the President came to put his trust in Grant—Ulysses S. Grant, who astonished everyone in Galena, Ill., by turning out to be somebody after all.

Agreeing completely with Grant's objective of smashing victory and peace, he occasionally questioned Grant's method but he remembered from the old days at Hodgenville and New Salem that you never cuss a good ax. To keep up with Grant, studying tactics late into the night, but, night and day, studying human nature as well; taking time out for needed laughter and humor; writing with a wry smile to a woman who had asked him for a sentiment and his autograph:

"DEAR MADAM: When you write to a stranger for something which is of interest only to yourself, always enclose a stamp. There's your sentiment and here's your autograph.

"A. LINCOLN."

Then, at long last, the tide of the battles and of the war turned under Grant's sledge-hammering — stubble-chinned, stubborn-jawed Grant, in whom the President had such faith—and the President was enabled to think beyond the war to the time of reconstruction, to the binding up of the Nation's wounds, when the road to reunion with the South would, he knew, have to be paved with justice and generosity and good will.

Blocked again in this because of his policy of moderation—not alone by many of the northern States and their leaders, not only by many members of his party, but often violently, profanely, by his very closest advisers and friends—yet knowing, as few men have even known, that wisdom as to ends must equal skill as to means or the work would be lost forever.

This, finally, was the martyr, the martyr to union, to freedom and to peace. Lincoln had a presentiment of death all his life but never more strongly or clearly than on the morning of April 14. Yet he knew that death was not the worst of life, that defeat was not the worst of failure, that not to have tried was the true failure and in his ceaseless trying to preserve this Union, for us and forever, achieving one of the greatest successes in all recorded time.

It was America's darkest hour since Valley Forge when they carried him out of Ford's Theater and into the little Petersen House across 10th Street and Dr. Charles Leale, 23 years old, assistant surgeon, United States Volunteers, who had been the first to attend him when he fell, sat through those long, black night hours and the long gray morning ones that following holding tightly to the President's hand, knowing, as he was to write later, that reason and recognition occasionally returned to the afflicted at the moment of departure and wanting the President to understand in his blindness that he was in touch with humanity and had a friend.

So it was that George Pickett's old friend from before the war himself had a friend at hand when the long war years were over.

This was Abraham Lincoln, politician, husband and father, President and Commander in Chief, martyr for all mankind. He was a man of such dimensions that he made all others seem small, though he would have been the very last to wish to do so. Those dimensions were not merely physical, not just the 6-feet-4 of him or the gaunt, bony frame of him, but the great soul and heart of him as well.

For this was the Bible-reading lad come out of the wilderness, following a prairie star, filled with wonder at the world and its maker, who all his life, boy and man, not only knew the 23d Psalm but, more importantly, know the Shepherd.

Now, in 1956, it seems possible that we shall never see his like again. This is a sobering thought, but it should be a kindling one, for upon us now, as a people and a party, has been laid perhaps the greatest responsibility any nation was ever asked to shoulder, yet certainly not greater than we can bear. Our days are no longer than were Lincoln's, our nights are no darker, and if there is any difference between his time and this, it lies in the tremendous advantage that is ours, that he stood so tall before us.

In such a time and at such a moment we surely can say then, from hopeful, brimful hearts:

We are coming, Father Abraham, devoted millions strong, firm in the faith that was yours and is ours, secure in the conviction bequeathed by you to us that right does make might and that if we but dare to do our duty as we understand it, we shall not only survive—we shall prevail.

We walk beside you now, long-striding, our feet firmly on the ground in this most practical of worlds but with an eye always on the heavens that we might never—never—lose sight of the stars.

Our Mental Health Problem—Mental Illness Can Be Cured

EXTENSION OF REMARKS
OF
HON. WALTER ROGERS
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 20, 1956

Mr. ROGERS of Texas. Mr. Speaker, in the eighth of a series of articles on our mental health problem the writers deal with the need of training workers so vitally needed in institutions for the cure of the mentally ill. This is one of the most perplexing facets of the whole problem.

[From the Amarillo (Tex.) Globe-Times of January 13, 1956]

THE MENTALLY ILL CAN BE CURED—KANSAS SUBSTITUTES BRAINS FOR BRICKS—TRAINING PROGRAM FILLS VITAL NEED

(By Louise Evans and Mary Tom Rasco)

All the oil in Texas won't buy the workers needed in the mental health field today. There aren't enough to go around; new ones must be trained.

The State and private institutions for the care of the mentally ill beg, borrow, and steal personnel from each other. Nationally, it is estimated that only 1 out of each 3 desperatedly needed workers is trained. In some phases of psychiatric work, there is only 1 trained where 10 are needed. State mental hospitals have only one-third of the workers they need for treatment, not custody, of patients.

There is nothing left for the hospitals and medical schools to do but to train the needed personnel, and it becomes a long-time project.

Physicians with medical degrees must spend from 3 to 5 years of further training in mental health to become psychiartists. Clinical psychologists, nurses, and social workers trained in psychiatric care are needed, all of whom must add the additional training to professional degrees.

Therapists must be secured and hundreds of aides for the ward work must first be interested in mental work, then trained intensively.

These aides are the first line of defense in the battle for restoring mental health. They are ones who are associated closely with the ill, and they find their very own moods reflected in the attitudes of the patients. Moreover, they are in a new field and endeavor—one in which the rules have not even been made—and they must be experimenters as well as dedicated, skilled workers.

MUST BE GOOD MAN

What is a psychiatrist? First, he is a physician with a medical degree from a college approved by the American Medical Association, and as a general rule he has a State license to practice medicine before he starts his additional training in psychiatry. The license is a requirement for those who train for the VA program. Then he spends from 3 to 5 years in intensive study of mental illness before being accredited by one American Board of Psychiatry and Neurology.

But the Menninger School of Psychiatry holds that even such educational qualifications are not enough; a psychiatrist must be a good man, in the platonic sense, and "must believe in the inherent capacity of even the sickest individual for reconstruction • • • that people can be understood, and they are thereby helped."

The trainees may go into Winter Hospital (the VA psychiatric training hospital) or Topeka State Hospital and combine training and service. Salaries range from $300 a month upward.

At least 10 percent of the Nation's present psychiatrists-in-training are in Topeka now, working in the three-way program financed by the Menninger Foundation, the Veterans Administration and the State of Kansas. Of this number only eight are Kansas physicians, although it is hoped by Kansans that some others will settle in the State. At least they man the program of mental health in Kansas while they train, and Kansans seem to feel that their State appropriation for training is well spent.

GUIDANCE CENTERS INCLUDED

The hospitals maintained by the VA, the State and Menningers furnish the best of clinical training, but there are several other institutions in Topeka that rely heavily on this pool of psychiatric talent. These are the VA Mental Hygiene Clinic, the Shawnee Guidance Center for children, the Kansas Boys Industrial School, where juvenile delinquents below the age of 16 are housed, and the Woodsview Clinic for Alcoholics.

State agencies in other Kansas cities use the trainees services. These are the other two State hospitals at Larned and Osawatomie, the Psychiatric Department of the University of Kansas Health Service at Lawrence, the Winfield and Parsons Training Schools (for mentally retarded), the Kansas Girls Industrial School at Beloit, the Kansas Children's Home and Receiving Center at Atchison and the Alcoholic Recovery Unit of the Kansas Commission for Alcoholism at Wichita.

Children's guidance centers in Kansas City, Kan., Atchison, Lawrence, Salina and Wichita and many community programs for mental hygiene depend on this same pool of Topeka trainees and workers for guidance and help. Nursing and boarding homes licensed by the Kansas Board of Social Welfare also use their services.

MILLION TO START

When Kansas decided to substitute "brains for bricks," a phrase coined by Dr. William Menninger, its State hospital system stood at the bottom of the list of States in number and professional standing of hospital staffs. The hospital system did a little begging, borrowing, and stealing, but it decided on a teaching and intraining program for two reasons: (1) This was the only method that would bring the number of workers needed; (2) if one of the hospitals could be made into a teaching hospital, prestige alone would bring top-grade men and women who want the satisfaction of teaching.

The Kansas Legislature appropriated a million dollars to start the program. It is a commentary on the struggle to get psychiatric workers that the Topeka State Hospital was able to spend only $300,000 of the appropriation that first year. In fact, every year since, the training program has been long on funds from the annual million dollar appropriations.

But by 1955, the Topeka State Hospital has been the training site for 71 psychiatrists of the Menninger School of Psychiatry. It has trained 18 psychologists, 852 psychiatric aides, and numbers of therapists, nurses, and social workers. Most of the 754 staff members and employees of the hospital have been "home-trained."

In all, training programs for 13 kinds of specialists in mental health work are conducted at the hospital under the direction of Dr. Paul E. Feldman, director of research and education.

Kansas State law requires that every nurse trained in the State must have psychiatric training for 13 weeks. Topeka State Hospital takes over this instruction. Furthermore it trains its own psychiatric nurses for longer terms.

Social work students from the Kansas universities and colleges are assigned to the hospital by the deans who carefully screen for those who might become potential workers in the field of mental health.

Nursing and boarding home operators have 1 week's intensive training with special emphasis on geriactrics and organic brain disorders.

The term "occupational therapist" has given way to "adjunctive therapist." Within this group of workers can be found those who will train the mentally ill in industrial, occupational, recreational, and music therapy. Scores of these workers are needed in any State hospital system. The Topeka hospital has an intensive in-training program for these adjunctive therapists.

Even the dietitians, the barbers, the electricians, the phone operators, the kitchen workers, and the maintenance men need some in-training work for the specialized "plant" in which they are employed.

VOLUNTEERS HELP

The hospital has training programs for others who fight the battle of mental ill health on other battlefronts; the ministers, community workers in mental-health programs, and the volunteers—those thousands of Kansans who have made it possible for the Kansas State hospitals to prove to the patients that "outsiders" know and care about their welfare.

The State Hospital Aides in Recreation and Entertainment—SHARE—and the Red Cross furnish most of these volunteers, who follow a schedule in hospital visits. But the good Samaritan acts of mercy and kindness from Kansas citizens throughout the State have had their effect within the hospital system, also.

For instance, the superintendent of Larned believes that one of the most successful therapies he uses is that of providing just ordinary house dresses, each different in material and stylings for his women patients. No longer are bolts of cloth delivered to the hospital to be made into identical dresses. Each woman selects her own wear from the hospital store. Kansas volunteers help here, too. Each year tons of clothes are contributed to the store by the people who live near Larned.

In Topeka, the volunteers provide transportation for patients who want to go shopping in town. They operate the patients' library. They provide the Christmas and other holiday parties, and many work with individual patients as companions and teachers.

But all of these volunteers who work directly in the hospitals must be trained, and Topeka State Hospital has vital programs to hold their interest.

A 3-month period of training is provided for ministers who are preparing for careers as chaplains in mental hospitals. Many other pastoral students take these courses, because they are aware that they are 1 of the 3 groups of professional men to whom the mentally upset and ill naturally gravitate—doctors, lawyers, and ministers.

BROADER HORIZONS

"Because psychiatry is one of the newer areas of medicine, he (the psychiatrist) should also be a scientist seeking new knowledge. Discoveries comparable to those of Harvey, Pasteur, and Koch still wait to be made in this growing science."

These words from a United States Public Health Service bulletin may be another explanation for the dedicated interest one sees among the Topeka psychiatric workers.

For here are the misty frontiers of research, beckoning the young man to discover a technique that may someday bear his name. Such research, of course, is not confined to Topeka. National Institute of Public Health research funds are available for every State. In Topeka, research funds

have been secured, too, from the great private foundations such as Rockefeller.

At the Menninger Foundation, research projects vary from the study of the effects of the new wonder drugs through the clinical problems of thyroid gland dysfunction to children's ways of coping with their problems. There are studies underway on the psychological aspects of blindness. For past 4 years an intensive study has been given to the psychology of the schizophrenic child and the child on the borderline or schizophrenia—that disabling mental disease accounting for more than a third of all mental hospital patients and the one most resistant to treatment.

Harry Levinson, Ph. D. (who as a psycology student from Kansas University did the spadework that broke the scandal in the State hospitals), is deep in research—and education—in the field of industrial psychiatry. Many a great industry now known the importance of mental good health among its workers, and psychiatrists are added to the staff just as are those who work in physical health.

But Levinson and Dr. Will Menninger are working on an even more ambitious project: searching out the psychological factors that under the three a's—absenteeism, accidents, alcoholism—cost American industry billions of dollars annually.

And in every ward in every Topeka hospital the most intensive, highly personalized search goes—what is mental health? Where and when is it lost? From the patients in those wards each answer will be found—and each psychiatric worker, from psychiatrist to aids, adds his little bit of observation to the growing record.

General MacArthur

EXTENSION OF REMARKS
OF
HON. A. L. MILLER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 20, 1956

Mr. MILLER of Nebraska. Mr. Speaker, under leave to extend my remarks in the Appendix of the CONGRESSIONAL RECORD, I include an editorial from the Korean Republic, Seoul, Korea, dated Monday, January 30, 1956. The editorial is about General MacArthur.

Mr. Speaker, the editorial on General MacArthur reflects not only the feeling and the thinking of the people of Korea but millions of people in the United States of America. It must warm the cockles of the general's heart to realize that the service he tried to render to these troubled people is fully appreciated.

This Congress should consider and pass legislation which has been introduced, which would give this distinguished statesman the well-deserved title of the General of the Armies. I am also convinced that this administration should use the knowledge and prestige of General MacArthur when it comes to dealing with the problems of Korea, Japan, and the Far East. He is respected; he is loved; he has great knowledge and understanding of the problems of the Orient. We should utilize this understanding and knowledge.

The editorial follows:

ASSIGNMENT FOR MACARTHUR

Gen. Douglas MacArthur was 76 years old the other day, and tributes from all over the world poured into his tower suite in New York's Waldorf Astoria Hotel. They could not have gone to a more deserving international statesman and military genius. When many of the other great names of our time have been reduced to insignificance, that of MacArthur will remain undiminished.

Of all American personalities, MacArthur has probably made the greatest impress on the Pacific world. Only part of that stems from his magnificent leadership and strategical conceptions in World War II and the Korean War. MacArthur is a prophet—and sometimes one without honor in his own country—who has always seen the shape of things to come in Asia.

He has often been called an "Asia firster." That is true, but not in the sense of a man obsessed with the love of given areas or peoples. MacArthur likes and understands Asians, of course. But his intense preoccupation with the Orient is based not upon Asiaphilism, but upon his great American patriotism. He knows that Asia is the power reservoir of the world, and that in time to come a free Asia will mean a free world and a slave Asia will mean a slave world.

In realizing this, MacArthur has become one of the most consistent advocates of national self-ditermination under any and all conditions. During the Japanese occupation period, for example, MacArthur never supposed nor advocated that Japan could be kept in a condition of permanent colonial thralldom. He knew that the Japanese soon would have to be freed to seek their own destiny, and he did all within his power to assure that Japan would follow peaceful and constructive ways. If Japan now is bent upon another direction, that is not his fault. With his departure from the Far East, weaker policies were substituted for his strong but impartial leadership, and the result is a Japan that is lined up with the Communists.

As Ambassador Ben Limb said in New York last week, the Korean war was stalemated only because MacArthur's views were vetoed. This was the man who had driven the Communists from the southern half of Korea only 4 months after their treacherous attack and penetration of all the Republic except the tiny ring of the Pusan perimeter. Yet when MacArthur warned that the price of the Manchurian sanctuary would be loss of the war, he was disregarded. From that decision not to carry the attack to Red Chinese bases across the Yalu stems the loss of half of Vietnam, the threat in the Formosa Straits, the continued division of Korea, and the great peril to all that remains of Free Asia.

It seems a great tragedy that a man of MacArthur's superlative qualifications should not be employed by his country at a time of crisis even more grave than that of December 7, 1941. We do not mean to imply that MacArthur is doing nothing. He is busy with his business interests and presumably with writing. He is generous in giving his time and advice to those who seek him out for advice and counsel. But he is needed for more than that, as is so often indicated by leading spokesmen of both the Democratic and Republican Parties.

We think that we speak for all Asia when we say that the United States could make no more sagacious move than to place General MacArthur in a position where his wisdom and driving energy could serve his own country, the Far East, and the Free World. With MacArthur there is no compromise with the ideals of freedom and democracy, no concessions to the Communists—and all peoples and nations know it. Such forthright leadership is the way to victory and to lasting peace that would follow.

Red Aim Unchanged

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 20, 1956

Mr. McCORMACK. Mr. Speaker, in my extension of remarks, I include a well-considered article showing that basic Communist policy or strategy has not changed, written by Cornelius Dalton, and appearing in the Boston Traveler of February 17, 1956.

In his article Mr. Dalton has objectively evaluated the recent speech of Krushchev, the first secretary and Red leader in the Kremlin:

RED AIM UNCHANGED

(By Cornelius Dalton)

The speech by Nikita S. Khrushchev at the 20th Congress of the Soviet Communists Party does not represent a basic change in Red policy or strategy.

Two general conclusions have been drawn from the speech by many observers. They are (1) that Khrushchev has emerged as Stalin's successor as dictator, and (2) that he has renounced the Marxist-Leninist dictum that capitalism must be overthrown by force and violence.

There is some evidence that the first conclusion may be correct, despite Khrushchev's references to "collective leadership" and his criticism of ""making a particular leader a hero and miracle worker."

He obviously is consolidating his power in his key position as first secretary of the Community Party's central committee, and he freely attacked Molotov and Malenkov. Unless he is challenged, the probability is that he will take over as supreme dictator.

But there is no convincing evidence that Khrushchev has repudiated force and violence as an instrument of achieving the triumph of world communism, even though he tried to give that impression.

After mentioning the Marxist-Leninist theory that "while imperialism exists wars are inevitable," Khrushchev said: "There is no fatal inevitability of war." He also advocated "peaceful coexistence" as the basis of relations between the U. S. S. R. and the United States.

Khrushchev implied that under cetrain conditions in certain countries the "transition to socialism" could be accomplished by "parliamentary" means.

But referring specifically to the use of force, he said this depends "not so much on the proletariat as on the extent of the resistance put up by the exploiters, and on the employment of violence by the exploiting class itself."

Then he made this extremely significant comment:

"Of course in countries where capitalism is still strong and where it controls an enormous military and police machine, the serious resistance of the reactionary forces is inevitable.

"There the transition to socialism will proceed amid conditions of an acute class revolutionary struggle."

What Khrushchev is saying is this:

If any country is willing to surrender peacefully to the Soviet Union, the "transition to socialism" will be accomplished without force and violence.

But if a country offers resistance to the Soviet Union, then the "transition" will be

enforced by "revolutionary" means, that is, by force and violence.

Khrushchev's prattle about "peaceful coexistence" is a continuance of the Kremlin's phony peace propaganda.

His appeal for a "popular front" is a new attempt to divide and weaken the anti-Communist forces.

The "peace loving" Soviet tyrants have already enslaved one-third of humanity.

The conquest and enslavement of the entire world is still their No. 1 objective.

A Chronology of Actions Since 1934 to Build Jefferson National Expansion Memorial—All Awaiting Modest $5 Million Appropriation for Federal Share of Work

EXTENSION OF REMARKS
OF
HON. LEONOR K. SULLIVAN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 9, 1956

Mrs. SULLIVAN. Mr. Speaker, the efforts of the people of St. Louis and surrounding areas to build the Jefferson National Expansion Memorial go back to the formation of an organization in St. Louis 22 years ago, the Jefferson National Expansion Memorial Association, in April, 1934. In June of that year, President Franklin D. Roosevelt established a Federal Commission to plan construction of this national shrine. There have been many developments since then, but until a modest $5 million is forthcoming from the Federal Government, we cannot make this dream into a reality.

The series of articles in the St. Louis Globe-Democrat giving the history and plans for the memorial to commemorate the Louisiana Purchase and the opening of the West has traced in detail the many steps taken by the people of St. Louis to do their part in connection with this great project. These articles, which I am placing in the RECORD under unanimous consent,. have been written by Ted Schafers, Ray Noonan and Marsh Clark.

The fifth article in the series, by Globe-Democrat Washington Correspondent Marsh Clark, tells how President Roosevelt, President Truman and President Eisenhower all joined in supporting the memorial. It tells of the many steps which have been taken since 1934, as follows:

THREE PRESIDENTS HAVE SUPPORTED RIVER FRONT PROJECT TO NO AVAIL.

(By Marsh Clark)

(Fifth of a series)

WASHINGTON, February 8.—Three Presidents of the United States have spoken out and acted in favor of the Jefferson National Expansion Memorial for the St. Louis downtown riverfront. However, in the 20 years since it was first proposed it is still nothing but a parking lot.

The first presidential action was June 15, 1934, when the late President Franklin D. Roosevelt established a Federal commission to plan construction of this proposed national shrine. St. Louis was selected because of its historic role as the gateway to the West.

The last presidential act took place May 14, 1954, when President Eisenhower signed a bill passed by Congress authorizing $5 million to be appropriated for the memorial when the Federal budget was balanced. This is now a fact. However, the Federal Park Service, which has the job of constructing and operating the project, has indicated it will ask for only $150,000—to fence and landscape the old courthouse. There is nothing for memorial construction.

Under President Roosevelt's leadership the 82.5-acre tract was acquired and the old buildings along the riverfront were razed. World War II and the Korean conflict caused natural delays.

President Harry S. Truman exhibited his support. Once confronting an eastern Senator who was cool to the project, in his characteristic forthright fashion, he said:

"Sometime or other I wish you would come out to St. Louis and Kansas City and take a look at what we are trying to do out here for the establishment of historical markers for future generations.

"They are just as important here as they are in Massachusetts, Rhode Island, and Connecticut," Truman remarked.

President Eisenhower expressed his personal feelings in a letter to Representative THOMAS B. CURTIS July 7, 1954, when he presented the Republican Congressman from Webster Grooves with the pen with which he signed the $5 million authorization law. President Eisenhower said:

"I was very happy to sign into law the bill authorizing construction of a national shrine to Thomas Jefferson and the pioneers who made possible the peaceful expansion of our Nation, west of the Mississippi.

"Through this shrine the American people art fittingly commemorating a critical period in our history and the courageous men who lived during it.

"Accordingly I am delighted to learn the pen I used in signing this bill will repose in the United States Museum of National Expansion in the historic old courthouse in St. Louis."

It is obvious from the letter that President Eisenhower felt this bill would start construction of this memorial as soon as the budgetary restrictions had been met.

To the thousands of St. Louisans and public-spirited citizens in other parts of the country the slow progress of the memorial here is difficult to understand.

Perhaps they can take comfort in the observation made by the late Newton D. Baker, Secretary of War under President Wilson, and a charter member of the Jefferson National Expansion Memorial Commission, who said:

"This memorial will be like a cathedral; built slowly, but surely."

St. Louis Congressmen have made determined efforts to get funds. But these have been as unavailing as had they tried to swim up Niagara Falls.

Bills, hearings, motions, agreements, and resolutions have not been lacking here in Washington. In fact, they have occurred in startling profusion. What has been notable by its absence is money, Federal funds in sufficient quantity to give firm evidence that the Government intends to keep its part of a bargain struck years ago with the city of St. Louis.

A check of the chronology of principal events affecting the Jefferson Memorial in Washington shows at least 31 important actions in behalf of the project.

Memorial backers have never tired of trying to get their plans and hopes understood by Congress. At a hearing in 1950 before a House committee, St. Louisans filled 88 typewritten pages with testimony.

The patient supporters returned again in May 1953, and gave 23,000 words more of testimony before the same House group. And, later that same month they uttered 15,000 more words to a Senate committee.

To read this testimony today you have to go to Government storerooms and the National Archives, the graveyards where outdated material is stashed away for posterity.

Let's take a look at a few highlights in the years of busy activity to get Government gers grinding in a decisive way:

April 11, 1934: Public-spirited citizens from all over the country organize the nonprofit Jefferson National Memorial Association, which is still in existence today.

September 10, 1935: St. Louisans ballot a $7,500,000 bond issue for the city's share. The vote: 123,299 for; 50,713 opposed.

June 22, 1936: National Park Service establishes St. Louis office to develop memorial.

May 1940: President Roosevelt accepts old courthouse as a gift from St. Louis.

May 1942: Removal of buildings on memorial site completed.

May 25, 1948: Interior Secretary concurs in Federal commission's approval of winning design—submitted by Eero Saarinen. Highlight of proposal is a huge stainless steel arch, rising 200 feet higher than St. Louis' tallest building.

December 6, 1949: Agreement signed between the Government, the city, and interested railroads providing for the relocation of railroad tracks and, an easement to the city of St. Louis for underground parking in the memorial area.

June 19, 1950: Memorial site dedicated by President Truman.

January 29, 1953: Identical bills introduced in House by Mrs. LEONOR K. SULLIVAN (widow of John B. Sullivan), who introduced original bill in January 1950); MELVIN PRICE, of East St. Louis; THOMAS CURTIS, of Webster Groves; C. W. BISHOP, of Cartersville, Ill.; and FRANK B. KARSTEN, St. Louis.

February 18: A new bill introduced by Senator HENNINGS in the Senate with Senators SYMINGTON, ANDERSON, MARTIN, and MORSE.

May 14, 1954: President Eisenhower signs $5 million authorizing bill into law.

January 17, 1956: President Eisenhower submits balanced budget to Congress removing legal bars to appropriation.

January 26, 1956: Representatives CURTIS and SULLIVAN introduce bill calling for the $5 million previously authorized. Since then, representative KARSTEN and Senators HENNINGS and SYMINGTON have called for more funds for the river front.

The record is long. Yet, despite these myriad efforts, the Federal Government as a whole has dragged its feet in sad contrast to the dash and vision of the men and the deeds which the memorial is intended to commemorate.

Final Article in Globe-Democrat Series on Jefferson Memorial Puts Problem in Simplest Form: Federal Funds Are Key to Project's Success

EXTENSION OF REMARKS
OF
HON. LEONOR K. SULLIVAN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 9, 1956

Mrs. SULLIVAN. Mr. Speaker, the series of articles in the St. Louis Globe-Democrat on the Jefferson National Expansion Memorial has detailed the long history of our efforts to build this great project as a shrine to the American spirit which opened the West. These articles,

written by Globe-Democrat staff writers Ray Noonan, Ted Schafers, and Marsh Clark, have told dramatically what this project will mean, when completed, not only to St. Louis but to the whole country.

The final article in the series is by Globe-Democrat Washington Correspondent Marsh Clark, and is entitled "Money Is Only Key to Solution of River Front Project Woes."

Mr. Clark dug into this story by going to the officials of the National Park Service to learn why, in a Federal budget of more than $60 billions, only $150,000 could be spared for the Jefferson National Expansion Memorial. Obviously, this is only a drop in the bucket. The Federal share of the project as now authorized is only $5 million. That is not much in a budget of more than $60 billions.

All of us in St. Louis feel the full $5 million should be provided, so that this long-delayed project can be put into construction. Mr. Clark's article sums it up as follows:

MONEY IS ONLY KEY TO SOLUTION OF RIVER-FRONT-PROJECT WOES

(By Marsh Clark)

(Sixth of a series)

WASHINGTON, February 9.—There is one key that will unlock all the troubles that have plagued the Jefferson National Expansion Memorial since its inception, two decades ago. That key is money.

It is true that small amounts have dribbled from Government coffers down through the years.

The amounts, however, have been paltry. Despite much flailing and many words, the proposed memorial has been grounded for lack of funds.

Here in Washington two groups are the keepers of that key which can open the door to the future achievement.

They are the Congress and the National Park Service.

It's easy to understand the importance of Congress. It alone can appropriate the money.

The National Park Service (part of the Interior Department) has a more indirect role, but, nonetheless, a crucial one. It administers all national parks and memorials—those actually in existence and those that are, like the Jefferson Memorial, still largely a pipe dream.

Congress attaches great importance to money requests to be spent on parks, made by the agency which has the job of administering those parks. Within the bounds of sound finances, the Congress tries to grant what the Service asks.

And what is the Park Service asking for the memorial for the next fiscal year?

The amount is $150,000, about 3 percent of what project backers would like to have.

Why is the Service asking for such a puny amount? To find an answer to this question, a Globe-Democrat representative conferred at length with Park Service officails. Here is their explanation:

The Park Service is being bombarded from all sides about the rundown condition of existing parks, they say. To fix the situation, the Service has launched Mission 66.

Mission 66 is a 10-year program that is supposed to put the parks in shape to accommodate 80 million annual visitors by 1966.

This will take lots of money. Not much is going to be left for starting new parks and memorials or continuing work on those already under way.

These officials seem genuinely perplexed about the St. Louis project. Scratching their heads, they admit it's in a unique status.

They allow (with loud sighs) that the Government has a very definite obligation to keep a bargain with St. Louis.

But, at least at present, they cannot see their way clear to giving more money to the long-delayed riverfront memorial.

Their argument rests. In part, upon the lamentably tired condition of existing parks. There is little controversy about that.

Here's a typical complaint about conditions at Yellowstone National Park: Speed limits have been raised to 45 miles an hour, the better to hurry visitors through a preserve dedicated to the leisurely appreciation of nature.

One day, the complaint continues, 16,000 people burned up gas driving into Yellowstone and 6,000 had to burn up gas driving right back out because of lack of accommodations.

Guard rails over precipitous cliffs are in disrepair. Park service employees are living in trailers, or in dingy barracks thrown up in the early 1930's to house laborers on public works projects. The Public Health Service is howling about the lack of sanitation in parks.

And here is the Park Service's punch line: "It wasn't our idea that our funds have been reduced to practically nothing."

Imposing though these arguments may be, where do they leave the 22-year-old Jefferson Expansion Memorial project and the agreement for Federal participation, now that all legal bars have been removed to an appropriation of funds?

Cannot a $66,238,000 Interior Department budget spare more than $150,000 to this worthy project and its long-suffering backers?

St. Louis Congressmen say "yes."

They are thinking in terms of $5,000,000, and are pressing for an appropriation in that amount despite the fact that the Park Service has not asked for it.

Both Missouri Senators have called for a substantial Federal appropriation.

Why was the $150,000 earmarked for restoring an iron fence and incidental landscaping around the Old Courthouse (a gift from St. Louis to the Government) when the Park Service's own priority lists put restoration of that structure far down the list of necessary steps?

The answer is simple.

One hundred and fifty thousand dollars is a drop in the bucket on a project the size of the proposed memorial.

Service officials say that the only part of the project where $150,000 would make the slightest dent is the Old Courthouse.

Relocation of railroad tracks is the No. 1 step that should be taken, they admit. But the estimated cost of this relocation is $2,500,000, and $150,000 wouldn't even buy a set of good blueprints.

Likewise, such vital steps as landscaping and constructing paved areas and utilities must be postponed until sizable chunks of money are made available, if they ever are.

That leaves these later steps: Construction of the arch, which is to be the highlight of the whole project (under present law, Federal money cannot be spent on the arch); construction of restaurants, getting a museum building and exhibits, and finally, historic reconstruction.

Perhaps the Park Service's feelings are best described by the words of one of its officials, who told the Globe-Democrat with obvious resignation:

"I'm sincere when I say we don't go out and buy up land just to let it stand there. This situation was brought about by a series of unfortunate circumstances beyond our control, including two wars.

"We'd do something tomorrow if we had the money."

St. Louisans are growing progressively more weary of hearing Government gobbledygook worded in the future tense.

They feel, after 20 years of delay, that the time to talk about is now.

Republican Deployment—1956

EXTENSION OF REMARKS

OF

HON. JOHN P. SAYLOR

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 20, 1956

Mr. SAYLOR. Mr. Speaker, the presidential campaign for 1956 is beginning to take shape. Everyone concedes that the Republican forces present a far different array this year than in the past two presidential elections. Their forces extend across the broad front of politics for the first time in many years.

One of the champions of the new era of Republicanism has been the Honorable HUGH D. SCOTT, from the Sixth District of Pennsylvania. He saw his advice go unheeded in prior years and his party go down to defeat, despite his warnings. His former position is now vindicated by the positive social legislation of the Eisenhower administration, as is evidenced by a recent article appearing in the Christian Science Monitor by Joseph C. Harsch.

The article follows:

REPUBLICAN DEPLOYMENT—1956

(By Joseph C. Harsch)

As the morning mist lifts from the great United States political battlefield of 1956, a surprising sight is disclosed.

The Republican array is deployed on a far broader front than it has presented to its ancient foe since Teddy Roosevelt raised the standard of his Square Deal.

Its right wing is anchored on the high ground of a promised balanced budget and a record of substantial encouragement to big industry.

Its left wing stretches off toward the broad plane of social security and welfare statism.

In the center is the heavy infantry of peace and prosperity.

This is a very different thing from the Republican force put into the field in either of the last two presidential elections.

In 1948 the Republicans were confident of victory. They had the old palace guard and the solitary figure of Thomas E. Dewey, who would be the "little giant" of the year. But between the champion and the guard there was little affection and almost no coordination.

Harry S. Truman turned out to be the doughtier champion; and the old guard, encumbered with antique armor, could not get into the fight in time to influence the result. With an appreciation for whimsy rare in United States politics, the voters of that year voted Democratic.

In 1952 there was no need for a broad front, or perhaps even for much of an army. The Republicans at last had a truly popular champion, a man so popular that the Democrats themselves had tried strenuously to persuade him to lead their forces. Dwight D. Eisenhower was what the Republicans had the most of in 1952, but it was enough to carry the country, though not enough to procure a real victory for the party itself.

This time it's different—to the Democrats startlingly different. As their field commanders scan the Republican line they realize that for the first time in many years there is no sure opportunity for their classic maneuver: the flanking movement around the Republican left which has so often before rolled up the Republican line and won the victory. Not since Teddy Roosevelt has the Republican high command so extended its line to the left and prepared so carefully to protect that flank.

This is what one Republican command casualty of other years dreamed of, yearned and begged and pleaded for, in his time. One of this reporter's most poignant memories is of HUGH SCOTT, Jr., Republican National Committee chairman of 1948, on the night the returns came in that year.

HUGH SCOTT had long recognized the appalling weakness of the Republican position on those endless open plains to the left. Against his pleas, his partisans of the 80th Congress had spent their time exclusively in fortifying their already impregnable position on the right. They built the great tower keep of Taft-Hartley and dug around it the broad moat of deafness to appeals from the Farm Belt for grain storage.

On that cold November night HUGH SCOTT watched from his command post as the Republican line was turned from the left and crushed against the castle walls, as he had suspected all along that it would be. When it was all over he turned to the little group of reporters who had waited to the end. Partly in bitterness, partly in frustration, and partly also in hope he commented, as nearly as memory serves me, as follows:

"It's a good thing. Those mastodons wouldn't listen to me. They had to learn their lesson. Now, maybe, they'll go out and pass some good social legislation."

HUGH SCOTT has suffered the fate of all field commanders who are required to join battle against superior forces. He is in command obscurity now along with Kimmel and Short, Ghormley, and Wavell, and Weygand. But the lessons of his failure have been noted by those who came after.

Under President Eisenhower, the Republican left has been extended to cover farm aid, school building, highways, social security for more people, higher minimum wages, public health. An orthodox Republican of the old Hoover school can be appalled at what has happened, and many a one is. This is not a garrison to hold the old citadel on the right. This is a field army raised to maneuver on hitherto unfamiliar ground. There is light infantry, and cavalry, and many a new weapon, besides the dragoons of the Old Guard.

The new Republican array is a sobering sight to Democrats. They are not, so far as is yet known, equipped to assault the Republican right. Their leader, Adlai E. Stevenson, is hardly the type to lead a massive charge through the center. And stretching out across the plain is the new Republican militia of the left.

There are two uncertainties about this new Republican array which could decide the issue. The identity of its battle commander is uncertain. And its cohesiveness and discipline are yet to be tested in combat.

But as the morning mist lifts from the field and before the battle is joined it looks unexpectedly extensive.

Upper Colorado Scheme's True Cost Exceeds $5 Billion

EXTENSION OF REMARKS
OF
HON. CHET HOLIFIELD
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 20, 1956

Mr. HOLIFIELD. Mr. Speaker, the appropriation authorization of $760 million is misleading. The direct cost of the projects authorized by section 1 of the bill alone would amount to $933,468,300 based on Bureau of Reclamation estimates. The construction costs of all the projects covered in the bill amount to about $1.6 billion. The figure of $760 million in the pending bill hides from Congress the true cost of the development, which, when interest costs on its extensive noninterest returnable irrigation features are added to the $1.6 billion, total in excess of $5 billion. This is an unconscionable burden for Congress to place on the United States taxpayers to irrigate land to produce more crop surpluses to further burden the taxpayers.

The upper Colorado proposal should be defeated.

The Need for Simplification in Tax Return Forms

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 20, 1956

Mr. ROOSEVELT. Mr. Speaker, one of my constituents has sent to me a letter which I quote below. This letter points up the need for a government which is continually alert to escape from redtape in its relationship with the ordinary citizen and to adopt an overall attitude of sympathy to the individual citizen's problems.

It also points up the great need for a tremendous simplification in the tax return forms. The present forms present an increasing problem to the individual taxpayer and, I believe, results in a loss of revenue to the Government, as well as disrespect by the citizen for the Government itself.

LOS ANGELES, CALIF.,
February 11, 1956.

Mr. JAMES ROOSEVELT,
House Office Building, Washington, D. C.

DEAR MR. ROOSEVELT: I had an experience Friday, February 10, 1956, which I believe you may be interested in hearing about. To give you the picture I must go into some detail but I think you will appreciate hearing about this situation.

I am a tax accountant and went to the Internal Revenue office in Inglewood to get some corporation and partnership tax forms. There was one man only behind the counter giving so-called information and help to taxpayers. There were approximately 15 or 20 people trying to get help, etc. Also, a cashier was on duty. I asked the cashier if she would be kind enough to get me the forms or ask one of the employees in the back if they would. She said the only one who could help me was the man behind the counter and I would have to wait my turn. That was all right as far as I was concerned so I began to wait my turn.

An elderly lady was asking the internal revenue man to make out her return. He told her he couldn't unless she was illiterate or mentally incapacitated. He proceeded to explain to her how to prepare the return. It was obvious that she could not understand and after approximately 10 minutes of her pleading for help together with his incomprehensive explanations she took her forms and said that she guessed she would have to go to a private tax office and spend $5 or $10 to have the return made out. As she was leaving I called her aside and told her I was a former internal revenue agent and would be happy to make our her form if she wished. She told me that the internal revenue had always made out her return for her and I told her the policy had been changed this year. It took about 2 minutes to make out her return. Her earnings were $1,674. I asked her how old she was since she looked over 65 and I thought might be entitled to the extra exemption. She said she was 64 but would be 65 this year. Her tax amounted to $179 and the withholding was $207. I explained to her that she would get a $28 refund from the Government and she was indeed happy. She was a widow living in a little trailer park.

I could relate several other instances I observed while I waited to get my forms which clearly indicate this so-caleld "new policy" unconcern for the little people but will not because I know you are busy. But the point I want to make is this—the case of the little old lady is not unusual. This is happening to thousands of people who cannot understand tax tables and instructions on the forms. They can ill afford to pay for help in filing their returns. I worked for the Internal Revenue under your father's and President Truman's administration and we worked Saturdays and overtime to help taxpayers who needed help. The Internal Revenue now has more employees than ever before and there is no reason why any person working for wages or a salary should have to pay for tax help.

I believe this new policy is politically stupid and also that it is converting thousands of people to the Democrats if they have not already been converted. What do you think about this situation?

Sincerely yours,

STANLEY M. ANSITE.

LOS ANGELES, CALIF.

Anything New From Moscow?

EXTENSION OF REMARKS
OF
HON. ALBERT H. BOSCH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, February 20, 1956

Mr. BOSCH. Mr. Speaker, we must be ever alert to the threat of communism and its ultimate goal—rule of the entire world, including the United States. We cannot accept Soviet statements at face value, because we know, from past experience, that they change their statements, but not their ultimate goal, when to change will serve the need of the moment. At this time, they would like us to think their goal of world conquest is no longer in effect. The time is for actual, sincere, and constructive deeds, not mere words.

Under leave to extend my remarks, I include an editorial from the February 19, 1956, edition of the Sunday News, New York City, which is, in my opinion, worthy of our consideration:

ANYTHING NEW FROM MOSCOW?

Has anything really new come out of the current 20th Communist Party Congress in Moscow?

To hear some of our deep thinkers tell it, the affair marks a historic shift in Kremlin policy. We've read the parts of Nikita S. Khrushchev's 7-hour speech that were made available in the United States by Soviet agencies. Maybe we're dumb, but we can detect no novelty in what Khrushchev said.

It is true that Khrushchev who holds Joe Stalin's old job as first secretary of the Communist Party, appeared to emerge at this Congress as a Stalin II, despite other delegates' frantic denials of one-man rule; but even this was predicted sometime ago.

What, then, did Khrushchev say that led so many observers to think his speech marked a turning point in Russian history?

For one thing, he pretended to repeal the old Lenin-Stalin-Manuilsky doctrine of inevitable war between capitalism and communism.

There was nothing new in that. Stalin took it all back when it suited his convenience to do so, notably when he was fighting with his back to the wall against the invading German hordes in World War II.

A ZIG, A ZAG

Khrushy says war isn't inevitable because communism has spread far and wide beyond the boundaries of Russia, and can now scare the capitalists out of starting a fight.

But the reason for the shift is the same as always, obviously. It's in line with Nikolai Lenin's old principle that communism must zigzag its way to world conquest. This latest zig, Khrushchev evidently figures, should lull western suspicions of him and his comrade cutthroats, and give the time to choke off popular discontent in Russia over recent crop failures and shortages of goods.

Khrushchev also made believe to blow the whistle on the Commies' old hatred of Socialists in this Moscow speech of his. These two groups of Marxists habitually hate each other like poison; but the Commies are able to turn their hatred on or off as directed by the Kremlin.

They turned it off in the 1930's, when they seduced a lot of Socialists, especially in France, into so-called Popular Front movements. The idea was to use the Socialists' respectability as a path to power, then to slit the Socialists' gullets.

OLD POPULAR FRONT GAME

It seems plain enough that Khrushchev hopes similar maneuvers can succeed in France and Italy in the 1950's. It's to be hoped that Socialists won't be suckered a second time; but there's no certainty of that.

Another Khrushchev crack which excited a lot of Western observers was the one about violent revolution being now unnecessary to turn many countries Communist. These, said Stalin II, can be taken over by popular vote sooner or later, because more and more of their workers are coming to understand the blessings of communism.

Widely overlooked was the fact that Khrushy added: "Of course, in countries where capitalism is still strong and where it controls an enormous military and police machine * * * the transition to Socialism (meaning communism) will proceed amid conditions of an acute class revolutionary struggle."

THEY'RE STILL GUNNING FOR US

Foremost among such countries, as Khrushchev sees it, is the United States.

So, as far as this Nation is concerned, the Communists, as always, look forward to its government's overthrow some day by force and violence. We can't imagine any stronger justification for the Smith Act and all our other anti-subversive laws than this tip from the Moscow horse's, er, mouth that the United States commies are to go right on with their criminal conspiracy for an eventual overturn of the American system in blood and fire.

There is, then, nothing new from Moscow. The Reds are as determined as ever to grab the whole world by hook, crook, or hydrogen bomb, and that was the whole and sole meaning of the foreign-policy part of Stalin II's 7-hour spiel.

The Yalta Conference

EXTENSION OF REMARKS
OF
HON. JOHN C. KLUCZYNSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 20, 1956

Mr. KLUCZYNSKI. Mr. Speaker, 11 years ago, in the early part of this month, a group of men arrived at Yalta, the famous Russian Riviera, to decide the future and shape of the postwar world. Famous statesmen, politicians, counsels, and advisers, military leaders, and even some members of their families arrived there by plane, by ships and trains from distant places, in order to participate in a joint meeting aiming to organize a better and happier world and to determine upon the punishment of those responsible for the worldwide catastrophy.

They brought with them briefcases full of legal data, memoranda, technical books, historical documents, maps, and dictionaries. The teams occupied the premises of the Livadia Palace, the former summer residence of Czar Nicolaus II and his family.

For 6 days, American, British, and Soviet teams were debating, while in between sessions, receptions for the visitors were given. In old-fashioned Russian style, caviar was being consumed by the pound, while vodka and other liquors were freely dispensed. Each round was accompanied by long and weary toasts "To our great alliance," "To the father of our beloved motherland, the Union of Soviet Socialist Republics," "Batiushka Stalin," "Long live our great victorious, invincible Red Army," "Death to the Fascists," and to the Hitler dictatorship.

While this was going on, in other parts of Soviet Russia there were countless human wrecks, representing almost all nationalities who were digging coal, chopping wood in the vast forests of Siberia, laying rails for the widely publicized Trans-Siberian Railroad. There were millions of people, securely guarded by entire divisions of members of the NKVD, dying by the thousands every day, and for each one of them who were relieved from their sufferings, there were many others being shipped as replacements in cattle trains. All of them were slaves. At the same time, in still another part of Russia, a new army was being created. It was an army of former SS men led by General Von Paulus, who only 2 years before that had tried to capture Stalingrad.

On February 4, 1945, at 5:17 p. m., the first formal meeting convened in the grand ballroom of the Livadia Palace. Among those present who were occupying seats around the large table were men of outstanding character, brilliant and well trained for their position, public servants with years of experience, who received their formal education at such outstanding colleges and universities as Oxford, Cambridge, Yale, and Harvard. It is felt that some who sat at the table were lacking in courage. There were also men who were shrewd and clever, who had grown up in one of the bloodiest revolutions history has known, men who had never traveled beyond the borders of Soviet Russia, educated in institutions operated by the party and the NKVD. There were others, great military leaders who have led armies to victory, and generals who knew how to administrate millions of slaves from their offices in the Kremlin.

Among them were lawyers, who were members of college fraternities where open discussions had been encouraged. There were men raised on America's main streets where differences could be settled by the courts and where rallies of all kinds and expressions of political opinions were permitted. Across the table were others, graduates of Soviet law schools. They sat there with grim faces, carefully observing their counterparts. To them the law was Stalin. Their experience was chiefly in purge trials held in the late thirties. Their weapon was prisons and slave-labor camps. Thus for the first time West met East at close hand.

After 6 days of long and tiresome discussions a mutual agreement was signed. Among the problems that were discussed and agreed upon were the future of the World Organization, the question of a free Poland, the release of war prisoners, postwar Germany, the war in Japan, and undoubtedly other questions. The documents signed 11 years ago contained eloquent words such as "a Poland liberated by the Red army" or "the Soviet Union shall enter into war against Japan on the side of the Allies on conditions that."

I do not believe for one moment that the above sentences need any commentary from any sound person. For that matter, neither do the Yalta meetings need commenting. The results of the Yalta conference we have experienced for the past 11 years are indeed unfortunate and we probably are still far away from the end of our experience. So far an entire continent has been swallowed by Russia. Part of eastern and central Europe is gone and what is more the threat of another world war has never ceased to harass us.

Eleven years ago those who dared to oppose the decisions mutually agreed upon at Yalta were called warmongers, which is a term out of the Soviet dictionary. But those who did oppose it, and I am proud to say that I was one of them, realized then the drastic consequences we would have to face. Mankind is facing it now.

The Crashes of Kansas-Based Airmen

EXTENSION OF REMARKS
OF
HON. WILLIAM H. AVERY
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 20, 1956

Mr. AVERY. Mr. Speaker, under leave to extend my remarks, I wish to include an editorial entitled "The

Crashes of Kansas-Based Airmen," which appeared in the February 13, 1956, edition of the Topeka (Kans.) State Journal. The editorial refers to two fatal crashes of Air Force B–47 aircraft on Friday, February 10, 1956.

The editorial follows:

THE CRASHES OF KANSAS-BASED AIRMEN

A tragic lesson has come home once more.

Military duty in peace as in war is inoculated with peril that can break out at any moment to consume those who serve. Its life is one of anxious nights at home to those who stand and wait, as it is of instant danger to officers and men afield, at sea, or as thousands here in Topeka know it, in the high sky.

In Friday's B–47 crashes, in South Dakota and not far from here, death came with obliterating finality to 6 men of our own Forbes Air Force base, as to 4 men of Salina's Smoky Hill. Their lives, their work, their dreams, must now be counted done. Yet life and danger must go on unabated, undiminished, among the living they left behind. Those living will be the men who do the more soberly the duty before them, and will be the anguished wives and lovers, the grieving parents, the bewildered children. The service is like that. It is the way of the military, from old time until the end of all war, which is not in sight.

The fatal crashes of these Kansas-based crews must fill all of us with sympathy for the bereaved, as with profound respect for the dead. There is nothing really that we can say, but much that we can do to be friendly and grateful to these our surviving friends and neighbors.

It will remain to us, perhaps, in this lesson that has been repeated, that every airman's valor to heed the call of duty above and beyond, is not far from the valor above and beyond the call of duty.

Address of Timothy J. Murphy, Commander in Chief of the Veterans of Foreign Wars, at Lincoln's Tomb in Springfield, Ill., February 2, 1956

EXTENSION OF REMARKS

OF

HON. JAMES C. MURRAY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 20, 1956

Mr. MURRAY of Illinois. Mr. Speaker, on Sunday, February 12, Mr. Timothy J. Murphy, national commander in chief of the Veterans of Foreign Wars, made a most stirring address at the tomb of Abraham Lincoln in Springfield, Ill.

I think it is most fitting that his remarks be preserved in our congressional annals. His remarks follow:

Today we gather on hallowed ground to pay homage to one of the greatest of all Americans—one who in the words of Stanton, truly, "belongs to the ages."

The privilege of rendering this tribute as the representative and commander in chief of the more than 1,250,000 members of the Veterans of Foreign Wars is deeply felt. Because of my lifelong reverence of his name and a belief in his democratic ideals, I deem it a personal honor that I shall never forget. We should all have a fierce pride in being citizens of a country that provides the opportunity for the full development of a Lincoln. Of all the great men in American history, the life of Lincoln most accurately portrays the example of a man who sacrificed himself in devotion to a cause.

And in preserving the Union, Lincoln himself epitomized the American dream. His life, the success of his democratic philosophy, and his leadership of free people under the pressure of war, refute with compelling logic, the theory sometimes advanced, that we, the people, are incapable of governing ourselves. He also, by sheer accomplishment, fulfilled the fond hopes of the Founders; namely, that in the democratic system the poorest and the lowliest of the Republic are not barred by accident of birth from rising to the top. Of Lincoln it could be said, that it was not in spite of, but because of his struggle, labor, and grief, there emerged at the right time a strong and wise American who brought victory and unity to a divided land. Ever shall we call him great.

He was superior in so many ways. Would that time permitted more detailed comment upon his nobility of character, his intellectual grasp of the important thing in government, and his understanding of human behavior. In the highest sense, Lincoln had what is called for the want of a better name—the common touch: the rare genius of talking plainly to plain people and making them understand. This quality has received much comment but I do not think adequate mention is made in the average eulogy of his distinguished position and stature as a citizen of the world. Because he was a living example of the freedom of opportunity, it is not surprising that he became one of the most articulate of those who actions have become milestones along civilization's rugged and often bloody road to freedom. He hoped and prayed that by freeing the slaves and preserving the Union, "succeding millions of free, happy people, the world over, shall call us blessed, to the latest generations." And by the Emancipation Proclamation, Lincoln moved a step farther to establish Jefferson's principle in the Declaration of Independence that, "all men are created free and equal."

Americans should cherish, as never before, the priceless documents and expressions of the spirit that reach from the Beatitudes to the Emancipation Proclamation; all of which gave hope and freedom to large segments and races of men. It is the job of the free world to live up to those democratic precepts in order to encourage 800 million people under the Communist yoke to break their mental and physical bonds. Those today who are struggling and planning to break the yoke of the Red master must often be reminded of the words of Lincoln, who said: "As I would not be a slave, so I would not be a master. This expresses my idea of democracy. Whatever differs from this to the extent of the difference is no democracy." I ask you, is that not the antithesis, the direct opposite of the materialistic philosophy of communism?

He said, "As I would not be a slave, so I would not be a master." This, from a man who in youth experienced great privations and disappointments; this from one whose face, it has been remarked, portrayed to his dying day, a life of struggle—abject poverty in youth, repeated defeats for public office, and a domestic life that held much sorrow and tragedy. Lincoln never aspired to be a big shot, a tough boss, a master. That, in fact, he repeatedly accepted ruination of personal ambitions by sacrificing self in devotion to a cause because he respected the dignity of man.

No one appreciated more than Lincoln the vicissitudes and hardships of the poor. When nominated for the presidency, he was asked to give some material for an account of his boyhood. "Why," he said, "it is a great folly to make anything out of me or my early life. It can all be condensed into a single sentence. And that sentence you will find in Gray's Elegy: 'The short and simple annals of the poor.' That's my life, and that's all you can or anyone else can make out of it." Lincoln, who came from the poor, helped the poor all that he could, but he believed in the freedom of opportunity and not in radical socialism. He would have been the last to even think of the dictatorship of the proletariat or a monstrous conspiracy to dominate the world. Slavery was abhorrent to him in any form or by any class. He loved freedom as a man loves his family and prayed and hoped that in time democracy would extend to the ends of the earth. His was a spirit that soared beyond the Nation he saved.

It was a spirit that intuitively understood the mass: "The mass," as Carl Sandberg wrote, "the Napoleons and the Lincolns come from me. They die and then I send forth more Lincolns and Napoleons." No leaders in the Civil War could more accurately than Lincoln fathom what the soldiers or sailors were thinking. He did what he could to alleviate their hardships and mitigate their courts-martial—a man of kind and compassionate heart. History's greatest commoner would have been shocked by knowledge of the regimentation of the masses and the official murders decreed by a Stalin. Those who resist Red tyranny may find some comfort in what Lincoln said: "Men will pass away—die, but the principle of democracy will live forever."

He knew full well how these principles were established by the American Revolution. In later life, Lincoln recalled that when a boy, by the light of an open fire, he had lain on the floor and read Parson Weems' Life of Washington. The deeds and magnificent leadership of the Father of our Country moved him greatly, but not more than the heroism of the soldiers of the Revolution. He commented, "boy, even though I was, I though there must have been something more than common that those men struggled for." And do we not think that thought today when we visit Arlington Cemetery or our other national cemeteries at home and abroad. Yes, it was "something more than common that those men struggled for." Lincoln knew the veteran. Did he not ask all to resolve: "that these dead shall not have died in vain" and "to care for him who shall have borne the battle and his widows and orphans"?

That should be kept in mind as we struggle to gain the minds of men, as we continue to fight to make democracy live. Few will disagree that the career, the writings, and the sayings of Lincoln comprise the most splendid exhibit in the showcase of our democracy. He is a shining example of the worth of the system and his life should be used more in our overseas information programs and literature. He did not appear in a blaze of glory, although vindicated by victory. He remembered the sufferings on both sides. He recognized the desolation and despair of the vanquished, and his feelings were of compassion and forgiveness, which were so beautifully expressed in the immortal words, "With malice towards none, with charity for all, with firmness in the right as God gives us to see the right, let us finish the work we are in, to bind up the Nation's wounds, to care for him who shall have borne the battle, and for his widow and orphans, and to do all which may achieve and cherish a just and lasting peace, among ourselves and with all nations."

Those abroad who read the Lincoln papers and speeches will soon realize that in addition to his faith in the common man's capacity for self-government, that Lincoln also had an abiding faith in the mercy and goodness of Almighty God. His belief that "righteousness exalteth a Nation" inspired those around him. This again is the opposite of the Communist doctrine that, "re-

ligion is the opiate of the people." In his presidential candidacy, Lincoln said: "I know that there is a God and that he hates injustice and slavery. I see a storm coming, and I know that His hand is in it. If He has a place, and work for me, and I think He has, I believe I am ready. I am nothing, but truth is everything."

I ask, are we ready and willing to carry on this struggle for human freedom? We have seen many fail in the struggle. In our own time, many governments that were of the people, for the people, and by the people have perished from the earth. Many people have been put to death for resisting the Red octopus and many still resist by underground activities. If Lincoln could speak, he would say: "Hold on. Your cause is worth fighting and dying for;" and for those who have died for the cause, he would say for them as he said to us: "These dead shall not have died in vain."

Ah—those deathless words, how many people have looked at and pondered the Gettysburg Address graven upon the south wall of the Lincoln Memorial at Washington will never be known, but the total is millions. There, day after day, people come by the hundreds to look at that incomparable memorial and to gaze at the heroic statue of a brooding Lincoln, in a majectic location, within the walls of a temple of Greek design like those once consecrated to the gods. Of those who come, one will note there are many young people—school boys and girls; Lincoln would have liked it that way, for he had a way with the young. It is reported that he was down on his knees with a group of boys playing marbles, when the news came that he was elected President of the United States. Youth would do well to remember that never did words of malice, hatred, or unforgiveness fell from his lips. We should remember also as veterans that Lincoln gave "the last full measure of devotion" as did our own good comrades who did not return.

Yes, this man of the people gave his all for us. His "malice toward none" philosophy, his unswerving fidelity to the Constitution, his emancipation of the Negro, and his preservation of the Republic, inspired his people to have graven high in stone over the statue in his memorial:

"In this temple, as in the hearts of his people for whom he saved the Union, the memory of Abraham Lincoln is enshrined."

We gather here today near his mortal remains to pay tribute because he is deeply enshrined in our hearts. Our few words of reflection on his consecrated life were also from the heart. But—unless we of the Veterans of Foreign Wars and our fellow citizens accept his ideals with conviction and practice them with deep sincerity, our lip service will do little good. But, if we follow his precepts and determine to make a better place for all, we are carrying on his great tradition; and that is to strengthen the Nation. He knew as do we, that a nation cannot escape history; and what is this grave problem in our time? No one phrased it more eloquently than Lincoln. It is, whether "we shall nobly save—or meanly lose the last best hope of earth."

Building Up Red China

EXTENSION OF REMARKS

OF

HON. PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, February 20, 1956

Mr. RODINO. Mr. Speaker, I read with interest and concern the following article by Mr. Budenz which appeared in the February 18, 1956, issue of the Advocate. Because I believe it points up a timely problem in a crystal clear manner I call it to the attention of the Members of Congress:

BUILDING UP RED CHINA

(By Louis Francis Budenz)

Moscow has apparently again hit its target—this time in regard to Red China. Unless Americans make their voices heard in Washington much more loudly than in the past, the Soviet regime will have been provided by us with the facilities to conquer Asia.

For some weeks Communist directive organs have been playing up Red China—the necessity for complete recognition of that regime and of western trade with it. One of those goals is on the eve of attainment—President Eisenhower and Premier Eden, of Great Britain, have agreed to soften restrictions on trade with Commmunist China.

The New York Times reveals that the first commodity which will be permitted to be sold is rubber. And rubber is the product on which armies are moved and military strength is built. This type of trade, if it is put through, will be more injurious to the United States than was the sale of scrap iron to Japan prior to World War II.

With the Communists trade is always accompanied by infiltration. Malaya is the country which will furnish the majority of rubber products in the proposed agreement. In anticipation of such an event the central committee of the Malayan Communist Party has just issued a manifesto announcing its new subversive activities for Malayan independence and, therefore, for the eventual sovietization of that land. This manifesto is published in the Cominform organ of January 13.

Trade between Malaya and Red China will facilitate the plans of the Communist Party and will imperil another section of Asia. Freedom from British rule will, in that case, be worked out according to the Soviet model of conquest rather than by any genuine independence for Malaya.

The background in which these moves are being made insures that the proposed trade agreement is dangerous. Moscow opened the new year with a new declaration of war on colonialism, appearing in the January 5 New Times. There it is asserted that the only hope of a lasting peace lies in the forwarding of Soviet moves against colonialism.

English and French rule over the so-called colonial peoples is, it is true, the Achilles' heel of the non-Soviet world in relation to Africa and Asia. But Soviet Russia uses its alleged war against colonialism to bring about a superrule over the colonial nations, making them vassals of the Kremlin.

This is in accord with Communist logic. For Stalin has said in his Foundations of Leninism that any genuine colonial liberation from the Communist viewpoint must be subsidiary and subservient to the dictatorship of the proletariat—that is, subservient to the Kremlin. Just as Lenin raised the slogan "land to the peasants" in order to take the land completely away from them, so Moscow agitates for colonial liberation in order to establish a supercolonialism that can be used to take over the world.

The New Times reminds comrades of this world goal in its very discussion of Soviet designs on the colonial countries. This reminder is furnished in the following quotation from Dictator Khrushchev's speech to the Supreme Soviet: "If certain politicians think that our confidence in the victory of socialism, of the teaching of Marxism-Leninism is a violation of the Geneva spirit, they obviously have an erroneous notion of that spirit; they ought to remember once and for all that we have never gone back and never will go back on our ideas, on our struggle for the victory of communism. They need never expect any ideological disarmament on our part."

We must recall that the teaching of Marxism-Leninism, to which Khrushchev so proudly refers, has as its core the establishment of the world Soviet dictatorship by violence. That is clearly stated by Lenin in State and Revolution and by Stalin in the Problems of Leninism. And these works are among the great classics of Marxism-Leninism.

Any aid to the Soviet war machine by trade, whether in Red China, or elsewhere, therefore, prepares the way for a violent attack upon the United States from within and without.

We can help prevent that by here and now letting our representative know that we are opposed to any dealings with the Soviet regimes, including specifically the Moa-Tse-tung cabal now in control of China.

Radioactive Fallout and Radioactive Strontium

EXTENSION OF REMARKS

OF

HON. CARL HINSHAW

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 20, 1956

Mr. HINSHAW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following remarks prepared by Dr. Willard F. Libby, Commissioner, United States Atomic Energy Commission, for delivery at Northwestern University, Evanston, Ill., Thursday, January 19, 1956:

THE RADIOACTIVE FALLOUT AND RADIOACTIVE STRONTIUM

(Summary of remarks prepared by Dr. Willard F. Libby, Commissioner, United States Atomic Energy Commission, for delivery at Northwestern University, Evanston, Ill., January 19, 1956)

Althought the area of local damage from radioactive fallout is larger for a high-yield weapon than for one of lower yield, it can be shown that the long-term effects of fallout from the high-yield weapon are not as great as are generallly supposed. This conclusion is reached in the results of a special study of this subject known as Project Sunshine, sponsored by the AEC.

Some of the present confusion which exists regarding the hazard from the fallout can be clarified if one recognizes that the radioactive debris comes from two main sources. One of these depends upon the nature and type of weapon, and the second upon the conditions under which the weapon is fired. Surface bursts involve the production of a heavy local fallout as opposed to those fired in the air or under the sea. High-yield bursts, moreover, according to evidence in Project Sunshine, place the major part of the bomb debris in the stratosphere where it appears to reside for some 10 years, slowly descending to the earth. Commonly recognized as the greatest long-term danger is strontium-90, a chemical relative of calcium, and a bone seeker.

From worldwide evidence for fallout in relation to recent studies of the maximum permissible concentration of strontium-90 in humans, it can be concluded that the hazard from the present rate of testing nuclear weapons is insignificant. A total of 11,000 megatons of TNT equivalent of fission would just yield a Sr^{90} content in humans equal to the Maximum Permissible

Concentration (MPC) an amount considered safe; at less than 10 times this value, or below 110,000 megatons energy equivalent of fission, statistically observable incidence of bone tumor should not appear; but at 30 to 40 times the MPC, or 330,000 to 440,000 megatons, the likelihood of untoward effects would be appreciable. Even the lowest of these figures—11,000 megatons—is very far in excess of the total energy released to date.

An additional safety factor is that the half-life of most of the fission products, with the exception of strontium, is extremely short, and that nature has wisely provided a built-in mechanism for discriminating against the uptake of radiostrontium in favor of calcium by plants, animals, and human beings.

THE RADIOACTIVE FALLOUT AND RADIOACTIVE STRONTIUM

(Remarks prepared by Dr. Willard F. Libby, Commissioner, U. S. Atomic Energy Commission, for delivery at Northwestern University, Evanston, Ill., January 19, 1956)

The radioactivity which falls out of the atmosphere after the explosion of a nuclear weapon is called the radioactive fallout. In the ordinary atomic bomb, for example, for each 20,000 tons of TNT equivalent of explosive energy about 2 pounds of radioactive materials are produced. In these 2 pounds are some 90 different radioactive species varying in lieftime from a fraction of a second to many years. This mixture of radioactivity decreases in radioactivity in such a way that for every sevenfold increase in age the total radioactivity is decreased tenfold. Thus the radioactivity by 7 hours after the explosion has decreased to one-tenth the radioactivity of 1 hour, and in 49 hours to 1/100, and at 2 weeks to 1/1,000, and in 3 months to 1/10,000 and so forth.

The conditions of fallout are largely determined by the amount and type of material vaporized into the fireball of the bomb itself. A bomb fired in the air contributes such a relatively small amount of matter to the cloud that the particles formed after dissipation of the enormous energy released are of necessity very tiny and therefore very slow in settling. The result is that most of the radioactivities are expended in the air and the area over which the fallout occurs is rendered very large indeed, extending to the ends of the earth in minute although detectable amounts.

A bomb fired on the surface of the earth, however, may have an appreciable portion of its radioactivity reprecipitated within relatively short distances, while bombs fired beneath the surface of the earth may place essentially no fallout radioactivity in the atmosphere. Therefore, the question of the area of contamination to be expected from nuclear weapons cannot be answered categorically without specifying the degree of contact of the fireball with the surface of the earth and probably also specifying the characteristics of this surface. Obviously water would differ considerably from soil in its ability to precipitate radioactive fallout. The coral in the southern Pacific islands used for the larger United States weapons tests will under the great heat decompose to form calcium oxide which will then rehydrate to form calcium hydroxide, which in turn will absorb carbon dioxide to form a crust of calcium carbonate. Obviously such a complicated series of chemical reactions will make the fallout particles from the great tests at Eniwetok differ from what would be observed if the same weapons had been fired over ordinary sand or granite rock. We cannot imagine all of the details in which the nature of the soil will affect the local fallout, but it is clear that the effects will be substantial.

In the weapon test operations great care is taken to insure that no danger results from fallout. Criteria are used which are meant to insure that this be so. However, it is well to note that it is from the test operations that we have learned what we do know about the problem of civilian defense against fallout. We must speak of test experience for it is the only source of experimental information about the phenomena of radioactive fallout.

The radioactivities resulting from the burst of a nuclear weapon can be classified as follows: (a) radioactivities induced in the environment, and (b) products dependent directly on the nature of the weapon. The environment can be made radioactive only by neutrons, but all nuclear weapons involve large numbers of neutrons, some of which are certain to escape into the surroundings.

Taking air bursts first, our problem is—what do neutrons do to air? The answer is simple, they make radioactive carbon, C^{14}, half-life 5,600 years. Fortunately, this radioactivity is essentially safe because of its long lifetime and the enormous amount of diluting carbon dioxide in the atmosphere. The cosmic rays themselves make neutrons, which, of course, make radiocarbon. In fact, the earth has on its surface a total of 80 tons of radiocarbon from the cosmic radiation. Now, since each neutron froms one C^{14} atom of mass 14 times the neutrons mass, this corresponds to 5.2 tons of neutrons, and we see that this enormous number of neutrons would have to be produced and escape in order that nuclear weapons would just double the feeble natural radioactivity of living matter due to radiocarbon. Such an increase would have no significance from the standpoint of health. The atmosphere itself contains only 1½ percent of the total carbon with which the cosmic ray produced radiocarbon is mixed, the main part being dissolved in the sea, so we expect that nuclear weapons could produce a short-range rise in the radioactive content of the carbon dioxide in the atmosphere, which later would decrease as the atmospheric carbon dioxide mixed with the sea. Therefore, only 1½ percent as many neutrons would be required to double the natural radiocarbon content of atmospheric carbon dioxide for this time before mixing with the sea could occur, or about 78 kilograms or 170 pounds of neutrons. To orient ourselves, the 20,000 tons of TNT equivalent atomic weapon involves the fission of 1 kilogram of uranium or plutonium and the liberation of about 10 grams of neutrons. If all of these neutrons escaped into the atmosphere it would obviously require 7,800 such weapons to double the radiocarbon content of the atmospheric carbon dioxide even with no mixing with the sea, and about 520,000 with complete mixing. These correspond to explosive energies of 156 and 10,400 megatons of TNT, respectively, if all neutrons formed escaped. A reasonable escape figure might be 15 percent so we can expect that nearly 1,000 megatons of fission would be necessary just to double the atmospheric radiocarbon content, and that about 66,000 megatons would be necessary for the same effect on a long-term basis.

The interchange between the atmosphere and the seawater, which is constantly taking place, would deplete and remove the excess radioactive carbon dioxide. Now it is known from measurements of the radioactive hydrogen-tritium—which also is made in the atmosphere by the cosmic rays—that this interchange is slow. In fact, we learn that the radioactive water which is formed by the burning of the tritium made by the cosmic rays is not diluted by more than the top 100 meters or so of seawater in its lifetime of about 18 years. The carbon dioxide dissolved in this water is about equal to the total in the air. In other words, a dilution by more than the twofold which corresponds to the dissolved carbon dioxide in the top 100 meters of ocean water would take longer than 18 years. However, the dilution by this factor of two would occur essentially immediately within a matter of weeks or months. Therefore, we would have to double our estimates for even the short time scale activation of the atmosphere to reach the enormous figure of 2,000 megatons of fission required. Thermonuclear weapons, of course, also involve neutrons. For a given energy release they produce somewhat more neutrons than fission weapons, however, the order of magnitude of atmospheric activation would not be greatly different. So our estimates apply to all nuclear weapons. The essential point is that the atmosphere is difficult to activate and the activities produced are safe. In addition to carbon-14 there are a few others produced in low yield—they include tritium and very short-lived products but none is produced in sufficient amounts to be hazardous.

For weapons fired on the surface the activation of the surface materials is a possibility, but in general it appears that most of the neutrons from stable isotopes and that the amount of radioactivity produced, at least with ordinary surface materials, is relatively small. The principal radioactivities produced by nuclear weapons are produced in the weapons themselves, and not in the environment.

Turning now to the radioactivities naturally produced in nuclear weapons themselves, probably the most important is radioactive strontium, 28 years half-life. The reason that this is so important is that strontium is chemically similar to calmium, which is one of the main mineral constituents of the body. Bone consists principally of calcium phosphate, and for this reason radiostrontium, like calcium, is deposited in the bone. The amounts of ordinary nonradioactive strontium naturally present are so small that the radioactive strontium will follow ordinary calcium into the body. The second reason that radioactive strontium, Sr^{90}, is an important fallout radioactivity is that it has a long but finite lifetime—28 years half-life, 40 years average life—and thus has a persistent effect. Third, because of its bone seeking property it stays in the body a long time, and fourth, the probabilities of body ingestion can be high. Finally, the fifth reason for its importance is that Sr^{90} is produced in high yield in the fission reaction—about 4 or 5 percent of all fissioning atoms yield this isotope.

In order to orient ourselves about this, let us consider the maximum permissible concentration recommended by the National Committee on Radiation Protection for AEC workers for radiostrontium—one microcurie for the standard man—whose body is taken to contain 1,000 grams of calcium in total. The maximum permissible concentration is of course well below any level at which one would expect any damaging effects to appear. On the basis of experiments with animals, statistically observable increases in the number of bone tumors should not be expected to appear at less than 10 times this level. As we go above this figure the chance for bone tumors occurring increases rapidly so that the likelihood of bone cancer with 30 to 40 times that figure is appreciable.

Let us consider in some detail the mechanism by which this most important fallout radioactivity produced in nuclear weapons might be expected to enter the human body. The first point is that from the point of view of fallout there are two essential classes of nuclear weapons—the high yield megaton weapons, and the lower yield kiloton weapons. All nuclear weapons produce atomic clouds which rise to heights dependent upon the energy released, and the clouds from the the megaton class of weapons rise rapidly up through the tropopause and pass into the top layer of the atmosphere which we know as the stratosphere. This part of the atmosphere is essentially isolated from the lower layer in which we live, the tropo-

sphere, and where all of our normal winds and storms, and so forth, occur. Therefore, radioactivity produced in megaton weapons is placed largely immediately in the stratosphere while the smaller kiloton weapons produce clouds which in general do not reach into the stratosphere, but stop near the tropopause—the imaginary boundary between the stratosphere and troposphere—and have the bulk of their radioactivity left in the troposphere.

In the troposphere where rain occurs any particulate matter will be washed down in a period of days or weeks. It is easy to show, for example, that one-tenth inch of ordinary rainfall will probably remove essentially completely all particulate matter except for that which is so small as to be almost of molecular dimensions. In other words, for one-tenth of an inch of rainfall one can be quite certain that the air between the layer in which the rain originates and the ground is washed clean of fallout activity, except for the minute fraction which may be so small as to move with the air out of the way of the falling raindrops as they make their way toward the earth; and even this tiniest fallout material is likely to be precipitated also for it will migrate rapidly by molecular type motion and in this manner is likely to absorb itself on other particulate material and so be rained out. For these reasons, tropospheric radioactive fallout does not stay in the atmosphere for more than a matter of weeks. It may make two or three trips around the earth in a given latitude before being entirely removed, but its lifetime in the atmosphere will be a matter of weeks.

This is in very sharp contrast to the material which is placed in the stratosphere by megaton weapons which appears to stay there for a matter of years. Perhaps 10 years is a good average, at least for the weapons fired to date. It is well to bear in mind that this conclusion may be dependent upon the nature of the material carried up in the cloud, but our present experience indicates that the fallout from megaton weapons which does not occur essentially in the first few hours or days, and is therefore deposited mainly locally, is deposited only at a very slow rate corresponding to an average time in the stratosphere of about 10 years. As a result of this long residence time in the highest layers of the atmosphere, the winds mix and distribute the radioactive material broadly over the earth and one finds when the fallout does finally find its way down into the troposphere where the rain and snow wash it out, that the rates of precipitation are relatively uniform over the entire earth's surface.

Returning now to radiostrontium, at the rate of 1 kilogram of fission for 20 kilotons of TNT equivalent, 2 megatons of fission energy would be equivalent to very nearly 1 millicurie of strontium-90 per square mile of the earth's suface, or about 79 disintegrations per minute per square foot of the earth's surface. The average soil of the earth has about 20 grams of calcium, which is in form available for plant metabolism in the top 2½ inches for each square foot of area. Now recalling the maximum permissible concentration level of 1 microcurie per standard man and noting, as we will show later, that in order that this concentration not be exceeded, the topsoil of the earth should not contain any more radiostrontium than would correspond to 10 times the concentration in the human body which is just permissible, i. e., 1 microcurie per 1,000 grams of calcium, or 2,200 disintegrations per minute, per gram of calcium, we find that 11,000 megatons of fission energy would produce this average level of raidoactivity. Actually, as I will indicate later, there can be a concentration of strontium-90 in the soil about 10 times greater than the recommended maximum permissible concentration before one would expect man living in such an environment to accumulate a maximum permission concentration. Referring to my remarks of a few moments ago, the 11,000 megatons would yield a Sr^{90} content in humans just equal to the Maximum Permissible Concentration (MPC); at less than 10 times this value, or below 110,000 megatons energy equivalent, statistically observable incidence of bone tumor should not appear; but at 30 to 40 times the MPC, or 330,000 to 440,000 megatons, the likelihood of untoward effects would be appreciable. Even the lowest of these figures is very far in excess of the total energy released to date.

High yield weapons fired near the surface have a portion of their activity deposited in and on particles large enough to fall out in the first few hours or days. Thus we have three kinds of fallout from high yield weapons: The first, or local, which is due mainly to large-sized particles. This may cover a considerable area depending on winds mainly. In the February 15, 1955, release of the Atomic Energy Commission which described the experience in the Marshall Islands in the Castle test series in the spring of 1954, some 7,000 square miles were described as being contaminated by this type of fallout. The second fallout from the high yield weapons is that portion which resides on the small particles, but which never reaches the stratosphere and thus stays in the troposphere until it is carried down by rainfall or settles out. There is thus a band of fallout in the same general latitude as the test site; the material may circle the earth 2 or 3 times before being precipitated, but does fall out within the first few weeks. However, a large part, half or more depending on firing conditions, of the radioactive yield from high yield weapons resides in the third category which is the fallout which occurs from the stratosphere itself. Of course, some of the large local fallout may form particles which were lifted into the stratosphere, but which were so large and so bulky that they fell out rapidly anyhow. The finely divided material which reaches the stratosphere apparently stays there for years in the main. A slow leakage through the tropopause into the troposphere occurs with apparently something like 10 percent per year descending. Measurements of the strontium-90 content of soils, rain and snow, and biological materials on a worldwide basis have all shown that strontium-90 fallout occurs all over the world at rates which are not too dissimilar from one another, except that there is a tendency in the middle latitudes in which the tests are conducted for an extra fallout presumably of the tropospheric variety described above. Since the completion of the Castle series of tests, this worldwide rate of fallout has approximated 1½ millicuries of radiostrontium per square mile per year. We thus see that radioactive fallout from the stratosphere is a very slow process. This is very fortunate indeed, since the high yield weapons thus have a major part of their radioactivity dissipated in the atmosphere in a harmless way if they are fired in the air or on the surface.

The fallout apparently occurs in the final step by a washing down of the tropospheric air by rain together with direct falling. The radiostrontium descends from the stratosphere into the troposphere by the processes of diffusion and falling, and is then caught up by the tropospheric weather and in a matter of a few days is deposited. Reasonable estimates for the middle latitudes give the average life in the troposphere to be about 1 week.

The radiostrontium comes down mainly in raindrops although fine morning mists and fogs may be particularly effective in this regard also, as well as surface contact and direct falling. It descends on the foliage and on the soil. That fraction of it which falls on plant leaves has a good chance of being absorbed directly into the plant—much in the way the most modern leaf fertilizers operate. The Eniwetok tests were conducted on coral islands and as a result their fallout may be largely water soluble. In any case, direct measurements of the radiostrontium content of alfalfa and other crops show them to be appreciably higher in radioactivity than the soils on which they grew, strongly indicating a leaf assimilation mechanism to be important. The rain falls and carries radioactivity, but when it runs off to the rivers and the seas it is nearly pure due to the action of the soil in absorbing the fallout, so that rivers are essentially free from radiostrontium. Lakes and reservoirs have a content which corresponds approximately to their surface areas only. The radiostrontium is absorbed in the top 2 or 3 inches of soil and held there very tenaciously. Plowing, of course, buries it more deeply, but it appears that in unplowed soil the radiostrontium does not move in a matter of 2 or 3 years.

The researches on radiostrontium conducted by the Atomic Energy Commission have been extensive. They have consisted of sampling soils on a worldwide basis. The actual sampling was done by Dr. Lyle Alexander of the United States Department of Agriculture, Beltsville, Md. Dr. Alexander with great skill and care has repeatedly collected series of soil samples for study, analyzed them chemically and submitted them for measurement of radiostrontium content to the Health and Safety Laboratory of the New York Operations Office of the Atomic Energy Commission, the Lamont Geological Observatory of Columbia University, and the Enrico Fermi Institute for Nuclear Studies at the University of Chicago. Direct fallout collected on gummed papers, milk and cheese, alfalfa, animal meat and bone, and even human bodies has been extensively studied. On the basis of the information so obtained, it is possible to say unequivocably that nuclear weapons tests as carried out at the present time do not constitute a health hazard to the human population—insofar as radiostrontium is concerned and it is believed with good reason that radiostrontium is likely to be the most important of the redaioactivities produced. It is well to note that since radiostrontium is assimilated in the bones it constitutes essentially no genetic hazard, because its radiations do not reach the reproductive organs.

The milk and cheese radiostrontium content is not as high, relative to that of the grass which the cows eat, as one might expect. There appears to be a discrimination against the fallout material such that the calcium in milk and cheese is roughly one-fifth to one-tenth as radioactive with radiostrontium as the grass that the animals eat. There are various possible physiological explanations of this and the conclusion itself may not be completely certain, but the data available to date indicate this to be true. In addition, the plant uptake of radiostrontium from soil does discriminate somewhat against radiostrontium as compared to calcium. The calcium taken up from the soil into the plant has in general about one-half the radiostrontium content that the soil calcium has. These two results protect the human population against ingestion of radiostrontium, since milk and cheese are the principal sources of calcium in the human diet. We find, therefore, that the radiostrontium content of human bodies is the lowest of all animals measured and is lower than the average soil and the average foliage by tenfold. The Sr^{90} to calcium ratio in young people—whose bones are still forming—corresponds to about one one-thousandth of the maximum permissible concentration recommended for adults: one microcurie per standard man containing 1,000 grams of calcium. The average soil in the

United States is about tenfold higher, whereas abroad the radiostrontium content in other areas of the world not subject to the local test fallout is about one-third of that for the United States.

The surface air itself contains radiostrontium due to the fallout from the stratosphere and corresponding to the average time between rainstorms in which it can collect. Filtration of air at sea level discloses radiostrontium on filters if the filters are fine enough, even in periods when bombs are not being tested so the only fallout is from the stratosphere reservoir from the high yield weapons. Measurements in the Antarctic on snow samples collected there show that the fallout rate there in January and February 1955 was comparable with that observed in the middle latitudes.

Finally, though the main part of the radioactivity from high yield weapons fortunately dissipates in the stratosphere, the small but very significant part which falls out within a few hundred miles of the site of the explosion for weapons fired on the surfaec constitutes a very real hazard and nothing I have said this evening should be interpreted otherwise. The weapons tests are conducted with great attention to this and the other dangers and every effort made to protect against misadventure. What we have learned from the studies I have described—which by the way have been conducted under the name Project Sunshine—is that these local precautions should be entirely adequate and the worldwide health hazards from the present rate of testing are insignificant.

We Can Meet the Employment Handicapped Problem

EXTENSION OF REMARKS

OF

HON. JOEL T. BROYHILL

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 26, 1956

Mr. BROYHILL. Mr. Speaker, under leave to extend my remarks, I should like to include the following article which appeared in the December 1955–January 1956 issue of the publication the Purple Heart:

WE CAN MEET THE EMPLOYMENT HANDICAPPED PROBLEM

(By Col. Waldron E. Leonard)

(EDITOR'S NOTE.—The writer has been active in the work of veterans' affairs since World War I; served as the State's representative of veterans' affairs in Texas for 2 years and now coordinator of veterans' affairs for the District of Columbia, where he has been employed for 10 years; has served on several National Committees of Veterans' Organizations and has received over 50 citations for his aid and assistance to his disabled comrades.)

A veteran just left this office who had been hurt, a paraplegic, but no complaint or self-pity was expressed by him in any of our conversation. The wound he was suffering from was in the heart of disappointment in being assured in an interview several weeks ago that a position would be available for him in the near future. The disappointment was caused by the fact that he received a notice that a position as messenger was available and he could submit his qualifications for same.

It was difficult to try to explain how the error could occur that would cause him to be certified for this type of position, which job specifications certainly for this particular position would not qualify a paraplegic; or why after lengthy interviews that a counselor would not record or remember the physical condition of the applicant, but often I am afraid that those who have qualified for the responsibility of assisting the handicapped get careless in their interviews and leave the impression to the one seeking assistance that they have a motherly complex in sympathy for the applicant's condition or take the easiest route in discontinuing the interview regarding the applicant's qualifications for the possibility of employment by continuous suggestions of rehabilitation. While this program has rendered and is rendering excellent service, there certainly comes a time when counselors should recognize that their responsibilities are assisting the handicapped in obtaining employment; which brings us to the subject of what employment.

Throughout the country various agencies are doing a splendid job familiarizing industry with the excellent service and performance of the so-called handicapped individual. Statistics are prepared and proof given in many instances that these employees are the most valuable and productive, but I believe that too much stress is given to the employment of the handicapped where he is so likely to be placed in a position other than he is qualified for, when perhaps with less effort a review of job descriptions where the handicapped could serve would be more helpful.

While proclamations are issued by the Federal Government, State governments, and municipal governments encouraging industry to employ the handicapped and citations are given throughout the country by veterans' organizations and those interested for their cooperation in assisting in this program, it might be well if we could consider the possibilities of positions existing in Government that would seem a natural for many of our handicapped.

MUNICIPAL JOBS

For an example, in most towns and cities throughout the country hundreds of parking meters have been installed on the streets where coins are deposited for parking privileges. The requirement of the collectors for these meters is that they have a key and a sack, the key to unlock the meter and the sack to carry the coins. This about summarizes the entire responsibility. I wonder how many of the city fathers in issuing proclamations on employing the handicapped have thought of their responsibility.

Other positions in the municipal governments throughout the United States include traffic enumerators. This responsibility consists of standing or sitting in certain spaces on the street or in an office building in a window facing the traffic pushing a small button that totals the number of vehicles passing in a particular area so as to determine the flow of traffic for the purpose of installing stop signs, street lights, installation of bridges, widening highways, or generally improving traffic conditions in the area checked. Many cities have dozens of these enumerators. Their calculators are turned in to a centralized point at the end of the day and results tallied by clerks. Again, I wonder how many city fathers have given first consideration for these positions to the handicapped.

Many cities have discontinued the use of their acting police enforcement officers for walking along the sidewalks and issuing violation parking tickets and instead have employed auxiliary policemen and many cities are using ladies to carry out this responsibility. It appears to me that this type of position should be considered for the handicapped where qualified.

There are school guard crossing positions. Certainly no one would be more careful of your children and my children than those who know what it means to be hurt. These are just a few of the positions in your city that might be considered by the municipal government for the job opportunities of the handicapped.

STATE JOBS

In the State government you might review the qualifications needed to issue automobile license plates, watchmen or guards in State buildings or institutions, elevator operators in State buildings, positions of issuing traffic permits, road tests for applicants, and where toll roads and toll bridges are in existence and you see perfectly healthy individuals sitting on stools accepting payment for such privilege, ask yourself why the State government is not giving consideration to allocating these positions to the handicapped.

Several agencies of the Federal Government and the President's own Committee on the Employment of the Handicapped have done a remarkable job in calling to the attention of the public numerous instances where production increased or services rendered better by those listed as handicapped.

DISABILITY TO ABILITY

However, there seems to be a need for a committee or commission under the supervision of or working directly with the Civil Service Commission to iron out certain difficulties in job specifications and requirements that in some instances make it impossible for Government agencies to give assistance to the handicapped employment problem.

Certainly this review should not be limited to the positions heretofore described, as many of those referred to as handicapped do have administrative and supervisory qualifications that I feel are too often not given a position of responsibility due perhaps that a review of the actual duties required at the time of a vacancy might not correspond with the job specification sheet that had formerly been prepared for the position.

Perhaps the agency responsible for establishing rehabilitation centers should consider a business establishment in placing a new recruit, in allocating some funds direct to the agency for special attention, where he will most likely receive permanent employment after his initial training. Often in an organization where there are a variety of positions, it can be determined very soon as to whether the position the applicant is first placed on will be the most likely where he will succeed for future livelihood.

For an illustration, a veteran who was a former truck driver was given 3 years' training as an automoible mechanic in rehabilitration centers. His service-connected disability left the veteran almost deaf. The factory manager discovered soon after his employment it was difficult for him to hear the motor running, thereby it being difficult for him to properly tune motors.

The manager of the plant noticed that the veteran was continuously visiting the fabric-cutting table where seat covers were made. In talking with the veteran he found that he was fascinated by this type of work and transferred him to this department. In less than a year he was placed as general foreman in the department with several men under his supervision. This observation and consultation changed the employee from a disability to an ability and from a liability to an asset.

It might be well for Government agencies to consider giving an opportunity to some of the positions heretofore listed and certainly many others in their departments where satisfactory results could be obtained, first to the disabled veteran where qualified to perform such service, second, any handicapped person under the same circumstances, and third to those of 40 years of age and over, who because of their age find it most difficult to obtain employment.

Disabled American Veterans, Department of New Jersey—Proposals for Congressional Action

EXTENSION OF REMARKS
OF
HON. GORDON CANFIELD
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, February 20, 1956

Mr. CANFIELD. Mr. Speaker, the New Jersey Department of Disabled American Veterans recently entertained members of the New Jersey State congressional delegation at breakfast at the Hotel Congressional here in the Nation's Capital. Maurice J. Sweeney, State commander, of Cedar Grove; Joseph J. Burke, national senior vice commander, of Bayonne; and John W. Bill, legislative director, of Clifton; presented a series of proposals for congressional action and addresses were made by Brig. Gen. Melvin J. Maas, retired, national commander of the Disabled American Veterans, and Representative OLIN E. TEAGUE, chairman of the House Committee on Veterans' Affairs. The legislative proposals presented follow:

DISABLED AMERICAN VETERANS DEPARTMENT OF NEW JERSEY—PROPOSALS FOR CONGRESSIONAL ACTION

1. Presumption of soundness at the time of enlistment should be considered once the veteran is accepted into military service, and any disability he might suffer during his course of military service should be recognized by the Federal Government as having been a direct result of his military service, and the veteran should be allowed direct service connection for such disabilities.

2. Legislation to prevent the severance of service connection unless obtained by fraud.

3. To prevent the reduction in compensation where dependency is considered, where disabilities show no improvement, only that the veteran is employed in his efforts to support his family.

4. Civil Service employment of disabled veterans upon completion of an examination, written or otherwise, and be given permanent status after 1 year of employment.

5. To permit all veterans to reinstate their war-risk insurance and national life insurance, also servicemen's indemnity insurance within 2 years after the enactment of the said law.

6. To permit disabled veterans to obtain out-patient treatment, hospitalization, and dental treatment in their own localities without having to lose time from employment in order to report to this regional office.

7. Proposed widow's pension for all widows of World War II and Korean veterans without regard to the cause of death.

8. Widow's legislation for World War I veterans by amending the law of 1944 recognizing the widow to be entitled to benefits regardless of the time of marriage.

9. To establish by law educational benefits for all children of World War II and Korean veterans who died before a service-incurred disability. That such legislation without the cooperation of States, permit the children to enter any university controlled by the State by awarding scholarships, and that the Federal Government join in bearing the expense.

10. That legislation be enacted directing the Army Review Board to review all cases of veterans who received discharges other than honorable, and who were denied benefits because of the said discharge by the Veterans Administration, that provisions be made in the said law so that the review board will appear in each State to give the veteran an opportunity to present his case by counsel to the review board, as it is a known fact that many veterans received discharges other than honorable because of some misunderstanding and not serious violation of the Army or Navy regulations, and that the same provision be made that all officers who had disabilities at the time of their release from service be given the right to appear before the Army Review Board and present their claims for direct retirement, and to be permitted to be represented by counsel if so desired. These two points are of importance to enlisted men and officers and to widows and orphans of those who have departed this life since their release from military service.

11. That there be created by law a court of appeals whereby decisions may be reviewed after the Board of Veteran's Appeals checks a claim for service connection or an increase in compensation, based on the evidence of record. If the said courts are created they should be allowed to travel from State to State so that the veteran may be presented to the said court of appeals and be represented by counsel who will present the claim for him. This is necessary since the veteran does not receive his constitutional rights to present his case to a court for further consideration of his claim for injuries sustained during his military service.

12. That Congress enact a law that there be at least one regional office in each of the 48 States and its Territories. That this be a matter of law rather than regulation set up by the Administrator who may change them by applying false economy. It is felt that each State and its Territory should be entitled to a regional office so that it may properly serve all disabled veterans, their dependents, and all other veterans who may need assistance.

The Federal Home Loan Bank System

EXTENSION OF REMARKS
OF
HON. F. EDWARD HÉBERT
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 20, 1956

Mr. HÉBERT. Mr. Speaker, Congress set up the Federal Home Loan Bank System with regional banks located in strategic parts of the country for the purpose of assisting homeownership. These reserve banks were designed to furnish credit to savings and loan association members throughout the country when their own funds were not adequate to take care of the home-financing demand. They were first created at a time when money for home financing was scarce and the need was extreme for this source of funds. These savings and loan member associations are the largest single source of home-mortgage financing in the country and account for over one-third of the home-mortgage lending each year.

Although the administration has proclaimed its support of homeownership, in practice the Federal Home Loan Bank Board has discouraged the financing of homes through private sources. I pointed this out recently when I commented on the action of the Board in restricting credit to the member savings and loan institutions of the Federal Home Loan Bank System at a time when there was strong demand for home-mortgage funds. This demand was so strong that after the credit curb, money could be obtained only at a high premium. The Rains Subcommittee on Housing of the Banking and Currency Committee has just rendered a report calling attention to these restrictions of the Federal Home Loan Bank Board, and I commend its reading to you.

Congress has made it very apparent that funds for the financing of homeownership should be made available without restriction. If the Federal Home Loan Bank Board and the administration see fit to continue their policy of curbing the use of private funds for financing, in my opinion, Congress should take action to see that these funds are made available.

Can We Be Neutral in Such a Fight?—Remarks on the Middle East Crisis and a Declaration on Behalf of 25,000 Residents of the Wynnefield-Overbrook Park and Main Line Areas of Philadelphia

EXTENSION OF REMARKS
OF
HON. WILLIAM T. GRANAHAN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 20, 1956

Mr. GRANAHAN. Mr. Speaker, several night ago, before the simply incredible — unbelievable — developments over those Walker tanks assigned to Saudi Arabia, I had the honor of addressing a large and sincerely concerned group of Philadelphians gathered at Har-Zion Temple to discuss the alarming situation in the Middle East.

I told the group that I would be pleased and honored to place in the Appendix of the CONGRESSIONAL RECORD, for the attention of this body and of the Senate as well, the declaration and resolutions adopted that night by representatives of 25,000 members of major Jewish organizations in the Wynnefield-Overbrook Park and Main Line areas.

Under unanimous consent, Mr. Speaker, I therefore send to the desk for inclusion in the CONGRESSIONAL RECORD the declaration and resolutions adopted at the meeting, followed by my own talk that night:

DECLARATION AND RESOLUTIONS

At the call of the leaders of 17 major American-Jewish organizations in the Wynnefield-Overbrook Park and Main Line areas, representing some 25,000 American citizens, this community meeting has been convened at Har-Zion Temple on February 16, 1956, to consider the deepening crisis in the Middle East which threatens the peace and security of America and the free world, and directly menaces the future of Israel.

1. THE BALANCE OF ARMS

Soviet imperialism has now moved into the Middle East. The Czech-Egyptian arms

agreement exposes the entire area to penetration by Communist arms, agents, technicians, and propagandists. This is a violation of the Tri-partite declaration of 1950 by which the United States, the United Kingdom, and France committed themselves to prevent aggression and to maintain the military balance in the Middle East. This military balance has now been destroyed.

Israel has appealed to the United States for arms to restore that balance so that she may defend herself from aggression long and publicly threatened by the Arab States. This is vital if war is to be averted in the Middle East: Therefore, be it

Resolved, That we call upon our Government to grant Israel's request to buy arms for defense without delay.

2. A SECURITY GUARANTY

Our Government has entered into security pacts with 44 nations in Europe and Asia to unite the peoples of the free world in the preservation of peace. It should extend this system of collective security to Israel. Such an undertaking would be a logical development of the tripartite declaration: Therefore, be it

Resolved, That we urge our Government immediately to negotiate a security treaty with Israel, and with such of the Arab States as are ready to join therein.

3. A PEACE SETTLEMENT

Israel's repeated offers to enter into peace negotiations have been rebuffed by the Arab States which have made impossible demands on Israel for territorial and other concessions. We are opposed to any efforts to force unacceptable conditions which violate the integrity and sovereignty of the parties. We urge our Government to decline to advocate peace on such terms and conditions, and to reject the threats made in the last few days by Russia in an attempt to disrupt the efforts of our Government to seek a peaceful settlement.

To aid in the defense of Israel at this critical hour is to strengthen America's own best interests: Therefore, be it

Resolved, That we call upon our Government to exert its best efforts to promote an honorable peace settlement in the Middle East, using as the basis for the negotiations the present boundaries of Israel.

REMARKS BY HON. WILLIAM T. GRANAHAN, OF PENNSYLVANIA, AT COMMUNITYWIDE RALLY OF MAJOR JEWISH GROUPS ON THE CRISIS IN THE MIDDLE EAST, HAR ZION TEMPLE, FEBRUARY 16, 1956

I appreciate very much the invitation to speak to such a dedicated group of West Philadelphians who have room in their hearts for concern for others and not just themselves. It is, to me, a wonderful thing the way Americans generally show concern for their fellow man. But I think Americans of the Jewish faith are truly outstanding in that respect. I admire you for it, and I salute you for it.

True, your concern for Israel and its survival is understandable in view of the long history of persecution of Jews which made the establishment of Israel so vital. But I know it goes much deeper than that. The Jew in America has never been under real danger—I mean the kind of brutal, beastlike attacks which happened in many other countries. Yet you have given so much of yourselves to help in the building of that Nation, and you have a right to be proud of your great and unselfish achievement.

I would say I am proud to be on the same platform here with a past national president of Hadassah, Judith Epstein. Every one I know who has visited Israel has come back with the most extravagant praise of what Hadassah has meant to that country, in hospitals, in health, in welfare, and well-being.

But we didn't come here tonight to hear us pat each other on the back for what has been done in the past to help fellow human beings to live in decency instead of in dread and in degradation. These rallies which you are holding all over the city, leading to a Philadelphiawide affair next month, are not parties or socials; they are deadly serious affairs based on a deadly serious international problem.

All of you who know me or who know anything about me, know that I have joined you over the years in your great humanitarian concern for the establishment of Israel and for its survival. As a neighbor living three blocks from here, and who has had many occasions to visit this temple and others in the Second Congressional District at bar mitzvahs and weddings and funerals and social affairs—and as a Member of Congress since 1945—I have worried along with you over the tragic period when we were afraid the hope of a homeland in Palestine might be destroyed before it ever became a reality. There was that tense period when the British suddenly pulled out, and left chaos behind them, after having stood in the way of a real Jewish national homeland for so long. There was the fighting to secure the country. There was the issue of American recognition, and of American economic help.

Now we are back to the tense dangers of another period, as once again Israel stands menaced and her existence—her survival—threatened by envious and aggressive neighbors.

Can we be "neutral" in such a fight? Can we stand idly by and watch lawless aggressors try to murder a whole nation of innocent people who desire only to live in peace? Of course not. We are not "neutral" as between those who believe in peace and those who believe in achieving their ends by aggression.

I say "we are not neutral" but sometimes there is a question of whether we can speak in that respect for some of our officials in high governmental office—particularly some of those who feel that the Arab States, with their millions of acres, need more land at the expense of tiny Israel.

Of course it is not a need for more land which stimulates Arab threats to Israel. It is an envious desire to capture and exploit what others have labored so hard to cultivate and bring into flower. It is fear of Israel as a dynamic force for democracy and freedom in the Near East. It is the suspicion, perhaps, that Israel may demonstrate to the people of the neighboring states that the rank and file of the people do not have to live in near slavery to a few rich and powerful leaders, but through democracy and enlightenment can improve living standards for all.

The Communists talk in those terms, but have failed miserably to make good on them. Israel, following in the path of the United States, has already shown how even a country under constant military danger can dream big dreams and carry through on the hard work of making good on those dreams. But the drain of defense costs is obvious.

I say we must guarantee the survival of any nation with such a spirit of progress and decency. I say we must make sure no aggressor or combination of aggressors can push Israel into the sea and destroy her. I say we must not base our strategy simply on counteracting Soviet moves in the Near East the way you would play a checker game. Instead, we must proceed on the basis of what is right for the free world, and what is right for humanity. And that means assuring a free, independent, secure Israel—just as we have the duty to use our influence in foreign affairs to accomplish that same goal for every free and decent nation.

Many of you may remember my letter to the Jewish Times some time ago in answer to an editorial in that paper asking Members of Congress direct questions about the high dam projected on the Nile River in Egypt. Here was a case where our Government apparently was being panicked into meeting any offer the Soviets made. As I said then:

"I for one will certainly want to know what steps, if any, our Government is taking to use our foreign aid programs, including those in the Middle East, as a means of promoting world peace. Naturaly, prompt settlement of the situation in the Middle East is fundamental to any real peace, since the tensions there could easily explode into a world conflict."

Events since then have certainly borne that out, I would say. I also stated then:

"It is unfortunate that the countries who seek to destroy Israel have now discovered that in dealing with Mr. Dulles it seems to help them a great deal to flirt openly with the Soviet bloc, and then watch this country's State Department fall all over itself trying to compete with Russia for their favor."

It is not just unfortunate that we have seen this happen; I would say it is rather tragic.

All of you, I know, welcomed the statement by Mrs. Roosevelt, by former President Truman, and others, including many of us in the House of Represents in the Congress in Washington, that we dare not sit idly by and see Israel destroyed by Communist arms in the hands of Egyptian troops. I am pleased that my position on this has right along been the one which now has such general support from such distinguished Americans. Let us press on, then, for a happy conclusion to this serious problem. Thank you.

More Kilowatts and Less Conversation

EXTENSION OF REMARKS

OF

HON. HAROLD C. OSTERTAG

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, February 20, 1956

Mr. OSTERTAG. Mr. Speaker, the people of Idaho, after a prolonged fight, are about to get kilowatts instead of conversation out of their water-power resources. Private enterprise, having at long last gotten the green light, is now getting on with the job of developing these greatly needed resources.

How long will it be before we can get on with the job at Niagara Falls? Private enterprise stands ready, willing, and able to develop the power potential there, and the people have registered overwhelming sentiment in favor of private, rather than public development. Labor and management are in complete agreement on the point. Municipalities want private enterprise to do the job. Civic groups agree. The voters agree.

I can supply some statistical evidence on the last point. I am at present conducting a poll among the voters of my district on this and other issues. The poll is still going on, but preliminary tabulations show 74 percent of the voters in favor of private developments of the power potential at Niagara Falls. What are we waiting for?

Under leave to extend my remarks, Mr. Speaker, I include in the RECORD a pertinent editorial on the subject from the Democrat and Chronicle, of Rochester, N. Y., of February 14:

POWER FAILURE

In a deep and winter-ridden canyon of Idaho, workmen are at work on a power project. Their blasting, tunneling and building is being paid for by private enterprise. For the people of Idaho have at last won a victory over public power enthusiasts who fought for years in Congress to let the taxpayer pick up the tab. As their governor, Robert E. Smylie says, they now are to get kilowatts instead of conversation.

Idaho's venture has meaning here in New York. Development of Niagara Falls power is held back because a comparatively few politicians are determined that the taxpayer shall foot the bill. All this despite the fact that private enterprise is completely ready to tackle the job, right down to preliminary and final blueprints.

Obviously the way to get action at Niagara is to start building. We can't get it because what seems to be a mere handful of powerful enthusiasts insist on a public project. And even they are split between ideologies, whether it shall be a State or a National undertaking. We are quite certain in our own minds that the great majority of citizens would prefer to trust experts in the power field to do the job economically, yet profitably to them and to the State.

It is ridiculous that 1 or 2, 6 or a dozen individuals should be able to deny progress unless it is achieved in their way. It is time that ambition and political theories be curbed, that work be permitted to start. We need more kilowatts and less conversation.

Upper Colorado Scheme Runs Into Geologic and Engineering Difficulties

EXTENSION OF REMARKS
OF
HON. GLENARD P. LIPSCOMB
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Monday, February 20, 1956

Mr. LIPSCOMB. Mr. Speaker, there are physical and geological difficulties in connection with the Glen Canyon storage unit which cast doubt on the engineering and financial feasibility of the entire upper Colorado River storage proposal.

Section 1 of the original H. R. 3383 was amended in committee so as to require the Secretary to take adequate measures, as a part of the Glen Canyon "cash register" unit, to preclude impairment of the Rainbow Bridge National Monument. This calls up a series of questionable aspects with respect to Glen Canyon.

(a) There is doubt whether Glen Canyon can support a 700-foot dam. In October 1954, Commissioner of Reclamation W. A. Dexheimer wrote that the Bureau's design specialists were "quite concerned" as to whether or not the foundation characteristics of the Glen Canyon site were capable of safely supporting a 700-foot dam. No further tests were made by the Bureau between 1954 and March 1955. Nevertheless, Commissioner Dexheimer testified at that time before the Subcommittee on Irrigation and Reclamation that a dam of 700 feet could be safely built. At 700 feet Glen Canyon would be the second highest dam in the world, second only to Hoover Dam, which is 726 feet high. Yet the foundation rock at Hoover Dam is at least three times as strong as the sandstone formation at Glen Canyon. This formation is nothing more than a weakly cemented sand dune. It was created geologically by the wind depositing one sand dune on top of another.

(b) There is doubt as to the adequacy of the plans for Glen Canyon Dam upon which the Bureau's cost estimates are based. These plans on which costs have been estimated are set forth in House Document No. 364, 83d Congress, which is the Bureau's basic planning report on the upper Colorado River project. These plans reveal that the cross section of the dam, which would be about the same height as Hoover Dam, is materially slimmer than Hoover Dam—this in the face of the fact that the foundation rock at Glen Canyon, as testified to by Bureau engineers and geologists, is only about one-fifth as strong as the rock at Hoover. It appears, therefore, that if a safe dam can be built at Glen Canyon, it will require a much more massive structure than the plans set forth in House Document No. 364, and that the construction cost will be substantially greater than estimated.

(c) The construction at Glen Canyon will endanger Rainbow Natural Bridge. Although the new H. R. 3383 now provides in section 1 that the Secretary of the Interior shall take adequate protective measures to preclude impairment of the Rainbow Bridge National Monument, so far there are no plans, and hence no assurance that protective measures can be provided which will be adequate, nor is there evidence that the cost of protection has been included in the cost estimates. As presently planned, the reservoir would back up close to the foundations of the Rainbow Natural Bridge, which is a fragile structure of soft sandstone. The Bureau has indicated that a dam would be built in the canyon below the bridge to keep out the reservoir water, but it appears that water would seep through the dam and also collect from natural drainage and back up under the Rainbow arch, thus jeopardizing this marvelous monument. The opinion of an independent consulting geologist given to one member of the Interior Committee, Mr. HOSMER, is that "regardless of the cost expended this low area will be subject to flooding by seepage of water from the proposed reservoir" through the porous and permeable Navaho sandstone.

(d) Large quantities of water may be absorbed into the formations surrounding the Glen Canyon Reservoir. Geologic reports show that the Kaiparawits and Henry Mountains' basins, both adjacent to the reservoir site, contain tremendous formations of pervious sandstone which have a combined capacity of 350 million acre-feet. The reports indicate that these formations at the present time are practically empty of water. Thus, as the reservoir fills, these formations could absorb tremendous quantities of water making it impossible to accomplish the storage and regulation of water and the production of power contemplated by the project. Since these basins have a capacity some 14 times greater than the proposed reservoir, it would appear absolutely essential to determine how much of this capacity is empty and thus free to drain water from the reservoir.

(e) The Chinle shale problem must be satisfactorily investigated and explained. One member of the Interior Committee [Mr. HOSMER] visited the Glen Canyon Reservoir site in company with a consulting geologist in December 1955. The trip showed that there exists along some 50 miles of the canyon sides of the reservoir a formation designated as Chinle shale, which is overlain by massive formations of sandstone. The Chinle is not thin. Neglected U. S. G. S. reports show that it has a thickness of 300–1,000 feet in the drainage area of the San Juan River, and its thickness in at least some of the critical areas of exposure along the Colorado River appears similar. Its importance to the reservoir area lies in the fact that it immediately underlies the canyon-forming Wingate and Navaho sandstones and, in areas of exposure of this shale provides the only foundation support for these overlying cliff-forming rocks. This Chinle formation, when subjected to water, immediately disintegrates into mud. As a result, the entire overburden mass of sandstone could crumble and be precipitated into the reservoir basin with untold adverse effect on the functioning of the reservoir.

The foregoing engineering problems are not of first impression. Surveys of the area now three decades old indicated the Glen Canyon site to be an impressive one but possessed of formation difficulties needing the most exhaustive tests. If $421,270,000—the Bureau estimate—is to be spent here the record on Glen Canyon must be unassailable. Congress should demand a thorough evaluation by an independent board of engineers before authorizing this key structure.

Disabled Veterans—Their Message of Hope

EXTENSION OF REMARKS
OF
HON. AUGUSTINE B. KELLEY
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Monday, February 20, 1956

Mr. KELLEY of Pennsylvania. Mr. Speaker, the struggle for the improvement and rehabilitation practices continues. The Veterans' Administration still carries on. I am, therefore, with your permission, including a piece of information coming from the Veterans' Administration:

DISABLED VETERANS—THEIR MESSAGE OF HOPE

(By the Office of Information, Veterans' Administration, Washington, D. C.)

Disabled veterans, trained under Veterans' Administration vocational rehabilitation programs, have given America a message of hope over the past decade.

Through their achievements they have demonstrated that there is practically no type or degree of handicap that need be beyond the ken of rehabilitation; that there is practically no type of occupation out of reach of the properly trained, properly placed

handicapped worker; that the handicapped, given the opportunity, can become valued, self-sustaining members of their community.

The record of the more than 600,000 disabled veterans who have received vocational rehabilitation training speaks for itself.

Ninety-five out of every 100 of the rehabilitated veterans are employed; nearly all are using skills they learned in training; more than 99 percent report they are satisfied with their jobs; they have doubled their prewar earnings and now are making $400 a year above the national income average.

Many rehabilitated veterans of today never would have been considered for vocational rehabilitation in an earlier day. "Medically infeasible for training" would have been the verdict. But advanced rehabilitation techniques, coupled with the courage of the veterans themselves, have opened the doors to hope and achievement.

Veteran-trainees have had nearly every conceivable type of service-connected disability. Forty-one percent are orthopedic cases, such as arm and leg amputees; 24 percent have had nervous or mental illnesses; 8 percent had been treated for tuberculosis; 7 percent have had heart and circulatory conditions; the remainder had a wide variety of other types of ailments.

Handicaps did not serve to limit veterans' choices of training objectives. They set their sights for nearly every occupation at which man earns his living—from aeronautical engineer to zoologist, from officeworker to machinist, from farmer to businessman.

Thirty-five percent trained for top-level positions in the professions and managerial field; 38 percent for highly skilled trades; 14 percent in farming; and the remaining 13 percent for clerical, sales, and service jobs.

Disabled veterans have shown the world there can be new hope for the handicapped. They have demonstrated that the emphasis can be shifted from disability to ability. The strength they have gained through rehabilitation is added strength for all America.

Address by the Honorable George Bell Timmerman, Jr., Governor of South Carolina, to the Southern Governors' Conference, Point Clear, Ala., October 19, 1955

EXTENSION OF REMARKS

OF

HON. JOHN L. McMILLAN

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 20, 1956

Mr. McMILLAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a copy of a speech delivered at the Southern Governors' Conference on October 19, 1955.

I hope that every Member of the House will have time to read Gov. George Bell Timmerman's speech, as he has dwelt on some very important subjects in his talk to the governors' conference.

We are very proud of our Governor, and I am happy to insert a copy of his speech in the RECORD.

The speech follows:

Our topic for discussion—water conservation and development—is one of increasing importance.

While water is vital to plant and animal life, it is also essential to our economic life. For that reason, the problems relating to the effective use of our water resources merit our attention.

THE NEED FOR A DEPENDABLE WATER SUPPLY

Water conservation and development can be defined as an attempt to meet the demand for water at a given place at a given time.

Within that definition, our problem is not a lack of water but a lack of a dependable water supply. The total volume of water is relatively unchanged.

In 1954 South Carolina endured a period of unprecedented drought, but enough rain fell during the year to drown every crop that is grown in our State.

The average rainfall in nearly all areas of the South is approximately 45 inches a year. That is more than adequate for the foreseeable future, but most of our rainfall is recorded during about 3 months of each year. The demand is likewise concentrated, and the greatest demand comes during that period when the smallest amount falls.

The rainfall as yet cannot be controlled, but the rain that falls can be conserved. The crux of our problem is the conservation of our water supply for use when needed and in a way that is practical.

I believe there is no simple solution. The problem is complex and it becomes more complex with the population growth and the subsequent demand for water in expanding agricultural, domestic, industrial and municipal use.

THE INCREASED DEMAND FOR WATER

Fundamentally, the growing demand for water lies with the additional use to which it is put for the individual.

Not only is our population gaining, but with it the per capita use of water is gaining.

Not too many years ago, an engineer in designing a municipal water system could safely base his plans on an estimated per capita consumption of 100 gallons a day. The estimate was thought to be sufficiently high to allow a reserve supply for any eventuality. But now the per capita demand in urban areas has jumped to approximately 125 gallons a day. Within the next twenty years the per capita use is expected to hit 175 to 200 gallons a day.

In agriculture, the demand for water has multiplied. The farmer invests heavily in high-cost labor, in high-cost fertilizer and in high cost machinery. The greater cost of production has made consistently higher crop-yields mandatory. To provide higher yields our farmers are turning more and more to irrigation, but one ear of corn from germination to maturity requires 100 gallons of water for maximum yield.

Diversification in agriculture has also accelerated the farm demand for water. A milk cow needs 30 gallons of water a day, a beef cow 15 gallons a day.

In industry, all plants use water in some quantity and new industrial plants are being constructed daily in the South.

Prominent among southern industry are the manufacture of synthetic fiber, the making of paper from woodpulp, and the refining of petroleum. In these three fields, the South can expect continued growth.

To manufacture a pound of rayon, 90 to 100 gallons of water are required. A ton of woodpulp needs 60 to 85 thousand gallons of water. A barrel of refined gasoline takes 100 to 150 gallons of water.

THE RESPONSIBILITY OF THE PRIMARY USERS OF WATER

The task of conservation and development falls to some extent upon the primary users of water.

Industry and municipalities have the responsibility of protecting the quality of the streams which serve to transport their wastes.

The landowner in rural areas is in a key position to further the job of water conservation. Our streams rise in rural areas.

In many sections of the South the construction of small farm ponds is proceeding rapidly.

These ponds have provided water immediately for livestock expansion and for limited irrigation. Already in several States they have served to meet the emergency needs of agriculture and industry during periods of drought. Also, the impounding of water has a tendency to recharge ground storage.

Land use is another field in water conservation which must depend on the farmer. A good watershed program would include the prevention of erosion and increased agricultural production.

Such a program also offers the advantages of less silting to clog our downstream reservoirs and more protection to fish and other water life. This, in turn, enhances the recreational value of reservoirs and streams.

However, the problem of conserving and developing our water resources is too intricate and too important to be left to the chance of individual initiative.

STATE RESPONSIBILITY

One important job in a sound program of water conservation and development is the initiation of State action.

Action on the State level can assure a program that will fit the needs of each locality. There seems to be no one ideal water-conservation program that will meet the needs of every section. What may be suitable in one area may not be suitable in another part.

The impounding of huge supplies of water in large reservoirs for later distribution over extensive landed areas may be the solution for some sections. It would not be the answer in another section.

In South Carolina we have many small independently owned farms. Although there is a trend toward larger farm ownership, it still would not be practical to transport water for great distances from a reservoir to our farms. The cost would be prohibitive. Moreover, we can supply our farms with water in a more inexpensive manner.

I am convinced that the problem of water conservation and development is primarily one involving State responsibility.

I am equally convinced that if our States fail to take adequate steps to promote sound water conservation programs within their respective territories, that the Federal sovereignty may eventually move in to fulfill that need. To me, that is an unwholesome alternative.

This not to say that the Federal Government should take no interest in the interstate aspects of the problem.

For instance, most of the South is in a humid region and until recent years had an abundant supply of water and such a small demand that an inventory of ground water was unnecessary. At the present time, I am told, that there is a very inadequate inventory of ground water in the southern region of the United States. I believe the Federal Government might well undertake such an important survey. The Committee on Irrigated Agriculture and Water Resources of the Association of Land-Grant Colleges and Universities has made a study of this problem and has recommended that the Federal Government undertake such a survey.

There are, perhaps, other aspects of water conservation and development that may merit cooperative action on the Federal level. In some instances, a watershed may have international as well as interstate aspects that would merit Federal action.

WATER POLLUTION CONTROL

In order to use our water resources to the best advantage it is necessary to conserve water not only in quantity, but also in quality. The usefulness of water should be preserved from the point of origin to final discharge into the sea.

In my State, a water pollution control authority was established in 1950 to deal with the problem of preserving the purity of our water. Operating as a unit of the State health department, it seeks to prevent new pollution and to correct the old causes of lower water quality. It must approve any new plans for disposing of wastes into rivers and streams.

Our experience with water pollution control has been most satisfactory. It has encouraged users of water to see that the purity of our streams is preserved.

Rather than discouraging our industrial development, it has encouraged confidence in the stability of our water policy. Within the first 6 months of the current calendar year our capital investment in new and expanding industries exceeded $91 million. This figure exceeded that of any previous full calendar year in our industrial history. Within the following 3 months, we have added an additional $85 million in capital investment, making a total of $176 million for the first 9 months of the year, or an average of $14 million a month in new industries and expansion. With that record, we consider that water pollution control is a positive factor in our industrial development.

WATER RIGHTS

The demand for water merits consideration of the need for State enactment of sound water-rights laws, but there is perhaps no law that demands greater care in its preparation. It can be an asset or a great detriment. These laws should define water rights in terms of modern usage and insure equitable distribution with full protection for all. Care should be taken to avoid the enactment of laws that may hamper industrial development and opportunities for profitable employment. Equal care must be taken to avoid giving a priority of right that would be detrimental to others. The rights of those individuals who invest in water conservation should be protected in order to make such investments attractive and profitable.

Water rights should not be confused with water conservation. While a sound water-rights law is closely related to water conservation, the two are separate problems.

The best way to simplify the problem of a water-rights law is to provide by conservation as much water as possible. An adequate supply of water necessarily reduces the need for regulatory controls and the intricate problems that regulatory controls inevitably involve.

In South Carolina a working committee to make a study of water conservation and water rights has been established. It is too early to draw any recommendation from the study but we think that a step has been taken in the right direction. We are moving slowly because we think it is wise, but we are moving.

STATE ABILITY TO FINANCE PROGRAM

The question now arises: Can the States financially afford to undertake an active and effective program of conservation and development?

I think they can.

Four years ago, South Carolina had more than 1,200 school districts, many of which because of their small size and lack of wealth were totally inadequate in their school programs. Our educational standards were as variable as the number of our districts. Some districts had excellent schools, in terms of facility, curriculum, and teacher qualification. Other districts only had schools of a sort. This variableness was unrelated to our system of segregation, notwithstanding representations to the contrary. Within less than 4 years, South Carolina has rebuilt her public school system. Today our school facilities have been made substantially equal for all the children of our State. Our school districts have been reduced to less than 105. Our school curriculum has been equalized. Teacher certification insures teacher equality. In short, we have accomplished an educational renaissance. Of equal importance, we have financed our own program without Federal help or advice and despite some Federal interference. Today, our State is more prosperous than it has ever been. Our per-capita income has risen rapidly. Our credit rating is double A. It must be remembered that we did this on our own although we were 45th in the Nation in per capita income.

If South Carolina can do this and maintain a double A credit rating despite her limited financial resources, I am sure that every State represented here today can afford a sound water conservation program without financial assistance from the Federal Government and the inevitably inapplicable Federal controls that Federal assistance would eventually involve.

CONCLUSION

I have endeavored in what I have said to cover in a general way some of the aspects of water conservation and development. I have not sought to supply a solution.

I hope that out of our discussion will come more concrete proposals for solving our problem of how best to conserve and develop our water resources.

We have four panel members who will lead our discussion. I hope you will all take part. The panel members are: Gov. Marvin Griffin of Georgia, Gov. Luther H. Hodges of North Carolina, Gov. Allan Shivers of Texas, and Gov. Thomas B. Stanley of Virginia.

The Segregation Problem

EXTENSION OF REMARKS

OF

HON. JOHN L. McMILLAN

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 20, 1956

Mr. McMILLAN. Mr. Speaker, I am inserting in the RECORD a copy of a statement I made during October 1955 on the segregation problem. I also expressed my opinion on the Supreme Court's ruling on the subject of segregation and hope that every Member of Congress has an opportunity to read same.

We people in South Carolina feel that the Supreme Court went completely beyond its jurisdiction in reinterpreting the Constitution of the United States as this subject has been interpreted by previous Supreme Court Judges and the schools throughout the country were of the opinion, during the past 50 years, that they were operating under the provisions of the Constitution by having separate school facilities for colored and white children in the United States.

The statement follows:

STATEMENT

The following statement is my personal opinion on the recent Supreme Court decision relative to school segregation.

First, I would like to state that it is my sincere opinion that the Supreme Court made a serious error by rendering their decision on the basis of social reforms instead of the legal facts in the cases. I have always been of the opinion that it was the intention of the framers of our Constitution that the public schools in the individual States be controlled, supported, and administered by the individual States. I certainly feel that if the individual States are not permitted under the Constitution to handle their own school affairs, they had just about as well dissolve their charter. I can't see where the States have any rights at all if they do not possess the authority to control their public school affairs. I have talked with colored people residing in practically every county in my district, and I have not found a single colored man who is insistent or even interested in having his children attend white schools. I have found each person whom I have interviewed to be only interested in having good schools and good teachers for his children and not any more interested in having his children enter white schools than the white people are in having their children enter colored schools.

I fully realize that we have in our midst a number of agitators who are not residents of the State of South Carolina or any other Southern State. These people are here under the guidance of the NAACP, whose expenses are paid in a great part by the nontaxable Ford Foundation funds.

From all the information that I have been able to secure during the brief time I have been at home since Congress adjourned, it seems that the Citizens Council committees now being formed in the individual towns may be the answer to this problem, since these councils are made up of the leading citizens of the towns and people who are permanent residents and well acquainted with school problems. I was delighted to read where our Governor and State legislature had created a school committee to study the school-integration problem. I have purposely refrained from making any public statements on this subject for the simple reason that this is a State problem and should be settled in a calm manner by the school authorities with the assistance of the Citizen Committees and also the colored and white leaders here in our State without any interference from the NAACP or any other agitators from outside the boundaries of our State.

I fully realize that some people are interested in getting this subject mixed up with politics, and I, for one, do not care to have any part in making this serious problem a political football. I certainly do not feel that the people of South Carolina elected the Members of the United States Congress to tell them how to vote or to tell them how to handle their school affairs here in the State of South Carolina. My simple belief is that the Federal Government should not interfere with our public-school system, and this includes the members of the Supreme Court, the President, and the Congress of the United States. We all know that the Supreme Court completely bypassed the Congress in making its decision in school integration. I am fully aware of the fact, and I think every thinking person realizes, that when the Supreme Court makes a decision it is the law of the land, and I certainly will be the last person to advise any person in the State of South Carolina to ignore the Supreme Court's decision. However, I am just as completely satisfied, on the other hand, that the thinking people of South Carolina, both colored and white, can solve this problem within the State and continue to have good relations between the races.

It is difficult for me to believe that there will be any integration of races in the southern schools without the consent and desire on the part of the colored and white people within the Southern States. As I have previously stated, there must be some calm thinking on the part of both colored and white leaders. I am perfectly willing to leave this matter, as much as possible, in the hands of the individual school boards and superintendents in our State to work out plans whereby colored children will continue

to attend their schools and the white children will continue to attend separate schools without any compulsion by either side. I am certain that 90 percent of the colored people in South Carolina desire to have their children continue to attend colored schools and the few agitators in the State can be outlawed and overruled by the good colored people themselves.

I have had more experience with this problem than the average person in South Carolina since I have been chairman of the District Committee in Washington, which has jurisdiction over schools and business establishments in the District of Columbia, which is the Nation's Capital. Congress passed a law many years ago calling for equal facilities and separated schools for colored and white children in the District of Columbia. However, when the Supreme Court rendered its decision for integration in the public schools in all States, they also declared the congressional act calling for segregated but equal schools in the District of Columbia illegal. Up until the recent Supreme Court decision, the colored and white people attended segregated schools, segregated theaters, segregated hotels, and segregated eating establishments the same as we do in the State of South Carolina. There was a drive on the part of certain agitators from New York and other States to break down the segregation in the District of Columbia during the 10 years prior to the Supreme Court decision. However, they were unsuccessful with the exception of when the Interior Department, who had jurisdiction over the swimming pools in the District of Columbia, with the assistance of President Truman, did away with segregation in all the Washington swimming pools. There were a number of colored agitators from New York who insisted on swimming in the white pools and they caused a great deal of disturbance in the District. I feel that this is the same type of agitators we have visiting South Carolina under the name of NAACP.

I was born and reared on a farm with colored people and feel that I understand them and their problems. No race or class of people in the world has advanced so much as the colored race in the United States during the past 50 years under the supervision of the white people. I feel that the majority of the colored people prefer to continue to have equal facilities and separate schools.

The State of South Carolina has built some of the finest school buildings in the United States during the past 10 years and the majority of these buildings have been assigned to the colored people. I am making this statement in order to give the people of my State my opinion on this problem and to plead with the press, the school officials, our Governor and our State officials to do everything possible to prevent this serious problem from becoming a political football. There is a strong suspicion on the part of numerous people in this country that the Supreme Court's decision was motivated from a social or political viewpoint.

Thanks for Nothing

EXTENSION OF REMARKS
OF
HON. WAYNE L. HAYS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 16, 1956

Mr. HAYS of Ohio. Mr. Speaker, under leave to extend my remarks, I include an editorial from the Martins Ferry Times-Leader dated February 9. This editorial is succinct and to the point and needs no elaboration by me.

THANKS FOR NOTHING

The Post Office Department, with evident pride, informs Congress that it has developed a tape recording which says "Thank you" when a customer makes a purchase from a coin stamp-vending machine. The first 7 of these gadgets cost $4,000 apiece, but it is hoped to bring the cost down later to $1,000 or so.

What still eludes us is why anybody expects thanks for buying a stamp. Without a stamp he can't get his letter mailed. If he wants his letter to go anywhere, he has no option in the matter. Maybe Postmaster General Summerfield, who has already earned a secure place in history by painting mailboxes red, white, and blue, instead of the familiar green, can introduce a refinement. The tape recording will be made to say, if not "Kiss me," then, at least, "Lick me." The letter writer will have to carry on the conversation on his own from there.

Susan B. Anthony

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 1, 1956

Mr. REED of New York. Mr. Speaker, under leave to extend my remarks, heretofore granted, I want to state that on January 13, 1955, I introduced House Joint Resolution 129, proposing an equal-rights amendment to the Constitution; that equality of rights under the law shall not be denied or abridged by the United States or by any State on account of sex. I want to join today with the many other Members of Congress, who have sponsored such legislation, in commemorating the birth of Susan B. Anthony.

Susan B. Anthony was born of a Quaker family in Adams, Mass., on February 15, 1820. For over 60 years, despite prejudice and popular apathy, she devoted her life and effort to the cause of political and social reform: the abolition of slavery, the temperance movement, and her greatest work, political equality for women.

After 1854 her efforts were almost entirely devoted to the movement for the emancipation of women. It was her belief that attainment of the franchise through a constitutional amendment was the key to full political equality for women, and a necessary step to their economic independence.

From 1868 to 1870 Susan B. Anthony was copublisher of a weekly newspaper in New York, The Revolution, advocating women's rights. A founder of the National Woman Suffrage Association in 1869, Miss Anthony served as its vice president until 1892, when she became president of the association at the age of 72.

Miss Anthony was a tireless campaigner, speaker, and organizer. She directed eight State campaigns for the adoption of a constitutional amendment enfranchising women.

Susan B. Anthony, at the time of her death in 1906, had gained wide recognition as an advocate of women's rights both in the United States and in Europe. Unfortunately, she did not live to see the fulfillment of her life's work and the acceptance of those principles for which she had so long fought. Legal recognition in the form of a constitutional amendment, permitting women to vote, was not adopted until 1919, 13 years after her death.

Susan B. Anthony will always be remembered for her undaunted belief in womanly courage.

The Honorable KATHARINE ST. GEORGE, who is the chief sponsor of the equal-rights amendment legislation, stated in an address on the floor of the House during the 82d Congress:

It is the last step on the long road toward freedom for women in the United States. We want equality, not protection. We want justice, not privilege.

Referring further to the equal-rights amendment she was proposing, Mrs. ST. GEORGE said:

If women have the right to vote they certainly have the right to be considered equal under the Constitution.

Address of Hon. A. J. Multer, of New York, Before Kings Highway Democratic Club, Inc.

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, February 20, 1956

Mr. MULTER. Mr. Speaker, on February 19, 1956, it was my privilege to address the Kings Highway Democratic Club at the dinner held at the Hotel St. George in Brooklyn on the occasion of its 40th anniversary. The text of my address follows:

Mr. Chairman, distinguished guests, and friends, it is fitting at functions like this to talk about our great American way of life and the contribution to it of our Democratic Party and its workers and leaders.

For many years Republican campaigns have been based on untruths, half-truths, and vilification, mixed with high-sounding slogans. An intensification of that low type of appeal is now underway.

Among the myths that have been given credence in our country is the illusion, created, nourished, and propogated by Republicans that Tammany is synonymous with Democrat and that that means bad government. We have done much to overcome that malicious propaganda and more recently with greater success. Much of the credit therefore, is due to our own great national committeeman, whom you will hear tonight, Carmine G. De Sapio.

Unlike many leaders of the past, who remained men of mystery to the general public, He has traveled wide and far, has been accessible to all who sought him out, and most important, has carried the message of our party, eloquently and effectively.

Wherever he has been, people say: "This man is all right. He is truly American. He makes sense." At all times, he brings us credit.

Permit me to point up the moral bankruptcy in the Republican Party, which is being reflected in the executive department of our Government.

We have just had further evidence thereof when the President vetoed the natural-gas bill. He said it was a good bill with a good purpose, but he must veto it because of the arrogance of some people—obviously the oil producers—as evidenced by a $2,500 contribution to a Republican Senator up for reelection.

I ask the President and his Republican campaigners of 1952 and of 1956, to tell us what is the difference in arrogance and in morality between that and the millions of oil dollars contributed to his compaign in 1952 and which brought about in 1953 the enactment into law, with his signature of approval, of the give-away of the vast United States tidal oil lands.

No doubt that comes under his description of Conservatism with property rights.

Let us look for a moment at his policy of liberalism with human rights. I know he meant liberalism in saving human life. It is being implemented, however, by his State Department to mean liberalism in sacrificing human life.

Everybody in this world knows that the situation is so tense in the Middle East that any day we may be propelled into world war three. American oil money, British stupid colonialism, and Russian imperialism vie with each other there in stirring up antagonisms among the Arab States and by them against the outside world.

With Russia and Britain falling over each other in an arms race to see who can supply more arms to the Arabs, our State Department issues releases saying: "No arms to the Middle East." All the time that our State Department has been saying to Israel: No arms to you, because we want no arms race, it has been approving the sale and shipment of United States arms to Saudi Arabia, who in turn has been transshipping them to Jordan, Syria, and Egypt.

During this same period, while the United States has been following Britain's urging that we sell no arms to Israel, Britain has been selling arms to Jordan, Syria, and Egypt.

Our State Department exhibits surprise at the consummation of an agreement by Czechoslovakia to send arms to Egypt, when for more than 3 years the Arabs have been getting Russian arms.

No wonder Republicans would like us not to talk about foreign policy. But from now until election day we will expose them on both fronts, the foreign and the domestic.

Now, my good friends, it is my extreme pleasure to give you our great leader, the Honorable Joseph B. Whitty.

Illinois Support of H. R. 4470

EXTENSION OF REMARKS

OF

HON. BARRATT O'HARA

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 20, 1956

Mr. O'HARA of Illinois. Mr. Speaker, today I appeared before the Subcommittee of the Committee on Public Works, ably chairmaned by the distinguished gentleman from Minnesota [Mr. BLATNIK], in support of H. R. 4470. I am extending my remarks to include my statement to the subcommittee, as follows:

Mr. Chairman, members of the subcommittee, a number of my constituents in the Second District of Illinois own summer homes in the dunes of Indiana and on the shores of the lake in southern Michigan in the district represented by our colleague, the Honorable CLARE HOFFMAN. They have suffered great loss because of erosion.

On June 1, 1955, I introduced H. R. 6605 to provide for a survey by the Corps of Army Engineers to determine the feasibility of construction projects for the protection of both public and private properties on the shores of the United States against erosion, by waves and currents. My bill defines the word "shores" to include all the shorelines of the Atlantic and Pacific Oceans, the Gulf of Mexico, and the Great Lakes, and lakes, estuaries and bays directly connected therewith.

Among my constituents who had alerted me to the urgent need of legislation in this field was Dr. Jerome G. Kerwin, a distinguished and nationally renowned educator, a member of the faculty of the University of Chicago holding the professorship of the Charles R. Walgreen Foundation for the Study of American Institutions.

On February 8, 1956, I wrote Dr. Kerwin that in view of the fact that H. R. 4470 had had a favorable report from the Army engineers and enjoyed the support of many Members from the eastern seaboard, and moreover covered damage both to public and private property, I thought it advisable that we should join forces in its support. I requested his evaluation of the bill.

Dr. Kerwin in his reply said: "As I read the Auchincloss bill, it provides for action by local public authorities such as cities, counties, and the like. This has its merits. It may, however, be difficult to get action in many localities, since the number of people owning lake-front or ocean-front property is often small compared with the whole population of the local area. They might have difficulty getting action. I find that to be true along the Michigan shore. Nevertheless, the bill deserves support."

Therefore, I am appearing before your subcommittee today in support of H. R. 4470. It enactment is urgently required and I trust the committee will take prompt and favorable action.

In fairness to the subcommittee I think I should state that while the enactment of H. R. 4470 would be of great benefit, and in the public interest, it alone will not meet in full measure the emergency that erosion has brought to my constituents owning homes on the shores of Lake Michigan. In his letter to me Dr. Kerwin further said:

"I had heard that as a result of flood conditions in the East a form of Federal disaster insurance was being considered. This might well apply to us unfortunates along Lake Michigan. We cannot even deduct these losses from our income taxes, because losses from 'erosion' are not considered."

A number of bills providing for Federal disaster insurance are now under consideration by the Banking and Currency Committee of which I have the honor to be a member. I hope and believe that when and if the committee reports out a disaster insurance bill it will give disaster insurance coverage to properties endangered by erosion.

IN SUPPORT OF H. R. 4470

Imagine. Mr. Chairman, how you would feel if you should learn that you must move your family and furniture within the next few hours before your front yard is washed away and the foundations of your house crumble. Perhaps I am asking too much for you to imagine this happening to you. But since the late summer of 1949, it has happened to many home owners along the shores of the Great Lakes. This particular case happened on the shore of Lake Michigan, a little east and north of Chicago. There had been a prolonged spell of rain with high winds off the lake. In the evening, as the homeowner returned from his work, he heard the roar of the waves and watched the lake with some feeling of apprehension. But the first realization of danger to his property came when he entered the house and his wife called attention to expanding cracks in the living room. Even as she spoke, the waves were pounding on the edge of his property and great chunks were tumbling off the lot for whose purchase he had saved and scrimped. Immediately, he began phoning for a mover to come and get the furniture, and then arranged with a friend to provide temporary shelter for his family.

Only to the extent that I am trying to put you in the picture am I drawing on my imagination, Mr. Chairman. This has happened, not only to the family I have in mind, but with minor changes to numbers of my friends and constituents in the region around Chicago, and to hundreds, if not thousands of people with property fronting on the Great Lakes. Those of my personal acquaintance are Chicago residents, many of them my constituents. They have sought refuge from a confining life in the city by building summer homes among the dunes of Indiana, or topping the bluffs along the southwestern shores of Michigan. They are neighbors of the constituents of my colleagues who represent the 1st and 3d Congressional Districts of Indiana, and the 4th District of Michigan. No doubt you will hear from them, as well as the many Representatives of other congressional districts in the seven States that front on one or more of the Great Lakes.

HOW LAKE LEVELS FLUCTUATE

Because my home is in Chicago I have an especial interest in Lake Michigan. Being connected with Lake Huron by the open water of the Straits of Mackinac, the two have the same level above the sea. Accordingly, they are considered a single body by the United States Lake Survey of the Corps of Army Engineers. For the other lakes, however, each has its own level. All are measured in relation to the mean tide of the sea at New York. The levels fluctuate with the seasons. Their high stages are in the summer, usually in June, July, or August. Thereafter, the levels drop away to the low stages which occur in winter.

The engineers have a way of describing these fluctuations in simple, direct language. During the fall and early winter the outflow from the lakes, plus evaporation from their vast surfaces, is greater than the combined normal inflow, plus the rain and snow that fall upon their surfaces. But in the spring, rains merge with the melting snow from the tributaries of the Great Lakes to reverse the process. This continues until mid-summer when it reaches a peak. From year to year this normal pattern of rise and fall varies with the differing amounts of rain and snowfall in the surrounding region.

LAKE LEVELS SINCE 1860

Records of the lake levels have been kept since 1860. They indicate an average of 580.58 feet above sea level for Lakes Michigan and Huron. This has varied through the past 95 years from a record high of 583.68 feet in June 1886, to a record low of 577.35 feet in February 1926. The extreme from the high level to the low level is thus 6.33 feet. As shown by the following records of the United States Lake Survey, the water level of Lake Michigan and Lake Hurton rose a total of nearly 3 feet (2.94 feet) during 3 years from July 1949, to August 1952.

Selected levels of Lake Michigan-Huron, 1860–1955

	Feet
Average level, 1860–1953	580.58
Highest monthly average, June 1886	583.68
Lowest monthly average, February 1926	577.35
Spread between extremes	6.33

Recent high water levels

	Feet
Highest monthly average, July 1948	580.85
Highest monthly average, July 1949	579.76
Highest monthly average, August-September 1950	579.96
Highest monthly average, 1951	[1] 581.46
Highest monthly average, August 1952	582.70
Highest monthly average, July 1953	582.14
Highest monthly average, July 1954	581.66
Highest monthly average, July 1955	581.38
Rise from July 1949 to August 1952	2.94
Subsidence from high of August 1952 to July 1955	1.32
Difference between level of August 1952 and 94-year average	2.12
Difference between level of July 1955 and 94-year average	.80

[1] Annual Report of the Lake Carriers' Association, 1951: "* * * during 1951, Lakes Huron and Michigan (averaged) 1.5 feet above the level of 1950." (p. 51.)

All levels are above mean tide at New York, 1935 datum.

Source: United States Lake Survey, Corps of Engineers, United States Army, Detroit, Mich.

DAMAGE REACHES $61 MILLION

The most recent high level record of 582.70 feet was recorded in August 1952. Since then a moderate subsidence has occurred. But during the 12 months ending in June 1952 damages of some $61 million were reported by the Corps of Engineers. This is the total suffered by the shore owners on the entire Great Lakes system, from Lake Superior to the St. Lawrence River. Approximately $50 million was the result of wave action, and some $11 million represented losses from inundation of property. Since 1952 water levels have abated slightly, but they are still nearly a foot above the average of the past 95 years.

The cause of all this damage, according to the Corps of Engineers, is several years of rain and snowfall above normal on the country tributary to the Great Lakes. It is as simple as all that, and cannot be credited to any of the man-made changes of the past quarter century. Neither is it the result of any combination of man's actions. This frees the city of Chicago from the charges that it stems back to the limit of 1,500 cubic feet per second now being diverted from the lake for sanitary purposes. Such diversions have been limited to this amount since 1938, following a decision of the United States Supreme Court. Before that as much as 9,000 cubic feet per second were being taken from Lake Michigan to flush out the Chicago Drainage Canal. With the added amount being diverted to supply water for the Chicago area, the current total is only 3,100 cubic feet per second. This amount is credited with lowering the level of Lakes Michigan and Huron less than a quarter of a foot.

Even were the diversion stepped up as high as 10,000 cubic feet per second, the Army engineers estimate the levels of the two lakes would be reduced by no more than a third of a foot in 3 years. Were it continued for 10 years, they estimate the level would be lowered only a little more than a half foot. At the same time the levels of Lake Erie and Lake Ontario would be lowered about a third of a foot.

PEAK REACHED IN 1952

Current reports can lead to an assumption that the lake level reached a peak in 1952 and is now receding. Therefore, why worry? It may never happen again. This, Mr. Chairman, is an argument for which there is no basis in fact. In all probability the recent high water stages will be repeated again and again.

A more important question is whether new records of high water can be expected. Twice during the past 95 years the level of Lake Michigan and Lake Huron exceeded 585.5 feet, and once during this period it equalled this level. Curves plotted by engineers with the Michigan Department of Health indicate a little more rain or snow in the region, or a cooler summer with reduced evaporation, could have raised the levels of the lakes to similar heights two or three times additional to those recorded during that same period. Fortunately, the combination of natural phenomena did not occur and our people were spared the inevitable losses. But all the records and all the observations point to the conclusion that the high and destructive lake levels prevailing since 1948 and 1949 will be repeated at indefinite intervals in the future.

This being the case, Mr. Chairman, a final question comes to mind. What can be done to meet this recurring and accelerating hazard? Of all the authorities on lake levels, no organization is so well versed on this as the Corps of Engineers. They offer two lines of attack. Both deserve consideration. They compensate one another, but do not compete. Only one can be considered at this time. The other would involve the possibility of international action with our neighbor to the north—the Dominion of Canada. It consists of lowering the high stages of the lakes by permitting greater outflow. I mention it because it has been proposed by responsible officers of the Corps. However, it is not contemplated in H. R. 4470, and is outside the jurisdiction of this committee.

IMMEDIATE CONSTRUCTION DEMANDED

More imperative and at the same time more local is the Corps' recommendation that protective devices be constructed as rapidly as practicable. This is just what is contemplated in the bill before this committee. The bill is specific in that it proposes the possibility of Federal aid to the States, municipalities, and political subdivisions of the States in carrying out the ideas and recommendations of the Corps of Engineers. Basic to this is the assumption that the States, municipalities, and political subdivisions want to do something permanent and worthwhile, but that they need help.

In this regard I would remind you that the city of Chicago, whose 2d district I have the honor to represent, is already going far to meet the hazards created by the high lake levels. In the spring of 1952, at the height of the most recent onslaught from Lake Michigan, the city bonded itself in the amount of nearly $7 million to carry out the beginnings of a program with which to meet the problem. This has resulted in relocating some 4 miles of our Lake Shore Drive, and the expenditure of nearly a million dollars for structures designed to protect the shore from pounding waves resulting from the high-water levels. No one realizes better than the engineers connected with the city of Chicago, and those serving the nearby municipalities, that this is only a beginning. Much more remains to be done. More engineering structures must be constructed as the changing water levels make other shore properties vulnerable to wave attacks. And once constructed, they must be maintained. All of this costs money.

COSTLY RELOCATION OF TRACKS

During the first years of this current spell of high lake levels, the Chesapeake & Ohio Railroad was forced to spend no less than $2½ million to relocate the tracks and protect the right-of-way of the road that serves Chicago and much of western Michigan. Similarly, costly projects were undertaken by the States and municipalities along the shore. As with the city of Chicago, these improvements must all be maintained and new ones planned if the taxpaying properties are to be adequately protected.

I opened this important discussion with a description of what has happened to the home of one of my constituents. That story could be duplicated dozens of times and it would still be limited to citizens who are residents of my congressional district. They are a small part, however, of those who have suffered losses. From Chicago to northern New York, where the waters of Lake Ontario enter the St. Lawrence River, and on down the river, property owners have found themselves face to face with similar situations. Individuals and corporations, municipalities and States throughout that entire area, and across on the shores of Canada, began in 1949 to install protective devices against the onslaughts of the high water. And as the high levels continued, many of them have continued their costly investments.

Fortunately for all concerned the Federal Government was reasonably quick to provide assistance. As early as May 1952, the Reconstruction Finance Corporation began making loans for repair of the damage, and the Corps of Engineers has been of invaluable service. But after nearly 6 years the situation remains imperative and many local political subdivisions are finding their responsibilities burdensome.

Reasons for prompt action

This, Mr. Chairman, brings me to direct consideration of the bill before this committee. Early enactment of H. R. 4470 will go far to encourage the States, municipalities, and political subdivisions of the States to construct the necessary seawalls and other structures to protect the shores. At the same time, it will relieve those same governmental groups from part of the oppressive burdens incident to their construction.

It will hasten the necessary planning of future structures for continuous protection of the lake shores. Planning of this sort is no less vital than the immediate work because of the probability that lake levels will again and again assume dangerous proportions. Such plans for the future assume greater and greater importance as the shore property values increase and as the population of our country grows.

By no means the least important consideration in this bill is the opportunity it provides for clarifying the responsibilities and cooperative possibilities of the Corps of Engineers, with particular reference to the United States Lake Survey. The history of the corps is a long record of service to the States. Under the impetus of this bill the corps can do even more to serve the several affected States and unify their programs. Thus, it will strengthen our internal defenses against the forces of nature.

These, Mr. Chairman, are but a few of the reasons why this bill deserves prompt approval and early enactment. As compared with the needs for comparable and concerted action to protect the shores of our great Atlantic, Pacific, and Gulf of Mexico coasts, the needs of this interior "heartland of America" are relatively small. But they are not inconsequential. And together with those of our ocean fronts they present a combination of problems for whose solution concerted action is long overdue. I urge, therefore, that no time be lost in giving this bill the consideration that will permit this committee to approve it and recommend its early enactment by the Congress.

Love of Neighbor Is God's Guided Missile to Peace

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 20, 1956

Mr. McCORMACK. Mr. Speaker, I am pleased to include in my extension of remarks an inspiring address that

should be as widely read as possible, delivered by our great archbishop of Boston, Most Reverend Richard J. Cushing, D. D.

The address was delivered on February 14, 1956, when Archbishop Cushing was presented the Man of the Year Award of the Benjamin S. Pouzzner lodge, B'nai B'rith of Lowell, Mass.

In response, Archbishop Cushing made a plea for all men of good will to adopt love of neighbor as God's guided missile to peace. The text of Archbishop Cushing's address, Love of Neighbor Is God's Guided Missile to Peace, follows:

With emotion too deep for utterance, with mingled gratitude and pride, I receive this award with sincere humility.

For tonight doing me this great honor—you do yourselves greater honor; because truly all the kind things that have been said of me tonight describe me more graciously than accurately, more generously than exactly. Tonight you have been describing me not indeed just as I am, but with a moving generosity of spirit, as I wish I were, as I pray daily and try daily to be. But in thus too generously picturing me—you have portrayed yourselves as you are. This award is indeed an idealized painting of me, but of you who have made it, and whose presence here tonight approve it, it is in deepest reality as a clear mirror wherein your true selves are reflected.

GRACIOUS GESTURE

For as no man can talk about another without revealing to an intelligent listener much of himself, so in describing me, you have truly revealed yourselves. Every kind and magnanimous word said here about me, said more the speaker, and of all of you whose applause endorsed and approved the generous sentiments so eloquently phrased, and written. For in invisible yet indelible ink, between the lines of this tribute, is written for angels to read the bigness of heart and the broadness of mind, the dynamic and inspiring Americanism, the true godliness, of those who voted for and prepared this award; and of all here assembled, men of all faiths, who have come here in support and approval of this Hebrew community's most gracious gesture.

Nominating, as it has this year, a Bishop of the Roman Catholic Church, a priest and servant of God—naming me as its choice, as man of the year, for exemplary and outstanding good will and good service to men of all creeds—this Hebrew brotherhood has not nominated—but proved itself, the Hebrew Community group of the year, for the very same virtues. This award you have bestowed upon me tonight, I firmly believe, God gives to each and every one of you the Book of Eternal Life.

Surely in Heaven before the throne of your God and mine, the erudite Master of the Talmud sings your praises. He once said of the good man, as written in that inspiring book, In Time and Eternity, edited by Nahum Glatzer, a great Jewish scholar, and rendered into noble English by Olga Marx, another Jewish scholar of note—"Let the good man increase peace with his brothers, with his relatives, and with every man, even with the stranger in the market place, that he may be beloved above and desired below, and well received by all creatures."

Thus tonight, being so kind to me, you have in essential reality been true to yourselves and your own religion—loyal at once to your Jewish tradition and to your American tradition; obedient to God who three centuries ago inspired a Syrian Rabbi, Samuel Ben Abraham Laniado to write, that the love of one's neighbor shall be considered in Heaven as if God Himself had received it. Yes, and long before that, nearly 20 centuries ago, that same God Incarnate said, "Amen I say unto you—as long as you did it to one of these my least brethren, you did it to Me."

BROTHERHOOD MANIFEST

And myself one of His least brethren, the stranger to whom you have opened the door of your hearts will never forget your kindness tonight, nor cease in my efforts to be worthy of it; to nourish and increase that awareness of brotherhood here manifest tonight, a blessed warmth and a holy light in us and upon us. Nor shall I cease while I live to oppose all movements and men who through ignorance or malice would infect us with the spiritual disease of bigotry, the contagious germs of racial hatreds. To such men, who knowingly or not, serve the enemies of God and country I would say:

"Whoever degrades another degrades me,
And whatever is said or done against another,
Returns in the end to hurt me."

Though the years of my priesthood have not dimmed my ideals, they have made me a realist. That is why even now, while I speak rejoicing, a shadow falls on my happiness, as I realize that some among you may be silently thinking, But is the archbishop unaware that Protestants and Jews may be disliked and distrusted by some of his Catholics?" To that silent question, if anyone here present be in thought asking it now, in sadness and humility I must answer, "I know." Among my own people, my own children in Christ, there may be those who offend you—and their God. A splinter minority of my flock may be prejudiced and intolerant, only a comparatively few—yet if there were but 3 such, that would be 3 too many. There may be indeed intolerant Catholics; but—I beg of you please believe and remember what I tell you now—if they are bigoted it is not because of their Catholic faith, but in spite of it, in betrayal of it.

My friends, I have broken bread with you this night, and have talked with you as a fellow American, neighbor, and friend. But in this matter I voice no mere personal opinion, but with the consecrated authority of my holy office, as a bishop of the Roman Catholic Church, and priest forever according to the order of Melchizedek, I declare to you that no Catholic can despise a fellow man and remain a true follower of his Lord and Saviour, Jesus Christ, and an obedient son of his church. Any Catholic who reviles or wrongs a brother because of the color of his skin, because of race or religion, or who condemns any racial or religious group, because of the mistakes or sins of a few individuals in that racial or religious group, ceases to be a Catholic and an American. He becomes a disobedient son of mother church and a disloyal citizen of these United States. The Catholic who fails to take a stand against racial or religious persecution is at once a slacker in the army of the church militant and a deserter from the battle of Christian democracy; turning his back to a brother of different color, race, or religion, wittingly or not, he turns his back to the flag and to the cross of Mount Calvary.

In all this anxious, war-weary, confused, and care-burdened world are there any men more futile and stupid than those who clamor for world peace and whisper for discrimination and discord in their own neighborhoods? The road to world peace is the street where we ourselves live. The first steps to world peace are steps to the stranger in need or the sorrowful next door, be his race or religion what it may.

There is a pathetic story of an unemployed Negro wearily filling out still another application for employment. When he came to the question, "What is your race?" with unconscious irony he wrote down, "Human." We have all of us heard—and some of us preached—hour-long sermons that said less. For there is one word in the heart of the matter. Since our beginning is in God and our end; since in love He created all men and nations—to hate any person or people or nation is to hate God their Father, and our Father.

Three centuries ago Samuel Laniado, great spiritual writer of Judaism, wrote: "Love your neighbor just as you do yourself. And this means that just as a man who has hurt himself with his hand, will not hurt in return the hand that has hurt him; so it is, if a neighbor inflicts pain or the like on him, he will not seek vengeance, because he regards his neighbor as himself, as his very self. Since God created his soul and the soul of his neighbor, he knows both alike—each an infinitesimal part of God's creation."

All the "anti" movements that lead to discord, and strife, that have led to the mass murders we call wars, have their roots in the rejection of the commandment of Christ. "All things whatsoever you would that men should do to you, do you also to them." He, the Son of God made man, understood how difficult it is to wipe out national, racial and religious enmities; nevertheless He refused to appease or compromise in this. He would accept no coexistence with hatreds or discriminations, but proclaimed, "You have heard that it was said: 'Thou shalt love thy neighbor and hate thy enemy.' But I tell you, love your enemies and pray for them that persecute you."

PEACE MISSILE

That is the one answer. We must learn it and soon, lest in blasting atoms the world commit suicide—

"The tumult and the shouting dies,
The captains and the kings depart.
Still stands Thy ancient sacrifice,
A humble and a contrite heart."

A humble and a loving heart—God's guided missile for the winning of peace. Men with such hearts, with God's help, will yet save the world. Paratroopers of the Lord and captains for Christ. The history of your people, my Jewish friends, and mine, of your religion and mine is beautiful with the records, the words, and the deeds of such men. Conquerors, though defeated; forgiving their enemies, they have no enemies; but they make of the conquerors captives of God.

Such a man was gentle St. Francis of Assisi. Such is that great priest whose parish is the world, because he loves the world, our Holy Father, Pius XII. Such a man was St. Stephen the Levite, who stoned to death, with his last breath begged forgiveness for his murderers, and in the beautiful scripture phrase, "fell asleep in the Lord."

Such men serve my Church in many lands, and are praying this hour for their Communist jailers. Nor need we go to the distant past, or far lands, for examples of the courage born of love. Such a man is Harry Melcher, of North Adams, Mass., of whom I read in the Boston papers of February 3, when for the second time in 25 years, mindless of self, he braved a fiery death to save the sacred scrolls of his synagogue, nobly proving again that as hatred is weakness, fear in action; courage is love in action. As St. John, the beloved disciple, proved in life and death, and in these deathless words: "There is no fear in love, but perfect love, casteth out fear." And thus casting out fear will bring peace to men; in their hearts and their homes, in their communities and countries—throughout the whole world.

For centuries now we've tried everything else; the powers of wealth, of mighty armies and navies, and combinations of nations, machinations of diplomats. All have failed. Before it's too late, and time is running out, let us turn from trust in the chain reactions of exploding atoms to faith in the chain reaction of God's love. Love—love of God

and fellow men—that is God's formula for peace. Peace and earth to men of good will.

This night, here assembled, you have lit a beacon for peace, a spark which could with God's help start a fire of enthusiasm to God who alone is peace in time and eternity. This night you are doing just that. You have kindled a flame of divine fire which might indeed, with God's help, start a chain reaction for brotherhood, a spreading conflagration of love withering to ashes all bigotries and fears, making bright the path to our loving Father in whom alone is peace in this world and the next, today and forever.

A half century ago when the British Empire was first among nations, as we are now, Kipling warned his people, and warns us now:

"Far called, our navies melt away;
On dune and headland sinks the fire:
Lo, all our pomp of yesterday
Is one with Nineveh and Tyre!

"If, drunk with sight of power, we loose
Wild tongues that have not Thee in awe—
Lord God of Hosts be with us yet
Lest we forget, lest we forget!"

You have not forgotten, nor will He forget you, nor I in my prayers—but one gift I would rejoice in more than your magnanimous award, a prayer, though it be but a mumbled phrase—that all men may love God and love one another. Every day and frequently throughout every day, let each one say—Oh, my God I love you and I love my neighbor as myself. That is God's guided missile to peace.

The Kelley Flood Insurance Bill

EXTENSION OF REMARKS
OF
HON. AUGUSTINE B. KELLEY
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 20, 1956

Mr. KELLEY of Pennsylvania. Mr. Speaker, following the disastrous east-coast floods of last August, it struck me that, in addition to more effective flood-control protection, homeowners and businessmen in areas subject to floods also needed a reasonable-cost flood insurance system. This is a field private enterprise has never felt it could enter, because the premiums would have to be so tremendously high in order to protect the insurance company against loss and also return a profit that few customers could afford to buy such a policy.

Consequently, I suggested a Federal national flood insurance program, in which the Federal Government would either reinsure the private companies or else issue the policies directly to the public. Other Members of Congress also got interested in this idea, particularly those from the flooded New England areas, and the House Committee on Banking and Currency has been holding hearings on the various proposals.

After suggesting enactment of flood-insurance legislation last summer, I looked into the matter further and found that President Truman in 1952 actually had a proposed bill drafted by the Reconstruction Finance Corporation for this very purpose. With necessary changes to bring it up to date, I introduced that bill early this year.

In urging the House Banking Committee to adopt my proposal, I pointed out the inability of private firms to sell such insurance on their own, citing the position of the National Board of Fire Underwriters that—

Because of the virtual certainty of the loss, its catastrophic nature, and the impossibility of making this line of insurance self-supporting * * * companies could not prudently engage in this field of underwriting.

My bill therefore has as its purpose:

To promote the national welfare by alleviating the widespread economic distress suffered from time to time within the United States * * * as a result of floods, and the attendant impairment of the free flow of interstate and foreign trade and commerce, by providing direct governmental insurance of certain flood risks or by making insurance of such risks available through private insurance companies by means of governmental reinsurance.

PROVISIONS OF KELLEY FLOOD INSURANCE BILL

My bill, H. R. 8142, provides for a maximum amount of insurance for any one person or business of $250,000, which would not cover the losses of a really big firm but which would certainly cover the homeowner and small-business man who need this protection most—who in the past in Westmoreland County and elsewhere, have seen their properties—on which they may have owed substantial debts—washed away and wiped out—but with the debt still to pay. It is hard enough to pay a mortgage off under any circumstances. To pay it on a house which no longer exists, which has been destroyed, is an intolerable burden.

Also provided is a limitation of 90 percent on the amount of any loss which would be covered, thus assuring that each policyholder would have an incentive to help keep down his own losses.

The bill requires that the program be operated without loss to the Government, which means that premiums would have to be realistic. But to assure that, some experience would be necessary, so the bill calls for a maximum of $500 million of insurance in effect in the first year, doubling at the end of the second year, and tripling to $1,500,000,000 at the end of the third year. This would enable the Government to amass reliable cost figures.

Private insurance facilities would be used to the greatest extent possible. The Government would issue policies directly only if private companies did not participate.

Further, other Government agencies operating loan or loan-guaranty programs, like FHA and VA home mortgage insurance, and so on, could require that flood insurance be carried by the purchaser just as they now require that fire insurance be carried. This is predicated on the assumption that the flood insurance would be available at reasonable cost.

Such a program, going hand-in-hand with better flood control, would protect people who have, in the past, seen everything they owned wiped out by rampaging flood waters, terrible disasters to all who ever experienced them.

Editorials in Los Angeles Examiner for February 16, 1956, Reveal That Los Angeles County Exceeds Cook County, Ill. (Chicago Area), and New York in Retail Sales

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 14, 1956

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent heretofore granted me so to do, I call to your attention and the attention of my other colleagues two editorials appearing in the Los Angeles Examiner on February 16, 1956:

GIANT STEP UP

Officially confirming what had long been previously indicated, the 1954 business census of the Department of Commerce reveals that Los Angeles County has become the Nation's greatest retail sales center.

In the 6 years since 1948, the county has made a phenomenal gain of 49.5 percent, or $2 billion, to forge far ahead of Chicago (Cook County, Ill.) and New York's Manhattan Borough.

Chicago, the leader in 1948, recorded a 22.9 percent increase in 1954. New York, third in 1948, retained that position in 1954 with a gain of 6.7 percent.

In dollar valuation Los Angeles' increase in retail sales exceeded New York's increase by more than eight times.

Another startling fact disclosed by the census is that in dollar totals Los Angeles sales far exceeded the combined totals of the Cleveland, Pittsburgh, and Boston areas—three of the most populous counties in the Nation.

All this is immensely gratifying, not only to Los Angeles County but to the metropolitan area and the whole community of southern California.

It reflects, obviously, another leap forward in the Southland's prosperity, a confident leap from the solid ground of a balanced economy.

It bespeaks, not a transitory condition of feverish boom but one of varied and general enterprise, the many sources from which production and earning derive.

And it testifies to the creative spirit which is the taproot of all prosperity, which gives impulse for leaps ahead and renews the incentive and power to leap again.

Gratification with growth, of course, inevitably presents a challenge.

We must build for the future with imaginative daring.

Today we lead in buying. Tomorrow we shall have more people here than in any other spot in the Nation.

But every facility of our greater community is now taxed to the utmost, or far short in capacity. Schools, roads, airports, sewers, and recreational areas come uppermost to mind.

We are committed to an era of expansion in which greater growth and prosperity are ours, if we give them the houseroom they need to live and perpetuate themselves.

LOS ANGELES COUNTY LEADS THE UNITED STATES IN RETAIL STORE SALES

Los Angeles County has officially passed Cook (Chicago) County, Ill., to become the Nation's top-ranking county in retail store

sales, the Los Angeles Chamber of Commerce announced yesterday.

Results of the 1954 Federal Census of Business disclosed that Los Angeles County recorded a phenomenal 49.5 percent gain in retail store sales to pass its closest competitor by almost $500 million.

The 1948 business census listed Los Angeles County second behind Cook County with total store sales of $4,512,261,000, compared to $5,085,557,000.

A countywide sales growth of $2,231,435,000 in the past 6 years, however, has boosted Los Angeles County to the top with total store sales of $6,743,696,000, compared to $6,252,260,000 for Illinois' largest county area.

UPSWING

New York's Manhattan borough remained in third place, according to the business census report, showing only a 6.7 percent gain in the 6-year period of the study. Los Angeles County's gain was nearly eight times that of Manhattan.

Los Angeles County's gain even surpassed the total store sales of three of the country's most populous counties—Cuyahoga (Cleveland) County, Ohio; Allegheny (Pittsburgh) County, Pa., and Suffolk (Boston) County, Mass.

In explaining the retail store sales upswing, George B. Gose, chamber vice president, commented:

"An increase of this nature tends to snowball and keep going. It should result in an increase of manufacturing within the county plus additional distribution centers. The dominance of this county as the Nation's No. 1 retail sales center will have far-reaching effects on national advertising and sales promotion programs."

Official figures from the census report showed that Los Angeles County ranks first in the sales of general merchandise, furniture, home furnishings and appliances, automotive, service stations, drugstores, lumber, building materials, and hardware.

The chamber's business census report was prepared by Wilbur M. McGann, manager of the research department. He was assisted by William Dover, director, business research department, Los Angeles Examiner, who is a member of the chamber's research committee.

She Wants To Outlaw Hunger in the United States

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 20, 1956

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks I include an article relating to our able colleague from Missouri [Mrs. SULLIVAN] written by Virginia Irwin, and appearing in the St. Louis Post-Dispatch of January 20, 1956.

The article relates to a bill introduced by Mrs. SULLIVAN, one that is humanitarian and at the same time, if enacted, would go a long way toward solving surplus perishable agricultural products.

The within article shows that the newspaper and public response is most favorable to this bill introduced by Mrs. SULLIVAN and her able and courageous fight to have it enacted into law.

As Mrs. SULLIVAN well said to me, "When people are not getting enough of the right food, and the food itself is piling up unused in warehouses, what difference does it make whether the modest cost of a food-stamp distribution setup be allocated to the Department of Agriculture or some other department? We are already spending many hundreds of millions to give this food away overseas."

I agree with my colleague.

The people of the district represented by the gentlewoman from Missouri [Mrs. SULLIVAN] are justified in feeling proud of her outstanding service in the Congress. This type of legislation typifies the high and idealistic character of service she represents and renders, so sincerely following in the pathway of her late distinguished husband whom she succeeded in the Congress.

The article of Virginia Irwin follows:

SHE WANTS TO OUTLAW HUNGER IN UNITED STATES—ST. LOUIS CONGRESSWOMAN LEONOR SULLIVAN PRESSING BILL FOR FOOD STAMP PLAN TO AID THE NEEDY

(By Virginia Irwin)

WASHINGTON, January 20.—Mrs. LEONOR SULLIVAN, the first and only woman ever elected to the United States Congress from Missouri, is as stubborn as the famed mule of her native State when it comes to fighting for legislation in which she is particularly interested.

One of Mrs. SULLIVAN'S most persistent battles ever since she arrived on Capitol Hill in January 1953 to begin her first term as the Representative from Missouri's Third Congressional District, has been over the passage of her bill to outlaw hunger in the United States. The bill provides for a stamp plan under which the Nation's billions of dollars in surplus foods could be drawn upon to feed needy Americans.

Recently former President Harry S. Truman criticized President Eisenhower's program to reduce price-depressing farm surpluses by paying American farmers to withdraw millions of acres of land from production, and suggested, among other things, that our country use the surpluses to improve the diet of the underprivileged here at home. This is what Representative SULLIVAN has been advocating in a bill she introduced first in the 83d Congress and in revised form in the House again last session.

"My bill to get some of our surplus food into the stomachs of hungry people would authorize the Secretary of Agriculture to distribute a portion—I would estimate that portion to be about $1 billion a year—of our surplus food stocks to our country's needy families under a stamp plan," the lady legislator from St. Louis explained in her office on Capitol Hill. "This bill is no overall solution for surpluses accumulating under the price-support program and it doesn't pretend to be. But it is an attempt to put part of this tremendous food surplus to humane use and to get some of it—a small portion of it—to kids who aren't getting enough milk, eggs, and meat, and to families who just simply aren't getting enough to eat."

Now attempting to get the chairman of the House Agriculture Committee to bring her food stamp bill out of committee, Mrs. SULLIVAN believes that the bill will, if passed, not only channel food to those in need but also be of great aid to the farmer in thus helping to reduce the price-depressing surpluses.

Various departments of Government, Mrs. SULLIVAN says, have been cool to her stamp plan because no Government department wants the cost of distribution of the surplus food included in its budget. Testifying before the House Agriculture Committee she said:

"Millions of Americans who need this surplus food are not getting any of it. I want to see some of them get some of it on a planned, intelligent, smoothly-run, regularly operating program of the Government." And, she added that the committee "may feel, as the Department of Agriculture seems to feel, that the problem of feeding hungry people in the United States should not be mixed up with the price support program."

Mrs. SULLIVAN believes that the stamp plan's economic effect on this country would more than offset the cost of her program for distributing surplus food to America's needy. Families on relief, while receiving surplus eggs, milk products and other foods of which this Nation has too much, she says, would have the dollars represented by these foods to buy other family needs and thus benefit their local merchants.

"The food stamp plan is aimed primarily at persons and families on relief, on public assistance, or in need of such assistance but ineligible because of legal technicalities," Mrs. SULLIVAN said. "Figures show that more than three-fourths of all the people on the welfare lists are small children and old folks over 70. Surplus foods would give them food which they are now not able to have because even the maximum amount of relief they now receive doesn't permit them to buy the right foods for an adequate diet."

Mrs. SULLIVAN suggests that standards of eligibility for receiving food from our surplus stocks be determined by the Secretaries of Agriculture, Labor and Health, Education and Welfare. She would provide these "blessings of surplus food" not only to people on welfare rolls but the needy whose unemployment compensation has terminated or who are on a waiting period to get unemployment compensation. It would also apply to those who are not eligible for unemployment compensation and have no way of procuring the necessary food for themselves and their families except through private charities.

Mrs. SULLIVAN emphasizes that a key provision of her bill provides that surplus food allotments made under her stamp plan would be in addition to—and not in place of—any public assistance grants recipients might already be getting. She also emphasizes that the bill would in no way interfere with programs now in operation, such as school lunches, foreign aid, assistance to hospitals, and other successful plans already under way.

"Think what it would mean to folks who are now going hungry to find themselves in possession each week of a few stamps calling for, say, a pound of butter, a certain amount of dry eggs or whatever," Mrs. SULLIVAN said. "I think this food-stamp plan might bring not only new hope but new strength and new health to millions of needy Americans."

A dynamic woman, "say past 40," LEONOR SULLIVAN, now in her second term in Congress, is getting ready to run for a third term. Completely absorbed in her work, she calls her job "wonderful and now my whole life."

The widow of John B. Sullivan, who was serving his fourth term in the House at the time of his death in January 1951, Mrs. SULLIVAN was born and reared in St. Louis, the daughter of the late Frederick W. Kretzer and the late Nora Jostrand Kretzer. Educated in public and private schools in St. Louis, she attended Washington University at night, taking special training in vocational psychology. She taught business arithmetic and accounting and then served as director of the St. Louis Business Training School prior to her marriage in 1941.

In Washington, Mrs. SULLIVAN worked in her husband's office and campaigned at his side during his congressional career. Immediately following her husband's death she served briefly as administrative assistant to Representative Irving of Missouri. In 1952, she won the Democratic nomination for Congress in St. Louis's Third District over seven other candidates and in the general election in November defeated Claude I. Bakewell, the

Republican Congressman, who had succeeded her husband the previous year.

Because of her interest in housing legislation, and particularly in the advancement of urban redevelopment and slum clearance, Mrs. SULLIVAN was selected by the House Democratic leadership in 1955 for a seat on the House Committee on Banking and Currency, which handles all housing legislation. In addition, she is one of the senior ranking Democratic members on the House Committee on Merchant Marine and Fisheries.

Most of the bills introduced by Congresswoman SULLIVAN have been directly related to the work of her own committees in the House or have dealt with the problems of her own St. Louis district. But she has also taken a leading part in a number of broad policy issues dealing particularly with the health and welfare of the individual citizen.

One of her most important bills which she introduced, in company with other Members of Congress from St. Louis and Missouri's two Senators, was one to authorize a flood-control program for the protection of St. Louis. The bill passed the House last July and Mrs. SULLIVAN is now working for appropriations necessary to get the project underway.

Since the beginning of her first term in Congress, she has favored more adequate appropriations for the Food and Drug Administration of the Department of Health, Education, and Welfare. She has also taken a crusading interest in the new housing law and was sponsor of an amendment to provide additional public housing for elderly persons. The amendment was lost in a last-minute conference committee compromise, but Mrs. SULLIVAN intends to fight for it again during the present session of Congress.

After her husband's death, Mrs. SULLIVAN shared a Washington apartment with another Congresswoman, Vera Buchanan, Democrat, of Pennsylvania. Since Congresswoman Buchanan died last year, Mrs. SULLIVAN has lived alone. She cares little for strictly social life and most of her evenings are taken up with official functions.

"Being a Congresswoman is a type of work to which you have to give everything you have," she said. "Actually you have no such thing as a private life. There are responsibilities but there are also great rewards.

"I get my greatest satisfaction out of my job when I go back home to St. Louis and get around my district and hear the expressions of gratitude from people for the little things I may have been able to accomplish for them—things done through legislation to make their life a little easier."

Closest to LEONOR SULLIVAN's heart on the list of things she wants to do is her bill for the stamp plan.

"It's time," says Mrs. SULLIVAN, "that the Department of Agriculture began to take a different attitude and treat the food surplus as a blessing that can be used to aid our needy, instead of just wanting to get rid of it as soon as possible, and preferably overnight, overseas, behind the Iron Curtain or some other handy place."

Housing for the Aged

EXTENSION OF REMARKS
OF
HON. CLEMENT J. ZABLOCKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, February 20, 1956

Mr. ZABLOCKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to commend to the attention of the membership of this body the following resolution adopted by the Common Council of the City of Milwaukee, Wis.

The resolution urges that Congress give early and favorable consideration to the possibility of amending our housing laws so as to provide adequate, low-rent housing facilities for our elder citizens who are unable to secure decent living quarters within their limited incomes.

I believe that this is one area which requires attention. In the past, the Congress has enacted housing legislation intended to aid in meeting a pressing need: The need for adequate housing facilities for low-income families. The principle that such aid should be extended to families whose children could be expected to carry the benefits to future generations was embodied in this legislation. Cognizant of the evils and the terrible social cost of juvenile delinquency, both in its immediate and in its long-range effects, Congress so directed Federal housing aid that it would help to combat this problem.

Because of its primary stress on family welfare, the housing legislation in the past made no provision for those elder citizens who, because of nonmarriage, death of a spouse, or other reasons, found themselves alone. Neither did our housing laws give adequate attention to elder couples, living alone on limited incomes.

I believe that the problems faced by many of our elder citizens deserve prompt and close consideration. I earnestly hope that the Congress will consider these problems in conjunction with the forthcoming action on housing and related measures.

"RESOLUTION RELATING TO URGING CONGRESS TO INCLUDE IN THE PUBLIC HOUSING LEGISLATION FOR ADEQUATE LOW RENT HOUSING FOR AGED PERSONS

"Whereas there is a definite and growing need for low rent housing for aged people, so that such persons may find comfortable and adequate housing at rentals which they can afford to pay; and

"Whereas present housing programs do not adequately reflect the needs of such aged people to secure convenient and comfortable housing; and

"Whereas Congress should be urged to specifically provide adequate housing for aged people by including in Federal housing programs now being planned or which may be planned, plans directed towards providing adequate housing for aged people at adequate rentals: Now, therefore, be it

"Resolved by the Common Council of the City of Milwaukee and it hereby declares its policy to be, That adequate housing for aged persons be provided at reasonable rental rates; and be it further

"Resolved, That Congress be requested to include as part of its Federal housing program a plan of providing adequate and comfortable housing for aged persons at reasonable rentals, either as to single persons who are aged or as to aged persons forming a family unit; and be it further

"Resolved, That certified copies of this resolution urging such a program be forwarded to each Representative from this State in the House of Representatives and to the two Wisconsin United States Senators; and be it further

"Resolved, That the housing authority of the city of Milwaukee, city attorney's office, and such alderman or aldermen as may be selected by the president of the common council be authorized and requested to confer with Members of Congress and housing officials of the Federal Government for the purpose of urging a housing program for aged persons, as is more fully set forth in this resolution, and that they be further authorized and requested to appear at congressional hearings of either the House or Senate committees dealing with legislation pertaining to housing, for the purpose of explaining the position of the city of Milwaukee and for recommending a program consistent with the objectives of this resolution; and be it further

"Resolved, That the persons herein authorized so to do take whatever steps may be required in order to urge the Federal Government to enact appropriate legislation which would permit the local housing authority to make available its present housing to aged persons, either single or in family units, on a preferential basis."

I hereby certify that the foregoing is a copy of a resolution adopted by the common council of the city of Milwaukee on February 7, 1956.

STANLEY J. WITKOWSKI,
City Clerk.

New Mexico Governor Wrong, Wrong, Wrong on Upper Colorado

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 20, 1956

Mr. HOSMER. Mr. Speaker, a few days ago I received a letter from the Governor of New Mexico soliciting support for the monstrous upper Colorado proposal. The inaccuracies contained in the letter were appalling.

Had the letter been originated by anyone other than a governor of one of our 48 States, and had its inaccuracies not been apparently broadcast to all Members of Congress, I would have ignored it. Under the circumstances, I have written the governor, taking up his letter point by point, and am having my reply reproduced below so that my colleagues may have the correct information:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., February 17, 1956.

Hon. JOHN F. SIMMS, Jr.,
Governor of New Mexico,
State Capitol, Santa Fe., N. Mex.

MY DEAR SIR: I have in hand your February 11 letter concerning the proposed upper Colorado storage project which apparently was broadcast to all Members of Congress.

It is inaccurate both in substance and detail. You are therefore requested promptly to advise all the letter's addressees to disregard it.

As Governor of the State of New Mexico, you certainly must be aware that H. R. 3383 provides not one single drop of water for the Atomic Energy Commission's Los Alamos atomic laboratory or its Sandia special weapons center. As a former employee at Los Alamos, I am completely familiar with the situation. I am at a loss to understand why you, the Governor of the State in which these installations are located, would say otherwise.

Taking the conclusions of your letter in their order, let me say this: Simple justice demands defeat of the project.

Like an iceberg, the House bill displays only part of its bulk to view. Beneath the surface are, amongst other things: destruction of Rainbow Natural Bridge; billions of dollars of increased burdens on the United States taxpayers to pay the interest on construction costs alone and 98 percent of this would be borne by the taxpayers of 44 States in which the project is not located; more agricultural land at a time when the Government proposes to spend billions of dollars to put land in soil banks; eventual invasion of Dinosaur National Monument with Echo Park Dam; a possible "billion dollar mud puddle" at Glen Canyon, etc., etc.

The same engineer-scientist, Raymond A. Hill, employed by the State of Colorado to assess its water resources, says that construction of the project would leave southern California's Metropolitan Water District, serving 67 cities and 6 million southern Californians, with only half the Colorado River water to which it has rights. Hill says this would be disastrous. Is that justice?

The project will not be self-liquidating.

The project's financial scheme is wholly unsound. None of the irrigation reclamation projects are financially sound. The irrigation water users on the average would be able to repay only about 12 percent of the irrigation investment, which, including storage costs, would range from $750 to $900 per acre varying with the number of projects included. The power dams are supposed to provide the revenues to pay for themselves as well as 88 percent of the irrigation investment.

The project repayment provisions contemplate an overall repayment period of at least 100 years. This is unrealistic and economically indefensible. The hearings make it clear that the repayment plan might work for only a minimum number of projects and that with additional projects there would be no possibility of payment within 100 years unless the power rate were increased substantially above the 6-mill rate contemplated in the Bureau of Reclamation's report. Furthermore, it is extremely doubtful that a market for the power even at the 6-mill rate would continue for 100 years. The approaching availability of atomic electric power will make 6-mill power competitively obsolete. In fact, the market area is not now in need of the power which would be provided. The power dams are in the bill because they are the only hope of making the overall project appear feasible. The project is not self-liquidating as you claim. Studies show that simple interest alone on the investment would be greater than the estimated net revenues.

Furthermore, the ultimate direct and hidden costs of the project total at least $5 billion (probably a low figure because based on the Bureau of Reclamation cost estimates which have proved notoriously short of actual construction costs).

Even if the original construction cost were to be repaid as claimed in a repayment period of 100 years, the cost to the Federal Government in the form of a hidden subsidy in interest charges on the funds borrowed and advanced for construction of the projects named in the bill would amount to at least $4 billion. This would be some $5,000 per acre on the total area to be serviced. In comparison the irrigated lands when fully developed would have an average sale value of about $150 an acre.

No defense requirements, urgent or otherwise, would be met by the project.

As set forth above, H. R. 3383 provides not one drop of water for Sandia or Los Alamos.

The Navahos receive nothing from H. R. 3383, and the only direct benefits that could be added would benefit only 1,100 Navaho families at a cost of $200,000 each.

This bill would not assist the Navaho Indians. It provides for the Navaho Dam and Reservoir, but not for the present construction of the Navaho project. However, the construction of the dam would have the effect of committing Congress to constructing the irrigation project works. The cost of the dam is estimated at $36,500,000; the irrigation project an additional $175 million. There are some 1,100 Navaho families involved, meaning a construction cost of close to $200,000 for each Navaho farm. This is just to bring water to the land and does not account for assistance which will undoubtedly be necessary for equipment to get the land in production. This astounding cost should be most carefully considered before Congress acts, particularly since H. R. 3383 as recently amended now provides that costs allocated to Indian lands which such lands cannot repay shall be nonreimbursable (sec. 6). This amendment was advertised as a gift to the Indians by newspapers reporting on recent upper-basin conferences which led to the amending of H. R. 3383. It is a gift Congress might well inspect closely. Certainly some more realistic and more economic method of providing for the Indians can be considered. By this gift the upper basin shows its unwillingness to have the costs of Navaho project paid for by the power revenues, as all the other costs are supposed to be. Instead, this money will go into the funds to be apportioned among these States, leaving the taxpayers in the rest of the country to carry the load.

Therefore, sir, since your previous letter was wrong, wrong, wrong, I reiterate my reiterate my request that you advise its addressees to disregard it.

Very truly yours,

CRAIG HOSMER,
Member of Congress,
18th District, California.

Domestic Point 4 Bill

EXTENSION OF REMARKS
OF
HON. LEE METCALF
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES

Monday, February 20, 1956

Mr. METCALF. Mr. Speaker, one of the most beneficial pieces of legislation before this Congress is the domestic point 4 bill principally sponsored by the senior Senator from Illinois, Senator DOUGLAS.

It is designed to focus the attention of Government on, and bring the resources of appropriate Federal agencies to the aid of, depressed areas left out of the "prosperity" which is being claimed for this Nation.

Cosponsors of S. 2663 are the senior Senator from West Virginia, Senator KILGORE; the senior Senator from Tennessee, Senator KEFAUVER; the junior Senator from Michigan, Senator MCNAMARA; the junior Senator from Minnesota, Senator HUMPHREY; the junior Senator from West Virginia, Senator NEELY; the senior Senator from Montana, Senator MURRAY; and the junior Senator from Massachusetts, Senator KENNEDY.

Two weeks ago, the senior Senator from Montana, Senator MURRAY, the junior Senator from Montana, Senator MANSFIELD, and I wrote the senior Senator from Illinois. We suggested that his S. 2663 be amended to include Indian reservations, many of which have been depressed areas since the day they were established, others having comparatively recently come into that category.

Our letter and his reply follow:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., February 9, 1956.

Senator PAUL H. DOUGLAS,
Senate Office Building,
Washington, D. C.

DEAR SENATOR DOUGLAS: For many years we have been deeply concerned over the numerous complex problems facing American Indians, including, in particular, their acute poverty and lack of opportunity for advancement. As we see the situation, the economies of most reservations now are strained to the breaking point and simply cannot support our rapidly growing Indian population.

Our observations recently were corroborated by the Senate Subcommittee To Investigate Juvenile Delinquency, which stated in an interim report that as a cause of juvenile delinquency among Indians "the importance of the economic factors can scarcely be overemphasized."

The subcommittee recommended that an effort be made to improve economic conditions for Indians through a plan of relocation as well as a program of assistance to those who continue to reside on reservations. With regard to the latter, it was recommended, among other proposals, that a comprehensive loan program and a program to locate Federal and State work projects near Indian reservations be developed. In addition, Senators KEFAUVER and LANGER have introduced a bill, S. 2632, providing that the Secretary of Commerce conduct surveys to determine the feasibility of locating manufacturing plants near Indian reservations.

Upon studying your bill for the relief of depressed areas, S. 2663, we find that this measure proposes to extend to depressed areas generally the very types of assistance which have been suggested for Indian reservations. We find further that only two minor changes would have to be made in the text of S. 2663 in order to make certain that Indian reservations can qualify for its benefits.

The first change concerns section 7 of the bill, which deals with local industrial development committees. We are afraid that on many Indian reservations it will be difficult to find a group of citizens who could do the work envisaged for these committees without some assistance and guidance. It would seem to us, therefore, that a small group of experts could be attached to the staff of the Administrator who could pay periodic visits to Indian reservations to help the local committees. It may very well be that other depressed areas would be in need of similar assistance. It could, of course, be made clear that such expert help would be given only on request.

The second change which we would propose is in section 9 (b), on page 6, line 8. Following "(including municipalities)," we would add "Indian tribes."

Equally as important as making these minor changes in the bill, however, would be an effort to make the Bureau of Indian Affairs aware of the opportunities which S. 2663 offers. During recent years the present Commissioner of Indian Affairs has spoken a good deal about the possibilities of attracting industry to reservation areas. Thus far his efforts have been unsuccessful. Here, however, would be a chance to translate his words into action. We hope, therefore, that the Bureau of Indian Affairs will be asked by your committee to testify on S. 2663 and to make suggestions on how the benefits of the bill can be extended to Indian reservations.

Sincerely yours,

JAMES E. MURRAY,
United States Senator.
MIKE MANSFIELD,
United States Senator.
LEE METCALF,
Member of Congress.

UNITED STATES SENATE,
COMMITTEE ON LABOR AND
PUBLIC WELFARE,
February 14, 1956.

Hon. JAMES E. MURRAY,
Hon. MIKE MANSFIELD,
Hon. LEE METCALF.

DEAR COLLEAGUES: May I thank you for your good letter of February 9, suggesting that the pending legislation to provide Federal assistance to depressed areas, S. 2663, might be amended to include Indian reservations among areas entitled to receive such assistance.

I believe your suggestions have definite merit and will discuss the question with the Subcommittee on Labor which is considering the bill.

We will, of course, be happy to invite the Bureau of Indian Affairs to present testimony on the bill with relation to possible aid for Indian reservations. At such a hearing, I would like to invite all of you to appear personally, or to present statements for the record. I am sure that the subcommittee would welcome the testimony of spokesmen of Indian interests, including, of course, members of particular tribes.

I appreciate deeply your interest in this problem and assure you of my desire to cooperate in every possible way in securing information to support the need for the amendments you have jointly proposed.

With kindest regards and best wishes, I am

Faithfully yours,
PAUL H. DOUGLAS,
Chairman, Subcommittee on Labor.

So-called New Upper Colorado Bill Contains All Vices of the Original Bill

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 20, 1956

Mr. HOSMER. Mr. Speaker, in a rather unusual step, a majority of the House Interior and Insular Affairs Committee considered and approved amendments to H. R. 3383 on February 8, 1956, some 7 months after a rule had been obtained on a bill which had been vigorously put forward as being a measure which would satisfy all interests and endanger none.

A principal amendment carves up excess revenues expected to be produced from the power dams and apportions them among Colorado, New Mexico, Utah, and Wyoming to be used in repaying construction costs of participating projects within those States. This totally new concept constitutes in effect a new bill. It and all the other amendments had less than 2 hours before your committee. It had no time at all before the Rules Committee. There was no executive department comment at all, with the exception of a brief letter from the Reclamation Bureau, which gave no substantiating information. This action is contrary to the orderly processes of the House. It should not be permitted.

The new H. R. 3383 contains all of the vices of the original, and more, such as the direct apportionment of project revenues. In addition, geological material has come to light since the end of the first session of this Congress which requires most urgent consideration by qualified people. It has received none. Furthermore, the administration's soil bank proposal is now before the Congress. It will require taking presently cultivated land out of production to cut down surpluses. H. R. 3383 would put new lands into cultivation and provide more water for lands already in crops (some of which may well be placed in soil bank reserve) to grow more surpluses. It simply does not make sense.

Funeral of the Constitution

EXTENSION OF REMARKS
OF
HON. RALPH W. GWINN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 7, 1956

Mr. GWINN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a copy of a significant article by Russell Maguire, a patriotic citizen, the publisher and editor of the American Mercury, in the issue of that magazine for February 1956.

The article, entitled "Funeral of the Constitution," presents in strong and eloquent words the worth of our Constitution and the freedom that has flourished under its protection. I commend the article to the thoughtful students of the Constitution everywhere.

The article follows:

FUNERAL OF THE CONSTITUTION
(By Russell Maguire)

Friends, Americans, countrymen, lend me your ears; I come to bury the Constitution, not to praise it. The evil that men and documents do lives after them; the good is oft interred with their bones. So be it with the Constitution.

The cunning one-world conspirators, the internationalist schemers, the war promoters have told you that the Constitution is an old-fashioned document and too ambitious. If it were so, it was a grievous fault. And grievously hath the Constitution paid for it.

Here under leave of the controlled international press, the invisible government, and the rest—come I to speak at the Constitution's funeral.

It was our oldest friend, faithful and just to us. It hath brought many rights and safeguards to our people. Under its protection our general coffers were filled. Did this in the Constitution seem ambitious?

When the poor have cried or been in need, the Constitution hath fed and protected them and their children. Ambition should be made of sterner stuff. Yet the selected Supreme Court has said, the Constitution is ambitious—and are they honorable men?

You all did know that our wise and patriotic ancestors had opportunities to give someone a kingly crown, which he did thrice refuse. Was this ambition?

I speak not to disprove what the un-American United Nations plotters have spoken. But I am here to speak what I do know. You all did love this Constitution once, not without cause; what cause withholds you then to mourn for it

O, judgment; thou art fled to bruitsh beasts. And men have lost their reason. Bear with me, my heart is in the coffin there with the Constitution, and I must pause till it come back to me.

But yesteryear, the Constitution's word might have stood against the world, now lies it there. And none so poor to do it reverence. O, citizens of these United States; if I were disposed to stir your hearts and minds to rage, I should do the internationalist tax-exempt organizations and the one-world foundations wrong, who, you all know, say they are honorable men. I rather choose to wrong the murdered Constitution.

Than wrong such honorable men? But here's the world's greatest document—the Constitution—with the seal and love of our wise and courageous God-fearing Founding Fathers. Let but the people hear this testament and you would go and kiss the Constitution's wounds. Yes, beg a part of it for memory, mentioning it to your children and passing it on as a rich legacy unto their issue.

It is not meet that you know how much the Constitution loved and protected you. For it will inflame you and make you mad. 'Tis good you know not that you are the heirs and owners of this great country—that the so-called powerful men and their stooges are but your servants.

Make a ring about the coffin holding the Constitution and I shall read its message to you. And if you have tears, prepare to shed them now.

You all do know this heritage, where all the rights and power were reserved to you. And with loving hands the founders of this country covered it with our flag of red, white and blue. Look in this place ran the United Nations dagger through; see what a rent Supreme Court decisions have made. Through these openings the well-publicized "advisers" stabbed, and as they plucked their cursed steel away, mark how the blood of the Constitution and the hopes of freedom flowed.

These stabs of treasonable people, admitted to our country as "citizens," were the most unkindest cuts of all. For ingratitude, more strong than Americans' arms, quite vanquished the Constitution. They burst its mighty heart, and bloody treason now flourishes over us.

Stay, countrymen. Good friends, patriotic friends, let me not stir you up to such a sudden flood of mutiny. They that have done this deed say they are "honorable"; what private international plots they have, alas, I know not. They are cunning and clever, and will, no doubt, try to answer you.

I am no orator, as our enemies are; but as all you know me, a plain, blunt man, that loves my country, I humbly ask to speak my thoughts. For I have neither wit, nor words, nor worth, nor action, nor utterance, to stir men's blood; I only speak right out to tell you that which you yourselves do know.

I show you the Constitution's wounds, poor dumb mouths, and bid them speak for me. But were I otherwise, I would ruffle up your spirits, and point to every wound in the Constitution. And then, at last, this should move the people of America to rise and mutiny against the conspirators who are planning to take over our country, and thus avenge the Constitution's death.

Eisenhower in Milwaukee—Let's Have the Complete Record

EXTENSION OF REMARKS
OF
HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 18, 1956

Mr. REUSS. Mr. Speaker, recently the members of this House have been favored

by several insertions in the Appendix of the CONGRESSIONAL RECORD of substantial portions of the memorable speech made by General Eisenhower in Milwaukee, Wis., on October 3, 1952. This was the time when the Republican presidential candidate expressed so eloquently his views on the problem of communism and freedom in the United States.

I am glad that these remarks by Mr. Eisenhower have again been brought to public attention. I am glad, not only as a proud citizen of Milwaukee, but as one who believes it is sound and instructive, as a new presidential campaign gets under way, to have everything which has been said on this vital subject spread again upon the public record.

However, Mr. Speaker, I believe that it would serve us all best if the complete record of the remarks which Mr. Eisenhower prepared for that important address were brought to light. I am thinking of the paragraph concerning Gen. George C. Marshall which, according to press accounts, Mr. Eisenhower omitted when he actually delivered the speech.

It is a distinct loss to the public, and a disservice to the President, it seems to me, to omit that brief paragraph. I have never been so fortunate as to learn its exact words, but I have heard that it was a heartening defense of a gallant fellow soldier against the incredible charges made on the Senate floor that General Marshall had led a conspiracy to let the United States fall victim to Soviet intrigue.

Mr. Eisenhower apparently found it necessary to omit this passage when he spoke in Milwaukee, yet it is an integral and important part of his views as he originally composed them. In the interest of a complete record and a full presentation of Mr. Eisenhower's statement, it should be restored to its original place. I hope, therefore, that one of my colleagues who is fortunate enough to have secured the text of this tribute will wish to insert it in the Appendix.

For the record, too, it would be helpful also, I think, if we could be enlightened as to just why these sentences were removed from the Milwaukee text. In looking over the press reports, I found the New York Herald Tribune reporting as follows:

[From the New York Herald Tribune of October 11, 1952]

During his talk with the reporters, General Eisenhower also sought to explain why he had deleted from his Milwaukee speech a four-line defense of General of the Army George C. Marshall, denounced by Senator JOSEPH R. MCCARTHY, Republican, of Wisconsin, as the unwitting dupe of a great Soviet conspiracy.

The General frankly admitted that he had cut the Marshall tribute from his speech after talking to Senator MCCARTHY in a hotel room in Peoria, Ill., the night before. However, he said he had not "censored" his own speech at the request of Senator MCCARTHY.

THOUGHT IT OUT OF PLACE

He did it, he said, because, first, he was guest of Gov. Walter J. Kohler, Jr., of Wisconsin, a MCCARTHY backer, and he thought it would be out of place to belabor Senator MCCARTHY in Wisconsin, and, second, he already had defended General Marshall. General Marshall knew exactly where General Eisenhower stood and had even sent him a note of gratitude, he added.

This seemed to be clear enough but then I found a different account. In the Washington Post and Times Herald, I read:

[From the Washington Post and Times Herald of July 12, 1954]

BOLTON LANDING, N. Y., July 11.—The real story of what happened in Wisconsin in the 1952 presidential campaign—how General Eisenhower agreed to delete from his prepared speech a eulogy of Gen. George C. Marshall—was told here today.

It has often been said that Senator JOSEPH R. MCCARTHY, Republican, Wisconsin, persuaded General Eisenhower to drop what he proposed to say about General Marshall.

However, Gov. Walter J. Kohler told reporters today that it was he who was responsible, not MCCARTHY. He told how he argued for elimination of the Marshall passage, first with Sherman Adams, and then in a meeting with General Eisenhower, Adams, and Maj. Gen. Wilton B. "Slick" Persons. This took place on the Eisenhower special train en route from Green Bay to Milwaukee, where the speech was to be delivered.

Governor Kohler, who is here attending the annual governors' conference, reminded newsmen that at the time General Eisenhower was in Wisconsin (early October) the outcome of the 1952 election was very much in doubt.

"So far as I was concerned," he said, "the most important thing in the world right then was the election of a Republican President. I had been shown a draft of General Eisenhower's speech. It was a defense of General Marshall against the charge of treason.

"I felt that General Eisenhower was a guest in our State, and that if he said what he planned to say it would be construed as an overt attack on MCCARTHY. That wouldn't be good.

"I remember saying to Sherman Adams, 'When a man calls on the Pope, he doesn't tell him what a fine fellow Martin Luther was.' "

Obviously, these two versions are inconsistent with each other. Can they not be promptly explained? Let us get the complete record straight for posterity.

Address by the Honorable George Bell Timmerman, Jr., Governor of South Carolina, Before a Joint Meeting of the Association of School Boards and Association of School Administrators at Dreher High School, Columbia, S. C., November 3, 1955

EXTENSION OF REMARKS

OF

HON. JOHN L. McMILLAN

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 20, 1956

Mr. MCMILLAN. Mr. Speaker, I take pleasure in inserting in the RECORD a copy of a speech our Governor of South Carolina delivered to the Association of School Boards and the Association of School Administrators at Dreher High School on November 3, 1955.

I am certain that if the Members of Congress will take time to read this speech, they will learn a great deal about the conditions existing in our State and all other southern States.

The speech is as follows:

Ladies and gentlemen, it is a privilege to appear before you who have the primary job of operating the public schools of South Carolina.

Nineteen hundred and fifty-five has been a critical year for public education, but the confidence of every South Carolinian has been strengthened by the sensible approach of our school officials and by the calm attitude of our people.

The calm attitude of our people should not be interpreted by others as the silence of consent. We are determined to resist integration.

I think it now appropriate for us to reevaluate our school situation and by thinking together to seek a clear perspective.

The unconstitutional opinion of the Supreme Court in the school segregation cases has accomplished no worthwhile purpose.

It has created more unrest and brought more unfavorable publicity to our Nation than all the agitation by those who would undermine our national security. It is not based upon the written law or the written Constitution. It is based in part upon the writings of a Swedish Socialist, prepared in collaboration with others who have been cited numerous times as members of Communist-front organizations. Even the integrationist must admit that the Supreme Court has attempted to change the law.

There is one current misunderstanding about the Supreme Court opinion that we should clarify in our minds.

The Court did not say that school children must attend racially mixed schools. It did not say that all public schools must be racially mixed.

Where no white child seeks to enter a school for Negro children, it may continue to operate within the opinion as a school for Negro children.

Where no Negro child seeks to enter a school for white children, it too may continue to operate within the opinion as a school for white children.

In South Carolina, since the opinion of the Court, no child has applied to enter a school for the other race.

There are many other States that are continuing to maintain separate schools within the opinion.

Examples are found in New York, Michigan, and Illinois. The same is true in Pennsylvania, and in Maryland, and even in the District of Columbia.

In fact, schools with only white children number in the thousands, while many of the bragged-about mixed schools have only a smattering of different races.

In most instances, mixed schools have been established only where substantially equal schools are not provided.

What the Court has said, and all that it has said, in this respect, is that no child can be denied admittance to a school of his choice because of race.

Even where a child chooses to enroll in a school for another race, admittance may be denied within the opinion for any other valid reason.

In South Carolina, there is a valid reason why no child should be transferred to a school for another race.

The General Assembly of South Carolina has not provided money for any school from which or to which a child may be transferred because of court action for so long as the child attends the school to which he was transferred.

In addition, many of the county supply bills do not provide money for schools in that category.

If the school trustees of a district were to attempt to implement the opinion of the Court by transferring Negro children from a Negro school to a white school, there would be insufficient funds to operate either the mixed school or the Negro school.

Without sufficient funds, no school can operate. The transfer would not implement the opinion. It would prevent the implementation of the opinion. It would force both the mixed school and the Negro school to close. Negro teachers in the district would be without pay for their work. Negro parents in the district would be without free schools for their children.

Under these circumstances, the practical question for the Negro is to choose between separate but equal schools or no free schools.

The Court cannot provide money for the operation of mixed schools. The public will not provide money for schools of which it does not approve. The National Association for the Advancement of Colored People is not going to provide money for any schools.

The sensible choice for the Negro is to support separate but equal schools.

The integrationist has launched a juggernaut of propaganda to force acceptance of racial mixing. Almost all news media outside of the South, and some within the South, have been mobilized in the most gigantic hard-sell campaign of our age. Millions of dollars in time, effort, and abuse of truth have been expended. But so far the effort has been a flop. And it is not likely that the public will ever be brainwashed.

Many people are coming to realize that integration, politics, and sociology are poor substitutes for Christianity.

Everywhere there is growing resistance, and contempt for racial mixing.

Washington was to be a model of integration but most of the parents, who could afford to move, transferred their residences to Virginia or Maryland, where they continue to send their children to separate schools.

One community in Delaware experienced difficulty in convincing some of the authorities that integration was not acceptable. But the problem has been solved. They elected a new school board and continue to send their children to separate schools.

The integrationist knows this. Paradoxically, he now pleads with these words: "Eventually, why not now?" That plaintive cry does not appeal to reason. It is the chant of weakness and the admission of defeat.

I am convinced the great majority of our Negro people oppose racial mixing. Negro parents love their children and want them to have good schools and good teachers, a normal desire of any parent. But they want their own schools and their own teachers. They want good churches and good preachers. But they want their own churches and their own preachers. There are few southern Negroes who would give up "big meeting" for any other form of worship.

What the alien white leadership of the NAACP fails to understand is that the southern Negro finds comfort in his own race. Agitation for integration and racial mixing is an insult to him.

The thinking, outspoken Negroes outnumber the agitators.

Earl McKnight, a Negro of Sumter County, recently wrote: "So long as the colored children have good schools to go to, I think it best for the races to go to separate schools."

Elleraree Ford wrote: "We have the best school in Pinewood in Sumter County and I want my children to go to it." Elleraree Ford is a southern Negro and Pinewood is a Negro school.

John Sanders of Sumter County wrote: "I think it best for both races that the schools be kept separate as they have always been." John Sanders is a southern Negro.

Lewis L. Scott of Savannah wrote that he was "openly, avowedly, and unalterably opposed to desegregation."

He is a southern lawyer and a Negro.

Roosevelt Barr and the Reverend Webster McClary of Kingstree recently and publicly renounced racial mixing. Both are southern Negroes.

Lilly M. Capers of Orangeburg in an open letter to all Negro parents urged them to join her in opposing the mixing of the races. She is a southern Negro.

The Reverend James Vanwright of Moncks Corner recently wrote that integration would cause the Negro to lose his identification as a race and would increase and confuse race problems instead of presenting a solution. The Reverend Vanwright is a respected southern Negro, who enjoys the confidence of both races in his community.

Nora Zeal Hurston described the integration decision of the Supreme Court as an insult to the Negro race. She is a prominent Negro author.

There are many others who have publicly deplored integration.

I do not know these people personally, but I do know they are interested in sound leadership for their people and they have the courage to speak for them. They are not afraid of the NAACP.

The colored officers of the NAACP are professional agitators and the movement to mix the races is largely sponsored and financed by white people who are professional southern haters and alien to the South.

United States Attorney General Herbert Brownell, a midwestern Republican, was recently quoted as saying that the Supreme Court decision was "the greatest single step forward" against discrimination. Herbert Brownell is a white man. His life is isolated from the Negro except for an occasional political association for propaganda purposes. He sends his four children to private schools which have few, if any, Negroes on their rolls, although he could send them to mixed public schools. Brownell is using the integration issue to promote his Republican politics.

Vice President NIXON, a California Republican, told the NAACP convention at Atlantic City that complete public-school integration is the country's most important civil rights objective.

A few days before NIXON spoke, W. R. Farley, a southern Negro, wrote that the effort to destroy the whole pattern of segregation and to establish an integrated social order will set the Negro back 50 years.

NIXON, like Brownell, is a white man. His life is also isolated from the Negro. He attended a segregated southern college. He lives in exclusive Spring Valley, a subdivision which has no Negroes. His children attend public schools that have few, if any, Negro students, although he too could arrange to send them to racially mixed schools.

Like Brownell, NIXON is using the integration issue to promote his Republic politics.

The NAACP is a foreign corporation chartered in the State of New York in 1911. It has been active in South Carolina for many years.

It has come to my attention that this organization may have failed to comply with statutory requirements for foreign corporations in South Carolina.

I have requested the Attorney General to investigate. If he determines that the NAACP has violated our law, I have directed him to institute appropriate action.

The NAACP lists among its board of directors no person from the South who has the respect of both races. The board includes Senator Herbert H. Lehman, a national Democrat, of New York City; Senator Wayne Morse, a national Democrat, of Oregon; Eleanor Roosevelt, a national Democrat and One-Worlder, of New York State; and Walter Reuther, a national Democrat and CIO president, of Detroit. All of these are known to be all white, with a purple passion against the South.

The character of the NAACP has been exposed by the Emmitt Till case. There was nothing in the case to warrant the notorious publicity. It was given notoriety only because it happened in Mississippi.

The alleged body of Till was taken to Chicago, but not for immediate burial. It was placed on public exhibition in one of the most uncivilized displays of desecration in modern times. Grotesque pictures were taken and distributed. The character of all the people of Mississippi was maliciously attacked. There was a full cry for immediate punishment of two suspects, contrary to the presumption of innocence to which every citizen—white or Negro—is entitled.

These activities are even more peculiar when you consider the NAACP's indifference toward other crimes.

Almost at the time of the Till incident, at least seven persons were seriously injured and three were killed without provocation by Napoleon Green, a Chicago Negro airman. The multiple slaying occurred in England in the presence of witnesses, thereby removing all doubt as to the identity of the guilty party. But there was no condemnation from the NAACP.

During the annual spring visit of school children to Washington this year, three teen-age Mississippi school boys were knifed near their hotel by a group of Negro men, but there was no condemnation from the NAACP.

In Chicago, during the National Governors' Conference, in August, a teen-age Chicago white girl was assaulted and killed by a Negro soldier. Even for this atrocious crime there was no condemnation from the NAACP.

More recently, three teen-age Chicago white boys were brutally murdered in the Chicago area. For this multiple crime too there was no condemnation from the NAACP.

There have been many crimes of violence involving white victims. Nowhere have they occurred more frequently than in Chicago, Washington, and New York City, where the NAACP maintains headquarters. And nowhere have they occurred more infrequently than in the South; including Mississippi.

It is revealing that the NAACP should pick out the death of one Chicago Negro in Mississippi, while ignoring so many other crimes, and in particular those crimes in Chicago, Washington, and New York City, where it maintains headquarters.

I mention these cases, not to minimize the death of any person, but to point up the racial bias, the discrimination, and the inflammatory character of those who decry justice in the South. The NAACP is not interested in justice. It is only interested in exploiting the Mississippi case in the interest of its fund raising campaigns. Anything for a dollar including the desecration of a human body.

No one can justly condone violence, and I am sure the people of Mississippi, with their good record of law enforcement, do not condone any crime.

The great majority of the American people, white and Negro, wherever they reside, are law abiding.

Out of some 15 to 20 million American Negroes, the NAACP can boast only of a polychrome membership of 250 thousand white and colored people. That is less than one-third of our State's Negro population. To me, this organization is not a National Association for the Advancement of Colored People. It is an association for the advancement of certain people.

It is not a representative organization. It has clearly demonstrated that it serves no constructive purpose in our State. It seeks to tear down, not to build up. Its leaders have openly attacked the South and responsible public officials who believe in racial integrity.

By contrast, there is nothing inflammatory in what the South Carolina citizen's councils have said. They have not concealed their identities behind a cloak of secrecy. They are attempting to furnish sound leadership in their communities.

I have, however, one word of caution. Any organization, if left to run itself, can quickly lose its good purpose by falling into the hands of the wrong people who would use it for selfish gain.

I do not belong to a citizen's council. I do not believe that the Governor of South Carolina should. I do not believe that the councils should become involved in personal politics.

The Gressette Committee merits the support of our citizens. It deserves your patience and understanding. It has worked untiringly to secure information and to formulate plans for the preservation of our separate but equal public-school system, within the framework of the law.

Because of the nature of its work, the committee has refrained from publishing its plans until it became necessary. No useful purpose can be served by the premature disclosure of information to those who would sabotage our separate but equal public-school system.

Until the Congress discharges its responsibility to curb the power of the United States courts to tamper with our public schools, we will have to live with the annoyance of the self-styled do-gooder and the professional agitator.

So long as we can continue to maintain our separate schools, as we are now doing, within the purview of the opinion, there is no point in taking some other action prematurely.

I strongly recommend that we continue our equalization program in good faith. In no better way can we preserve good schools with peace and friendly relations. The hope of the integrationist is for South Carolina to abandon its equalization program. In in other way can the integrationist hope to succeed.

A failure to provide equal facilities could prove more damaging, and more difficult and costly to overcome, than the opinion of the Supreme Court itself.

Much of the responsibility for maintaining our equalization program rests upon the local school authorities.

Requests for State funds for school facilities originate with them.

If we are to preserve our separate public-school system, we must in good faith preserve equal schools.

Today, our people, white and Negro, have more job opportunities, and enjoy a higher standard of living, and have better schools for their children, than ever before. With good education for our people, we can continue to move forward, both white and Negro, under our system of segregation, to an even better standard of living for all.

On the other hand, there is no room in South Carolina for anyone seeking to take the law into his own hands. We will not tolerate lawlessness in our State.

It is the duty of every responsible white person to see that no harm comes to innocent southern Negroes. The effort to mix the races is not sponsored by the Southern Negro.

It is also the duty of every responsible Negro to repudiate the false leadership of the NAACP and it alien white sponsors and to supply sound and sensible leadership for their people.

Our common task is one of patience, understanding, and unyielding determination. In this way we can minimize some of the tragedy which the Supreme Court would impose upon us all.

With the knowledge that right, justice, and truth are our allies, we will not fail. There shall be no compulsory racial mixing in our State.

Address of Hon. Carmine De Sapio

EXTENSION OF REMARKS
OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, February 20, 1956

Mr. MULTER. Mr. Speaker, I am pleased to call to the attention of our colleagues the address made on February 19, 1956, by the Honorable Carmine G. De Sapio, New York's Secretary of State, before the Kings Highway Democratic Club, Inc., on the occasion of the celebration of its 40th anniversary at the Hotel St. George in Brooklyn. His remarks follow:

Mr. Chairman, reverend clergy, Mrs. Friedman, Mr. Whitty, Congressman MULTER, distinguished guests and friends, it is a very great pleasure for me to join you this evening and to visit with so many of my friends in Brooklyn. This remarkable dinner is a tribute both to the leadership of the Kings Highway Democratic Club, and to the dedication and spirit of our party's members and supporters in the second assembly district. It is a prelude, too, to the determination of Democrats here—and everywhere else in our country—to stand united and strong and to undertake with vigor and enthusiasm the challenge which lies before us during the coming months.

I would like to paraphrase a popular television commentator, and ask what kind of week has this been? It was a week in which the sinister pattern of world events drove the free people closer to the realization of the need for preparedness and leadership, as Russia's rulers spewed new venom and hate.

It was a week in which was brought to light the fact that America was shipping tanks and arms to Saudi Arabia to be used in letting the agonized blood of the Israelis.

It was a week in which the Vice President of the United States defiled the memory of Abraham Lincoln and derided our constitutional form of government by characterizing what he called, a great Republican Chief Justice of the Supreme Court, as he sought to make reckless political capital of racial prejudice.

It was also Brotherhood Week.

It was Brotherhood Week all over America—in the movies, on television, in our newspapers and schools—and in meettings, in speeches all over our country we talked of brotherhood and of understanding and of achieving justice through compassion and love.

And this annual observance which was brought into being so that we might reaffirm our respect for our neighbors, and our concern for their well-being, found itself frustrated and mocked by the actions of men who have the responsibility for governing our Nation.

And I say to you, my friends, that unless an end is put to partisan artifice; to political hypocrisy; to politics as usual, the ideals upon which our Nation was founded and the justice which America is supposed to represent, will be drowned in the mire of venom, and suffocated in the smog of hate.

The world is the stage of a drama whose final curtain may well ring down upon the destruction of all mankind. And the part that each of us plays in this drama will determine the nature of the lives of future generations of our children * * * if, indeed, there will be future generations.

For if ever freedom was in a struggle for survival, it is now * * * in the age of the atom.

And as the tug of war between tyranny and liberty continues with unrelenting desperation, both sides seek new support from those who, by circumstances and need, remain undecided as to which course to choose.

That is why we spend so much money all over the world, trying to win friends and influence supporters for democracy. That, too, is why there exists all over the world a mad race for hydrogen might; for muscular superiority; for numerical supremacy. And that is why there is such an urgent need for bringing home to the people, everywhere, an understanding of principles, of ideals, of integrity, of morality; and yes, of political decency.

And we ask, what can the people of the world think of a government whose answer to the Russian threat of coexistence or war, this past week, was to help Russia to destroy the only bulwark for democracy in the Middle East?

What can the world think of an America which pompously reprimands satellite Czechoslovakia for sending arms to Egypt, at the same time that it sends weapons of war and destruction to a country, equally determined with Egypt, to destroy Israel?

What can the world think of our vacillation; of our double-talk in the face of Israel's urgent need for help—of our solemn proclamations of sympathetic neutrality—at the very moment that we send to her enemies the means for her annihilation.

Have we capitulated to Russia's ultimatum? Are we coexisting with Russia by helping her to destroy democracy, by helping her to prevert morality and decency and by sacrificing, to her lust for world domination, a country with whose people we have so very much in common? Was the sudden, belated lifting of the embargo, yesterday, a reaction to protest, or an effort toward justice?

The answer to these questions cannot be found in the utterances of the Secretary of State, because with painful consistency he says one thing, and inevitably does the other.

The answer cannot be found in the declarations of the national administration, because its record of performance, and the history of its philosophy, are at total odds with its pious expressions of sweetness and light.

The answer can be found only in the hearts and the wills of the American people, and it will be given to the world with resounding clarity and with neither compromise nor irresolution next election day next November.

Brotherhood Week, indeed.

Brotherhood Week for reasons of obvious symbolism commences each year on the anniversary of the birth of Abraham Lincoln. And it was on this occasion that RICHARD MILHOUS NIXON—the Vice President who wants to be President—visited our city to tell the world about his concept of brotherhood; about his understanding of its meaning, and force.

Of course, we would expect his comments to be shaded by partisanship. He would not be RICHARD NIXON if they weren't.

Of course, we would expect his statements to be characterized by falsehood. He would not be RICHARD NIXON if they weren't.

Of course, we would expect his talk to be arrogant and deceitful. He would not be RICHARD NIXON if it weren't.

But he had no right—even RICHARD NIXON had no right—to impose upon the people of the world, the ugly suggestion that our Supreme Court is controlled by a "Republican" Chief Justice, and that therefore segragation was outlawed in our schools.

And although the wrath of aroused public opinion was quick to descend upon his shoulders, the scars he left across the heart and the face of the world remain vivid and ugly, grim reminders of the shocking truth that the Vice President of the United States is completely devoid of understanding and compassion, and bears an unholy veneration for votes—votes at any cost.

We may take great comfort in the almost unanimous excoriation of his tainted—of his

stained remarks—by the press of our city, and elsewhere throughout the country. But we must also remember that similar attacks—even by Republican editors—haven't in the past, silenced this important public official who had the temerity to suggest that President Truman is a traitor, and who had the unconscionable gall to characterize the Democratic Party as a party of treason.

So bad is this man's taste, so evil is his concept of politics, that Walter Lippmann in the Herald Tribune—3 days ago—summed up the outrage of the editorials and the people when he said, and I quote: "RICHARD NIXON is a ruthless partisan. He is a politician who divides and embitters the people. A man who will exploit for partisan purposes a decision of the Supreme Court, does not have within his conscience those scruples which the country has the right to expect in the President of the United States."

But you may well ask Walter Lippmann if Dwight Eisenhower is not in fact the President of the United States. And the answer must be that the President and the Vice President are bound together, elected together; and are separated only by the single beat of a human heart.

But there is more to RICHARD MILHOUS NIXON than divisiveness and embitterment—and the love for his dog. This man is the very symbol of what was once known as the Republican Party.

We can no longer discuss the differences between the two major parties because the painful and awful truth is that there no longer is a Republican Party. They depend upon one man to carry them through * * * the one man who RICHARD NIXON himself said is the only Republican who could win the election * * * a man who, himself, incidentally, called RICHARD NIXON the greatest Vice President in history.

And in this helpless dependence upon one man, the Republicans have abdicated party principle and have forfeited party philosophy. They pretend to be all things to all people, as they are, in fact, everything to a small clique of privileged monopolists.

This man—this Vice President who wants to be President—typifies the arrogant disregard of his administration for the well-being of the common man; the flagrant disavowal of his administration's articulate promises so glibly made to the farmers, the wage earners, and the consumers of our Nation.

He typifies the bungling in our international affairs, generally, and the treacherous doubledealing in our affairs with Israel, particularly.

And he thereby vitiates everything which the people understand to be the brotherhood to which the Nation has pledged itself during this week.

But as the free world despairs at what RICHARD NIXON says and at what his administration does, it becomes increasingly incumbent upon the American people to put an end—once and for all—to his kind of moral chicanery and spiritual bankruptcy.

This is the responsibility of every American citizen. This is the challenge which faces every Democrat.

When we hear the Republican national chairman admit his dependence upon Democratic votes to return the administration to office next November, let us ask him if he really—it he honestly—expects Democratic votes to send NIXON and Dulles back to Washington.

When we hear Senator BARRY GOLDWATER talk of labor's conspiracy, let us ask him if he expects labor to send the administration back to office.

When the Secretary of Agriculture endorses the castigation of farmers and pooh-poohs the farm depression, let us ask him if he expects the farmers to send his administration back to office.

Let us ask the mothers of America if, in the light of their heartbreaking experience with the Salk vaccine fiasco, they will send this administration back to office.

Let us ask the slum dwellers if, in the face of the completion and willful breakdown in the housing program, they intend to send this administration back to office.

Let us ask the young people in our Armies, our Navy, and our Air Force if, in view of the deliberate scuttling of our armed strength, they propose to send this administration back to office.

Let us ask the small-business man who, in greater numbers each day, is forced into bankruptcy or swallowed up in large corporate mergers, if he expects to send the administration back to office.

My good friends, no matter whom we ask, the answer will be the same.

For the people know that the time has come to restore America to greatness; to strength; to principle, and to Democratic leadership.

This is not only the determination of Americans; it is also the hope of the entire free world.

And it is the opportunity and the challenge for everyone who believes in the Democratic Party's tradition of Government with a heart, of Government with a conscience, of Government in the true meaning of brotherhood.

Thank you very much.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Printing and binding for Congress, when recommended to be done by the Committee on Printing of either House, shall be so recommended in a report containing an approximate estimate of the cost thereof, together with a statement from the Public Printer of estimated approximate cost of work previously ordered by Congress within the fiscal year (U. S. Code, title 44, sec. 145, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on Printing, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. The money derived from such sales shall be paid into the Treasury and accounted for in his annual report to Congress, and no sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

DISTRIBUTION OF THE CONGRESSIONAL RECORD

To the Vice President and each Senator 100 copies; to the Secretary and Sergeant at Arms of the Senate, each, 25 copies; to the Secretary, for official use, not to exceed 35 copies; to the Sergeant at Arms, for use on the floor of the Senate, not to exceed 50 copies; to each Representative, Delegate, and Resident Commissioner in Congress, 68 copies; to the Clerk, Sergeant at Arms, and Doorkeeper of the House of Representatives, each, 25 copies; to the Clerk, for official use, not to exceed 50 copies; and to the Doorkeeper, for use on the floor of the House of Representatives, not to exceed 75 copies; to the Vice President and each Senator, Representative, Delegate, and Resident Commissioner in Congress there shall also be furnished (and shall not be transferable), 3 copies of the daily RECORD, of which 1 shall be delivered at his residence, 1 at his office, and 1 at the Capitol.

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Frank Brodie is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

PRINTING DOCUMENTS AND REPORTS

Documents and reports of committees with the evidence and papers submitted therewith, or any part thereof ordered printed by Congress, may be reprinted by the Public Printer on order of any Member of Congress or Delegate, on prepayment of the cost thereof (U. S. Code, title 44, sec. 162, p. 1940).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at $1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

OFFICERS OF THE SENATE

Secretary—Felton M. Johnston.
Chief Clerk—Emery L. Frazier.
Sergeant at Arms—Joseph C. Duke.
Secretary for the Majority—Robert G. Baker.
Secretary for the Minority—J. Mark Trice.
Chaplain—Rev. Frederick Brown Harris, D. D.

STANDING COMMITTEES OF THE SENATE

Committee on Agriculture and Forestry

Messrs. Ellender (chairman), Johnston of South Carolina, Holland, Anderson, Eastland, Clements, Humphrey, Scott, Aiken, Young, Thye, Hickenlooper, Mundt, Williams, and Schoeppel.

Committee on Appropriations

Messrs. Hayden (chairman), Russell, Chavez, Ellender, Hill, Kilgore, McClellan, Robertson, Magnuson, Holland, Stennis, Clements, Bridges, Saltonstall, Young, Knowland, Thye, McCarthy, Mundt, Mrs. Smith of Maine, Messrs. Dworshak, Dirksen, and Potter.

Committee on Armed Services

Messrs. Russell (chairman), Byrd, Johnson of Texas, Kefauver, Stennis, Symington, Jackson, Ervin, Saltonstall, Bridges, Flanders, Mrs. Smith of Maine, Messrs. Case of South Dakota, Duff, and Welker.

Committee on Banking and Currency

Messrs. Fulbright (chairman), Robertson, Sparkman, Frear, Douglas, Lehman, Monroney, Morse, Capehart, Bricker, Ives, Bennett, Bush, Beall, and Payne.

Committee on the District of Columbia

Messrs. Neely (chairman), Bible, McNamara, Morse, Frear, Beall, Hruska, Case of New Jersey, and Allott.

Committee on Finance

Messrs. Byrd (chairman), George, Kerr, Frear, Long, Smathers, Johnson of Texas, Barkley, Millikin, Martin of Pennsylvania, Williams, Flanders, Malone, Carlson, and Bennett.

Committee on Foreign Relations

Messrs. George (chairman), Green, Fulbright, Sparkman, Humphrey, Mansfield, Barkley, Morse, Wiley, Smith of New Jersey, Hickenlooper, Langer, Knowland, Aiken, and Capehart.

Committee on Government Operations

Messrs. McClellan (chairman), Jackson, Kennedy, Symington, Ervin, Humphrey, Thurmond, McCarthy, Mundt, Mrs. Smith of Maine, Messrs. Cotton, Bender, and Martin of Iowa.

Committee on Interior and Insular Affairs

Messrs. Murray (chairman), Anderson, Long, Jackson, O'Mahoney, Scott, Bible, Neuberger, Millikin, Malone, Watkins, Dworshak, Kuchel, Barrett, and Goldwater.

Committee on Interstate and Foreign Commerce

Messrs. Magnuson (chairman), Pastore, Monroney, Smathers, Daniel, Ervin, Bible, Thurmond, Bricker, Schoeppel, Butler, Potter, Duff, Purtell, and Payne.

Committee on the Judiciary

Messrs. Kilgore (chairman), Eastland, Kefauver, Johnston of South Carolina, Hennings, McClellan, Daniel, O'Mahoney, Wiley, Langer, Jenner, Watkins, Dirksen, Welker, and Butler.

Committee on Labor and Public Welfare

Messrs. Hill (chairman), Murray, Neely, Douglas, Lehman, Kennedy, McNamara, Smith of New Jersey, Ives, Purtell, Goldwater, Bender, and Allott.

Committee on Post Office and Civil Service

Messrs. Johnston of South Carolina (chairman), Neely, Pastore, Monroney, Hennings, Scott, Neuberger, Carlson, Jenner, Langer, Curtis, Martin of Iowa, and Case of New Jersey.

Committee on Public Works

Messrs. Chavez (chairman), Kerr, Gore, Symington, Thurmond, McNamara, Neuberger, Martin of Pennsylvania, Case of South Dakota, Bush, Kuchel, Cotton, and Hruska.

Committee on Rules and Administration

Messrs. Green (chairman), Hayden, Hennings, Gore, Mansfield, Jenner, Barrett, McCarthy, and Curtis.

UNITED STATES SUPREME COURT

Mr. Chief Justice Warren, of California, Hotel Sheraton-Park, Washington, D. C.
Mr. Justice Black, of Alabama, 619 S. Lee St., Alexandria, Va.
Mr. Justice Reed, of Kentucky, the Mayflower.
Mr. Justice Frankfurter, of Massachusetts, 3018 Dumbarton Ave.
Mr. Justice Douglas, of Washington, 3701 Connecticut Ave.
Mr. Justice Burton, of Ohio, the Dodge.
Mr. Justice Clark, of Texas, 2101 Connecticut Ave.
Mr. Justice Minton, of Indiana, the Methodist Building.
Mr. Justice Harlan, of New York, 1677 31st St.

OFFICERS OF THE SUPREME COURT

Clerk—Harold B. Willey, 3214 N. Wakefield St., Arlington, Va.
Deputy Clerk—Reginald C. Dilli, 1329 Hemlock St.
Deputy Clerk—Hugh W. Barr, 4701 Connecticut Ave.
Marshal—T. Perry Lippitt, 6004 Corbin Road.
Reporter—Walter Wyatt, 1702 Kalmia Rd.
Librarian—Helen Newman, 126 3d St. SE.

UNITED STATES JUDICIAL CIRCUITS

JUSTICES ASSIGNED

TERRITORY EMBRACED

District of Columbia: Mr. Chief Justice Warren. District of Columbia.

First judicial circuit: Mr. Justice Frankfurter. Maine, New Hampshire, Massachusetts, Rhode Island, Puerto Rico.

Fifth judicial circuit: Mr. Justice Black. Georgia, Florida, Alabama, Mississippi, Louisiana, Texas, Canal Zone.

Sixth judicial circuit: Mr. Justice Reed. Ohio, Michigan, Kentucky, Tennessee.

Seventh judicial circuit: Mr. Justice Minton. Indiana, Illinois, Wisconsin.

Eighth judicial circuit: Mr. Justice Clark. Minnesota, North Dakota, South Dakota, Iowa, Nebraska, Missouri, Arkansas.

Ninth judicial circuit: Mr. Justice Douglas. Washington, Oregon, Montana, Idaho, California, Nevada, Arizona, Alaska, Hawaii.

Tenth judicial circuit: Mr. Justice Clark. Colorado, Wyoming, Utah, Kansas, Oklahoma, New Mexico.

Appendix

The Spirit of Brotherhood

EXTENSION OF REMARKS
OF

HON. WILLIAM H. AYRES

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 21, 1956

Mr. AYRES. Mr. Speaker, on February 20, 1956, Mr. Harvey S. Firestone, Jr., acting in the capacity as national chairman for Brotherhood Week, addressed the National Conference of Christians and Jews held at the Sheraton-Park Hotel in Washington, D. C.

I believe you will agree with me after reading Mr. Firestone's speech that he has grasped the true meaning of brotherhood.

The gold medal brotherhood award was to be presented to President Eisenhower. Secretary of Defense, the Honorable Charles E. Wilson, received the award on behalf of the President, and read his remarks.

The Honorable EDITH NOURSE ROGERS, our colleague, attended the brotherhood dinner and has included her observations in today's RECORD:

THE SPIRIT OF BROTHERHOOD—TALK BY HARVEY S. FIRESTONE, JR.

Mr. Chairman, ladies, and gentlemen, it is a very great pleasure for me to be with you this evening and to talk with you about brotherhood in our Nation's Capital which possesses a rich heritage of our country's past and people whose leadership encompasses the high hopes for the future of the free world. In a world where disarmament is a dream of the future, and frightening weapons are the realities of the moment, it is comforting to know that there are enough men of good will to sustain and to develop continuously the idea of brotherhood.

For without brotherhood among men, both in word and in deed, our way of life loses much of its substance and much of its strength. Brotherhood is the firm foundation of the personal liberty we so strongly cherish.

If there is one seed from which our way of life may be said to have grown, it is the seed of personal liberty. And at the root of this liberty is a profound respect for the rights of others, as individuals, without regard to their race, their color, or their creed.

Brotherhood does not mean that every man is the captain of the team. But it does mean that there is a team, and that every man, if properly qualified, has a right to be its captain.

The concept of teamwork is fundamental in the development of America's greatness. We have discovered that one secret of success is working together as a team in running our businesses, in conducting our civic endeavors, in participating in our government and in giving our leadership to the world. We, of course, are well aware that teamwork does not mean complete uniformity of opinion. That's the kind of so-called teamwork found behind the Iron Curtain.

Our kind of teamwork is based on the recognition of the right of men to choose freely to work together for the accomplishment of a common aim. Each individual is not forced to join with others. But when he does, he helps accomplish the objective by working for it with other individuals. In other words, our kind of teamwork carries with it explicitly the roots of personal and individual freedom.

Every freedom brings with it a duty and an obligation. If we want to be free, we must see to it that others are free. If we want our rights respected, we must see to it that the rights of others are respected. In the last analysis, we can defend our own rights and freedoms best by defending the rights and freedoms of others. That concept, of course, is a fundamental one of the National Conference of Christians and Jews.

Although the National Conference of Christians and Jews was founded only 72 years ago, its objectives are centuries old. They are woven into the very fabric of American tradition. Indeed, the spirit of brotherhood is the spirit of our American way of life, just as the concept of free private enterprise is its body. To recognize the truth of that statement, we have only to recall the motives which impelled people to come to this country.

Among the first settlers in America were the Pilgrims who landed on historic Plymouth Rock 335 years ago. This small group of courageous pioneers left their homes across the sea to escape religious persecution. Rather than sacrifice the principles in which they so deeply believed, they risked their lives and their fortunes in a frail ship buffeted by winter winds and waves. They faced the danger of savage enemies to carve out with gun and sword, and scythe and plow, a new home in the New World.

As the years went by, they were followed by many other groups who sought over here the freedom which they were denied at home. And, ever since, America has been the refuge of all who thirst for liberty and justice, whether they be Protestants, Catholics or Jews.

In 1776, when the Liberty Bell pealed forth its message of freedom, men of all faiths became united, as never before, in the common cause of independence. They fought side by side in bloody defeat and in glorious victory.

In later years, during both World Wars, in Korea and other places where Americans have had to fight, they have fought together, not as Protestants, Catholics, or Jews, but as brothers all in a crusade for freedom.

The cold war in the tense world today is fundamentally a war of ideas that is being waged in the minds and hearts of men everywhere. There is only one way to defeat a bad idea, and that is with a good idea.

Fortunately, in this country we have that good idea. Freedom will always be more attractive than bondage. But we must be sure that our own house is in order. We must stand together on behalf of human rights. By so doing, we can strengthen the spiritual foundation upon which our society is based. We can defend the dignity of man as an individual and thereby take from our enemy one of his important weapons, which is the exploitation he makes of every crisis in human relations and of every denial of human rights.

America stands before the world today as a living example of the power of freemen. Never before has there been such an opportunity for us to demonstrate what freedom means and how vital it is to the peace and security of the world. And there is one thing we know: We must do more than merely preach freedom. We must practice it.

Freedom is priceless because it endows each individual with personal rights and privileges. Brotherhood is equally important because it is opposed to any violation of these personal prerogatives.

Naturally, most Americans are aware that America was settled by people who fled from religious persecution. They recall that this issue was so important that generations later, when the United States became an independent nation, freedom of religion was incorporated into the Constitution and became a basic law of the land. They recognize that no man should be judged by the color of his skin, the land of his origin, or the precepts of his faith. They realize it is the individual, the man himself, who counts.

They know that only by working in harmony in the bonds of brotherhood have generations of Americans been able to make the United States the most powerful, the most prosperous, and the most successful nation on earth. They know that the spirit of brotherhood has been the irresistible force which has made it possible for our country to grow, in the relatively short space of 180 years, from a small, impoverished group of independent colonies to the position of world leadership which it occupies today.

And yet, there are some people with prejudices so deeply rooted in their minds and hearts that they deny the reality of these facts. By word and by deed they practice persecution here in the land which owes its very existence to those who fled from persecution. There are others who are merely thoughtless. Unintentionally, they say and do things which would and offend.

The real danger in both prejudice and thoughtlessness lies not only in the resentment which they create, but also in the grist which they feed the mills of our enemies. For example, Communists and their fellow travelers pick up cases of religious prejudice, magnify them all out of their true proportion, and shout them from the housetops. They fan the sparks of resentment into the flames of vengeance. Then, with lying tongues, they paint a picture of life under communism in which they claim that no such discriminations exist.

Many forget that conditions in countries behind the Iron Curtain belie this claim. They do not remember that in Russia, and in her satellite countries, religion is condemned and that those who try to practice it are shipped off to labor camps, persecuted, starved, tortured and murdered. Under communism there can be on freedom of religion, no freedom of thought, no freedom of speech. Any departure from the party line is punishable as treason. Yet these wily subversives have the bold effrontery to criticize our way of life and our treatment of our fellow men.

Therefore, it is important that we strive to eliminate baseless prejudice and thoughtless criticism not only because of the individual resentment which they cause, but also because of the individual resentment which

they cause, but also because the add fuel to the fire with which our enemies are trying to destroy the American way of life.

You are all aware, I am sure, of the ways in which the National Conference of Christians and Jews carries on its positive program. But perhaps it will bear some brief repetition just to show how complete and how realistic it is.

The basic concept of the conference program is participation of people of all religious and racial groups. It calls upon educators to work with it through the schools and colleges of which they are a part. It seeks the cooperation of religious leaders to work in their churches and synagogues to make brotherhood a living reality. It asks leaders of all civic organizations to take its methods and materials into every civic organization in the community. It calls for the help of labor and management to put across its program in industry. And it asks the professionals of radio, theater, press and advertising to make the brotherhood concept a part of their every-day work.

Many thousands of Americans take part in conference programs as leaders, reaching millions of their fellow citizens seven days a week 52 weeks in the year, with a message of goodwill, harmony and understanding among men, a message of brotherhood that is realistic, down-to-earth and of immense importance to the survival of freedom in the world.

To my mind, a word which is often overrated is the word "tolerance." To me, it implies a mental reservation. It is negative. It connotes a grudging acceptance of a person who is not really regarded as an equal.

Brotherhood, on the other hand, implies no limitations. It is positive in every respect. It connotes recognition of every man as the brother of every other man and, therefore, an equal.

Let us realize the simple fact that Christians and Jews alike acknowledge God to be their Heavenly Father. Obviously, therefore, they must all be brothers. How, then, can any thinking person whose fundamental faith includes the Fatherhood of God ignore the brotherhood of man?

When a child first comes into the world, he arrives completely free from conscious dislikes of people. It is only in the days and years of growing up that he may come down with the disease of prejudice, and the principal carriers of the germ are apt to be the adults who mold his life.

Contemplating the innocence of a baby, we can realize the awesome power that parents, teachers, and adults in general have in shaping the world of tomororw through the children of today.

Because children are naturally without prejudice, we should make a conscious effort to instill in their hearts the positive worth of brotherhood as a way of life. Brotherhood is not a cure-all for the ills and disturbances of a grownup world, but it is a medicine that can do nothing but good provided it is prescribed early enough and taken consistently.

The idea of brotherhood suggests to former children the better world this might have been if we had been able to hold on tightly and completely to the mutual kindness and love for each other that is our birthright and our natural heritage as children of the one God.

Brotherhood does not mean we have to open our hearts and our homes to everyone we meet. We have the right to select our friends because we like them or our associates because we have interests in common. Nobody wants to spend his time with a bore or open his home to a thief. Brotherhood does not say that we should or we must. It asks only that we look upon others on the basis of their individual worth rather than on the basis of the accidental factors of their race, their color, or their creed. In short, it asks that we observe the Golden Rule: Do unto others as you would have them do unto you.

The cornerstone of brotherhood is the individual. By its very nature it must be personal. Like charity, it begins at home. It begins with you and with me. Unless we recognize that personal level of brotherhood, we shall weaken and dilute the effectiveness of our efforts.

While brotherhood is personal, it can have a profound effect on the international, interracial, and interreligious misunderstandings which exist in the world today. Brotherhood is like ripples in a lake, starting at one place but spreading gradually to the far edges of the water. We never know how widespread are the effects of a good act.

Brotherhood Week gives to us as Americans an opportunity to reaffirm our belief in the individual freedom of our fellow men. However, we must not lose sight of the fact that Brotherhood Week is only 1 week out of 52. It is important as a symbol, as a spotlight to focus attention on the day-to-day year-round operations of the National Conference of Christians and Jews.

Brotherhood Week does not mean that we start loving our fellow men with great intensity on 1 day in February, keep it up for 7 days straight, and then stop.

No; Brotherhood Week simply is a means of rising to a peak and obtaining widespread public rededication to the week-in and week-out work with which we are all concerned. The year-round work is what counts.

If the freedom we cherish is to survive in the world, we must find ways to eliminate the frictions, the tensions and the distrusts that turn man against man and nation against nation. We must first eliminate these irritations at home if we are to have hope of eliminating them throughout the world.

As a nation, we owe our position of leadership in the world today to the achievements of people of many racial and religious backgrounds who believe in brotherhood. Brotherhood is the belief of men and women who are confident of our country's continuing greatness. It is the belief of those who face the future with fearless hearts and abiding faith.

In Brotherhood we have an atomic idea whose chain reaction can spread to the hearts and minds of people everywhere. Let us use this powerful force widely and wisely. Let us believe in it. Let us live it. Let us support it.

By so doing, we can bring greater personal happiness to ourselves and our loved ones and help to achieve the goal of all men of good will: The brotherhood of man under the Fatherhood of God.

And now it is a very great honor and a real pleasure for me to present a well-deserved award to an outstanding American.

He believes there is "no alternative to peace" and has dedicated himself to that belief before the world. He has exercised the great moral force of his leadership to bring about notable progress in human relationse and increased personal dignity for all men throughout our land. His leadership has served as an inspiration to those dedicated to the cause of greater understanding among people who differ in race, in color or in creed.

He has translated the words of his beliefs into the deeds of his leadership. In his personal and in his public life, he has truly enlarged the areas of our human understanding of each other.

This 1956 Gold Metal Brotherhood Award, the highest honor given by the National Conference of Christians and Jews, is being bestowed upon President Eisenhower for his outstanding contributions to better understanding; to the improvement of human relations internationally, nationally and in the Nation's Capital; and for advancing the objectives of the National Conference of Christians and Jews, namely, the promotion of justice, amity, understanding and cooperation in all human relationships.

I would like to read to you the text of the citation accompanying this award:

"The National Conference of Christians and Jews World Brotherhood. The National Conference of Christians and Jews acclaims for his devotion to increased human understanding and his service to human need, Dwight D. Eisenhower. He has been ever ready to render that service be it at the call of the Government of the United States, the world community, or its humblest citizen. His sympathetic understanding of the spiritual as well as the economic needs of his fellow man is making an outstanding contribution to the survival of freedom.

"EVERETT R. CLINCHY,
"President.
"BENJAMIN F. FAIRLESS,
"National Cochairman.
"ROGER W. STRAUS,
"National Cochairman.
"JAMES F. TWOHY,
"National Cochairman.
"WASHINGTON, D. C., *February 20, 1956.*"

It is my privilege to present to you this gold medal brotherhood award on which is inscribed: "To Dwight D. Eisenhower, February 20, 1956. For outstanding contributions to the cause of brotherhood."

THE WHITE HOUSE,
Washington, D. C.

To the Brotherhood Dinner, the National Conference of Christians and Jews.

The gold medal brotherhood award which you have given to me is a high honor indeed. The medal symbolizes a most noble purpose, a rewarding peace among men through a common understanding of their common aspirations. I am deeply touched by your choice of me for this distinction. Most sincerely, I thank you.

The principles on which the Republic is founded, that all men are created equal in dignity and in inalienable rights, underscore the brotherhood of man.

Our faith that we can achieve among all peoples a mutual understanding and a mutual recognition of our common brotherhood, is fortified by the progress we have made at home by the practice of those principles in the last few generations—a brief span of time compared to the ages in which prejudice and misunderstanding have accumulated.

As we look forward now to the challenges of the atomic age in a world made small by rapid transportation and communication, we must with our fullest effort put brotherhood into practice by giving to others the rights and respect we want for ourselves.

In our efforts, we must maintain a sense of balance, a sense of perspective, and a capacity to listen as well as to speak. We must work for freedom and equality. In the words of President Washington, we must give "to bigotry no sanction—to persecution no assistance," and in the words of President Lincoln, we must act "with malice toward none, with justice toward all."

I congratulate the National Conference of Christians and Jews for its continued educational efforts toward better understanding in all human relationships and again express my deep appreciation for the brotherhood award.

DWIGHT D. EISENHOWER.

FEBRUARY 15, 1956.

The Spirit of Brotherhood

EXTENSION OF REMARKS
OF
HON. EDITH NOURSE ROGERS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 21, 1956

Mrs. ROGERS of Massachusetts. Permission was granted to extend my remarks immediately after the remarks from the gentleman from Ohio [Mr. AYRES]. I was greatly privileged to attend the brotherhood dinner and to hear the very fine speech of Mr. Firestone and the splendid statement of the President of the United States, and Secretary Wilson's moving remarks.

The President's statement and the remarks of Hon. Charles E. Wilson follow:

THE PRESIDENT'S STATEMENT

To the Brotherhood Dinner, the National Conference of Christians and Jews:

The gold medal brotherhood award which you have given to me is a high honor, indeed. The medal symbolizes a most noble purpose, a rewarding peace among men through a common understanding of their common aspirations. I am deeply touched by your choice of me for this distinction. Most sincerely, I thank you.

The principles on which the Republic is founded, that all men are created equal in dignity and inalienable rights, underscore the brotherhood of man.

Our faith that we can achieve among all peoples a mutual understanding and a mutual recognition of our common brotherhood is fortified by the progress we have made at home by the practice of those principles in the last few generations—a brief span of time compared to the ages in which prejudice and misunderstanding have accumulated.

As we look forward now to the challenges of the atomic age in a world made small by rapid transportation and communication, we must with our fullest effort put brotherhood into practice by giving to others the rights and respect we want for ourselves.

In our efforts, we must maintain a sense of balance, a sense of perspective and a capacity to listen as well as to speak. We must work for freedom and equality. In the words of President Washington, we must give, "to bigotry, no sanction, to persecution, no assistance," and in the words of President Lincoln, we must act "with malice toward none, with justice toward all."

I congratulate the National Conference of Christians and Jews for its continued educational efforts toward better understanding in all human relationships and again I express my deep appreciation for the brotherhood award.

DWIGHT D. EISENHOWER.

REMARKS OF HON. CHARLES E. WILSON, SECRETARY OF DEFENSE, AT BROTHERHOOD DINNER, SHERATON-PARK HOTEL, FEBRUARY 20, 1956

Mr. Riley, Mr. Firestone, honored guests, ladies and gentlemen, I am honored to be here this evening and have a part in your program in celebration of Brotherhood Week. I am doubly honored to represent our President and accept for him the gold medal brotherhood award. I know he regrets that he could not be here this evening and bring a personal message to you under the inspiration of the occasion and of this wonderful audience.

I did not have in mind to say anything myself but I have a few things in my heart and on my mind that perhaps would be in order for me to say. President Eisenhower is a living example—a symbol of good will and brotherhood. Not only is that recognized in our country but it is recognized throughout the world.

I thought I might tell you about a little incident that happened when he first started to improve on the road to health.

Admiral Radford and I went to Denver to see him for just a few minutes. He had been out on the sun porch. They brought him back in and he was reclining there in bed. The only thing he had on his mind that he wanted to talk about was whether he was going to recover to the degree that he could carry out the responsibility that he feels he has, not only to our country but in the whole world—perhaps a unique opportunity to personally contribute to peace and good will in the world and all he wanted to talk about was that and whether even if he didn't recover to the point of where he could carry on his duties as President, that he would at least recover to a point where, in some other capacity, he could still fulfill that opportunity, and I'm frank to confess to you, ladies and gentlemen, that had I been a woman I would have broken out in tears and cried.

Of course, I don't know any more than the rest of you do—whether he's going to run again or not. We have an express in the military business of "need to know" and I don't quite "need to know" up to now, but the time is getting a little short.

My particular assignment as Secretary of Defense is to make certain that our country is strong in a military sense and I would like to say that there is a fine group of dedicated men—military and civilian—in what is commonly called the Pentagon that are working diligently at that. We call it the defense team and in spite of what you may read in your papers from time to time we're making some progress with the job.

The purpose of our country in maintaining great military strength is in the hope that thus we will maintain peace in the world. Our military strength is not for aggression. Science, technology, and the mechanical production has been so phenomenally successful in the last few decades that science now has the clear promise of being able to raise the standard of living and the well-being of all the peoples in the world.

The progress in this area has been phenomenal and we all hope and pray that through strength we can maintain peace in the world until men and women of good will—men and women who recognize the responsibility of brotherhood have time to catch up in the sense of establishing better understanding among all human beings throughout the world so that the world will avoid another great catastrophe of war and that's why I'm so pleased and honored to be here this evening and accept for the Presiden this award.

Washington at Valley Forge

EXTENSION OF REMARKS
OF
HON. PHIL M. LANDRUM
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 21, 1956

Mr. LANDRUM. Mr. Speaker, as we approach the birth anniversary of the first President of our great United States it is well for all of us to reflect a few minutes on the hardships, sacrifices, and abounding faith in God indulged in by our forebears in laying the foundation for the great Government and wide prosperity which we enjoy today.

I received a few days ago some verse from the pen of Mr. W. A. Roper, of Gainesville, Ga., describing his feelings about George Washington and the sacrifices made by him and his men. I believe you will enjoy these simple expressions from a man who has grown from humble circumstances into one of the most valued and respected citizens of his country.

The matter follows:

WASHINGTON AT VALLEY FORGE

General was having his ups and downs,
And every day was losing ground.
With battles raging far and wide,
His trusted soldiers bled and died.

Some from hunger, some from cold,
But many died from being bold.
The wind was cold, the snow was deep,
Beneath the stars they had to sleep.

Some fell aside and ceased to go,
With bleeding imprints on the snow.
The day was gone, they lost the fight,
And souls of men were taking flight.

The cold north winds with anger o'er,
Were beating hard on General's door.
And battles raged from sun till sun,
But General George lost every one.

When all the world had seemed but lost,
A little dell this good man crossed.
And there alone on bended knee,
He sent to God a mighty plea.

And when he got his wires uncrossed,
The British ran till they got lost.
Then round the world went George's fame,
He prayed and prayed till victory came.

And may we like our George of old,
Keep pressing on to reach the goal,
And in the end we all may see,
A brighter world in which to be.

Gamma Sigma Fraternity—Workshop in Democracy

EXTENSION OF REMARKS
OF
HON. HUGH J. ADDONIZIO
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 21, 1956

Mr. ADDONIZIO. Mr. Speaker, 9 years ago a group of students at Rutgers University organized a fraternity in which persons of all colors, creeds, and nationalities were eligible for membership. This was an experiment in social living, designed to test the principle of broad fraternity participation.

The nonsectarian fraternity, Gamma Sigma, began at the university in the fall of 1947 when 12 undergraduates, 9 of whom were ex-service men, decided that the existing fraternities were not in keeping with the democratic traditions of our Founding Fathers. They wanted a fraternity that did not have arbitrary restrictions concerning race, creed, or color. So they organized their own fraternal group without any restrictions whatsoever, except character and the appreciation of one individual for another.

During the 1947–48 college term, when universities were bulging with veterans,

national fraternities sought new chapters all over the Nation. Several sent representatives to Rutgers, where Gamma Sigma was one of three new fraternal groups in the process of organization. When the fraternity pledged two Negro boys, the national fraternity representatives immediately lost interest.

When classes began in September 1949, it was discovered that the new fraternity had achieved the highest academic average of any fraternity chapter on the campus. The following year Gamma Sigma rented from the university the yellow house in fraternity row which it now occupies. It became evident that the organization was on the campus to stay. The heterogeneous group was welded into a strong unit.

Membership is pretty evenly divided among members of the three major faiths. The evening bull sessions are often equivalent to many courses aimed at explaining the religious beliefs subscribed throughout the world. Many nationalities are in the fraternity—Chinese, a Japanese student, the son of a Cuban educator, a Greek, and a Dutch boy.

The fraternity president, Richard Cogan, a history student, feels that Gamma Sigma has shown that all sorts of people can live together.

On Saturday evening, February 11, 1956, the young men of Gamma Sigma gave a testimonial dinner at the Somerville Inn, Somerville, N. J., to Mrs. Elin Johnson, the fraternity housemother. Mrs. Johnson, who came to the United States from Sweden 32 years ago, typifies the spirit of brotherhood of the group. She has by her devotion to the principle of the brotherhood of man inspired all those around her.

On the ninth birthday of Gamma Sigma Fraternity I wish to salute them and commend them for exemplifying the American tradition of equality. It is my hope that this workshop in democracy will have many years of continued success.

Mr. Speaker, under unanimous consent, I include in the RECORD various messages, a letter from Mrs. Eleanor Roosevelt, and a newspaper editorial concerning Gamma Sigma.

The messages are as follows:

STATE OF NEW JERSEY,
OFFICE OF THE GOVERNOR,
Trenton, September 30, 1955.

DEAR MR. COGAN: May I congratulate your fraternity, Gamma Sigma, on its 9th anniversary. The objectives with which your group was organized are certainly commendable. I wish you future success.

Sincerely yours,
ROBERT B. MEYNER,
Governor.

UNITED STATES SENATE,
Washington, D. C., October 5, 1955.

DEAR MR. COGAN: I wish to commend the men of Gamma Sigma Fraternity for their fine efforts on behalf of the true spirit of democracy at one of our leading universities. Fraternities should be founded in the belief of the brotherhood of man. Unfortunately, on some of our college campuses, the fraternity system has been perverted by policies of discrimination and exclusion.

Gamma Sigma, by its example, upholds that most fundamental precept of our Nation that all men are equal without regard to race, religion, or national origin. My own experience while mayor of Minneapolis in working to solve these problems of human relations has convinced me that much more can be done to level the barriers of prejudice and hate than we sometimes think when confronted with them in all their ugliness. It can be done through just such forthright action as yours.

The practice of toleration and good will as exemplified by Gamma Sigma has its influence far beyond your own fraternity. As you begin your ninth year of democratic living together, I hope you will be encouraged by the knowledge that others look to your example with respect and hope. Keep up the good work, I pray you.

Sincerely yours,
HUBERT H. HUMPHREY.

UNITED STATES SENATE,
Washington, D. C., September 30, 1955.

Mr. RICHARD COGAN,
President, Gamma Sigma Fraternity,
Rutgers University,
New Brunswick, N. J.:

Would you extend my congratulations to the members of the Gamma Sigma Fraternity of Rutgers University upon the opportunities that await them during the current academic year.

It is my understanding through mutual friends that this particular fraternity came into being 9 years ago because of a need felt upon your own campus for a fraternity into which persons of all colors, creeds, and nationalities could come and share in the common life and benefits of associating one with another. You who are members of this fraternity today inherit the high purposes with which this organization was founded and the current year offers you an opportunity to add to that history.

I again congratulate you on the opportunity and wish you a challenging and eventful year.

HERBERT H. LEHMAN,
United States Senator.

OFFICE OF THE VICE PRESIDENT,
Washington, October 4, 1955.

DEAR MR. COGAN: I have recently heard of your experiment in democratic living which is now past the experiment stage, having reached the 8-year mark.

As Gamma Sigma enters its ninth season, I wish for it good fortune and long life.

Sincerely,
RICHARD NIXON.

FEBRUARY 4, 1956.

DEAR MR. KRUGER: I am happy to send my good wishes to the Gamma Sigma Fraternity on the occasion of their annual alumni dinner. I think it is nice that you have this independent, nonsectarian fraternity and it must add greatly to the democratic way of life on your campus.

My best wishes to Mrs. Johnson for her good work with the fraternity members.

With all good wishes.

Very sincerely yours,
ELEANOR ROOSEVELT.

MESSAGE FROM CONGRESSMAN HUGH J. ADDONIZIO TO GAMMA SIGMA FRATERNITY

As Gamma Sigma gathers for its second annual alumni dinner, I wish to take this opportunity to extend, both to its members and to Mrs. Elin Johnson, who is being especially honored on this occasion, my most sincere congratulations and best wishes.

It has been 9 years now since a group of young men at Rutgers determined to enter upon an experiment in democratic living. The fraternity they organized has lived up to the finest traditions of American life. Nonsectarian, nondiscriminatory, Gamma Sigma has been a living demonstration that democracy can thrive on a college campus. Too often college fraternities are charged, and often rightly so, with raising discriminatory barriers. Yet college years are the time when such barriers should be broken down, when students should learn to know the peoples of all nations, all creeds, all races with which we share this land and this shrinking world. What better way to do this than by sharing the experiences of everyday living, by working together, or by long talks over that last cup of coffee at dinner? The fraternal spirit can and should do much to lift the barriers of discrimination and prejudice. For this is the spirit of brotherhood in its truest sense.

It is most fitting that Mrs. Johnson should be your honored guest. Her position as housemother to your fraterinty is one that requires tolerance and wisdom and discretion, as well as a firm belief in the principles for which you stand. On her depends some measure of the success of your undertaking.

It is my sincere hope that Gamma Sigma's crusade will meet with ever-increasing success, so that one day, the fraternal spirit having conquered, discrimination will have vanished.

May Gamma Sigma enjoy many long years of success.

[From the Toledo (Ohio) Blade of April 22, 1952]

If all fraternities operated on the same basis as Gamma Sigma at New Jersey's Rutgers University, there would be far less room for criticism of the fraternity system on the grounds that it produces unwholesome social byproducts in the form of snobbery, race, and religious prejudice.

In 1947, 12 Rutgers undergraduates, of whom 9 were ex-servicemen, organized Gamma Sigma without any membership restrictions whatever on race, creed, or color. The only criteria were character and individual appreciation. Its members today include a Chinese who came to the United States from Indonesia with his family, a Japanese student from Tokyo, an Albanian, a German youth who arrived here via England, and the son of a Cuban educator.

The fraternity has achieved a high scholastic average. It is permanently established in a house on the university's fraternity row. * * *

One suspects that Gamma Sigma's members have received an education from one another as valuable as anything they have been taught in the classroom. They are certainly far better equipped to live in a world in which, if it is to survive, whole nations must revise their concept of fraternity.

A Planner's Philosophy for the National Capital Region

EXTENSION OF REMARKS
OF
HON. DeWITT S. HYDE
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 21, 1956

Mr. HYDE. Mr. Speaker, under leave to extend my remarks in the Appendix of the CONGRESSIONAL RECORD, I include the following address by Prof. John T. Howard entitled "A Planner's Philosophy for the National Capital Region," which he delivered to the annual meeting of the American Planning & Civic Association in Washington, D. C., on February 7:

A Planner's Philosophy for the National Capital Region

(By John T. Howard, consultant on the regional plan of Washington, American Planning and Civic Association, 52d annual meeting, Washington, D. C., February 1956)

The previous speakers have reviewed the development of planning policies for the National Capital in this century, and the emerging forces that are now reshaping policy. It is my part to try to set before you the planner's view of what our future policies may be, or ought to be, in guiding the growth and development of the National Capital region toward the 21st century.

Let us start by adding to the background already presented, an atempt to gage the scope and dimensions of the planning problems with which new policies must cope. In terms of area, what will be the extent of the Washington metropolitan region a few decades hence? If we take the present jurisdiction of the National Capital Regional Planning Council and add to it a bit, we come up with an area of about 2,000 square miles, composed of the District of Columbia, Montgomery and Prince Georges Counties and perhaps part of Charles County, in Maryland, and Alexandria, Falls Church, Arlington, Fairfax, and parts of Loudon and Prince Williams Counties in Virginia. This is equivalent to a circle of 25-mile radius, but it runs only 20 miles—about halfway—toward Baltimore, and about 30 miles to the northwest, west, and south. This 2,000 square miles is a perhaps conservative estimate of the territory that will be directly tributary to, and geographically a part of the National Capital region before the year 2000.

What will be the population of this area? It is now over a million eight hundred thousand. A number of forecasts have recently been made, which indicate a total of close to 4 million people by about the year 2000. If we accept the forecast of 300 million for the United States as a whole for that date, this is not an unreasonable ceiling. Our own studies are still in progress, but let us say, an increase of perhaps as many as 2 million people in the National Capital region during the next 30 or 40 years.

What happens when we put these two figures together? Our present population is using about 200 square miles for urban purposes, at a rough estimate. This counts the houselots, the stores and offices, the warehouses and factories, schools, institutions, Government buildings, parks, cemeteries, golf courses, railroads, waterworks, airports, and streets—all the uses of land that directly serve the urban population; it leaves out farms, woods, swamps, vacant land and water areas. It assumes about 75 acres of urban use per 1,000 population. But for the future, all trends point to a rate much higher than that; house lots are bigger, school sites and airports are bigger, factories are single-story with much parking, highways are wider—for nearly a century, new urban areas have been built at progressively lower densities than before. It seems reasonable that in the years ahead we will use up for urban purposes about a 140 acres—nearly twice as much—for each 1,000 of new population.

Two million new people, then would require about 400 more square miles of new urban land—land that is now rural. Added to the 200 we are now using, that means a maximum of about 600 square miles of land put to urban use by the year 2000. But note that this is less than a third of the 2,000 square miles that comprise the region.

The problem of our planning is to guide the development of about 400 square miles of land—the locations of all of the activities of the new 2 million people—in addition to whatever redevelopment needs to be done within the 200 square miles already urbanized. Where, within the 2,000-square-mile area, should this growth be encouraged? How should it be organized in space—what patterns should be sought? What should be the criteria and the standards for our planning?

Obviously we need a whole battery of criteria and standards, to apply to each of the manifold elements of an urban environment for four million people. These are the matters on which we need policy decisions. And it is vital that these policies should be consistent, each with the others, or no comprehensive plan can be devised that will give force and effect to them all. I am going to try to outline my view of the shape that some of these policies should take, in regard to some of the more significant aspects of the National Capital region of the future. My suggestions are not official; they have not been cleared with anyone, and represent merely personal opinions. I lay them before you for your judgments, as to whether they are valid policies for this area.

Let us take first the feature of the National Capital region that is its reason for being: the seat of government of the United States, the place of business of the national legislature and the chief executive, and the nerve center of government administration. An obvious criterion is the housing of these governmental activities on sites, and in relation to each other, in such a way as to maximize the efficiency of all their operations. Equally obviously, efficiency requires interaccessibility among key people and key agencies. Even more obviously, our national Government has become so complex, and its personnel so numerous, that there is a practical limit to the number of key people to whom interaccessibility can be provided. A corollary criterion, then, is that the National Capital region, or at least its core, should house only those parts of the National Government among which frequent face-to-face contracts are essential; and all others should be located—or relocated—somewhere else.

But the "seat of government" has another function, beyond mere functioning. It is a symbol of the ability of freemen to govern themselves. In the language of the National Capital Park and Planning Commission's 1950 report on the comprehensive plan, "the monuments (of national significance) have a true and leading place, to inspire the citizen and visitor with the national Capital's function as the setting for the spirit as well as the operation of democracy". Here is a policy to guide our planning, to be coupled with another also in the words of the same report: "Now 'working' buildings will probably work better, if their efficiency is not subordinated to magnificence."

The second significant aspect of the region is to shelter its inhabitants, a function shared by every metropolitan area. It should surely be a planning policy to make the residential parts of the region places for good living—not merely healthful, but convenient and pleasant. The goal of our American society is the fulfillment of the growth capacities and potentials of each individual within it, and as a feature of that goal to provide opportunity for a range of choice to match the range of kinds of individuals that we are. Our capital city should express this goal in its planning, not only to the extent that every city should, but even more.

This means residential areas that are varied, offering housing types to meet the needs of all our kinds of family and all our income groups, from the single worker and young working couple to the many-childed and the retired; from the nightclubber to the gardener, the solitary to the gregarious, the quiet to the noisy. It means schools and local institutions that meet standards of site size and neighborhood location. It means shopping and consumer services and entertainment that are convenient and varied, accessible but not intrusive—the bright lights are fun, but also it should be possible to walk or ride without flashing neon shouting from every corner to buy or eat or watch something. It means facilities for culture and education and religion, housed and sited with a dignity that conveys more than lipservice to the respect we claim for them.

And, lastly, it means opportunities for recreation of all kinds, both local and regional—the playground and the quiet little park; the athletic grounds for players and for watchers; the picnic place, the boating and riding and swimming places; the woods and streams; the natural reservation big enough to get lost in. There should be enough of all of these and so placed that everybody can get at them. And beyond the measurable requirements for specific recreational activities, natural open spaces are very much needed to break the monotony that has become so typical of our suburban sprawl, not only for visual pleasure, but to divide what would otherwise be frighteningly big urban areas into communities to which people can feel that they belong, in scale with human dimensions.

These criteria are no more than the accepted policies for the planning of residential areas and services that have been crystallized during the last generation. I have repeated them, not because they are new, but because they are important.

A third aspect of the region is as a workplace. If good living is the goal of cities, making a living is the first essential. Though the Federal Government is and will be the prime employer, the majority of the population is and will be supported by other economic activities—most of them serving the Government-employed or located in Washington because the Government is here, others independent of Government and located by another regional orientation. It must be a planning policy to foster the prosperity of all these economic activities, by assuring sufficient space for efficient operation, in locations accessible to labor supply, markets, and the other essential factors. This means attention to the differing requirements of different kinds of retail business center; and to the requirements of administrative offices, professional services, and the manifold operations involved in the processing, shipping, and storage of goods of many kinds, for local and nonlocal markets. And this brings me, without attempting to define the varying criteria for these many forms of economic activity, to a fourth aspect of the metropolitan region.

Let us look at it now as a complex structure of many functioning parts—the many different land uses, each a place where people do something—live, learn, play, make, buy, sell, legislate, administer, and so on—all knitted together by systems of utilities, communication, and circulation, whose functioning makes it possible for people to do these things in these places. Planning technique is concerned with the designing of this complex structure, or rather of its future growth and change. Planning policy is concerned with the objectives of the design. A number of these objectives have already been outlined, but decisions in regard to the design of the service systems are so influential in achieving—or thwarting—these objectives, that they partake of the nature of policy.

The two utilities for which this is especially true are water supply and sewerage. The over-riding characteristic of water supply is that it is limited; so it must be a regional planning policy to so dispose the various urban uses of land as to conserve that supply, and to conserve also all possible fu-

ture opportunities to utilize it. The limits of water supply may turn out to be the ultimate controls on the future population of the region, and thus the determinant of all other planning policies.

But water supply and sewerage have another characteristic, in that urban development cannot take place without them—except at such low densities as to be in effect rural rather than urban—but where water and sewer are provided, urban development is almost inevitable. Therefore, since we are projecting a total quantity of urban development that will occupy less than a third of our regional area, decisions as to where or whether to provide water and sewer service are tremendously influential in determining where that growth will occur, and should not be undertaken lightly. The policy that stems from this is that these decisions should be coordinate with community planning policy, as expressed through whatever plans for patterns of land use and nonuse that may be finally arrived at.

In the same category are many elements of the region's circulation system. The airports and the railway and highway routes that connect the region to the outside world not only feed into and out of it the people and the goods that keep the metropolitan area alive, thus making their efficient design and location a matter of major regional planning concern. They, as well as the intra-regional net of highways and transit lines, also exert great influence upon the future location of land uses and distribution of population. Those who decide where new highways are to go will also be deciding where new subdivisions and new outlying industries will go. It is the interaccessibility of all of the working parts of the region that makes the region work, as an economic and sociological unit. It is accessibility that makes land useful for urban purposes; so the providing or withholding of access is tantamount to deciding whether or not the land shall be used. From this I draw the same policy for the utilities, that major highway and transit decisions must be coordinated with land use planning policy.

There are other obvious ways in which the planning of transport facilities need to be coordinated with the planning of land use and population distribution. An overloaded transport route may be relieved by increasing capacity or providing an alternate route between the origin and the destination; it may also be relieved by moving some part of the destination to a place nearer or to, or in another direction from, the origin. It is a matter of planning policy to decide which course of action will ultimately best serve the future goals of the region. The policy I propose is at least to be aware of these two alternatives; which I would choose, I will say something about later.

But before leaving the subject of circulation, I would like to suggest some subordinate policies, which are perhaps more in the nature of standards. The journey to work, which is the single largest burden on the circulation system, should be so provided for that most workers spend no more than half an hour, and few more than 45 minutes, on this journey. At the same time, the system of facilities should make it possible for every worker's home to be within this range, not of all workplaces in the region, but of all kinds of workplaces, including the center of the city. Something like this same standard should apply, and would automatically, to the journey to shop. And the measure of interaccessibility among the Government agencies (and Government-oriented private offices) that need it, should probably be under half an hour. But it is relevant to point out that, either by modern express highway or by modern rapid transit, only half an hour separates two points that are 25 miles apart if the facilities are not overloaded—plus, of course, time to and from the express facility. This suggests that, given the facilities properly routed, there is hardly any part of our 2,000-square-mile region that could not be made sufficiently accessible to the center and the other parts to meet these standards, and thus qualify for urban development as an integral part of the National Capital Region.

The next aspect of the region that I want to mention looks at this territory as a not insignificant geographical segment of our country. As such, it has natural resources which it is our responsibility not to squander. These are not alone places of scenic beauty, nor the water that the region itself needs. There are agricultural resources of soil for pasture or tillage, which, if not irreplaceable in the sense that they cannot be substituted for by farming in other regions, are at least irreplaceable here; if once converted to urban uses, they cannot be converted back at a later time. Agriculture has a place in this regional economy, and it should be a planning policy to conserve this resource wherever there is a reasonable alternative location for urban use.

Finally, I suggest that we look at the National Capital region on yet another light, as the beleaguered headquarters of the free world in a conflict that we have been told may continue for a generation or more. Is there not a planning responsibility here, and therefore a reason for a planning policy?

If there is a risk of active war—and the national budget suggests that there is—can the kind of planning that is done for the physical development of this metropolitan area—and others—help to allay that risk? It seems to me that it can. An article by Hans J. Morgenthau in the January Bulletin of the Atomic Scientists states: "The present atomic stalemate is composed of four main factors: the, for all practical purposes, evenly matched atomic capabilities; the similarly matched capabilities for defense; the similarly matched availability of vital targets; and the monopoly, vested in the United States and the Soviet Union, of the capability to wage all-out atomic war." Alongside this quotation let me put one from last Friday's Christian Science Monitor: "Soviet industry under this—current 5-year—plan is to continue its trek eastward beyond the Urals into the heart of Siberia. * * * By 1961, if everything goes well, the country will be less vuluerable to attack. * * * Few parts of the sixth 5-year plan are more likely to be carried out." You all know what has happened to this country's vital targets during the last 10 years; they have become increasingly attractive, especially the National Capital region. Several hundred thousand more Americans, some of them quite important to the working of our country, are now within the destructive range of a bomb dropped on the Capital.

There are three phases to a consideration or urban vulnerability. The first, and, we hope, the only one ever tested is the efficient performance of a city's functions during peacetime—in this case, National Government and international affairs. This falls within the scope of the planning policies already described. The second is minimization of destruction under attack; and, the third, ability to quickly recover after attack and resume the vital function. Can the future growth and change of this National Capital region be so planned as to achieve these objectives? I believe that it can, and in such a way as to strengthen rather than weaken every one of the proposed planning policies that I have presented. And if this can be done, the present precarious balance may be prevented from shifting against us, and the risk or war not grow greater.

But the inevitable conclusion of this reasoning is the framing of a proposed planning policy that would surely be highly controversial. It involves doing everything possible to check the present trend of growth all around the fringes of the metropolitan urbanized area, and seeking to channelize as much new growth as possible into the outer parts of the region as I have described it. It means adoption of a policy by the Federal Government of relocating agencies to far outlying sites; and by utility, highway, and transit agencies of deliberately withholding extensions of service to the areas that are now considered to be next, in line for development, and deliberately providing services and creating accessibility in areas that are at a safe distance from the District core. It means adoption of a zoning policy by local jurisdictions that is equally revolutionary. It means discouraging higher densities in the District of Columbia, whether for apartment houses or for office buildings; in fact, discouraging the location of new economic activities with a radius of many miles from the Capital.

But what about the positive aspects? Is such a policy consistent with reasonable peacetime goals? Let us review quickly the other policies I have suggested. First, geometry confirms that there are the 400 square miles of land needed by our 2 million additional people, within the region but beyond a 20-mile radius. Second, given a new circulation system—which is engineeringwise perfectly feasible—the necessary accessibility could be created, to enable new functions or relocated functions, and people, to perform as integral parts of the metropolitan region in such outlying locations, without impairing the efficiency of intercommunications. Third, the ceremonial and symbolic functions of the Capital would be enhanced rather than impaired, by removing the temporary buildings—and relocating an equivalent number of Federal employees. Fourth, many of the desiderata of a good residential environment could be better provided for in new and planned centers of population, than in a continuation of the gradual accretion at the edges that is progressively depriving the present central population of access to rural areas; and the preservation of accessible public and private natural open space would be made possible. Given the utilities, the work places and the circulation system, houses and schools and churches and supermarkets can be built and well-planned, anywhere. Fifthly, then, new economic activity—and especially industry activity of a kind not tied to the presence of the Federal Government—can also flourish, on spacious sites, with new labor markets and new interregional transport lines.

The final advantage that I offer for this policy is that it would preserve a future freedom of choice and action. The one thing we know is that we cannot predict the future accurately, and may therefore want to change our minds later. Regional development at low density makes possible a future increase of density; should world situations and planning technologies change, the open spaces can be filled in and low buildings replaced by skyscrapers. But if we plan and build at high densities now, we are committed; the laws of land economies and inertia make reductions of density practically impossible.

The National Capital region has a choice of alternatives. In very general terms, I have described one. It seems to me that it would be a good policy to adopt—good for the efficiency of the Federal Government, good for the people now living here, good for the new people to come, good for the country as a whole—perhaps contributing to the good of the world. I submit it for your judgment.

Office of Vocational Rehabilitation Looks Back on Decade of Accomplishment

EXTENSION OF REMARKS
OF
HON. AUGUSTINE B. KELLEY
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 21, 1956

Mr. KELLEY of Pennsylvania. Mr. Speaker, under leave to extend my remarks, I wish to include something of the accomplishments of the Office of Vocational Rehabilitation as reviewed over the past 10 years. This bureau prepares the handicapped for employment and aids in the field of job placement:

OFFICE OF VOCATIONAL REHABILITATION LOOKS BACK ON DECADE OF ACCOMPLISHMENT

(By the Information Service, Office of Vocational Rehabilitation, Department of Health, Education, and Welfare)

The United States was slow in coming to the realization that, like its natural resources, its human resources must be both conserved and utilized to the utmost. Since 1920, however, this realization has grown steadily.

Unfortunately, it was not until the critical manpower shortage of World War II made it imperative to utilize handicapped individuals in the labor force that the country really learned that, when properly prepared and placed, disabled men and women make good workers. During the past 10 years, 556,000 disabled men and women have been restored to productive jobs through the nationwide State-Federal program of vocational rehabilitation. This number represents 65 percent of all rehabilitations by the State vocational rehabilitation agencies since the national public program was established by Congress 35 years ago.

Experience over the years has demonstrated that the range of occupations that handicapped persons are qualified for is almost unlimited. In growing numbers, disabled individuals have succeeded in the professions, in agriculture, in all phases of commerce and industry, in communications, and in their own business endeavors.

The accomplishments of the past decade can be accounted for in a number of ways. First of all, in 1943 the Barden-La Follette amendments to the Vocational Rehabilitation Act paved the way for State agencies to supplement their training and counseling services with physical restoration. Previously, they had been obliged to train around the disabilities. The full effect of these measures was felt only after 1945 when the physicians, physical therapists, and other medical people were able to turn from their wartime tasks to civilian rehabilitation.

Another factor was the increased recognition and acceptance of the fact that rehabilitation is the only method of overcoming disability until medical science finds the cure for all disabling diseases. This has resulted in a heartening increase in cooperation among the various public and voluntary agencies concerned with disability.

The value of scientific advances in methods of reducing the handicapping effects of disability has been increasingly demonstrated. And with these advances came a steady improvement in the quality of rehabilitations, despite the fact that more difficult cases were being attempted. The restoration of more and more paraplegics probably has done more than anything else to convince the Nation that most disabled people can attain the happiness and dignity of productive life.

Then there was the recognition and appreciation of the size of the disability problem—an estimated 2 million disabled individuals who could profit by vocational rehabilitation. This has had a tremendous impact upon the social and economic strength of our country since disability has become a major cause of public and family dependency. Yet it has also been demonstrated that the rehabilitation of the disabled more than pays for itself in dollars and cents.

Looking at the cumulative record of earnings and taxpayments, we see truly amazing results. For example, in one decade the earnings of rehabilitants increased nearly $3 billion, and their Federal income taxes for the period were estimated at $298 million. Yet, the total expenditures for the public program of vocational rehabilitation were just $227 million for that period. It is, then, a demonstrable fact that vocational rehabilitation not only pays its way, it also returns a profit on the investment.

All of the factors cited above influenced the enactment of the Vocational Rehabilitation Amendments of 1954—the most important legislative advance in the history of the program. Public Law 565, with its authorization of increased funds for expanding both public and private rehabilitation operations and facilities, is expected to result in an even more significant increase in the number of rehabilitations in the next 10 years.

It is clear that several factors have combined to give the handicapped of today a better chance than those of the past and to provide much greater hope for the handicapped of the future. All technical advances, however, and all financial and legislative support would have failed without the dedicated and tireless effort of the skilled men and women in the State programs of rehabilitation. This is especially true of the work of the individual counselors. They have helped to make the efforts of all others more effective.

Upper Colorado Scheme Tramples Water Rights in California, Arizona, and Nevada

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 21, 1956

Mr. ROOSEVELT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement on the upper Colorado River storage project:

THE UPPER COLORADO RIVER STORAGE PROJECT WOULD SERIOUSLY IMPAIR WATER RIGHTS IN THE LOWER BASIN OF THE COLORADO RIVER COMPRISING THE STATES OF CALIFORNIA, ARIZONA, AND NEVADA

H. R. 3383 is planned on interpretations of the Colorado River compact which are the exact opposite of those involved in the planning and operation of Hoover Dam. These interpretations are at issue in *Arizona* v. *California*, now before the Supreme Court. Arizona, California, Nevada, New Mexico, Utah, and the United States are parties to this litigation and will be bound by the result. The Court recently denied a motion to join the upper basin States as such, at this stage of the proceedings, by a 5 to 3 vote, without opinion. The important thing, however, is that the United States will be bound by the final decision and will be required to operate its projects, whether in the upper States or the lower, in accordance with that decision. That decision will determine which set of assumptions, those on which lower-basin projects have been built and are operating or those on which the upper-basin project is planned, is correct. Both cannot be.

Evidence of the impact of the upper-basin project upon the southern California area is found in a report submitted to the San Diego County Water Authority in September 1955 by a board of engineers composed of Raymond Hill, John Longwell, and Carl Rankin (Mr. Hill was retained by Colorado in 1953 to report to that State on the water resources of the Colorado River available to it. See S. Doc. No. 23, 84th Cong., 1st sess.). Conclusions in the report to the San Diego County Water Authority pertinent here are (see report, p. 20):

"16. When the upper Colorado River storage project is constructed and in operation, there will not be a sufficient flow in the River below Lee Ferry to supply the full right of the metropolitan water district, namely, 1,212,000 acre-feet per annum. It is quite probable that the flow will not take care of more than about one-half of the full right.

"17. In order to obtain its full right in the Colorado of 1,212,000 acre-feet per annum, it will be necessary for the metropolitan water district to make other arrangements to replace the deficiency resulting from the construction of the upper Colorado River storage project.

"18. Any reduction in the Colorado River aqueduct diversions will mean a proportionate decrease in the amount of water available to the San Diego County Water Authority through the existing aqueduct. Its effect on the authority would be disastrous."

Thus these California agencies which have had firm contracts with the United States since the early 1930's for the delivery of fixed amounts of water and which have constructed works costing hundreds of millions of dollars to carry this water to the coastal plain, face a loss of half of their water right through this project. As the report notes, the effect would be disastrous.

While this litigation is pending and while the water rights remain in doubt Congress should not authorize H. R. 3383.

Its Record the Republican Platform

EXTENSION OF REMARKS
OF
HON. PAGE BELCHER
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 21, 1956

Mr. BELCHER. Mr. Speaker, under leave granted, I wish to insert in the RECORD the following editorial entitled "Its Record the Republican Platform" as it appeared in the Enid Daily Eagle, Tuesday, February 7, 1956:

ITS RECORD THE REPUBLICAN PLATFORM

With Democrats running around wildly seeking an issue or issues from which to build a campaign platform for next fall's election, what will the Republicans offer? According to Senator ROMAN L. HRUSKA, of Nebraska, who spoke in Enid, Saturday, the answer is simple: It will run on its record of accomplishments in its 3 years of administration.

Firstly, the Senator points out that the Eisenhower regime has kept the country at peace, after wiping up a Truman so-called police action which cost us 130,000 casualties in Korea. It has tried to correct the evils

left from the Yalta Conference. It has sought and found new alliances and new treaties, strengthened our Armed Forces throughout the world, built up stockpiles of arms and strategic materials, yet has been ever ready to discuss any reasonable suggestions for peaceful solution of international difficulties.

Domestically, the administration has reestablished honor and integrity in Government; it has reestablished public confidence in the conduct of national affairs. It started out by cutting the Truman budget by $10 billion, a budget Mr. Truman had said couldn't "be cut 15 cents with safety." This year, it will balance the budget, with perhaps a surplus.

The GOP followed this with a tax cut of more than $7 billion, 62 percent of which went to individuals, with a large percentage in the lower income brackets benefiting. It reestablished the stability of the dollar, which had fallen to a value of only 52 cents under its predecessor regimes; and has held the value steadily at that figure, this without either deflation or inflation.

Under the Republicans during the past 3 years, wages have reached the highest average in the Nation's history and working conditions have been brought to the highest level ever. During its regime, the value of the national production has reached an all-time peak; and employment at above 62,000,000, a record, has been achieved, without a war to bolster it. The previous administration had worried because it said 60 million jobs would be needed by now, and the Republicans wouldn't be able to supply them. They have, and more.

Farming remains the one weak point in the economy but vigorous steps are being taken to remedy this, and already one bill in the President's nine-point farm program has been passed. Others are rapidly advancing in committee. Farm exports have been increased and the farm export program put in the Department of Agriculture, where it belongs. When it is considered that most of the loss in farm income in the past 5 years occurred under the previous administration, and later under continuing laws passed by that administration, it will be seen that the Republican effort at agricultural improvement has been hampered long by inherited difficulties and inherited legislation, which, due to future commitments, could not be changed overnight.

All in all, the record is one of progress and achievement. It is one of peace and prosperity. It is one just getting fully rolling and which offers the best possible hope for the country through the continuance of the party in power. Why shouldn't it run on its record?

San Francisco's Need for Great Circle Airline Connections

EXTENSION OF REMARKS

OF

HON. WILLIAM S. MAILLIARD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 21, 1956

Mr. MAILLIARD. Mr. Speaker, the city of San Francisco is rapidly assuming its logical position as a leading world air transport center. The city's geographic location and excellent airport facilities as well as its historic position in the world of trade are some of the many reasons why its citizens feel justified in seeking more and better airline service, both domestic and international.

The city is a natural terminal location for the increased great circle traffic which is bound to develop. Therefore, we were particularly heartened by President Eisenhower's request to the Civil Aeronautics Board for a reopening of Pan American Airlines' application for approval of its great circle proposal for service to the Orient. With the coming advent of jet transport, the economies and convenience of the great circle route will add even greater emphasis to the present necessity for the establishment of such service to and from San Francisco.

Four of our city's leading newspapers have recently discussed this matter in editorial comments. Under leave to extend my remarks, I should like to bring these editorials to the attention of my colleagues:

[From the San Francisco Examiner of January 19, 1956]

HOLD IT HERE

The Civil Aeronautics Board owes San Francisco an opportunity to make its best possible case for a great circle air route to Europe with San Francisco as the Pacific coast terminus. That means a hearing should be scheduled by the CAB in San Francisco.

A big expansion of great circle flying is in the offing. Pan American World Airways and Trans World Airlines have both applied for Pacific coast to Europe routes with San Francisco among their desired terminals. British BOAC, German Lufthansa and more lately Dutch KLM are all interested in competing, though KLM apparently proposes to bypass San Francisco for Los Angeles as Scandinavian Airlines System presently does.

Last year, when direct service from San Francisco to Central and South America was up for consideration by the CAB, a local hearing enabled the city to make an impressive and winning case. It is entitled to the same opportunity now, for inclusion on great circle routes both to Europe and the Orient is vital to San Francisco's commercial future.

[From the San Francisco News of January 20, 1956]

FIGHT FOR AIR ROUTES

It becomes increasingly manifest that San Francisco will have to fight every step of the way to maintain its position as a world air transport center.

In the terrific competitive fight among the airlines for routes all around the globe this city must insist upon being counted in as a major terminal. Scandinavian airlines passed us up in favor of Los Angeles a short time ago. Now the Dutch KLM line proposes to do the same thing.

A new opportunity to win better trans-Pacific service is opened by President Eisenhower's request of this week that the Civil Aeronautics Board review its decision upon Pan American Airways' application for right to fly the great circle route to the Orient.

The President said "new circumstances and new developments" warrant reexamination of the request. He did not specify what they are, but there is a possibility he was thinking about inauguration within 3 years of jet commercial transport service.

Pan Am, with the high speed jets it has ordered, would be able to fly from San Francisco to Tokyo in 9 hours and 27 minutes over the great circle route. The advantage this would afford business here and in Tokyo needs no elaboration.

The CAB, in reviewing the case, must certainly take that into consideration.

San Francisco must insist upon having airline services equal to or better than any other city on the Pacific coast. Awarding Pan Am permission to fly the great circle route would be an important step in fulfillment of that purpose.

[From the San Francisco Call-Bulletin of January 21, 1956]

NORTH POLE-VAULTING

As the advent of intercontinental jet passenger flights approaches, San Francisco's need for great circle airline connections grows correspondingly greater. And the need is more than somewhat urgent right now.

The omens are auspicious. A Civil Aeronautics Board examiner has recommended that the public interest requires a San Francisco terminal point on British Overseas Airways Corp. London flights. And, as Call-Bulletin Aviator Writer George Rhodes reported from Washington Wednesday, the CAB examiner's cognizance of "the growing potential of the west coast" provides a possible basis for licensing Pan American and TWA to fly in and out of San Francisco over the region of the North Pole. There'll be a conference Monday which may clear the way for formal hearings in San Francisco. Meanwhile, President Eisenhower has asked the CAB to review its thumbs-down decision last year on Pan Am's application.

Certainly, if both British and the Dutch KLM lines put down here, United States carriers should have a chance to get into the pole-vaulting act, too. Inasmuch as our carriers fly into Europe, it's own fair reciprocity to let theirs into this country. But in so reciprocating, let's not discriminate against the United States operators.

San Francisco, to maintain its place as the aerial crossroads of the Pacific, will need all of the service it can get, and should get all that it needs. What's more, the city's International Airport is better equipped than most others to handle the vastly bigger, faster jet planes which will be in service within a few years. Meanwhile, what about that third transcontinental route which our city so far lacks, and which Los Angeles has? The CAB should do something about that.

[From the San Francisco Chronicle of January 23, 1956]

JET TRANSPORT PROSPECT FORCES NEW FLIGHT PLAN

In calling for review of the decision that keeps Pan American World Airways from flying a direct, great circle route from San Francisco to the Orient, President Eisenhower opens the way to remedy a grave injustice.

The existing restrictions compel Pan American to adhere to dog-leg route—San Francisco, Hawaii, Wake, Tokyo—that adds 1,200 unnecessary miles to the flight and is wasteful of fuel, operating costs, and passengers' time alike.

San Francisco is an injured party in that the decision operates directly against the city's status as an international airport. As noted by Tom Gray, manager of the Down Town Association, the President's request that the Civil Aeronautics Board reopen the case is a victory for San Francisco.

The President's request was based on "new circumstances and new developments." It is a likely assumption that he had in mind the imminence of jet transports that will make nonstop transpacific flights commonplace—and essential to economic operation. The new planes, which will carry 145 passengers at 575 miles an hour, cannot be used profitably on short hops, air transport authorities say.

If the CAB now approves the Pan American application and those of other lines seeking to fly the great circle course from San Francisco to Scandinavia, London, and Paris, this city will come into its rightful heritage as one of the world's great aviation centers.

Russia Invokes Help of Security Council

EXTENSION OF REMARKS
OF
HON. USHER L. BURDICK
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 21, 1956

Mr. BURDICK. Mr. Speaker, well, anything can happen. Russia now warns that the United States and Great Britain will have to notify them of any move we make in the Far East. They say our intended plan of liberating countries is a direct violation of the Charter of the United Nations, and that before we can make any move we shall have to get a permit from the Security Council of the United Nations. What has happened? All at once the Russians have an urge to bring the power and authority of the United Nations to the front. They did not take this attitude while stirring up their underlings to start in on aggression. We have such positive evidence of this that simply to state the situation is proof enough.

We agreed with Russia that we would pull out of Korea, with the provision that she would do likewise. We kept our promise and did pull out. Knowing the dictators of Russia as we must have known them, we never should have taken their word for anything. We got out, but the Russians, through the Red Chinese, came in and started a huge aggressive movement that would have swept the South Koreans into the seas. We intervened and went through all the expense in lives and property necessary to get back in to stop their aggression. Did Russia then think of the terms of the Charter of the United Nations that they now say we are violating? No; she did not. She carried out the principal of the manifesto of Karl Marx that any agreement with capitalistic nations is all right as long as it helps the Kremlin; but when the agreement bars the path to its further aggression, scrap it. That is what Russia did in Korea, but now when we merely talk about aiding helpless people, Russia points her finger at us and shouts, "You are violating the terms of the United Nations Charter. We will attend to peace in the Far East. That is our orbit."

For outright duplicity, deceit, perfidy, and degraded diplomacy, this is the worst history has ever recorded. The Russians know what the Charter of the United Nations is; they were instrumental in writing it. It is for them to use when they want it, when it complacently submits to the dictates of Russia, but to be in all things rejected when its terms may conflict with the program of the Kremlin for world domination.

After this recent blast of the Soviets are we going to play country dog, and with our tail between our legs streak for home? Or shall we finally make a stand so that these intriguing propagandists will have something to chew over before they take it upon themselves to run our business before we ask for it?

Since Russia now complains that we are making moves not authorized by the Security Council of the United Nations, we should ask just what authority this Council has bestowed upon them to take charge of the peace in the Far East. The Security Council has not yet spoken on this subject. Is Russia so sure of having the support of that Council that they can act with impunity, while demanding that we conform to their interpretation of the Charter of the United Nations? They may be right, for they were openly active in framing that charter, and they would not approve anything that would not accrue to their advantage.

Address of United States Representative James C. Davis, of Georgia, to Joint Session of the General Assembly of Georgia, January 24, 1956

EXTENSION OF REMARKS
OF
HON. WILLIAM M. TUCK
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 21, 1956

Mr. TUCK. Mr. Speaker, on Tuesday, January 24, 1956, our colleague, the Honorable JAMES C. DAVIS, a Representative in the Congress from the State of Georgia, delivered a masterful address before a joint session of the General Assembly of Georgia in the capitol at Atlanta. The invitation extended to Judge DAVIS to speak in that forum is evidence of the high esteem in which he is held by the people of Georgia. It constitutes an appropriate recognition of his integrity, character, and ability by the citizens of his own State, a compliment which he richly merits and deserves.

I have read, studied, and considered the address carefully. It is a dignified, yet forceful, and able discussion of a subject very close to the heart of every true American. The fundamental principles upon which our country was established and which we cherish are being threatened and jeopardized by flagitious influences. At such a time as this we are fortunate to have Judge DAVIS and others like him in the public life of America. He has talent and courage. He is unafraid to express his convictions and to inveigh against these evils whether speaking to the General Assembly of Georgia or the Congress of the United States.

I am proud to have the privilege of knowing the distinguished gentleman from Georgia, the Honorable JAMES C. DAVIS. Under leave heretofore granted me to extend my remarks, I am glad to include in the RECORD his address hereinbefore referred to. I commend it to every thoughtful American who appreciates and prizes our liberty and freedom.

The address is as follows:

Lieutenant Governor Vandiver, Speaker Moate, and members of the house and senate, I deeply appreciate the high privilege and great honor which you bestowed upon me in extending the invitation to address this honorable assembly.

This is the 10th year I have represented my district and State in Congress. There I have been duly impressed with the magnificence of our Capitol city and with the greatness of our Government. Yet I have never lost sight of the fundamental truth that the strength of our great Government lies not in the size of its buildings, the hugeness of its appropriations, or the pomp and ceremony with which its affairs are conducted.

Rather the strength of our Government lies in the individuality of the citizenry all across this broad land of ours who maintain this Government; in our love of liberty, our devotion to freedom, our capacity for self-government and self-support, and the maintenance of strong State and local governments, the principle upon which this Nation was founded, and upon which it has become great.

In the resolution extending the invitation to my colleague, Congressman FLYNT, and to me, you have expressed your concern regarding pending legislation in the United States Congress on the subject of Federal aid to education. Your concern is justified. This is a subject which needs and deserves the prayerful thought and study, not only of the Congress, but of all the people, especially those officials who, like yourselves, administer the affairs of our State and local governments.

On the one hand we see the rapidly growing population of our country, having increased from 150½ million in 1950 to 165½ million in 1955 with an increase in children of school age during that same period of 6,158,000. This has brought to many sections overcrowded schools, and a great need for more school construction. The Federal Government has in some degree, where increased school population has resulted from operation of Federal Government agencies, contributed to the cost of school construction, and in small measure to maintenance and operation expense. In those areas with which I am familiar, however, this Federal contribution has been inadequate. Because of the smallness of these contributions no great voice in the control of our school systems has been sought by the Federal Government.

Now, however, the President has proposed the sizable contribution of $1¼ billion for school construction and the bill reported out by the committee calls for $1.6 billion. As the time draws near for consideration of this legislation, and its passage or rejection, threats are being made by those who traditionally have displayed hostility to our section who traditionally have sought to meddle in the conduct of our affairs, that they will attach conditions to the use of this money which we in Georgia could under no circumstances accept or tolerate. There is not a scintilla of doubt in my mind as to what will be the proper course of action if acceptance of Federal money means also acceptance of Federal control. If the only way we can obtain Federal school funds is to accept them with strings attached, then I say with no hesitation whatsoever, the answer is "No." That would be my answer and my vote in the Congress, and I am confident that would be your answer and your vote here in the Georgia Legislature upon this resolution now pending before you.

We face a very serious question in this respect: If the bill is voted, and either now or next year a condition is imposed that none of this money will be allotted to a State where segregated schools are maintained, the taxpayers of Georgia will be in the unfortunate position of having to pay our part of the taxes to raise the money, without getting a dollar of it for our own use. It would go to States willing to accept it with conditions attached, and be denied to us because we will not accept it with conditions attached, which to us are repulsive, unacceptable, and intolerable.

The conditions placed in the pending bill by the committee call for too much Federal control. Our Georgia member on the com-

mittee, Congressman PHIL LANDRUM, voted against the bill in the committee. As the bill now stands, I believe a majority of the Georgia delegation in the House will vote against it because of too much Federal control. In approving or disapproving the State plans for spending the money, the Federal Commissioner of Education, under the bill, has almost unlimited discretion. How would that discretion be exercised?

As we seek the answer to this and other questions involved, what are the facts? What is the attitude of the Federal Government toward this question, the legislative department, the executive department, and the judicial department? We must be realistic as we answer these questions.

Our present dilemma and the threat to our public school system is not the result of Federal legislative action. The United States Congress has consistently refused to join in the unconstitutional illegal efforts which have been made to take away from the States control of our own local affairs.

But the executive department, headed by the President, and the judicial department headed by the Supreme Court, have joined hands to bypass Congress, and to bring about changes in our Constitution and laws through irregular and unconstitutional means—changes which they have not been able to induce Congress to make through regular and constitutional legislative action. The Supreme Court in the past few years has been usurping the power to make laws and to amend the Constitution. The Court does not possess either of those powers.

The United States Attorney General, of course with the approval of the President, filed a brief in the Supreme Court, urging that segregation be declared unconstitutional.

The people and the States are being made the victims of a conspiracy of radical-thinking individuals and organizations, many of whom are subversive. The spearhead of this conspiracy is the radical organization, the National Association for the Advancement of Colored People, many of whose officers have had long records of association with subversive and Communist-front groups, which has been thoroughly exposed through material from the files of the House Committee on Un-American Activities. This radical group has been aided and abetted by other loud, noise-making minority pressure groups.

While the great majority of the right-thinking, right-living men and women of the United States have been carrying on the necessary daily functions of paying the taxes which support all of the governments of this Nation, cities, counties, States, and Federal, supporting our schools, growing the crops which must feed and clothe our population, operating our factories, financing our banks, and carrying on the myriad tasks necessary for our great Nation to maintain its rightful place in the world, this radical organization, conniving with other radical groups such as the Americans for Democratic Action, the American Civil Liberties Union, and allied radical pressure groups have been pushing that conspiracy to bypass Congress and amend our Constitution and change our laws through fraudulent court decisions and dictatorial Executive orders from the White House.

Political blackmail is the chosen method through which these radical groups have sought and are with great success seeking to impose their will upon a protesting, unwilling people.

All over this country vigorous protests are being made by white people who intend to remain white, and to keep our white institutions free from forced intermingling with other races.

It is shameful to note the extent to which those who seek political power in this country are willing to pander and capitulate to noisy minority pressure groups, whose political influence actually has been magnified far beyond its actual strength.

It is shameful that the President of the United States for political expediency, has permitted these radical pressure groups to influence him to issue orders creating a new FEPC Commission, and other similar orders to destroy and tear down wise customs and practices which are as old as civilization itself, and which in fact, do not represent the real attitude of the President himself.

In his present efforts to pander to the Negro voters of this country, he now boasts that he has eliminated the last vestige of segregation in all of the branches and departments of our Armed Forces. Yet in 1948 when he was a General in the Army, and not a candidate for any elective public office he testified before a congressional committee that he was in favor of keeping the Negro soldiers in small units of their own; that they could not compete successfully with white soldiers for promotions and that "if we attempt merely by passing a lot of laws to force someone to like someone else, we are just going to get into trouble." (P. 996, Senate UMT hearings, Apr. 2, 1948.)

The President boasts that he and the Republican Party have been instrumental in turning the vast hordes of Negro pupils in upon the white children in the classrooms of Washington, D. C., where the Negroes constitute two-thirds of the school population of that city. Yet at the very moment he makes this boast that he has imposed this radical change upon the white children of our Nation's Capital, his own grandson is carried by automobile to an Episcopal school in Alexandria, Va., where tuition must be paid for his schooling, although his son, Maj. John Eisenhower, resides upon the post at Fort Belvoir, Va., where his son is in easy walking distance of a nonsegregated school, attended by both whites and blacks, and which the Eisenhower child could also attend without the necessity of transportation, and without paying any tuition whatever.

Yet the President is using his great power as the Chief Executive of this country to force our boys and girls in the various branches of our Armed Forces to live, eat, and sleep with Negroes, and to force our children into integrated schools with them, a practice in which he does not believe, and which his own flesh and blood do not follow. There are mothers and fathers in Georgia today who know their sons are being forced to live with Negroes against their will in the armed services. There is no wonder that the armed services are having a hard time getting men to enlist and reenlist.

The apostles of integration and mongrelization, the Communist Party, the NAACP, the American Civil Liberties Union, Americans for Democratic Action, and other radical organizations and individuals of the same stripe and odor are busy endeavoring to create the impression that segregation is being voluntarily abandoned, and that integration is being voluntarily accepted.

Nothing is further from the truth. Integration of the races is not voluntary. On the contrary segregation is voluntary. Wherever integration has taken place, it has been forced upon the people. Wherever segregation has been abolished, it has been over the vigorous protest of those affected. It is not voluntary in the Army. It was put into effect by Executive order, and men have to render at least 2 years military service. It is not voluntary in our political primaries. That came by a court order.

Time and time again where people in various States have had the opportunity to vote upon FEPC proposals, FEPC laws have been rejected.
